This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

+ *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.

+ *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.

+ *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.

+ *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at `http://books.google.com/`

WESTERN LITERARY MESSENGER.

VOLUME IX. BUFFALO, SATURDAY, AUGUST 7, 1847. NUMBER I.

For the Western Literary Messenger.

Lines:

On the retirement from office, of Hon. Thomas S. Williams, Chief Justice of Connecticut.

BY MRS. L. H. SIGOURNEY.

When from the post of honor and renown,
The great in mind, the pure in heart retire,
And lay the Aristidean balance down,
For such repose as gathered years require,

They, who to all of human kind the friend,
Were ne'er from paths of equity entic'd,—
But skill'd with heavenly alchymy to blend
The sword of Themis with the Cross of Christ,

Not unattended by a people's praise
Should they to shades of private life repair,
But grateful zeal emba'm for future days
Their blameless course of labor and of care.

And thou, who thus, with studious lore profound
Unchanged, unswerving, didst the truth maintain,
Still, in each path of toil or duty found,
Above suspicion, and without a stain,—

Thine be a crown of blessing on thy head,
And thine a prayer to Him who rules above
That each returning year, with downy tread,
May richly ripen for the realm above.

For the Western Literary Messenger.

The False Vow.

BY ARIEL.

It was in midwinter. The Heavens were shrouded with deep dark clouds, from which fell thick and fast the driving snow. Neither a star, nor the slightest ray from the moon, shone forth to guide the wanderer's way, and even the mantle of white which clad the earth, served not to lighten the impenetrable darkness which reigned around. Thicker and faster poured forth those clouds of black their fleecy contents, which were driven by the fierce gale with irresistible force through the now deserted streets, forming deep furrows and high drifts, through which the unfortunate wayfarer of that night must wade breast-deep. No foot prints marked the path; for the wind as it surged along, bearing great masses of snow upon its wings, obliterated every track and effaced every land-mark. It was indeed a terrible night; one in which the charitable, and those surrounded by life's comforts might well exclaim, "May God have mercy upon the poor!" But sincere indeed was the philanthophy, and heartfelt the charity, which braved the terrors of those icy blasts, to extend the kind hand of relief to the destitute and the needy.

It was upon such a night, with the fierce storm howling without, but where all was light and beauty within, that my friend first beheld Flora ———. There was nothing within that brilliant hall, to remind of the war of the elements which raged without. Enlivening music drowned the roaring of the wind as it moaned along like a troubled spirit, and the sweet strains rose above the dashing of the driven snow upon the windows. Those stirring notes forbade the tripping feet to falter, or weary of their task.

"On, on with the dance;
No sleep 'till morn, when youth and beauty meet
To chase the glowing hours with flying feet."

Yet brighter far, than the rays of light thrown from the lamps upon the scene, were the eyes of the lovely women there assembled; more thrilling than the strains from the music band, were the happy tones of their sweet voices. All was mirth and merriment. No grief or sorrow had ever touched any of the young hearts in that gay throng; or if they had, the gloomy shadows of the mind were for the time transformed by the mery dance and exciting music, into rays of happiness and of joy.

No eye shown brighter, no heart beat happier than Flora's upon that evening. Among the many lovely women the occasion had called together, she was distinguished for her beauty. Many a fair face, which viewed alone would have received its just homage of admiration, sank into the shade when beneath the influence of her surpassing loveliness. She was in the freshness and bloom of early youth, for not more than seventeen summers had lent their warmth to tint the delicate coloring of her cheeks. No care had ever dimmed the mild but sparkling eye, no thought of sorrow had ever shaded the snowy brow. Her stature, rather above the medium height, harmonized well with the perfect symmetry of a full voluptous form, abounding in dignity and grace. Thick dark chesnut hair,—so dark that in the distance it resembled more the ravens wing—fell back from a brow which told not of a single grief; while from her bright yet soft dark eyes, there beamed a light whose mild influence penetrated into the inmost soul, leaving upon the heart an enduring and a happy thought. She was plainly dressed, as though conscious that ornament might conceal some charm, and as this bright and beautiful creation moved with enchanting grace through the lively dance, or engaged in the whirling waltz, admiration spoken from every eye.

Such was the impression which the first sight of Flora ——— produced upon my mind, and I was a disinterested observer. I had passed that period of youth, when the heart is so keenly sensitive to the attractions of beauty; and viewing her mere-

ly as the perfection of a master hand, I felt no desire to bring myself within the charm of her sweet clear voice, or nearer to brave the influence of her dark mild eye.

But not so my friend. The rays of light which emanated from that star of lovliness, gave warmth and life to many a picture of ideal beauty which hovered in his fancy. Before the company separated, he obtained an introduction to the lovely girl, and thus commenced an acquaintance which time and opportunity soon ripened into friendship. and finally into intimacy. Nor was he the only one who sought her friendship and her favor.—Her beauty had thrown its magic charm over many others, who acknowledged the influence of the spell. But upon no one did she bestow so much of her intimacy as upon my friend, and her marked preference for his society soon pointed him out as the one finding most favor in her sight. And well worthy was he of such a preference. Possessed of a tall, commanding person containing much of manly dignity, he had been endowed by nature with talents and an intellect of no ordinary standard. With a refined taste and a lively imagination were united an open and a generous heart, an unsuspicious and affable disposition. An apparent reserve of manner had given the name of pride to what was but the nature of a retiring disposition, and it was only to intimate friends that the real worth of his character was known. An extreme sensibility to slight or neglect as well as to insult, was a trait in his character which had lost him many friends, for it was carried to that extreme where ceasing to be a virtue. it became a fault. But this same sensibility made him more careful and guarded in his intercourse with others, lest he too might wound feeling as refined and as sensitive as his own.

Time passed on. Winter gave way to the more genial influences of spring, and with every succeeding month the intimacy of Flora and my friend increased; all rivals save one, had abandoned the field, and seemed to award the beautiful prize to him. One, however, still followed the phantom of his hopes, and she in the spirit of coquettry innate with Eve's fair daughters, bestowed upon him just enough encouragement to retain him in her train. He was of considerable personal beauty, yet boasted of few other attractions, unless it was faith, truth and devotion to the object of his worship. That he was faithful, true and devoted, there can be no doubt, for he persisted in his attentions long after hope of final success had ceased to whisper encouraging words to his reason, and obeyed only the dictates of his heart, whose leading strings were guided at will by another's hand.

Almost a year, with its chances and its changes, sped on, but it wrought no change in Flora and my friend. The many pleasant hours they had passed together; their frequent walks in the soft summer eve by the bright moonlight, had drawn still closer the chords of intimacy around them. They had never found any society so agreeable, or any friendship so replete with happy thoughts as their own. They had kept within the limits of friendly intimacy, for no declarations of mutual affection had ever yet passed between them; they were content with their friendship, and satisfied with the happiness it brought them. But Platonic love, beautiful indeed in theory, is not adopted to actual life. Age, it is true, with its cool blood and sober reasoning, may carry out its sublime precepts; but the heart in the glad period of youth, is not content with attachments formed by the mind alone; its own warm feelings involuntarily seek to entwine themselves with those of kindred heart, until they blend together in the enduring chain of mutual affection. Friendship but opens the way for stronger ties, which advance with stealthy step, and are not discovered until they have secured a resting place from whence they cannot be dislodged. Who can say to the inclinations, "Thus far shalt thou go and no farther?" Vain the thought, vainer still the attempt when in constant communion with the one whom we esteem; and with woman this is peculiarly the case for their affections are the world in which they live and have their being.

Flora entertained for my friend, feelings of more than friendly intimacy: insensibly to herself, her heart had been drawn into warmer ties.—Her eye beamed for him a softer light, her voice contained a sweeter tone. She had never breathed her affection, she scarcely dared whisper it in secret to herself; but the close observer might have perceived a deeper color mantle her cheek, an instant brilliance light her eye at his approach, perhaps a shade of sorrow 'cloud her brow at the slightest attention bestowed upon another.

Some there were, who viewed the increasing intimacy of this youthful pair, with an evil eye; and who from feelings of personal jealousy would gladly have seen them divided and their friendship forever broken. They spared no efforts to accomplish this end. Under the guise of friendly solicitude, they whispered in her ear many a tale of his unworthiness; they maligned his character and traduced his motives; they misinterpreted his conduct, and charged him with actions he had never committed, and with expressing sentiments which had never passed his lips. These efforts failed. The heart has always an abiding confidence in those it loves, which nothing short of some act of positive unworthiness—proved beyond a doubt—can ever shake. A long and intimate acquaintance had convinced her of the existance of virtues irreconcilable with what they charged against him. She knew his to be a heart which beat responsive to every noble sentiment, and that dishonorable thoughts were strangers to his breast. They finally induced her relatives to join them in their endeavors; and when countenanced and assisted by these, they told her he possessed no thoughts in common with her own; that his professions of friendship were un-

meaning words; that he had made their intimacy the subject of idle jests, and that others were objects of his greater preference — a preference which he openly avowed—then indeed did the trusting confidence of the beautiful Flora begin to waiver. They had at least found the right chord upon which to strike, it was the chord connected with the heart. They brought forth apparently convincing proofs of the truth of what they uttered, and relatives whom she thought her friends confirmed the statements and assisted their endeavors. Conscious that she had bestowed upon him all that a woman can, and live, hope often whispered that it met return; she now felt that she loved him as woman alone can love, and as even woman loves but once, and every suspicion that her love met no response, was a thought which robbed her of her peace. She felt that suspense was even less endurable than a knowledge of the worst: conviction may break the heart at once, while suspense is a slow lingering torture which wastes it by degrees. She determined to know the worst, and if he loved her to bring him to an avowal of his attachment.

Instigated by such thoughts as these, she changed in her demeanor towards my friend. Sweeter smiles than was her wont were bestowed upon others, and more of her society granted to old admirers, who gladly returned to their allegiance, while she affected a satisfaction she could not feel, in her intercourse with them. She betrayed no marked or pointed coldness towards my friend; but there was an absence of that confiding trust, of that cordial feeling which had characterized their acquaintance; a pretended inability longer to participate in those evening rambles, so productive of pleasure to them both; in short a thousand little things, trifles in themselves and noticed only by him for whom they were designed. She thought in this way to induce him to seek an explanation, which hope promised would be followed by an avowel of his attachment. But the beautiful Flora had not yet learned the disposition of my friend, if she supposed success would crown such means. She had selected a course of all others the best calculated to destroy his preference, if such he felt, and to extinguish forever the flames of any attachment which may have slumbered in his breast. His was a nature so keenly sensitive to slight, that a confirmed suspicion that his society was not agreeable, or his friendship desired, was enough to arouse a pride which would seek no reconcilement, which would ask no explanation.

On the same spot, within the same brilliant hall, and upon an occasion similar to the one which witnesses their acquaintance just one year before, did their intimacy cease. My friend had long been conscious of a change in her demeanor towards him, but thinking it originated from some of the many false tales which daily reached her ears, he gave it no heed, trusting that the first beam of truth would instantly dissipate the cloud which hovered over their friendship. But upon the evening to which I refer, he received what his sensitive nature construed into a slight, conveying to his mind the impression that his society was less desired than formerly. This was sufficient to arouse all his pride, to awaken all his resentment. He asked not her reasons, he sought no explanation. Whispering in her ear a few hurried words which told of his appreciation of her actions, he waited for no reply, and bidding her a cold good night, was gone.

What changed the color of her cheek that instant, from the rose's hue, to the lily's white? He had often said good night before; yet the magic power of the voice can convey to words a hidden meaning, which but one alone can interpret.—Those words, so cold, so distant, fell upon her heart like the icy hand of death, chilling the warm blood as it bounded through the veins, and crumbling into nothing many an airy castle of the fancy. How different from the cordial tone of their former partings, when the lips breathed so much of friendly feelings, so much of warm solicitude; aye! her heart had after hoped, so much of true affection. Gladly would she have recalled the events of the past few days, most willingly have had him return for a moment's explanation. But he was gone—perhaps anger in his heart. His parting words lingering in her ear, drove from it every pleasant sound, and unable longer to remain among the merry throng with the blaze of light and the joyous notes from the music-band, she withdrew from a scene where none but the light of heart and the careless gay should be, and went to take communion with her own sad thoughts.—Hope's soft ray ever and anon lit up a rosy cloud which promised a happier dawn, but the first touch of those words "good night" to this bright vision, enveloped all in darkness and plunged her thoughts once more into despondent gloom. Hope, however, and anticipation, are influences ever more powerful upon the inexperience of eighteen summers than despondency and doubt, and Flora, before she closed her eyes that night, had united, in imagination, the broken chords, and she slept to dream of the happy scenes of their acquaintance—dreams bright and beautiful, such only as are dreamed by youth, and in the first gush of youthful love.

The morning brought with it a note from my friend; and as she took it from the bearer, her heart beat as though it would burst the narrow limits which confined it. It was long before she could summon courage to break the envelope. That little package, how pregnant with fate! It was either a confirmation of her dearest hopes, or the announcement that her happiness was wrecked and gone forever—Heaven forbid! fell from her lips as with trembling hand, she broke the seal:—

Miss Flora:—

It is your wish that the intimacy which has so long existed between us should cease. With

such a wish, I must conform. I possessed no claims upon your friendship, except such as you choose to grant, and our intimacy was but the creature of your will; that will which gave it life, has declared it shall exist no longer.

I cannot have misunderstood your meaning; if actions are at all a signification of the thoughts, your manner last evening can convey no other conclusion. Although long aware that some of yourrelatives and pretended friends, looking upon our growing intimacy with an evil eye, have put forth every effort to break it, yet I heeded not their endeavors so long as I knew that your own better judgment gave the lie to their false slanders. All this was well, and what friend owes to find. But a change ensued and a reserve incompatible with the friendship you professed,—alleging that you were compelled to such a course by relatives whose commands you felt bound to obey. If such was the cause, I was much mistaken in my acquaintance, for the Flora ——— whom I knew, possessed a spirit by far too proud and independent to suffer herself to be guided into a line of conduct at variance with her feelings, and with the convictions of her own better judgement. That the voice of calumny has at last effectually whispered in your ear many a falsehood, I cannot doubt, but can only wonder that they should have made such an impression upon your mind, as to have influenced your conduct. Whether these were the only reasons which induced you to end our intimacy, it matters not for me to enquire. Such being your wish, so be it.

Receive my thanks for the many pleasant hours passed in your society; nor can I doubt but that among your numerous admirers you may find one, who will occasion far happier ones to you Trusting that your future life, wherever cast, may be happy, I am yours, respectfully,

———.

It was the realization of her darkest fears. Her mind could scarcely realize the void created within her heart. To renounce forever one upon whom nearly every thought had long been centred; to forego those hours of pleasant intercourse which she was wont to regard as the happiest of her life; and to cast from her heart an image which it had so long in secret worshipped—all this at once was a blow hard indeed to bear.—Cold words cannot describe the burning thoughts which passed with lightening speed across her mind, as she sat for hours meditating upon the past and the future.

> "Keen were her pangs, but keener far to feel
> She nursed the pinion which impelled the steel."

It was the first trial which had ever fallen upon her young heart, it took from it every desire, save that of death. Bitterly did she now repent having given the occasion for this breach between them, and that she who had bestowed so much of her affection, had not given with it all her confidence. Could she drive him from her mind and forget that such a one had ever existed; she felt it impossible. Nor can we, by any power of the will alone, drive from our thoughts an image whose connecting ties are many happy associations, and around which the dearest recollections —linked indeed with the very clouds of life— have long been centred. The memory reverts with pleasure to every scene which has thrown its rosy hue of gladness over days gone by, keeping ever fresh and vivid in the mind the impressions that it once created.

They met again and often in society after this. At first, hope beat high in Flora's breast, that he would again address, again seek her out as was his wont; and she even sought to promote the opportunity by placing herself in his path where something must be spoken. But the cold and distant manner in which he addressed her, and his studied politeness when civility demanded an exchange of speech between them, extinguished forever this last faint glimmering spark of hope. It did more: it aroused all her woman's pride, it awakened her resentment and quickened her anger; it gave birth to thoughts that she who had offered up the richest treasures of her young heart, had received nothing in return; that her affection had been scorned, and her love cast back. While such thoughts reign in woman's breast, all others are subservient, and a keen sense of unmerited injury fills the mind. While in this state of wounded pride and of injured feeling, she accepted the addresses of that one of her admirers who had been so true and faithful, and who, taking advantage of a disunion which he himself had helped to cause, urged his suit with ardor and finally with success.

They stood before the alter, ready to unite their hands in that tie which binds until death. Joy beamed from the eyes of the happy bridegroom, and well might he be proud to call his own the treasure which stood beside him. He was tall in person, of a slim elastic build, with regular features, and a well proportioned form, and his light hair and tall figure made a pleasing contrast with the dark locks and full voluptous outline of her who was his partner. A casual observer would have called him decidedly handsome; but the eye which could read the inner virtues from a study of the outward features, distinguished but few of those more sterling qualities which adorn the man: good will, generosity and openness of heart, were well developed; but decision of character, energy of purpose and steadfastness of intention—those virtues which sustain under reverses and are quickened by difficulties, and which constitute man's superiority—were wanting. God grant that he may protect and cherish through the storms of life and the griefs and troubles of this cold selfish world, the weak and trembling woman who has chosen him for her protector: guide well her feet that they may not be wounded by the thorns which bestrew the path, and give her up at the end of a happy life, more perfect than when thy hands received her, so that

Heaven itself shall exclaim with admiration, that Love alone can stamp the last impress of beauty upon the soul.

The bride, dressed in simple white—fit emblem of her purity—almost seemed, in her transcendant beauty, a being of another world—the world of poets and of enthusiasts. She realized those creations of the artist's fancy, which, roaming through ideal realms, seeks to create a model which shall unite in itself the perfections of all that his eye had ever seen or his thoughts imagined. But why those downcast eyes, where anxious sadness seems to reign? why that solemn face, that unhappy look at a time when all should be bright and happy?—and though the pensive shade of melancholy thrown over beauty's face adds much to its attractions, yet surely the bridal eve is not the time to indulge in thoughts which give it rise. She should be happy; she has the chosen one beside her, to whom she is about to pledge her life-long troth. But it may be thoughts of the important step she is about to take, that has dimmed the usual brilliance of those bright eyes; or else the affectionate yearnings of her heart after the home she is on the point of leaving forever, that has diffused the care-worn look over her laughing face. So perhaps thought those to whom the circumstance gave food for reflection. But there was one present upon that occasion, who had made that bride a study; who could read deep into her very soul; whom long and close observation had enabled to interpret the lights and shadows as they flitted across her brow, and to read in her eye—the mirror of the soul—the passing thoughts which hovered in her mind. It was my friend, and he gave a different interpretation to the troubled brow, and the anxious face.—Gladly had the truth been known, would Flora have withdrawn from her place as a bride, and taken back her promises to the groom; for she now felt that she had never loved and could never love him, and bitterly repented the hasty impulse which had accepted his addresses. As she stood there, about to assume new ties and to cut asunder the associations which bound her to home and to the days of youth, the great solemnity of the step she was taking came in all its deep importance upon the mind. Well indeed might she be serious, and her countenance thoughtful: she was upon the eve of that era in woman's life, when leaving behind her the happiness and the known delights of home, she trusts her future weal to the keeping of a stranger. Important indeed is such a step, even when taken with one in whom our happiness is centred, and who possesses our full and trusting confidence; whose affection stimulates our hopes, and pours its healing balm into the wounds caused by the severing of old and hallowed associations. But Flora scarcely dared look forward to the future. She knew that she was leaving true and faithful hearts to which she had clung from childhood, exchanging them for uncertain happiness with one who already began to seem repulsive to her. Unhappy girl! that such thoughts should crowd thy mind while the myrtle wreath binds thy brow, and at a time when thine eye should beam nought but confidence, faith and deep devotion in him with whom thy lot in life will soon be cast. Look not around the careless throng who have assembled to witness thy espousal, for consolation or for sympathy: posessing no thoughts in common with their own they know not the unspeakable agony within thy heart. The only countenance which seems to participate in thy unhappiness, is the one in yonder corner, from whence glance eyes whose deep piercing gaze is felt within thy inmost soul. And yet thou durst not seek sweet sympathy there, for that countenance revives thoughts and recollections which another's bride should not recall, and which add to the misery of thy heart.

The vow was spoken. The holy man raised his hands in benediction above the heads of the beautiful pair, and as he invoked the blessing of Heaven upon the future life of the wedded ones, hot tears coursed down the cheeks of the lovely bride. Unhappy tears! Her heart denied the promises which her lips had uttered: she had called upon the God of heaven to bear witness to the falsity of her vows to cherish and to love, and in the presence of sorrowing angels, whose tears—if angels weep—fell thick and fast, had involved a soul—until then unstained—in the deep dark crime of moral perjury. Reats Heaven's blessing upon a union such as this?—

(CONCLUDED NEXT WEEK.)

Interesting Narative

Of the Capture, Adventures, Sufferings &c., of Major GAINES *and* BORLAND'S *party in Mexico.*

We abridge the account from the New Orleans *Delta*, July 16:

There arrived yesterday in our city, by the schooner Home from Tampico, John Swigert, John Scott, W Holeman of Capt. Milam's company of Kentucky cavalry, P. Tunk, of Capt. Pennington's and W. B. Denowitz, of Captain Heady's company, all of whom belong to the command of Major Gaines, which was captured last February near Encarnacien by a large Mexican force under Gen. Minon.

From Mr. SWIGERT we learned the following particulars:

Messrs. Gaines and Borland with three companies of Kentucky and Arkansas Cavalry, were out on a scouting party. It was thought that there were small bodies of the enemy's cavalry prowling about the country, but no one had the slightest apprehension that a large force could be so near Gen. Wool's camp.

Major Gaines having joined Borland at a rancho near Encarnacion, the two commands went into quarters for the night, after posting sentinels some distance in advance and on the top of the house in which they were encamped. That night, the officers, who, tired by a very long march, and laid down to sleep, were several times aroused by the alarms of the sentinel, who declared he saw an armed Mexican approaching the rancho. But the sentinels on the top of the house declared they could see nothing, and the man who gave the alarm, was treated as a rather

nervous and dreaming individual. The officers thereupon retired again to their blankets, but had scarcely fallen asleep, when they were aroused by another alarm from the sentinel, who declared that he had again seen an armed Mexican, and had pulled trigger on him, but his gun being wet, the cap did not explode. Other alarms were also given by other sentinels picketed some distance from the rancho. The night was now waning fast. It was very dark and misty. The officers bestirred themselves, and aroused the men, prepared to meet an attack, thinking that the enemy consisted of a force of four or five hundred, which Major Gaines had already been in pursuit of, and which he considered a force about equal to his own.

Our men were all collected on the top of that rancho, with their guns ready for action, full of courage and zeal, and warmly desirous of a handsome brush with the enemy. The morn broke slowly. The mist hung heavily around them, and although they could hear very plainly the approach of horsemen, they could see nothing. At last the light began to break through the mist, immediately in their front, and the faint outline of a strong body of armed horsemen was perceptible in the distance. And as the mist rolled and gathered into huge clouds, and gently ascended toward the neighboring heights, it revealed, with most painful distinctness, a whole regiment of splendidly equipped Mexican lancers drawn up in line of battle, and occupying a commanding position within three hundred yards of the rancho occupied by Major Gaines's party.

Undauntedly surveying and counting this strong force before them, our men prepared for action, crying out, "Oh there are only six hundred of them—it's a fair fight and we'll see it out!" But, stop! Look on the right as the mists leave that side of the rancho, there is another regiment, just as strong as that in front.

"Well," cried a stalwart Kentuckian, who kept all the while a bright eye on his long rifle, "this is coming it rather strong: the thing looks serious, most decidedly: but I reckon we can lick a thousand Greasers, and throw in two hundred for good measure." "Can't we?" was the unanimous cry of the party.

But "Oh cracky," cried the tall sergeant, "here's more of the varmints." And there sure enough on their left was another regiment about six hundred strong, whose bright helmets, flaming pennons and showy uniforms, loomed out conspicuously in the dark horizon. And there too, just a few hundred yards in their rear, was still another regiment. Thus was this small party of one hundred and twenty Americans entirely surrounded by a Mexican force of about three thousand cavalry, the finest in the country and commanded by one of their best officers.

Major Gaines ordered his bugler to blow with all his might the American charge, and directed the men to follow up the blast with three loud cheers. The order was cheerfully and heartily obeyed. The Mexicans, who were advancing upon the rancho, were so awed by the loud yells and terrific huzzas of our boys, that they halted, and looked at our little band in mute terror and astonishment that so small a party could make such a tremendous noise. "Give them three times three," cried out Cassius M. Clay, and the huzzas were prolonged to the full complement until they made the welkin ring for miles around, and so frightened the Mexicans that their Gen., to prevent his men from running away, had to order his fine brass band to strike up the Polka, and to wheel his men into column and put them on the march. In open order and with military precision the Mexicans marched around the rancho to the tune of the Cracovienne, and seemed, like the cat with its little victim, to be sporting with their captive before they destroyed him

An officer with an interpreter and white flag was sent to Major Gaines to demand his unconditional surrender. "Never," replied the gallant American. "Then no quarters will be given," remarked the Mexican. "Very well," exclaimed Capt. Clay; "remember the Alamo: before we surrender on such terms, more than five hundred of your yellow-bellied scoundrels shall be left to bleach on yonder plains."

It was finally agreed that Major Gaines should have an interview with Gen. Minon. From him the Major received very courteous treament, and was assured that in surrendering himself and his party, they would be treated with all the consideration of prisoners of war.

Capt. Henrie, whose name is familiar to all who have read the stirring history of Texan warfare and adventure, was very anxious for a fight, and strongly dissuaded Maj. Gaines from surrendering. He told the men to count their bullets, and if they had one for every two Mexicans, it was a fair game, and he would go it. He also cautioned them to hit the Mexicans below their beards, that they might frighten off the others by their groans, and to give them as much misery as possible. One of the Mexican officers, recognizing him, cried out in Spanish, "I shall have the pleasure of your company to the city of Mexico, Capt. Henrie!" "Excuse me, senor I generally choose my own company," replied the cool and courtly captain.

It was the second day after their capture that Maj. Gaines's high spirited mare showing considerable restlessness, the Major requested Capt. Henrie, who is a famous rider of the Jack Hays school, to "mount her and take off the wire edge of her spirit." The captain did so, and riding up to Capt. Clay, carelessly remarked, "Clay, I am going to make a burst." The Mexican commander, half suspecting his design, placed additional forces at the head and rear of the column of lancers within which the prisoners were placed, and rode himself by the side of Henrie, who would pace up and down the line, cracking jokes with the boys, and firing up the spirit of the mare by various ingenious manœuvres. At last, Henrie, seeing a favorable opportunity, plunged his spurs deep into the sides of the noble blood, and rushing against and knocking down three or four of the mustangs with their lancers, started off in full view of the whole party, at a rate of speed equal to the best time that Boston or Fashion ever made. After him rushed a dozen well mounted lancers, who, firing their escopetas at him, started off in full pursuit. But it was no race at all—the Kentucky blood was too much for the mustang. The lancers were soon distanced, and the last view they got of Henrie, he was flying up a steep mountain, waving his white handkerchief, and crying out in a voice which echoed afar off through the valley, "Adios, senores—adios, senores!"

After many narrow escapes from the enemy, and starvation, and after losing his noble mare, Henrie arrived safely at our camp, and gave the first authentic intelligence of the capture of Majors Gaines' and Borland's party.

In the rear of the Mexican army the prisoners met Capt. Riley, with his company of deserters from the American army. He had already eighty or ninety men, who constituted the main artillery for the army, and said he was picking up more every day. He made a great effort to persuade some of the prisoners to join him, promising them as much land and money as they wanted. It is unnecessary to say that the traitor's proposals

were received by our gallant volunteers with scorn and contempt. The prisoners were much gratified to hear some time afterward, in the Carcel St. Jago, that Capt. Riley's company was cut all to pieces and but twenty ever returned to the city of Mexico. This twenty, together with other American deserters, who had escaped from our army at Tampico and Vera Cruz, became so disorderly and unruly in their habits that they were ordered out of the city, and on their way, were attacked by a large Mexican force and all put to the sword.

On the first of March the prisoners arrived within nine miles of the city of Mexico, when the colonel in command of the guard received orders to retain them at the place where he was until the revolution, which was then raging in the city, had abated. But the revolution continuing longer than was expected, the prisoners were marched into the city on the night of the 5th of March, and were lodged in the secure prison fortress of San Jago, in the society of all the principal malefactors and convicts of Mexico, and a more rascally, filthy and villainous set were never before congregated.

Proposals were made by both of the parties to our prisoners to release them if they would fight on their side. The Mexicans had heard of the skill of our riflemen, and they believed that it was only necessary for the prisoners to join either party, to secure its success in the strife then going on in the city. But our boys preferred looking on, like the old woman in the fight between her husband and the bear, not caring a copper which whipped.

In the midst of the revolution the first news of the battle of Buena Vista reached the city. There was a great ringing of bells, and much rejoicing on account of the joyful tidings. Bad news travels fast, and the prisoners were soon informed by Mexicans of the total rout and capture of Gen. Taylor's whole army, the death of Gen. Butler, and several of our most distinguished officers.—Although but little disposed to rely on Mexican stories there was such an air of probability about this report that the prisoners were forced to give it some credence, and were overwhelmed with grief and mortification by the disastrous result.—But soon other stories were circulated, conflicting statements were given, all tending to throw doubt upon the story of Santa Anna's splendid triumph. At last the hurried despatch of the Mexican general was received, and the notes of rejoicing in the city subsided perceptibly. A copy of this despatch was thrown down, by means of a twine string, from the room where the officers were confined to the main court yard, where the men were, and was eagerly and joyously perused by them. It was evident that Gen. Santa Anna had sustained a decided repulse, and the prisoners could not restrain their exultation, but gave it relief in three loud cheers, which startled the inmates of the prison, and brought the Governor down upon them, in the greatest terror and perturbation.

Although the men suffered considerably from the want of exercise and bad diet, their health was generally good, and but one man died of their whole number since they were captured. After they had been in prison three months, the prisoners were told that they had been exchanged and would be sent to Tampico. Their officers, however, were not allowed to see them, but they were told they would join them in a few days.

They were then put in charge of a colonel and twenty lancers, and proceeded on their journey toward Tampico. The country through which they passed for four or five days was beautiful, and highly cultivated. The dark foliage of the evergreens, the luscious fruit, the teeming crops, the springs of cool water, gushing from the mountain side, the myriads of richly colored and variegated birds, the delightful variety of mountains and valleys, rendered the journey of the long-imprisoned Americans one of great interest and pleasure.

They were well treated by the officer who conducted them, and generally by the people of the towns through which they passed. There are, however, some exceptions to this remark. At the large mining town of Rio del Monte, the people assaulted the prisoners with stones, and would have murdered them, if the English residents had not interfered and protected them. For this generous and humane conduct of the English the prisoners express their great gratitude and thankfulness. After a long journey of two hundred miles, the prisoners arrived at the town of Huejutla, where they were received very kindly by Gen. Garay, and were allowed twenty-five cents a day for their support.

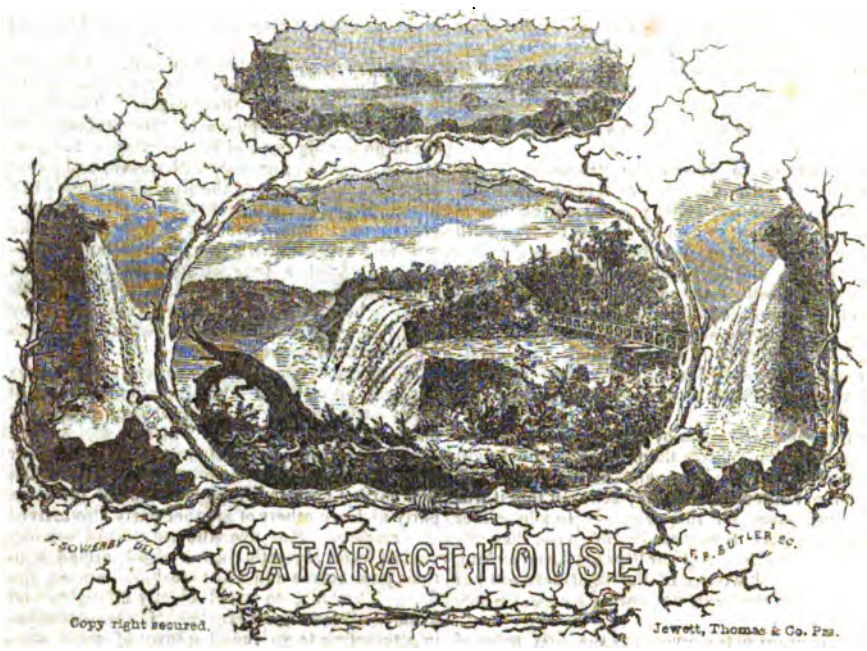
He there detained the prisoners some weeks but getting restless and impatient, several of them escaped out of the town and proceeded on their way to Tampico. The five who arrived here in the Home got safely into Tampico. Four others, who escaped before them, were retaken and carried back to Huejutla. One of the same party and two others of another party also arrived at Tampico. The five who are now in our city started from Huejutla in the night, armed with their jack-knives and one case-knife among the five. They had to travel chiefly at night, and avoided all towns and ranches. On one occasion, in attempting to go round a town of some size, they took a ravine, and suddenly found themselves in the very center of it.

They assumed, however, a very easy and indifferent carriage, and passed by the guard house where there were several soldiers lounging about. The soldier on guard cried out 'who goes there,' in Spanish, but the men, carelessly answering '*amigos, amigos,*' kept on their course and got safely out of the town.

Near Tampico they come suddedly upon a ranche, where were fifteen or twenty Mexicans, all armed with that formidable weapon, the *lariat.* Seeing that they were noted, the Americans walked boldly up to the Mexicans and commenced making signs to them of their friendly intentions. The Mexicans looked very threateningly, and seemed to be adjusting their *lariats* for immediate use, but the Americans showed their knives, and were permitted to proceed on their journey.

After many trials and sufferings, the prisoners at last arrived within sight of Tampico. The joy which filled their hearts, as they saw the noble banner of our Union, with its broad stripes and bright stars, waving from the lofty flag staff of Tampico, can be better imagined than described.

PARASOLS IN THE DRAWING-ROOM.—The introduction of gas-lights into private houses has been taken advantage of by the ladies, who under protest against the glare and dazzling uncomfortableness of such bright lights, deliberately *spread parasol* in an evening soiree, and, (incidental advantage) converse under and behind the same very agreeably. A pink parasol judiciously held between a lady's face and a gas burner, throws a tender, roseate hue over the complexion, and can be dexterously manœuvered, of course, to curtail an annoying perspective, or furnish glances in effective monopoly to the privileged. The Arts do not seem to have fallen behind the Sciences in the march of improvement!—*Home Journal.*



NIAGARA FALLS.

Above we present to our readers an exquisite engraving, comprising the four principal views of the Great Cataract, drawn from nature by F. Sowerby and engraved by F. P. Butler, a young artist recently established here. The engraving was executed for Messrs. Whitney, Jerauld & Co., of the celebrated Cataract House, Niagara Falls, to whose courtesy we are indebted for its use, it being a copy-right work. The top view is a representation of the entire Falls as seen from the river's edge on the Canada side, near the Ferry. The view on the left is the "American Fall" taken from below, near the railway to the Ferry. The centre view, a most beautiful and correct one, is taken from the "Hog's Back" on Goat Island, looking down the river, showing part of the "Centre Cascade," the "American Falls," "Luna Island," etc. The view on the right will be readily recognized as taken from below "Table Rock," and shows the spot where visiters usually enter to go behind the great sheet. Together the picture presents a complete epitome of this great wonder of nature, and reflects much credit upon the artists, as well as upon the spirit of the proprietors of the Cataract House, who have caused this beautiful embellishment to be prepared for the adornment of their letter-sheets, bills of fare, cards, etc., thus enabling all who visit their house to carry away with them a striking and faithful memento of their visit.

One word for the Cataract House itself.—Probably there is no hotel in the country, of more extensive dimensions, better accommodations, or with more gentlemanly and obliging hosts. The house, itself, with its well ventilated corridors and elegantly furnished apartments, forms one of the objects of attraction. Its fish-ponds, cold and warm baths, splendid parlors, dining-rooms, and its admirable *cuisine*, all present a most agreeable aspect to the sojourner there, after a day's ramble among the romantic and sublime. The visitors the present season have far outnumbered those of any previous one, and just now the falls are fully thronged.

For the Western Literary Messenger.

The Butterfly.

Do not yet depart:-
Dead times revive in thee.—Wordsworth.

Gay sporter in the summer air,
In careless circles flitting,
Of dancing Childhood, free from care,
An emblem how befitting!

I gaze on thee with rapt delight,
For back in fancy carried,
While links of broken years unite,
My heart to joy is married.

The friends that formed the merry ring
In Youth's delightful measures,
To Memory's hand in fondness cling,
Like troops of laughing Pleasures.

The radiant scenes of early years,
The glorious, the enchanted,
Arise to view, mid gushing tears,
With rainbow hues still haunted.

And lost awhile to manly toils,
The Present's high beseeming,
My spirit, pleased with Memory's spoils,
Is mid them sweetly dreaming.

O linger long, thou sporter gay,
To nurse the golden vision;
For, tarrying here, thou lead'st the way
Still on through fields Elysian.

But thou art gone! and ah, like thee
The blissful dream has vanished;
The cherished friends of infancy,
Like exiled ones, are banished.

Like them and thee, I soon depart,
Though where? to what dominions?—
O grant me, God! a sinless heart,
And guide and nerve my pinions.

J. Clement.

Rotation of Crops.

There is living in Northampton county, Pennsylvania, on the banks of the Lehigh, a very aged man, whose success in falling upon a system of rotation, by which he could obtain the greatest possible yield of wheat, in a given term of years, has caused it to be generally adopted in that fertile region. It is called Sheimer's system, after the discoverer, Jacob Sheimer, whom I had the curiosity to visit at his most substantial homestead some years ago, and from whom I obtained the following account:

When a young man, with a large family of children growing around him, and dependent on him for support, he plainly perceived that under rude practice then existing, he would not be able to maintain them. He had thought over his difficulties while following his plough, and at length he determined upon his plan, which followed up without faltering, has conducted him in the decline of life to ease and affluence.

When I saw him he had resigned the active duties of his farm to his son, who was following in his footsteps: after having himself practised his system of rotation for thirty-five years, with a constant improvement in the quality of his land, which indeed had the unmistakable stamp of fertility upon it.

The farm contained one hundred acres, which was divided as nearly as possible into eight fields of 12 1-2 acres; each of which was carried through an eight years rotation.

Commencing with a fallow field, he

1st year. Manured and limed; ploughed three times, in May, June and August; harrowed and seeded one bushel and three pecks per acre of wheat, which was ploughed under.

2d. Clover seed sown on wheat in the spring, six quarts to the acre, which was pastured after harvest.

3d. Pastured clover in the spring, one bushel per acre; cut in June, and ploughed under second crop, and seeded again with wheat.

4th. Wheat—same as No. 2.

5th. Pastured early in the season, ploughed under second crop in August, and sowed wheat.

6th. Wheat again, and rye sowed on stubble.

7th. Sowed clover seed in the spring on rye.

8th. Ploughed under the clover sod and planted corn; and next season recommenced.

It will be observed that there was every year three fields in wheat, one with rye, one with corn, two with clover, and one fallow. The produce had one season reached as high as 1,400 bushels of wheat, 600 bushels of corn, and 400 bushels of rye.—*Hon. Morris Longstreth's Address.*

Salt for Hay.—Salt is good to preserve hay, (says the Boston Cultivator,) but, if farmers are not cautious, they will use too much for this purpose for the health of their animals. We have several times shown that animals have been injured, and that they have died, in consequence of using hay that was salted freely in order to keep it. Some use a half bushel, and others a bushel to the ton; but a peck is too much, as no animal having constantly a full supply of salt by free access to it, would eat a peck of salt while consuming a ton of hay. Four quarts to the ton is as much as animals will generally eat consuming a ton of hay. Coarse hay and bushes may be salted at the rate of a peck to the ton, if cattle are fed on it occasionally, and in the intervals fed on hay not salted.

Master and Man.—What an important relation is that of master and man! How it pervades the world; ascending from the lowest gradation of planter and slave, through the states of master and servant, landlord and laborer, manufacturer and artisan, till it comes to the higher degrees of rule which one cultivated man has to exercise over another, in the performance of the greatest functions. See, throughout, what difficulties and temptations encumber this relation. How boundless is the field of thought which it opens to us! how infinite the duties which it contains! how complete an exercise it is for the whole faculties of man! Observe what wretchedness is caused by a misunderstanding of this relation in domestic matters. See the selfish carelessness of those around them of men not ill-intentioned, nor unkind, perhaps, in their dealing with the world in general, but lamentably unfit for the management of a house. Then observe the effects of similar mismanagement in dealing with a country.—Look at the listless loiterers about a town; you would naturally say to yourself, "Surely this people have done all that there can be for them to do." You walk out of the town, and find the adjacent fields as listlesslooking and neglected as the men themselves. Think what a want there must be of masters of labor, that those hands and these weeds are not brought into closer contact—*The Claim of Labor.*

American Sculptors in Italy.—We have given, on the outside of this paper, some sketches, copied from the correspondence of the Boston *Atlas*, of American Painters in Italy. We copy below, from the same source, a few paragraphs upon the Sculptors who are now pursuing their labors in the land of art. Powers, Greenough and Crawford, form a *triumvirate* of which the country has just reason to be proud. Their distinctive excellence is thus pointed out by the writer in the *Atlas:*

Crawford is probably better than either in the grouping and expression of his figures. Powers excels in the beautiful finish of his marble, and Greenough certainly has a grander conception than either of them. Powers has at length accomplished his long cherished desire of sending his statue of a *Greek Slave* to the United States for exhibition, having shipped it from Leghorn for New York. It is thus spoken of by the critic:

The Slave differs from a Venus merely in the accessory of a chain on one of the lower limbs, and is decidedly the *chef d'œuvre* of modern sculpture, though not entirely free from faults—it is rather stiff when looked upon from the right side, and the lower limbs are certainly subject to the same fault. Powers commits the great fault of repeating this statue, instead of striking into the higher region of his art, and executing a group. His Eve has also been repeatedly remodeled, and the last re-production is lengthened out so as to improve the effect. He is now at work on a statue of John C. Calhoun, a few inches larger than life, after which he will execute a statue of Benjamin Franklin, for New Orleans.

Of Crawford and Greenough we have this account:

Mr. Crawford left for Florence, on his way to Venice, where he proposes spending the summer months. There is a life and spirit about his works not to be found in the studios of Powers or Greenough but he is not very prolific. The *Daughter of Herodias* is an exquisite composition representing her going for the head of St John, by order of her mother, with her timbrel and a vase. The dress of the dancing girl is elaborately executed—the *pose* naturally graceful—and the drapery worthy of high commendation. A bust of Mrs. Crawford, in which a flying veil is used to give effect to the head. finds many admirers, althoug the artists criticise it severely.

Mr. Greenough, as independent as he is bold in his designs, is understood to be quite satisfied that his Washington is finally put out of doors—it is what he wanted. He is now modelling a group which is said to be of high merit, but I have not seen it. He is also bringing out, as an episode to his own history—to commemorate the anonymous assistance he once received when almost despairing—$1,500 to enable him to study in Italy—a bas relief, representing a young student working desparingly by a dying lamp, which is replenished with oil from a vase held by a hand coming from the darkness above. Thorwaldsen conceived nearly the same design to commemorate a similar benefaction.

Another young artist, by the name of Mosher is spoken of as just commencing. Having executed several heads of merit, he has now attempted an imaginative work, a bust of *Pocahontas*, and so far as I can judge, says the correspondent of the Atlas, he has succeeded most admirably in combining classic beauties with the peculiarities with the Indian physiognomy, and the queenly expression which is said to have belonged to the savage heroine. Mosher has several orders for this work, and will yet make a noise in the world.

The World isn't what it used to be.—Every generation compared to the age it immediately succeeds, is but a further lapse from Paradise. Every grandfather is of necessity a wiser, kinder, nobler being than the grandson doomed to follow him—every grandmother chaster, gentler, more self-denying, more devoted to the beauty of goodness, than the giddy, vain, thoughtless creature, who in her time is sentenced to be grandmother to somebody, whose still increased defects will only serve to bring out the little lustre of the gentlewoman who preceded her. Man, undoubtedly, had at the first a fixed amount of goodness bestowed upon him; but this goodness, by being passed from generation to generation, has, like a very handsome piece of coin, with arms and legend in bold relief, become so worn by continual transit, that it demands the greatest activity of faith to believe that which is is now current in the world to be any portion of the identical goodness with which the human race was originally endowed.

"We shall never see such times again!"

"The world isn't what it used to be."

"When I was a boy, things hadn't come to this pass."

"The world gets wickeder and wickeder."

Since the builders of Babel were scattered, these thoughts have been voiced in every tongue. From the very discontent and fantasticalness of his nature, man looks backward at the lost Paradise of another age.

Let the poor man—the mechanic of a town—look around him. Let him in his own house, humble though it be, acknowledge the presence of a thousand comforts which, had he lived two centuries ago, he could not with a baron's wealth have purchased. Not mere creature enjoyments; but humanizing, refining pleasures, drawing man nearer to man, expanding the human heart, and imparting to humanity the truest greatness in the greatest gentleness.

We would go no step backward, but many in advance; our faith still increasing in the enlarged sympathies of men; in the reverence which man has learned and is still learning to pay towards the nature of his fellow-men; in the deep belief that whatever change may and *must* take place in the social fabric—we have that spirit of wisdom and tolerance (certainly *not* a social creature of the golden days) waxing strong among us—so strong that the fabric will be altered and repaired brick by brick, and stone by stone. Meanwhile, the scaffolding is fast growing up about it.—*Douglass Jerrold.*

The Chesapeake.—A criminal prosecution has been commenced against the officers of the *Chesapeake*, in the U. S. District Court, now sitting at Columbus.—Col. Bradbury received this morning a summons to appear before the Grand Jury at Columbus, forthwith. We understand he leaves tomorrow.—*Cincinnati Chron.*

A little girl walking in the cemetery of Pere la Chaise, at Paris, and reading one after another the praises upon the tombs of those who slept beneath, suddenly exclaimed—"I wonder where they bury all the sinners!"

Editorial Department.

J. CLEMENT, EDITOR.

Mental Culture.

It is a glorious thing to live! There is much in the world to enjoy. The fruit of the tree of life is not *half* of it bitter, and the portion that *is*, need not, much of it, be so. Those individuals who are always eating crab-apples, shake the wrong branch. Their vision is dim and consequently they make a mistake. In plain words, half the disquietude and misery daily witnessed, is the result of mental neglect. "Unrest, discontent, nay innumerable faults," says the charming Swedish romancer writer, "spring from want of mental culture." The fact is, an empty mind is one of the greatest burdens in life. Its crevices seem to be infested with innumerable vagrant fancies and untamed, frantic thoughts, which bewilder, lead astray and sadly disappoint, till one gets almost sick of the dull sameness, the weary round of daily toil. The labors of the uncultivated mind are a mere and miserable tread mill performance. One goes round and round in the same narrow and confined sphere—no change of exercise, no variety of field view; and what wonder, under these circumstances, if it seems to some, almost a luxury, "to shuffle off this mortal coil!"

It is a glorious thing to live, we repeat, but to such only as have within themselves resources for refined enjoyment. Says Miss Bremer, from whom we have before quoted, "in intellectual development—and the very highest may be arrived at in private life—the world opens itself to the eye of man, and infinite treasures are offered to the soul, more, far more than he can ever appropriate to himself." These "treasures" expand, and elevate and satisfy the inner man. The field of contemplation that is opened, constantly enlarges, and every new prospect is ennobling: the thoughts are raised by degrees higher and higher and become more and more purified, till, accustomed to lofty flights, they lose, at last, that attachment to the gross and debasing which makes man the slave of guilty passion and sometimes brings him to a level with the brute.

By mental culture we do not mean exclusively that degree of it which can be obtained by such persons only as devote their whole lives to scientific pursuits, but also that amount of mental expansion and refinement, by chaste, elegant and instructive reading, which may be obtained by almost any individual—the artizan, for instance—who diligently devotes the leisure which, under almost any circumstance, is at his command, to the enlargement of his fund of useful information. The persons who think they have no time to read, nine cases in ten, waste, in idleness or vain conversation, on an average one hour a day the year round, and one could make no inconsiderable advancement in literary knowledge in three hundred and sixty-five hours' choice and close application of the mind.

Let the reader, then, whoever he may be, however hard his daily toil, bear in mind that the pleasure of which we have spoken as the result of mental culture, may be shared *measurably*, to say the least of it, by himself. If it is lot—by no means a discouraging one—to devote ten or even twelve hours per diem to manual labor, let him do it with a newspaper in his hat or a book in his pocket, and he will find minutes almost every hour, and hours every day, which may be given to the feeding of the hungry and immortal mind.

BUFFALO MUSICAL INSTITUTE.—We call attention to the announcement of Prof. Coppock on our last page.—It would be superfluous in us to add any thing in commendation here: the reputation of Prof. C., as composer and teacher, is well known and appreciated—as his numerous and accomplished pupils give ample evidence. The establishment of an Institute, where a thorough musical education can be obtained, has long been a desideratum here, and we hail the fact of its attainment with much pleasure.

THE COLUMBIAN MAGAZINE for this month, nobly sustains the high reputation which this periodical has obtained. It is embellished with two splendid engravings, one of which is "*Christ Found in the Temple*," and the other, "*Lake Winnipisseogee, from Red Hill.*" We can vouch for the accuracy of the latter, and all others can speak a good word for its merits. In the literary department, Mrs. C. N. Butler, Mrs. Sigourney, Mrs. Osgood, Mrs. M. G. Sleeper and several other scarcely less able writers, lend a helping hand. Success to the Columbian.

TO CORRESPONDENTS.—The two poems sent by Mrs. SIGOURNEY, arrived just in season to get one of them inserted this week. Her kind remembrances of us, have, in times past, sent a ray of light into the darkest hours of our editorial life.

The poem by "D." of this city, is accepted. Let him persevere.

We must repeat that anonymous articles are very apt to be laid aside.

TO OLD SUBSCRIBERS.—We can supply our former patrons with missing copies of most numbers of the last volume, if they will let us know, free of expense, what they want to complete their files. By the way, will they not, each of them, get us a new subscriber? Some of them we know will do it, and will not all try? We strike off five hundred extra copies this week, in order to meet anticipated demands.

A NOVEL ENTERPRIZE.—The British ship Duke of Argyle, from Amoy, China, with 388 emigrants, said to be Chinese coolies, arrived at Havana about the 13th inst.

☞ Wasps—Spiders—and Magnetism.—"Do you know, sir," said Patrick O'Flecharty to us, last night, "that Magnetism was found out a long time before folks knowed it? See the wasps' nests upon the stone wall, sir: do you know, sir, how them devils make their nests? Two of them come together, sir, and pair, and then they get some mud, and set to work, and catch a spider, and then they magnetize him, sir, and put him to sleep, and lay an egg on him, and build him up in the mud, and the egg is hatched, and the grub feeds upon the spiders, and they ARE magnetized, sure enough, and keep asleep, because I've found them alive in the nests early in the spring, before the wasps are about." This was to us a new and interesting idea. We examined the nests, and found that the spiders were actually built up with mud in various cells, as nuns used to be with stone work, in "the good old times." We found also the larva or grub of the wasp, feeding upon the spiders thus strangely provided. Patrick's idea of magnetism arose undoubtedly from the spider's habit of "being such a fool as to" pretend to "be dead." The instinct of the wasp in shutting up the spider without killing him, is really wonderful.

Balloon Ascension.—Mr. J. Wise made an Ærial Voyage, embarking at Morris' Garden in this city, last Saturday afternoon, and anchored in the top of a hickory tree, near Williamsville, ten miles east. Was helped down by the good citizens of the place, and returned to the city in the evening.

☞ A paragraph is going the rounds of the papers, credited to a Lower Sandusky paper, stating that a number of plates, inscribed with hieroglyphics, had been discovered in an ancient mound near that place, and intimating that when deciphered, they might afford some information of a lost race of people. Mr. E. G. Squier, in a letter to Prof. Silliman, says he has examined the plates, and the hieroglyphics are nothing more or less than *discolorations* caused either by the infiltration of a mineral solution between the laminæ, or by its presence at the period of crystalization. The material is very well known as *graphic* or *hieroglyphic mica*, a deposit of which occurs upon the Schuylkill, not far above Philadelphia. Although the discoloration, following the planes of crystalization, falls in places into right lines, it seems utterly unaccountable that they were mistaken for the work of man. This is another illustration of the very loose manner in which facts relating to our antiquities have been placed before the world:—a looseness, unfortunately, not entirely peculiar to newspaper statements.

A Grammar of the English Language; adapted to the Schools of America. By Joseph R. Chandler, editor the United States Gazette. Philadelphia: Thomas, Cowperthwait & Co. 1847.

This is a new grammar in which care has been taken to simplify the system by means of preparatory lessons for the beginner. Nothing more than such a book as this, in the hands of a judicious teacher, is necessary to ensure rapid progress in the pupil. It is highly expedient that this study should be pursued early in life, before the habits of verbal expression have become fixed.

For sale by the Deaf and Dumb Bookseller at Weyburn's.

Foreign Items.

The Washington left Southampton on the 10th, her regular day, but before she reached the Needles it was found that the furnace bars were partially burned; they were however replaced, and these in turn were affected, so that it became evidently unsafe to continue the voyage; under these circumstances, her head was turned at half past 3 A. M. on Sunday, and she arrived in Southampton again on the afternoon of the same day.

At a meeting of the passengers, a committee of investigation was appointed, consisting of nine persons altogether uninterested. This committee, after examining the coal and the furnaces, assisted by the officers of the vessel and the engineers, made a report, in which they arrived at the conclusion that from all the evidence brought before them, they can only ascribe the inability of the ship to pursue her voyage to the bad quality of coal employed, a species of anthracite, resembling somewhat the American in appearance, but which destroyed two sets of furnace bars within the short space of 24 hours.

The magnificent weather prevailing throughout England, which made sure an early and good harvest, it was thought would prevent any recovery of the prices of breadstuffs noted by the Britannia, which reached here on the 17th inst.

The great decline in the prices of Corn in the first week of July, was fully established in the London and Liverpool markets at the commencement of the week—but a frightful storm on Wednesday, accompanied with heavy rain, having swept over the metropolis and extended its ravages over most parts of the country, the downward tendency of the market was checked, and indeed an improvement of 1s to 2s per quarter took place.

The reports from all the markets of Europe are of the most promising character.

The rumors too of reappearance of rot among the potatoes had ceased—even in Ireland—and the early potatoes brought to market were found to be quite sound.

Willmer & Smith say—"Portions of the large fleet of vessels which lately passed the Dardanelles, laden with with wheat for ports in the Mediterranean and Western Europe, continue to arrive, and by the last advices no fewer than 500 passed the same strait in three days, to load wheat in the ports of the Danube and the Black Sea."

The quarterly revenue returns of England are spoken of as highly satisfactory—considering the general derangement of trade. The decreased comparative consumption of cotton wool, amounted however, to the enormous figure of 10,000 bales weekly.

The arrival out of the Cambria from this side had relieved, by the quotations she carried of foreign exchange, all apprehension of a farther drain of specie, and the effect of the news was to give a lift to Consols. Consols improved from 88⅝ to 88¾.

There is little or nothing of interest in our papapers as to the affairs of England. Parliament is hurrying through business of form preparatory to adjournment.

The installation of Prince Albert as Chancellor of Cambridge and the visit of the Queen, was the exciting topic a few days before the leaving of the steamer. The ceremony attracted not only her Majesty but almost all her Ministers and the members of the Court. The Duke of Wellington, Lord John Russell, Sir Robert Peel, and a great many Bishops and other personages of distinc-

tion were present, Prince Waldemar of Prussia, among them.

At the ceremony of installation, an ode in honor of the Prince and the occasion, was sung. It was written by Wordsworth, who, as our readers are aware, is Poet Laureate. It is well enough in its way, but does little honor to the author of the Excursion. The festivities on this occasion were numerous and splendid. Her Majesty attended all.

Ireland is glutted with provisions, and the merchants who have been hoarding will be losers.

It is stated in a private letter from Clonmel, that the merchants of that town, who have realized such immense profits by hoarding up their stocks of meal, &c., are now obliged to destroy great quantities of it, through its becoming heated in their stores. The river Suir now receives on its placid bosom what would have subsisted many who have gone off the stage forever.

The report about the marriage of the Duke and Miss Coutts is scouted as impertinent nonsense.

Paris dates are to the 13th. The extraordinary and scandalous trial of M. Teste furnishes the chief staple of the newspapers.

On the evening of Monday, 12th, after retiring from the audience before the Chamber of Peers, when most damning evidence was produced against him, M. Teste attempted suicide. The *London News* of the 15th gives these particulars of the occurence:

The bewildering doubts in which the report of the proceedings, and the air of confident innocence of the accused, left the public were soon destined to be dispelled, and this curious drama was to receive an unforeseen *denouement*. At half-past eight o'clock in the evening of Monday the report of fire arms was heard to issue from the apartments in the Luxembourg, occupied by the prisoner. The persons in charge and the guards instantly rushed to the rooms, and found that M. Teste had attempted suicide with pistols, but without success.

It appears that he first placed a pistol in his mouth and snapped it, but it missed fire. Provided with a second, he placed the mouth of the barrel close against his breast and discharged it. The ball under these circumstances seems not to have acquired force enough to enter the body.—It fell to the ground, merely leaving a black mark on the waistcoat and the skin, but without producing any contusion, as was incorrectly stated in some of the published accounts. The Chancellor, the grand referendary, and the members of the committee of the chamber appointed to conduct the trial, were immediately summoned, and the commissary of police of the district, as well as the prefect of the police attended.

The procureur-general and the police authorities made a *proces verbal* of the transaction. M. Teste was ordered to be kept *au secret*, with proper precautions against any attempt at self-destruction. The only person who visited M. Teste after his retirement to his apartment yesterday was his son, who is a member of the Chamber of Deputies. This circumstance has given rise to the report that the loaded pistols were thus supplied to him. A report is mentioned in Galignani's paper, that as he was leaving the Court on Monday evening, he was heard to exclaim: "Je suis un homme perdu!"

A report had been circulated in London of the illness of Louis Phillippe. But it seems unfounded—the Paris papers of the 1st, have this paragraph:

The King and Queen of the Belgians, with their son, the Duke of Brabant, are at Neuilly. The King and Queen of the French and Madame Adelaide, with the Duchess of Orleans and her children, are at Dreux, attending the religious solemnities which mark the anniversary of the death of the Duke of Orleans, which took place on July 13.

The same paper gives this account of the state of the weather in France:

The weather continues to be highly favorable. The late rains have been succeeded by an unclouded firmanent and high temperature. At six in the morning on Monday, the thermometer in the shade stood at 70½ deg., at noon it rose to 86 deg., and at two o'clock it attained 88½ deg., an unusual temperature in these latitudes.

It is said that the French government will grant the petition of Jerome Buonaparte to return to France.

The ports are filled with grain laden ships. The *Debats* reports the arrival of 450,000 tons at Marseilles; and on the 28th and 29th ult., six large American ships delivered at Havre, 28,523 barrels of flour, 17,602 sacks, or 1,500 tons of wheat and 1,453 sacks of rye.

The crops of wheat and rye are superb, the potatoes are promising, but oats and barley lacked rain. The consequence of these favorable circumstances is a general fall in the price of grain in the south and east of France.

The civil war in Portugal has come to a bloodless end. The Junta has submitted, and Oporto is occupied by the Spanish under the orders of Gen. Concha. The English are to take possession of Castle of Foy, and to bring in one or two steamers.

It is confidently expected at Paris that Donna Isabella will abdicate the throne of Spain, and that the Duchess of Montpensier will be established in her seat. Isabella is still attacked on all sides. With unprincipled ministers, treacherous friends, an alienated husband, and the mercenary French organs full of abuse of her character, she she seems to be literally at her wits' end. We find the following paragrah in the London Globe:

There is a strange story in one of the Madrid journals. It is stated that the Queen, when she last took an airing, without the escort of her father-in-law, suddenly disappeared, in company with a gentleman who is not named, but whose dress is very minutely described. According to this account, the Queen and her friend were for a long time wandering God knows where. This statement is denied by some of the other journals, and treated as an abominable calumny—as we dare say it is. Another story is, that poor Don Francis, the King of Spain, is kept so short of money by his wife, that he has been compelled to dismiss all his music-masters except one, who generously offered to remain without pay. A third story tells us of some old man who visited the King, and urged him to be reconciled with the Queen, on which his Majesty thanked him and sighed. It is a pity that the dispute between these royal personages should have reached such a height that gossip of this kind should find its way into the journals.

The dearness of food in Holland has produced serious disturbances among the people. In the town of Groningen, troops were called out. They made use of their arms, and it is said killed four persons and wounded twelve, some of them very seriously. Most of the wounded persons had taken no part in the disturbances, having been present only as spectators. On the morning of the 29th, order was re-established.

Abd-el-Kader had been attacked by the Emperor of Morocco, whose troops he defeated with great slaughter, and afterward put to death their commander, whom he had taken.

London Corn Exchange. July 14.

The accounts from all parts of the kingdom continue to give very favorable reports of the progress made by the growing grain crops to maturity; and if the present forcing weather last much longer, we may expect harvest operations to be pretty generally commenced in the south about the close of the month.

Whether a more gradual ripening of the grain would not have been more beneficial may be questioned, such extreme heat as that lately experienced being calculated to cause the corn to turn too suddenly. At the same time we we must remark that the complaints of blight and red gum are on the increase, and though these accounts are probably exaggerated, still we fear that the yield of wheat may not prove so plentiful as could be wished.

At all the markets held since Monday, prices of wheat have tended upwards; indeed, the rise in some instances has been important, and nowhere less than 2s. to 3s. per quarter. The cause of the advance has been the inadequacy of the supply to meet the consumptive demand, the deliveries from the growers having nearly ceased.

At our market today there was very little English wheat on sale, and a clearing of the Essex and Kent stands was speedily made at prices rather exceeding those of Monday last.

Foreign wheat was taken to a fair extent by buyers from the different parts of the country, at rather above previous prices.

The business in flour was not of much importance, but the late advance on American was well maintained.

Barley, beans, peas, and Indian corn were but little enquired for, and quotations for these articles remained much the same as in the beginning of the week.

The arrivals of oats were quite moderate, and having again rather an improved inquiry, former rates were slightly exceeded, particularly for good fresh parcels of Riga.

Liverpool.—There has been more firmness in the market since our last report, and prices, which had a declining tendency, have rather rallied. On the 6th there was a very full attendance of both local and country millers, and for all useful descriptions of British and foreign wheat a lively and ready sale at 1d to 2d below our last quotations. American flour, of good fresh quality, being in very active request, as well from consumers as for investment, the operations were considerble; and partly recovering the above named depression, prime Western brands realized 35s 6d to 36s, the trade ruling firm, and few parcels offering at the close of business. Barley, Beans and Peas were cheaper, and each difficult of sale. Oats, although rather more saleable, were also further degressed in value; and Oatmeal nearly without inquiry. Indian Corn, assuming an improved aspect, was taken off more freely at a slight amendment upon late prices: and Indian Meal was in moderate demand on the terms last noted. Since the 6th inst. the market has continued firm, and the weather has in some degree promoted an extended demand, partly speculative, for wheat, Indian corn, and flour, each of these articles acquiring a moderate advance on the current rates of that day. Yesterday was in tolerably good demand at an advance of 3d to 4d on Tuesday's rates. The best brands of Western Canal Flour were in demand at 37s. other kinds in proportion at an amendment of 1s per qr. Indian Corn was inquired for, but all other articles met a limited sale at our quotations.

Later from Gen. Taylor's Camp.

From the N, O. Picayune, July 22.

We are to day placed in possession of farther advices from the camp of Gen. Taylor by the receipt of our correspondence. We have also the Matamoros Flag, of the 17th inst., three days later than the number of that paper before received.

One of our letters which has not come to hand contains, as we learn by a private letter, an account of a sumptuous dinner given at Monterey on the 4th of July by the merchants and principal citizens of the to Gen. Taylor. The principal incident at the dinner was a speech from General Taylor, which was called forth by a toast associating his name with the Presidency. The speech was quite unexpected and listened to with great interest and aroused the greatest enthusiasm.

We understand that it was in the same spirit with the recent letters which have been published from him—that if he consented to the use of his name, it was at the call of the people of his country; and that if elected he should serve to the best of his ability for the benefit of the whole country, not of a party.

We are informed that it is the present purpose of Gen. Taylor to return to the United States some time in November next, should his military duties at that time allow him to pay a visit to his family.

It is represented to us that Gen. Taylor speaks freely upon the subject of moving to San Louis Potosi. It is said he has written the War Department, advising that should it have been determined upon that no advance shall be made to San Luis, he has now as many troops as are required to maintain his line, and may even spare a regiment from his present force; but that if he is expected to advance into the interior of Mexico, ten thousand men will be necessary.

The Flag appears to have some apprehensions about predatory bands of Mexicans in that vicinity.

New York, Aug. 2, 7½ P. M.

The *Hibernia* arrived about 9 o'clock this morning, having made her passage in 13 days.

The following are the Liverpool quotations of the 19th ult.

Flour, sweet 34a35s, sour do 27a29s. Wheat, red 9s 4d a 9s 8d, white 9s 10d a 10s 2d. Beef prime mess 88s to 94s per tierce, 55a60s per bbl. Pork, new mess 76s to 78s, old mess 68s to 72s, new prime 60s to 62s.

A Liverpool paper of the 20th ult, states that during the last 10 days the weather has been almost uninterruptedly fine, and each day strengthens the expectations entertained of an abundant harvest of grain, throughout Ireland and all Europe. The heavy decline in corn which took place at the beginning of the month, was checked since the 13th. The market has again given way. The prospects of receiving still larger supplies from the United States and by the way of the Mediteranean, added to the fine weather which prevails in our quarters oppressed the market, which presents every aspect of a downward movement.

The potato crop is represented to be free from danger, and contributed not a little to affect prices. During the last week however the market has been much firmer. The prices of the 13th inst became current and were maintained throughout the week, and yesterday in Mark Lane a farther advance of 1s took place. The trade in Indian Corn was however quite paralyzed, and Flour in barrels was quite neglected.

The Cotton Market has been steady since the 10th. Sales pretty large and a considerable portion taken on speculation and for export.

In cured provisions a limited business. Butter has receded. Transactions in Bacon are limited —prices receded through to 4s. Pork is in limited demand. American Hams are neglected, and prices, if anything, lower.

The reports from manufacturing districts are of a satisfactory and encouraging character.—Some few failures are noticed in the Manchester reports, but they are not to a very great extent. The woolen trade in Yorkshire is resuming a healthy position.

NEW YORK, July 29—7½ P. M.

A despatch from Richmond says, no mail beyond Petersburg.

A letter from Buenos Ayres, June 7th says:—It was generally believed there would be no settlement of the Rio Plate question. Mr. Harris had been consulted by Plenipotentiaries, and the proposals were today before him, and he had endeavored to induce those to accept of them, but without success.

By the arrival at New Orleans, of the steamer *James L. Day*, we have advices from the Brazos of the 18th inst. The Mexican forces at San Luis Potosi were variously estimated, by some at 14,000. They are commanded by Gen. Delancia, who it was reported, would join Santa Anna with 9,000 regulars. Gen. Wool's troops were in good health. Gen. Taylor has twelve days rations. 800 wagons and 25 mules were waiting to move forward. His force amounted to 2,900 men.

Gen. Urrea, it is positively stated, was at Victoria recently, and arrested the Governor of that place and sent him to the Capital, charged with treason against the Government; it is also said that Canales had been shot by him, for treasonable correspondence being found in his possession. The department of Tamaulipas has been put under contributions for a large sum of money. Gen. Urrea departed to enforce its collection with the bayonet. It was reported that he left Victoria for Tampico, but it was not credited. Caravajal is reported moving all over the country, letting few traders escape. The intended march of the Mexicans from San Luis against Gen. Wool, seems to have been abandoned.

A San Luis paper says that despatches ordering Taylor to join Scott via San Luis, had been captured, and the Mexicans are not certain that old Zuck will march upon that place. It was rumored at San Luis on the 8th, that Gen. Scott had marched for Puebla, but countermarched on learning that resistance would be offered when within 25 miles of the Capital.

RIOT AT PITTSBURGH.—There was a riot at Pittsburgh last night at a house of ill fame. Stones were thrown at the house, and the inmates fired upon the crowd in the street, wounding three mortally.

REFORM OF THE LAW PRACTICE.—The N. Y. True Sun speaks of the progress made in the labors of the reformers of the practice, Messrs. Loomis, Hill and Graham, and gives assurance that any apprehension that may have been felt of the character or extent of their labors will be removed by the first report to the Legislature next fall. They have already made, it says, considerable progress in their arduous undertaking, and are united in a resolve to reject every useless formula and construct the most simple and effective system that can be devised.

HAPPINESS ESSENTIAL TO LONGEVITY.—Longevity and happiness if not invariably, are generally, co-incident. If there may be happiness without longevity there cannot be longevity without happiness. Unless the state of the body be that of tolerable health, and the state the mind that of tolerable enjoyment, long life is unattainable: these physical and mental conditions no longer existing, the desire of life and the power of retaining it cease together. An advanced term of life and decrepitude are commonly conceived to be synonymous: the extension of life is vulgarly supposed to be the protraction of the period of infirmity and suffering, that period which is characterised by a progressive diminution of the power of sensation, and a consequent and proportionate loss of the power of enjoyment, the "sans teeth, sans eyes, sans taste, sans every thing." But this is so far from being true, that it is not within the compass of human power to protract in any sensible degree the period of old age properly so called, that is, the stage of decrepitude. In this stage of existence, the physical changes that successively take place clog, day by day, the vital machinery, until it can no longer play. In a space of time, fixed within narrow limits, the flame of life must then inevitably expire, for the processes that feed it fail. But though, when fully come, the term of old age cannot be extended, the coming of the term may be postponed. To the preceding stage, an indefinite number of years may be added. And this is a fact of the deepest interest to human nature.—*Philosophy of Health, by Southwood Smith, M. D.*

☞ The following paragraph beautifully illustrates the very pleasant way the English have of extending their benignant rule over the Nations of the East. Why should not John Bull be permitted to give us lectures on the enormity of Gen. SCOTT'S management of the campaign in Mexico?

THE BOOTY TAKEN IN SCINDE.—We understand that a grant has been made to the captors of the booty taken in Scinde by the troops under the command of Major General Sir Charles Napier, in February and March, 1843. The amount of bullion and treasure is stated at upwards of £400,000—what the value of jewels, &c., may be is not known, but they will probably realize £100,000; so that not less than half a million sterling will be divided among the captors. To the troops who were stationed in Scinde at the time of the battles of Meanee and Hyderabad, but who were not actually present in those battles, a specific portion (we believe one-sixth) is allotted. The residue is given to the forces engaged in the battles, after deducting what they have already received under the head of extra batta on this account. The stamp duty paid into the Bank of England on account of the bullion and treasure amounts to upwards of £21,000.—*Allen's Indian Mail.*

☞ A large Paper Mill, worked by steam, is about to be put in operation at Millwaukee, by Messrs. LUDINGTON & GARLAND of that city.—The *Sentinel & Gazette* says it is intended to manufacture a first rate article, and in quantities sufficient to supply the Territory and any demand there may be from Northern Indiana and Illinois.

FROGS.—A plague of frogs has appeared in St. Lawrence, N. Y. Millions of small green frogs cover the road leading from Plattsburg to Cumberland Head. Thousands of them are in the ruts, through the sand roads, and are crushed by the wheels of the passing wagons.

For the Western Literary Messenger

Life.

Oh, ho! life is a funny thing,
Free and wild, wildly free:
Made to frolic, laugh and sing,
What hath care to do with me?
Stepping on the flowery path, in life's first joy,
With a bounding life-pulse, so spake the *boy*.

Heigh ho! life is a mystic thing,
How it mingles light and shade!
Hope, fear, love, oh how they fling
Gloom into joy! *Why am I made?*
Pausing in the heart-strife, in life's deep truth,
With a long, sad, soulward gaze, so spake the *youth*.

Ah me! life is a solemn thing,
And battle is its perfect type;
Its hopes are only born to sting,
Its fruits are rotten ere they're ripe:
Sighing o'er the backward view of life's long span,
Taught in the trial-school, so spake the *man*.

JULY, 1847. B.

A BRAVE BOY.—We heard of a noble act, by a boy of only twelve years of age. It was called out by an accident which occurred at the steamboat *Michigan* on Wednesday last:

A gentleman and lady were stepping on board the steamer, and a number of boys endeavored to go on board at the same time, but an officer ordered them off. In turning quickly to get off the ship, one of the lads fell off the plank into the water, and the splash was the first intimation his comrades had of his danger. A brother of the drowning boy, a lad of some twelve years, was near by, and the moment he heard him strike the water he sprang in to his rescue, and actually succeeded in buoying him up until both were helped out. That boy will be heard of hereafter.—*Chicago Com. Adv.*

DEATH BY LIGHTNING.—The storm of Thursday after noon passed over the village of Bethel (town of Danbury, Ct.) and Mr. WILLARD TAYLOR, recently from South America, and who was on a visit to his mother, while standing in the door of her house, was struck by lightning and instantly killed.

LAKE IMPORTS FROM COMMENCEMENT OF NAVIGATION TO AUGUST, FOR FIVE SEASONS.

The following comparative table of the imports of a few leading articles from the commencement of navigation to August, presents an increase this season over last in flour, to the extent of 550,121 barrels—wheat 6,320,550 bushels, and corn 865,372 bushels; and over the season of 1845, 968,111 barrels of flour—6,960,972 bushels of wheat, and 1,481,430 bushels of corn.

Ashes have fallen off soundly, and the demand which has existed thus far this season for almost every description has crippled the means of the stave and lumber dealers, and deterred them from pushing on their respective branches. The mid-summer months having set in, and much of the rolling freight disposed of, this leaway may yet possibly be made good:

	1847	1846	1845	1844	1843

BUFFALO MUSICAL INSTITUTE FOR YOUNG LADIES.

At the residence of Prof. W. R. Coppock—Composer and Teacher of the Piano Forte, Organ, Singing and Composition.

An institute devoted exclusively to Musical Education is not yet common in this country; but in Europe the test of experience fully shows its great advantages over the too general superficial manner in which the important part of polite education is acquired. The advantages this institution offers to those desirous of completing their studies as Organists or practical players of the Piano Forte, together with a thorough system of imparting the same to others is fully established by the many precedents of the past 18 years. The pupils are constantly guarded in their practice, against all bad habits, and from the various stages of progress they may be in, are continually stimulated to effort and industry, by association with each other. The family too, are all players, and the theory is amusingly discussed, impressing its rules in a more pleasing manner, and more lasting upon the understanding, than by the mere dry study of an elaborate book. Music is composed and arranged from time to time, showing the various styles and harmonies analytically, and adapted for performance on several Pianos at the same time. This teaches a thorough knowledge of counting, and dividing passages into their given time. Vocal music is particularly attended to, and when the pupil has a moderate share of talent, we hesitate not to say, a correct and pleasing singer can be made. The Piano Fortes used are all new, and of the finest quality, and every inducement will be given to render the true spirit with us profitable. The building is commodious, and has a fine garden attached, with Green houses, Bathing rooms, &c., and is pleasantly situated in Seventh street, between Niagara Street, and the Falls rail road, and about midway to Prospect Hill.

Terms made known upon application at the Institute, or by mail, post paid, directed Prof. Coppock, Buffalo

Prof. Coppock, keeps constantly a choice selection of Piano Fortes for sale.

Buffalo, August 3, 1847.

PRINTERS' FURNISHING WAREHOUSE.

WILLIAM PRESCOTT, Manufacturer of Printing Inks, No. 6, United States Hotel Block, Pearl st., Buffalo Printing Presses, Metal and Wood Type, Cards, and every other description of Printers' materials constantly on hand at New York prices, adding transportation. Also, sole Agent for the sale of C J Gayler's Patent Double, and Improved Single Salamander Book Sales a18 3m.

REMOVAL.

WILLIAM J. MAY has removed to No 274 Main St, in Kremlin Stores, where he will be happy to see his old customers. One price, good goods, small profits and fair dealing, will always be the rule at No. 274 au17 3m.

WESTERN
LITERARY MESSENGER.

VOLUME IX. BUFFALO, SATURDAY, AUGUST 14, 1847. NUMBER II.

For the Western Literary Messenger.

The Transplanted Flower.*

How beautiful, how beautiful, in childhood's rosy morn,
While innocence bedews the heart and grief is yet unborn,
To see the tender bud unfold, and, ere its leaves are froze,
To have it borne away to heaven, to be at once a rose.

Such is its lot, the budding one, its parents' fond delight,
Whose absence leaves their bleeding hearts in sorrow's murky night;
Retaining still the fragrance of its native Holy Land,
The messenger has called it back in glory to expand.

J. CLEMENT.

* Died, at Lockport, N. Y., June 27th, Julia Frances, daughter of Joseph and Cynthia D. Carpenter, aged five years.

For the Western Literary Messenger

The False Vow.

BY ARIEL.

CONCLUDED.

Long years had been added to the dusty growth of time, since the occurrence of the events above related. I had been called away from my native city, and for ten years was a wanderer in strange lands and among strange people. But the days of my wandering were over, and it was with the feelings of a long banished exile that I once more beheld the shores of my much loved, native land.

I stood again in my native city. Time had wrought wondrous changes in its outward appearance. In size it had nearly doubled, and places which I had left wide and silent commons, were now compactly built, and resounded with the busy hum of thronging life. The obliterating hand of innovation was visible at every step.—And while time had been busily working these changes in the appearance of my native city, ten years had not been idle among my acquaintances and friends. Some had been laid beneath the silent turf; others were scattered far and near, and others still were so changed that I could no longer recognise them—changed not only in external appearance, but also in their domestic relations. My friend had likewise left his home soon after my departure, and had gained a reputation and a name in one of the western states. He had never married, and was enjoying the indpendence of bachelor life, esteemed by all his acquaintances, and loved by all who knew him.

One evening, soon after my return, I was strolling thro'some of the well remembered streets in a part of the city which had become comparatively old. It was in the month of August and on a lovely evening; the bright full moon was in the glory of her nocturnal majesty, with countless stars for her maids of honor. It was an evening well calculated to awaken a pensive mood, and particularly so in me, as I wandered through the streets, remarking at nearly every step some object around which were centred many youthful associations, and which striking a train of thought, slumbering for years, would call around me incidents and scenes long since forgotten, with all the vividness of recent events.

I came before a gloomy and dimly lighted shop, whose three emblematic balls, swinging over its portal, told the business and the calling of the occupant. No name was above the door; the three gilded balls themselves were enough to exhibit to the world in signification of his calling. Ten years before and a pawn-brokers shop was a thing unknown in my native city; but increase of population had brought with it the usual increase of poverty and want, as well as those occupations whose gains are wrung from the necessities and destitution of the unfortunate. In the dimly lighted window of this shop were scattered various articles of almost every description and value, and which having been unredeemed, were exposed for sale. Could those inanimate objects have written their own history, what soul-moving tales might they not have told! I stood and gazed, throwing around each article as it met my eye an imaginary history. There was a bracelet whose plain setting seemed to show, that the braids of auburn hair which composed it were considered by its former owner as of the greater value; perhaps it was the hair of some friend now dead, and endeared by the associations of many happy hours; perhaps shorn from the tresses of a mother and hallowed by filial affection. That locket from which the miniature had been taken, may have been a gift of love from the hand of him who had won the heart when the world was bright, and before the darkness of evil days had thrown its gloom over the soul; who knows but that the trinket may have been worn many a day upon a heart which beat responsive to every thought of him whose counterpart it had once enclosed? who can tell the bitter tears which had bedewed it, before the mind would consent to part with an object around which clustered so many endearing recollections.

The web of fancy which I was weaving around these objects of my interest, was suddenly broken by the arrival of a female, who, with hasty step, approached the pawn-brokers shop. She did not perceive me, for I stood at some little distance from the window, and in the shade cast by a neighboring house. She was poorly clad, though

cleanly, her whole attire and demeanor betokening extreme poverty. She passed the window slowly, gazing into the shop as she did so, and after passing a few paces beyond, turned and came back, and then again moved on, as though undecided to enter. Her actions interested me, and filled as my mind was with the pictures of imaginary interest which I had woven around the various objects exposed in the window, I determined to learn as much as was possible of the true tale which might be here revealed.

The object of my observation came back for the third time after going but a few steps, and finally stopped before the pawn-broker's shop.—Looking up and down the now deserted street to see if passers by were coming, she approached the door and extended her hand to raise the latch, but instantly withdrew it. Hesitation and indecision characterised her whole conduct, as though her mind was not yet fully made up as to the step she was about to take. She stood close beside the window, and the lamp hanging within fell full upon her face, revealing features delicate and regular, but strongly marked by a settled expression of melancholy and of care. A flitting thought seemed to connect her in my mind with a face I had seen before, but the impression vanished as soon as formed. Drawing from her finger a ring, she held it to the light and looked upon it long and affectionately; and as the rays of the lamp shone upon the three white jewels with which it was adorned, casting a reflection from the sparkling stones into her eyes—once perhaps as bright as they—I could perceive a tear drop gather on her eyelid and roll down her cheek. I would have given much to know the thoughts of sadness then passing through her mind as she thus regarded this trinket, inestimable to her perhaps as being connected with youthful years and with days of happiness. Perhaps it was one of the few remaining links that connected her with scenes which threw their glad shadows and sunshine over days gone by; perhaps a reminiscence of one who possessed her heart, and whom lapse of time had not been able to drive from the memory. It is truly a great and indeed almost the only consolation of the miserable and the unfortunate, that they can cast back the memory to scenes of happier days, and driving from the mind the consciousness of present evil, live only in the ideal world which such recollections create. How doubly precious then must be every relic, which can assist in promoting such enjoyment. But this poor creature seemed compelled to part with this trifle—evidently of the greatest value to her—for the purpose, perhaps, of procuring bread for herself, or for little ones more dear than self. She pressed it repeatedly to her lips, and hastily drying the tears which had bedewed her face, started as though seized with a sudden energy, and entered the shop. Stern necessity had gained the victory! the iron hand of want had laid its cold touch upon her heart, driving from it for a time the sweet reminiscences of earlier years, whose smouldering flames had burst forth with a dying brilliance, as she stood sunken in thought before the pawn-brokers window.

How cold and heartless must the manner of that man of business have seemed to her who had just passed through such an ordeal, as he critically examined the jewel offered for his inspection. He knew not the value which circumstances had thrown around that ring; it had for him but the intrinsic value of the materials alone. He thought not of the hot tears which had bedewed, nor the sighs which had embalmed that trinket before it reached his hands, or, if he did, it was but to calculate in his sordid heart the increased gain which might be wrung from the more than ordinary misery which compelled its sale. His avocation had long driven all charity from his heart; his was an every day soul, into which no ray of sympathy could penetrate. He named the pittance he was willing to give for the ring, a sum much below its real value, with the usual privilege of redemption. She took the trifle offered her and with it a ticket of redemption, in the hope—alas! her appearance betokened that it was but another of the sweet though false delusions of the charmer which had so often before beguiled her—that better days would come, when she might recover possession of this memento of earlier days, and again refresh her heart with the many recollections which those three inanimate stones could revive.

As she left the pawnbroker's shop and passed close beside me, I heard a sob; poor thing! the overburthened heart which had thus offered up one of its dearest treasures upon the altar of necessity, must find some outlet for its feelings, or break. Deeply interested in the fate of this unfortunate woman, who had evidently seen better days, I followed her, determined to know more of her history and of her misfortunes. My interest was the more strongly excited, since I could not drive from my mind the thought which connected her features with some one whom I had known or seen years before; yet all was vague and indistinct, nor could I associate her with a single person or object which my power of memory was able to call around me. She passed hastily along several streets, and finally striking down a gloomy, alley-like passage, entered a large but dilapidated and dirty building, whose peculiar construction—it being divided into numerous entrances, and rooms separated from the other, each one apparently occupied by a family—seemed to design it for the poorest classes. Indeed everything in and about the building and its inhabitants, plainly betokened that poverty and want held undisputed reign within its walls.

Before many days elapsed I went to visit the object of my interest. I inquired for her from one of the occupants of the part she had entered, describing her appearance, for I knew not her

name. "O! you want Mrs. F.; she lives in there." was the answer. The name was one which had fallen upon my ear before; and after a moment's reflection, the whole truth burst, like a blaze of light upon my mind. I entered the room indicated, and before me stood the once beautiful, the once happy and adored Flora. The occupant of this miserable room was she who had once been the brightest gem of the social party, whose smiles and favors all had sought, and around whose pathway only the roses of life, divested of every thorn, seemed strewn: whose future then promised a succession of nothing but happy years, with not a cloud to darken the fair prospect spread out before her. But now how changed in circumstances, how altered in appearance. The animated, happy look had been succeeded by the dull expression of melancholy and sorrow; the cheeks fresh with the bloom of health, were now sunken and blanched; her dark hair already began to show signs of a change which in happy lives comes not until late; and the sunken eyes, dimmed and lustreless, retained no trace of their once sparkling life. The hand of care and of grief had evidently implanted more wrinkles upon her brow than the hand of time, and premature old age was visible in her features and in her form; she seemed to be at least seven and thirty years of age, though I well knew she could not be more than eight or nine and twenty. To me the change was as unexpected as it was sudden When I last beheld her she was in the bloom and beauty of nineteen summers, the lovely and adored; she stood before the altar upon that era so important to woman's heart, with the myrtle wreath entwined among the locks of her rich, dark hair. But since then she had evidently drank the cup of life's bitterness to its very dregs; the happiness which then seemed to dawn upon her, was but an illusion, soon to fade and pass away.

I called upon her several times, and soon gained much of her confidence; for the days when I had first seen her, and the mutual friends of that happy period, were the connecting links between her confidence and mine. Her husband, she told me, had died about a year before, leaving her with two children, the youngest of whom had been a few months after, laid beside his father. The relatives from whom she could claim assistance, were either dead or afar off, and her very existence had long depended upon her own exertions. One day, after we had rolled back the tide of ten years' time, and had recalled the events which then transpired and the actors in them; after I had again repeated all I knew in relation to my friend, and had returned to her the ring with which she had so unwillingly parted, and which, as she took it, she kissed again and again—the fountains of her confidence were fully opened, and she related to me in detail, the history of her acquaintance with my friend, of her marriage, and of her life since that time. Most bitterly had she atoned for that false vow; from that event she dated her unhappiness. She confessed that she never loved him to whom she had been united, and that she consented to become his wife while almost maddened at the thought, that my friend had scorned and rejected the affection she bestowed upon him.

"That ring"—said she, once more pressing it to her thin lips, while her eyes brightened up with somewhat of their original brilliance—"was the only memento I possessed of him. He placed it upon my finger as we were returning one beautiful evening from the place where we had first met, bidding me keep it as a token of our friendship; and in all the vicissitudes through which I have since passed, it has been treasured as the only remaining object which connected me with days of happiness. I have often, during the past ten years, looked upon that ring, and—lost in the reminiscences it revived—been carried back in imagination, to those days of joy, forgetting at such times, for hours, the unhappiness which surrounded me. Alas! so much the more bitter were my waking moments, after having lived in such a world of imaginary joy, It had for me a priceless worth; it was a talisman with which I could at will, dissipate the dark clouds of the present, and throw around me the bright sunshine of happiness. You may wonder that I have so long cherished his memory in my heart, and that I retain, at this late day so warm a recollection of one who rejected my affection, but he was connected with and participated in my last days of unalloyed happiness, he was associated with the first warm feelings of my young heart;

> "Like a rose in the wilderness
> Blooming and free;
> Like a fount in the desert,
> Is his love to me."

And as I now look back through the weary waste of years which my unwilling feet have trodden, his friendship is the first bright flower which gladdens my eye, the first clear fount whose sweet influence falls like the dew of Heaven upon my wasted heart. I know that such recollections should have found no abiding place within my mind; but I could not endure that my memory and thoughts should dwell upon the events of the past ten years, and in looking beyond them to the gladsome days which preceded, he is so intimately connected with almost every thought and scene which then transpired, that should I expel him from my mind, it would be striking out the brightest and sunniest page in the history of my life. Alas! I have not so many bright and sunny leaves, that I can afford to lose that one, without leaving a void in my heart which could never be refilled.

"But still my conscience does not now reproach me with having failed in any duty to him who became my husband. If not happy, I had at least been brought to regard my lot with resignation, and I might almost say, with contentment. During the period of which I speak, he was affectionate and kind, and seemed to do all in his power

to promote my happiness. But darker days came upon him and things changed. Misfortunes in business and the failure of almost every project, brought despair and discouragement upon his mind. He was not so constituted as to bear up under reverses, or to be incited by discouragements to renewed exertions. He yielded to the despondency which had seized him, and sought excitement and distraction in the use of intoxicating drinks. From that time forward he continued to sink lower and lower, until at last no helping hand could save, no warning word recall. Abandoned by all his friends, there was none left but myself to care for him, and I too was strongly urged to abandon him to his fate. The very relatives who had been mainly instrumental in promoting our union, now came forward with offers of assistance on condition that I would leave him for ever. But the thought that he was the father of my children, drove from my mind every idea of abandonment. I felt it my duty to repair as far as lay in my power, the wrong I had committed at the altar in consenting to become his bride, and in promising to cherish him to whom I could not give my heart. Though unable to love him, it was within my power to cheer his despondent hours, to be beside him in sickness, and to comfort him in his afflictions. That I faithfully performed those duties, my conscience now gives me absolution. I watched beside him in his last illness, brought on by unceasing dissipation; I cooled his burning brow and smoothed his aching pillow; I pacified him in his moments of wild delirium, when a thousand horrid spectres seemed to hover around his bed; and last closed his eyes in their eternal sleep, shedding a sincere tear upon the lifeless brow of the father of my children."

Such was in part the tale that Flora poured into my ear, and which upon paper seems cold and passionless when compared with the words as they fell from her lips, her whole manner showing the deep emotion which filled her heart. An animation as of old, lit up her eye, and seemed to bring some color to her wasted cheek, so that I could again trace a slight remnant of that beauty for which she had been so pre-eminent, but which was now gone for ever. Her simple and affecting tale awakened in my mind an interest in her fate which I could not dispel. In the consciousness of duty, she had clung to him who had been the instrument of her unhappiness, rejecting offers of assistance coupled with abondonment; and had remained with him through all vicissitudes, nor quitted him so long as life remained, keeping weary vigils and hovering around like a ministering angel in his last hours, for he was the *father* of her *children*—names awakening in her bosom a thousand echoes, to which none but a mother's heart can respond.

O noble heart of woman! which, in the discharge of a high and holy duty, can thus cling to the instrument of thy sorrow and the author of thy unhappiness; comforting where thou shouldst have been comforted; sustaining where a sustaining arm should have encircled thee, and cherishing where thou shouldst have been the cherished one. Could there be such a thing as atonement in this world, for sins committed here, surely the bitter tears of ten long years of sorrow, had washed away, in their redeeming flow, every remembrance of Flora's guilt, and blotted out the record of her sin from the register of the recording angel.

But she had now passed her bitterest trials. The destitution under which she then lived, was relieved by willing hands, and brighter days opened before her—not days of perfect happiness, for such she could know no more—but of contentment and pious resignation. She was among sympathizing friends, and their smiles once more cast a ray of sunshine upon her heart. A bloom again appeared upon her cheek; but alas! it was the hectic bloom which told not of life, but warned of coming death—the prematnre bloom of the rose, which betrays the canker within its inmost folds. The trials of long years had wasted away her strength and sapped the foundations of life. Before many months had passed away, she softly closed her eyes in the sleep of death, and amid the sighs and tears of friends who had learned to love her, breathed her last breath gently as a vesper breeze:

> "So fades a summer cloud away,
> So sinks the gale when storms are o'er,
> So gently shuts the eye of day,
> So dies a wave along the shore."

Her last request, that the redeemed ring should remain upon her finger, fell upon willing ears; and that parting spirit, as it took its final flight, bore upon its wings to Heaven, a prayer for the happiness of him who gave it.

BUFFALO, January, 1847.

How frequently does a remark not always true, pass current as a proverb, and the world, eager to reach conclusions but glad to avoid the labor of investigating facts, condemns where it should almost worship. This is well illustrated in the following tale by LAMAN BLANCHARD:

"FAULTS ON BOTH SIDES."—(THE OLD STORY.)

So say they in your case, Lyddie Erle—even this, and no more! What note takes mankind of tragedies, if they happen to be real!

Lyddie Erle's sacrifices began in early childhood. They were all joyfully made for a brother, her fellow-orphan and sole companion, whom, as long as she could remember, she idolized; and who, even in those giddy, boyish days, when the heart is most happy and generous, was ungrateful selfish and tyrannical. She was bright-minded as well as affectionate, and though two years younger than himself, pursued his studies, solely for the delight of doing his exercises for him when he happened to be idle or in a scrape. With the management that belongs to maturer years, she extricated him from all difficulties—things in which he had a wonderful faculty for getting entangled; gave him the best of advice, which he did not take, and the prettiest watches and purses with coins in them, which he did; set every bit of his bad conduct right with inquisitive friends,

and made, as he said, "all straight," without any crooked dealing at all.

She was the star of his life, a redeeming spirit, a sleepless angel snatching him from all harm.—But go wrong he would. However, when minor sacrifices were at an end, larger ones were ready. The debts he had contracted she provided for out of her scanty portion—a third of what his had been; and when he returned to her in wild passion, the money spent, and the debts not paid, she wept, indeed for his sake, piteously, but gave the full sum again without a sigh for her own.

A beggar, and with a character while yet so young, not entirely unblotted, his safety required sacrifices costlier far than gold. Tears and sleepless nights would not purify and save him; but thought, energy, well-directed influence might; and with a head like a sage man, but with an angel's heart, she devoted herself to the task.—Warm affection and a firm soul did the work of sagacity, and experience approved what the mere girl suggested. The enterprise by which her brother was to be advanced to independence, would need but part—not *all*—of her remaining store of money. It was but to exercise, for her own support, her skill in languages, and in music, if necessary; it would be a pleasure, not a hardship; self maintenance would be so easy—and oh! so very, very sweet!

But when this enterprise, so costly to her, but so pregnant with golden promise, fell to the ground with a ruinous crash, through misconduct and recklessness, unexcused now by the plea of ardent, inexperienced youth, the discovery of a new hope and a safer course became painfully difficult. Her own small gains—even if she reserved none of them—would be but the mockery of a supply to one of his extravagant habits; and how to speak to him imploringly of a pinching economy, without seeming to reproach him in the hour of his bitterness!

Self, however, will sometimes start a plan where even sympathy like hers is ineffective. The brother of Lyddie Erle was conscious of one *thing*, which Lyddie Erle could never have thought of; the priceless value of such a sister. Some months before, a sentiment had stolen into her mind favoring the advances of a youth possessed of manifest desert, whose passion spoke more in his silence than in his speech, and yet it was unequivocal. In her innocent nature, the little "bud of love" was silently opening to the sunshine, when her brother at once crushed it. The object of it was too noble for him to hold communion with; and besides, he could not afford to give away such a sister to any lover. Soft expostulations, fond assurances, and chiefly, lies foul with detraction, enabled him to stifle the growing prepossession.

Now, however, his view of marriage changed. A friend of his own, bold, dissolute, and hard-minded, but rich at present, came as a suitor to the startled and blushing Lyddie; who shrank back terror-stricken at the bare thought. She would have leapt into her brother's heart, had it been open to shelter her; but it repulsed her tenderly at first, then sternly, even fiercely, in anger and astonishment at her resistance. But resist with all her gentle and unpolluted blood she must; she did. His arguments, his passions, could not here prevail—though they shocked and wounded her. He spoke of his own ruined state, his starved hopeless prospects, and Lyddie trembled; he spoke of the secret uses to which he *could* turn the rich connexion formed by marriage, of the bright fortune which by certain contrivances it would bring him, and Lyddie shuddered!

Not *that!* even for the being most beloved by her under heaven; for him, compared with whom herself was nothing, dust. To give what was yet left of her store, to engage to work with head, heart, and hands, to raise what might be necessary for replacing him in the world, was easy—it was happiness: and to take it, together with the passionate assurances of the wonders her affection was yet to work in his behalf, was to him not difficult, and anything but misery.

People blamed the extravagance, the audacious swagger of the brother, while they extolled him as noble-hearted; but they blamed more the presumption of poor Lyddie, her want of affection for her relative, her insensibility to his interests, in refusing such a match. "There were faults," they said, "on both sides."

Trials were at hand that wrung from the girl's heart tears of blood. Not the silent sufferings hourly undergone in slights, injuries, insults, incurred by the anxious, indigent teacher; in bitter privations, endured rather than spend the produce of the music-lesson; of fatigue and misery, only not overwhelming and intolerable, because sustained for his sake; no, these were light trials—compared with the heavy, awful, life-darkening secret, which had fallen like a huge block of ice upon her soul, and seemed, so chilling and crushing was its influence, to bury her alive.

The rich *roue*, on a marriage-connexion with whom he was to have built his proud, mean fortune, had become his dupe in another way; and the life of honor, the life of virtue, the life of lofty manhood was in him extinct for ever. What he had once compassed in safety, the tempter bro't him, not reluctantly, to try again; but this time the theft was less securely effected, and Suspicion turned upon the paralyzed villain its cold, keen, unsleeping eye; cold, though, full of fiery light, which was ever shaded. He recovered, to repel the accusing spirit of that glance, by a bold, but quiet look; he hid deep the burning sense for vengeance; the thirst for safety; waited the dark hour, which his fate told him was sure to come; and planned the murder, which at the appointed moment, his very poverty (so it turned out) prevented him from executing. A post-chaise would have carried him as far as man could go on the great highway of crime; ah! he had at that nick of time no money; he was too poor (so his fate willed it) to pay for powder and shot. How he cursed his ill-luck!—how he execrated with bitterness, increased a thousand-fold, his sin-thwarting poverty. He was without a shilling to buy poison.

But the act committed, and the act intended, both were known to Lyddie. Oh! the agony of that knowledge. Yet, yet it should be endured, suppressed, nay, stifled:—or, rather the very knowledge should be cast forth from her mind, and its burning sparks be trodden out into darkness and blank oblivion. Penitence should come at once, and peace after long search be found.—Alas! of what avail this calm in the distant future! The crimes were known also to the man whose life was to have paid the price of his supicion of injury.

And yet here—here in the darkest abyss—a light shot up and kindled hope, wild hope and joy, in the heart of the malefactor. He had a sister who could buy him out of a bondage too dreadful to bear. Yes, it was so. The lesser profligate would pardon the great, and cheat justice. The price was Lyddie Erie.

Lyddie lived to hear the proposal—then dropped, and a soul untainted by the dust that fell seemed to have risen to heaven. But she again awoke, after long days, to consciousness; and

heard the proposition, painfully, eagerly, madly reiterated. She did not drop; but she summoned her reason, and armed her affections for fierce trial. She demonstrated the insanity of the prayer, and pleaded for pity and pardon for her brother. Too soon was she doomed to plead for these *from* him; for the enraged accuser, foiled in his scheme of sweeter vengeance, had his hand upon brother's forfeit life. The end then seemed approaching. Yet something remained for thought and energy to do. She sold, for almost nothing, what drawings she could make in the night-time; she collected what trifles might be secured by giving lessons during the night-like day—happy moral lessons to the young, and merry melodious tasks in music; and with the funds thus drawn together by patient, thoughtful, resolute toil, the accused surrounded himself with the means of defence. This was the holy and loving desire that kept Lyddie Erle alive. He would have the ablest counsel: he would not be deserted and undone in the desolate time.

What a pang had been thine, fair soul, could thy innocent and truth-speaking spirit have guessed that the gold would have been employed to buy witnesses also! Witnesses!——

God of purity! amidst the false they sought to include the true. With the suborned, they would have ensnared her also to their purpose, who had but one tongue, which was lifeless. But Lyddie Erie, they said, could save her brother yet. She had only to step into the witness-box; to give her evidence without wavering or wandering; to prove what no one else could; to establish her brother's innocence, his *innocence;* to rescue him from agony, from ignominy, perhaps from death.

Her brother's innocence!—and *she knew!*—To be proved, established triumphantly by her, who *knew!*—She to be called to give evidence, who, if compelled to speak a word———the thought brought a wild wish for instantaneous and universal darkness; she knew not where to hide herself, lest she should be dragged into the presence where Truth dare not be dumb.

It was in vain that she told them that it was *impossible!*—in vain that she uttered the same words over and over again a hundred times, expressing the one conviction of her soul which it seemed childish to repeat, and yet mad not to understand. But they could not understand why it was impossible. She had but to speak, and yes, one thing more—what so easy?—*to hold her tongue!* Why was it impossible?

And weeks after, when the brother was voyaging through the deep waters in a hideous felonship, and Lyddie Erle's grave was being turfed and bordered with spring violets, those who thus decorated her green dwelling, and who, as they thought, knew her well, and loved her too, could not help preaching over it the old world sermon—the solemnity which familiarity make ridiculous:

"Beautiful she was, never proud, and always kind to the poor; but she might have spoken up for her brother in his time of need. He was wild, but devoted to his sister. Both had grievous troubles, and both were to blame. THERE WERE FAULTS ON BOTH SIDES."

THE RIFLE.—Many persons who are very expert in the use of the rifle know nothing of the principle upon which it operates, and would be at a loss if asked why a grooved barrel throws a ball truer than a smooth bore. The reasons are these:

In the first place no bullet is or can be cast perfectly spherical. One side is always heavier than the other. The ball therefore swerves from the right line of projection. However hard it may be to prove this, theoretically, practice demonstrates. The same smooth bore, immovably fixed, twice loaded with the same charge of the same powder, and with balls cast in the same mould, will not plant them in the same spot, at the same distance.

The rifle barrel is a female screw, which gives the tightly driven ball a rotary motion; so that if the bullet or rather the slug swerves with one twist of the screw, another revolution corrects the errors. There are but three motions in the rifle ball, the straight forward, the spiral, and the downward, caused by the power of gravity. A rifle of thirty to the pound drops its ball about a foot in a hundred yards. Rifles are sighted, therefore, to meet this deviation. On leaving the barrel, the ball moves above the line of sight, continually falling in a parabolic curve till it intersects it. The point of intersection is called the point blank.

Who invented the rifle is unknown. Its principle was known to the North American Indians before the discovery of the continent. Their arrows are feathered spirally, and move precisely in the manner of a rifle ball.

"The Examiner."

From the Cincinnati Gazette.

We have purposely delayed the common courtesy of an editorial notice of the new anti-slavery paper established in Louisville by John C. Vaughan, Esq., till time should be allowed us to see in what manner it would demean itself among a community one of whose "peculiar institutions" it seeks to overthrow, and what would be the temper in which it would enter upon the interesting and important mission with which it is charged. Seven numbers have now been issued, and we have read some portions of each: and it affords us much pleasure, as personal friends of Mr. Vaughan, to say that it regularly bears evidence of great industry, of talent peculiarly fitted to the purpose it has in view, of a comprehensive and enlightened patriotism, and of true christian philanthropy. These are all high qualities, we are aware, but with a full understanding of the import of our language, we say that no one, who is not strongly prejudiced, can closely and calmly read the paper, and deny them to its conductors.

The Examiner has started the investigation and discussion of the Slavery question in Kentucky, in a period, it seems to us, particularly opportune. The Legislature provided at its last session for the taking of a vote of the people on the question of holding a Convention to revise the Constitution of the State; that vote is now being taken; and if it result in the affirmative, the Convention will be elected and held at an early day. One party contends that the subject of Slavery will not necessarily come before it when it is held. That is true; but while another party insists that this question is as important as any one that can be submitted to it, and that it *ought* to come up, it will be very difficult, if not impossible, to keep it down. In the midst of the discussion of this preparatory question, *The Examiner* is started, to show that the institution is one which has steadily retarded the growth of Kentucky—that it is now undermining the prosperity of the State—that it may be discussed without warmth of feeling or bitterness of language—that facts exist in abundance to render such a discussion interesting and profitable—and that the three classes of persons into which the people are divided on this question, those who are in favor of preserving Slavery in the State, those who oppose them and are ready for its abro-

gation, and those who, from either moral, political, or social reasons, favor emancipation, but fear the effects of an agitation of the subject, may, if they are so disposed, meet together in sectional primary assemblies, or in a great State Convention, and discuss the question with as much calmness as any other could be discussed of anything like its importance. This is itself a great end gained; yet this we think *The Examiner* has established. Certainly we cannot see how any body of good citizens can come together with the spirit and in the temper of *The Examiner*, and start any investigation which may not be conducted with the utmost coolness and deliberation, and be pursued to important if not final and satisfactory results.

The Examiner has no tone of slang—no taint of fanaticism—no language of denunciation. It works altogether in a Christian spirit, with weapons furnished by the institution of Slavery itself. By facts that are indisputable, and by calm and logical reasoning from admitted premises, it endeavors to show that Slavery is not calculated to promote the well-being of Kentucky, either morally, socially, or politically; that it paralyses industry, prevents immigration, and retards growth; that under it the natural resources of the State are not developed; that, in the language of one of Kentucky's eminent statesmen, "it is a wrong to the slave, and a curse to the master;" and in that of another, "a blistering sore that knows no healing." The paper contrasts Kentucky and Ohio a generation ago, and Kentucky and Ohio now; and thus shows the superiority of free over slave institutions. It addresses the reasons of the people, in all these ways and others, and studiously avoids appeals to passion or prejudice. To intelligent minds in Kentucky, we think its labors must be acceptable; and we cannot see how its elevated tone and philanthropic spirit can give offence to any one.

We observe that one of our Kentucky exchanges denounces Mr. Vaughan as an ultra Abolitionist, from Ohio. Mr. V., it is true, resided in this state a number of years, and coming as he did from an "ultra" Slave State (South Carolina,) drew a good deal of interest about him by the open, manly, and steady testimony which he bore against the institution, in the presence of which he had been born and reared; but that he was an Abolitionist, in the sense intended by the paper to which we refer, will be news to every one here. He was a warm and enthusiastic Whig, of the anti-slavery and anti-war stamp, and as such did good service in several hard campaigns, both by his tongue and his pen.

Fortunatus Cosley, Esq., one of the ripest scholars and best intellects in Kentucky, is Mr. V.'s associate in the editorial conduct of The Examiner. Under the management of two such men, the paper cannot but be useful. As a miscellaneous family journal alone, it is a very valuable sheet. The subscription price is $2 per year.

The London Times.—The *Courier & Enquirer* relates the following incident in the history of this paper, which it vouches for as true:

It was for a long time the most radical paper in England, and in a single twenty-four hours, changed its whole course and came out an *ultra Tory* paper; or if the Albion likes the phrase better—*ultra conservative*—which it now claims to be. Does the *Albion* know the history of that change? If not, the following *facts* related to us by one of its then Editors, since dead, will not be uninteresting.

Of course the Albion knows that it was alleged that Mr. Walter was bought up by the government, and that he received some two hundred thousand pounds sterling for changing the course of his paper. This is denied by some; while others say that if he did, it was *not bribery*, but only a fair remuneration for the risk he incurred.

But be this as it may, the then editors, Messrs. Barnes & Bacon—the ablest ever connected with that press, and both since dead—together with all its Parliamentary reporters, were invited on a certain day to breakfast with Mr. Walter, the proprietor. The breakfast over, Mr. Walter addressed all present and stated that it was feared that if the *Times* persisted in its then radical course, a revolution in England would be *inevitable;* and therefore, he had determined and *promised* that from that time forward the course of the paper should be changed, and he had called together its conductors, to announce his determination, and ask their co-operation! All were taken by surprise; and *all*, with the solitary exception of Francis Bacon, gave notice of their determination to withdraw, and did withdraw from the paper, but very soon returned to it! The sale of the *Times* on the day of that breakfast, exceeded *eleven thousand*, but within a week its sales fell off to a fraction over *four thousand!* We all know the result. The *Conservatives* of the whole nation came to its support; and consequently, it became what it now is, the leading paper of the world, and the most profitable.

A Peruvian Paradise.—The favorite residence of the Incas was at Yucay, about four leagues distant from the capital. In this delicious valley, locked up within the friendly arms of the Sierra, which sheltered it from the rude breezes of the east, and refreshed by gushing fountains and streams of running water, they built the most beautiful of their palaces. Here, when wearied with the dust and cares of the city, they loved to retreat and solace themselves with the society of their favorite concubines; wandering amidst the groves and airy gardens that shed around their soft intoxicating odors, and lulled the senses to voluptuous repose.—Here, too, they loved to indulge in the luxury of their baths, replenished by streams of crystal water, which were conducted through subterraneous silver channels into basins of gold.—The spacious gardens were stocked with numerous varieties of plants and flowers, that grew without effort in this temperate region of the tropics, while parterres of more extraordinary kind were planted by their side, glowing with the various forms of vegetable life skilfully imitated in gold and silver. Among them the Indian corn, the most beautiful of American grains, is particularly commemorated, and the curious workmanship is noticed with which the golden ear was half disclosed amidst the broad leaves of silver, and the light tassel of the same material that floated gracefully from its top. If this dazzling picture staggers the faith of the reader, he may reflect that the Peruvian mountains teemed with gold;—that the natives understood the art of working the mines to a considerable extent; that none of the ore was converted into coin; and that the whole of it passed into the hands of the sovereign; for his own exclusive benefit, whether for purposes of utility or ornament. Certain it is that no fact is better attested by the conquerors themselves who had ample means of information and no motive for misstatement. The Italian poets in their gorgeous picture of the gardens of Alcina and Morgana, came nearer to the truth than they imagined.—*Prescott's Conquest of Peru.*

Peace is the evening star of the soul, as virtue is its sun, and the two are never far apart.

Rural Department.

Fine Cattle and Sheep.

From the Buffalo Commercial Advertiser.

There is probably no place in the United States where so many superior, thorough-bred cattle and sheep of the most approved English breeds exist, as in the vicinity of Buffalo. The large cattle herd of Lewis F. Allen, Esq., has long been celebrated as of the first character for excellence, as his uniform success at the State and County Cattle Shows, wherever his stock has been exhibited, has testified. This herd, kept on his farm at the head of Grand Island, in the Niagara River, consists of about one hundred and sixty head, chiefly dairy cows, and young stock. Among them are some thirty head of thorough-bred short horns of the choicest kind, kept in their purity, and bred with the greatest care. These have descended from some of the best importations ever made into this country, and will sustain the reputation of their ancestry. As dairy cows, the short horns are perhaps superior to any other breed in our country, while for beef they are hardly excelled by any others, and their introduction into the United States has greatly improved the inferior native cattle.

Another beautiful race bred by Mr. Allen is the Devon—the hardy, compact, graceful, deep red cattle so much admired by our New England and Northern farmers. The cows of this breed are also, though smaller than the short horns, excellent milkers, and in their close matching, docility and activity, the Devon oxen are unrivalled in the yoke. Of these there are some five and twenty thorough bred, and their uniformity of appearance, all being of a rich mahogany red color, with high spreading horns, mark them as general favorites in their attractive qualities.

Each of these separate kinds are bred distinct in their purity, and from them every year are purchased several animals by enterprising farmers and stock breeders in different parts of the United States and the Canadas, for the improvement of their herds. Aside from his thorough breds, Mr. A. has a large number of both short horn and Devon grade cows and heifers, which are used in the dairy, comprising probably the choicest herd of dairy cows in Western New York.

On this farm also is a flock of about one hundred select Cotswold and Southdown sheep, each bred in their purity. The former of these are celebrated for their great size as a mutton sheep, and yielding the long woole for combing purposes now coming into extensive use in our manufactories of muslin de laines and worsted stuffs. These sheep are from the celebrated flock imported by Messrs. Corning & Sotham in 1841. The Southdowns are the favorite mutton sheep of England. Exceedingly compact in shape and hardy in constitution, yielding a fleece of moderate quality wool, and highly esteemed in this country wherever they are known as furnishing the best of mutton, and a valuable "farmer's fleece."

In addition to the above, Mr. Sotham, who, with Mr. Corning, of Albany, has for some years past been extensively known as the importer of a select herd of Hereford cattle, has now, in connection with Wm. A. Bird, Esq., of Black Rock, purchased the interest of Mr. C. in them, and removed with his stock on to the fine farm lately occupied by Mr. Richard L. Allen, on the river just below the Rock. Mr. Sotham has been long known as a breeder of judgment and sagacity, and the numerous sales which he has made of his stock, at good prices, prove the high estimation in which his cattle are held in the United States. In England the Hereford oxen have long held successful rivalry with the short horns at the prize shows of fat cattle in the London Markets, while the cows occupy a respectable position as milkers in many of her dairy Counties. They are large in size, with high spreading horns, imposing and beautiful in their appearance, their color being deep red, with white faces, flanks, and bellies. They are eminently a grazier's cattle, being good and quick feeders, while their fine size and athletic frames equally fit them for the farmer as a working ox. To all such as admire fine cattle and sheep, or who wish to improve their herds and flocks, we commend them to a ride of half-a dozen miles down the Niagara to look at these beautiful animals.

While on this subject we may as well mention, though not least in our estimation, the noble pair of fat oxen, owned and fed by Messrs. Alberger & Boorem; on the farm of the former, near the Cold Springs. They are now six years old, about three-fourths short horn in blood, and probably the finest pair of fat cattle in the State, their weight being estimated by good judges at about 3,000 pounds each. Messrs. A. & B. are well known as among our most enterprising butchers, who take laudable pride in feeding, as well as providing some of the best cattle for our markets. These steers took the first prize at the State Cattle Show at Utica in 1845, and will, we are equally sure, bear away the first honors wherever they may be exhibited hereafter. We only regret that the out-of-the-way location of the next State Cattle Show, (at Saratoga) will probably prevent Messrs. Alberger & Boorem from drawing to our county the prize to which she would be justly entitled in their exhibition.

Added to all these we may mention as in our neighborhood, the excellent short horn cattle of Mr. Stevens at Batavia, probably comprizing, together with that of Messrs, Allen and Sotham, a greater variety of superior farm stock than can be found in the vicinity of any other interior town of the United States.

Breaking ground for the Factory.—The digging for laying the foundation of the Steam Cotton Factory, has been commenced this week. This is our third steam factory, and the largest of them all.—*Utica Gaz.*

For the Western Literary Messenger.

My Lute.

My long-loved lute, my long-loved lute!
I'll touch thy cords no more:
Thy music-tones seem sad to me,
And make my heart run o'er:
Of youth's glad time, of childhood's hour,
And long, long years since then,
They cause sad memories to rise,
Like shadows in a glen.

Yet still in parting from thee, lute,
I own I feel a pang;
Methinks the thought restores the hour
When first thy wild-notes rang;
In that sweet hour my guileless heart,
Knew not the world untrue;
Oh why, when other friends depart,
Why wouldst thou leave me too?

It cannot be, it cannot be,
We have been friends too long,
Thy voice has still the tone of love,
I feel my heart was wrong:
Joy follows grief, sweet peace the storm,
And morn the gloomy night;
Thy voice dispels dispondency,
And lures me to the *Right*.

The demons from my heart are gone,
Who caused me life to hate—
Who taught me ever to despond,
And murmur at my fate:
My lute restores the soul I had
When first I touched its strings,
When joy sat on my guileless heart,
And fanned it with her wings.

P. S.

For the Western Literary Messenger.

The Present Age.

BY GEO. MILLER.

The present is a *wonderful* age. It would appear that man had resolved, at length, to throw his last fetters off. We seem to be rousing from the sleep of ages, and to be rushing, with accelerated strides, from the inner chambers of darkness into the very eye of the meridian sun. No longer satisfied with the fair seemings of external show, we are now intent upon cracking time-honored shells, and feasting upon the kernels.—Age—*per se*—is no longer respected, and why should it be? Must the world be for ever tied to apron-strings? Is there never a period, at which, having once arrived, it were pusillanimous *not* to assume the "toga virilis," and demand our rights?

Already do "the knowing ones" squint, with awful suspicion, upon gray-haired sentiments.—We are beginning to act upon the maxim that presumptions are all against antiquity. Whatever admonitions our revered mothers and revered sires may have given to the contrary, we have now learned that sugar is *not* injurious to teeth. The spell, then, is broken. Our point is gained. The citadel is in our hands. On all sides, it is conceded, at last, that wisdom is not as old as one's grandmother. Views which are driven to hide themselves behind the sanction of more than one according century, we are, shrewdly enough, beginning to suspect at the brood of ignorance—hatched out under favor of the Dark Ages.

Amazingly critical have we *also* become in these latter days. And, indeed, taking it "in the abstract," we may very safely doubt (as what may we *not* doubt in this enlightened age) whether one generation has *the right* to impose its opinions upon another—to masticate the intellectual food of its successors for all time to come.—Grave questions are started—great misgivings are afoot. "The present age" will rebel—that is certain. We *will* think for ourselves. We *will not* think as our fathers thought, even though, to think differently, is to think erroneously. The "largest liberty" consists in having our own way. Our ancestors had *theirs* unmolested by *us*. It is now *our* time, and must we have the same dull round? Cucumbers rot, then why not opinions?

Such, in brief, are the enlarged tendencies of "the present age." It is not contended, we may remark, that *all* are equally enlightened. Far from it. We frankly, and in much sorrow, admit, that many are still lingering on the *borders* of illumination. They cry out for "the old paths." We may believe that they are still hankering after the flesh-pots of Egypt. These people, as one might suppose, take fierce exceptions to the march of modern improvement. To our ridicule they oppose contempt—to contempt, ridicule. Nay, their audacity overleaps all bounds. Does our philosopher of the 19th century announce resplendent discoveries in the peopled moon—or transcendental views of mind—forthwith, in full chorus, and with the most provoking coolness, do these graceless lovers of the past, cry out, "prove it, sir, prove it." Prove it *yourselves* would be *our* indignant reply. "The present age" has no patience with these quibbling fellows. *Prove* it quotha! As if the march of science must be arrested, at every turn, just to please *you*. We'll see you hanged first. We give no reasons upon compulsion. *We* are satisfied *without* the proofs, if *you* are not, that is your business not ours.

By what assumed right, we may deign to ask, do these non-illuminati hang upon the wheels of the car of science, or about the flanks of the army of Pioneers, clogging its progress with their petty annoyances? Why, no sooner shall the benevolent sagacity of our age have reached the pinnacle of a tall conclusion, than some fellow bawls out the enquiry, *how got it there?* Is it not enough that we *are* there? What need we care, that he persists in having an explanation of our process of climbing, on pain of his denial that we can climb at all! "Prove me that" says one.—"Show me the *correctness* of that conclusion," exclaims another. Why just as reasonably might the Austrian have demanded proof that Napoleon had crossed the Alps, and denied the fact, unless that great commander would condescendingly subject himself to the fatigue and inconvenience of marching his whole army back again, and crossing anew! It was, we think, for all *practical* purposes at least, quite sufficient that Napoleon was, in very deed, upon the plains of Italy.

In the science of Phrenology, for example, we have known men to stand within the very shadow of the Temple itself—nay with one foot upon its very door-sill—demanding proofs that certain protuberances were infallible indication of particular traits of character and special manifestations of mind, when, perchance, the self same evidences, which they professed to seek, were piled, mountain high, on their own heads. Strange, is it not, that these gentry do not procure a mirror (the expense being quite inconsiderable; at most a shilling) and "examine" their own *crania* in the quiet recesses of home, instead of protruding them upon the attention of honest people, in the public lecture room, to the manifest disgust and annoyance of the votaries of science!

It is high time for "the present age" to assert its clear prerogatives. Is it to be borne that we must waste so much precious time to satisfy ignorance and convert scepticism? Must we be continually drawn off from the prosecution of the schemes and reforms and sciences of the day, because *somebody* who *should* have been born five centuries back, chooses to have his doubts—to interpose his objections and to start his difficulties? We trow not.

"Hence we conclude" that it is time—high time—past time—for this guerilla warfare against the "improvement" of the present age, to cease. But should it continue—should some still refuse to see, and seeing to acknowledge the light, we would affectionately ask our Reformers and Philosopbers to bethink themselves, and to *reconsider* their good-natured desire to carry all minds with them.

If it were permitted us to approach your august presence, ye itinerant expounder of the "Athies" and "Ologies" of these days, and ye transcendentalists of whatever name! we would humbly implore you somewhat on this wise: Why stand ye debating all the day with these "outside barbarians?" Why waste your strength for nought? Are ye fairly astride some huge truth—some ponderous conclusion? Make the most of it. Press on. New Alps await your coming. Have you dug up some *central* science? Press on. Heed not your adversaries—laugh their objections to scorn. Do they demand proofs? Let them *hunt* for them, as *you* have done—or *would have done* had you deemed them of consequence. If the facts and the world sustain you not, so much the worse for the world and the facts. With them be it, to arrange their own quarrels. It is no concern of yours, ye mental pioneers! Did not this same world persecute Galileo—decry Bacon—doubt Newton? And who are these that *now* refuse to follow unless you will kindly show them the way? Are they not the enemies of all progress? Do they know that they are living in the full blaze of this 19th century? Have they yet to learn "that wisdom was just as certainly born with you, as that it will die with you," ye lights of the present age?

Press on, then, "conquering and to conquer," and "the light that shined on glory's plume;" shall gleam in untold splendor about your heads.

Massilon, O.

Has Man Progressed?—Whilst we believe that man has made great and real progress in substantial happiness and intelligence, we would not be classed among those who see nothing excellent in the past, and we heartily subscribe to the ideas expressed by Hazlitt in the following words:

There is not a lower ambition, a poorer way of thought, than that which would confine all excellence, or arrogate its final accomplishment to the present, or modern times. We ordinarily speak and think of those who had the misfortune to write or live before us, as laboring under very singular privations and disadvantages in not having the benefit of those improvements which we have made, as buried in the grossest ignorance, or the slaves of 'poring pedantry:' and we make a cheap and infallible estimate of their progress in civilization upon a graduated scale of perfectibility, calculated from the meridian of our own times. If we have pretty well got rid of the narrow bigotry that would limit all sense or virtue to our own country, and have fraternized, like true cosmopolites, with our neighbors and contemporaries, we have made our self-love amends by letting the generation we live in engross nearly all our admiration, and by pronouncing a sweeping sentence of barbarism and ignorance on our ancestry backwards, from the commencement—as near as can be—of the nineteenth, or the latter end of the eighteenth century. From thence we date a new era, the dawn of our own intellect, and that of the world, like 'the sacred influence of light' glimmering on the confines of 'Chaos and old night;' new manners rise, and all the cumbrous 'pomp of elder days' vanishes, and is lost in worse than Gothic darkness. Pavilioned in the glittering pride of our superficial accomplishments and upstart pretensions, we fancy that every thing beyond that magic circle is prejudice and error; and all, before the present enlightened period, but a dull and useless blank in the great map of time. We are so dazzled with the gloss and novelty of modern discoveries, that we cannot take into our mind's eye the vast expanse, the lengthened perspective of human intellect, and a cloud hangs over and conceals its loftiest monuments, if they are removed to a little distance from us—the cloud of our own vanity and short-sightedness. The modern sciolist stultifies all understanding but his own, and that which he conceives like his own. We think, in this age of reason and consummation of philosophy, because we knew nothing twenty or thirty years ago, and began then to think for the first time in our lives, that the rest of mankind were in the same predicament, and never knew anything till we did; that the world had grown old in sloth and ignorance, had dreampt out its long minority of five thousand years in a dozing state, and that it first began to wake out of sleep, to rouse itself, and look about it, startled by the light of our unexpected discoveries, and the noise we made about them. Strange error of our infatuated self-love. Because the clothes we remember to have seen worn when we were children are now out of fashion, and our grandmothers were then old women, we conceive, with magnanimous continuity of reasoning, that it must have been much worse three hundred years before, and that grace, youth, and beauty are things of modern date—as if nature had ever been old, or the sun had first shone

word, the last generation, when tottering off the stage, were not so active, so sprightly, and so promising as we were, we begin to imagine that people formerly must have crawled about in a feeble, torpid state, like flies in winter, in a sort of dim twilight of the understanding; 'nor can we think what thoughts they could conceive,' in the absence of all those topics that so agreeably enliven and diversify our conversation and literature, mistaking the imperfection of our knowledge for the defect of their organs, as if it was necessary for us to have a register and certificate of their thoughts, or as if, because they did not see with our eyes, hear with our ears, and understand with our understandings, they could hear, see, and understand nothing. A falser inference could not be drawn, nor one more contrary to the maxims and cautions of a wise humanity.

J. CLEMENT, EDITOR.

Seventeen Hundred and Seventy-Six:

OR THE WAR OF INDEPENDENCE; a History of the Anglo Americans, from the period of the Union of the Colonies against the French, to the inauguration of Washington, the First President of the United States of America. Illustrated by numerous engravings of plans of battles, prominent events, interesting localities, and portraits of distinguished men of the Period. By BENSON J. LOSSING, New-York; EDWARD WALKER, 114 Fulton Street, 1847.

The American Revolution is the glory of the eighteenth century. Indeed it is the most sublime national drama the world ever saw. We care not who contemplates it; at this short remove from the period of its action, it has gathered around it a lustre which the eye of British prejudice, even, cannot behold but with feelings of admiration.

The Independence of the Colonies was the legitimate child of Oppression. Our fathers were true to the home government till that government began to impose upon them an unreasonable and illegal tax. Through all the Colonial wars up to 1763, the best blood of her American subjects was shed in defence of the rights and for the glory of the English Crown. In the march towards Fort Du Quesne, the expeditions against Crown Point, Kittaning, Louisburg, Niagara, Quebec, etc., etc., side by side fought the veteran soldiers of Britain and the undisciplined but brave and loyal yeomanry of the youthful colony. The blood of England and America, to use the language, slightly altered, of an Irish orator on another occasion, "flowed in the same stream, on the same fields; when the chill morning dawned their dead lay cold and stark together; in the same deep pit their bodies were deposited, the green arm of spring breaks from year to year on their commingled dust; the dew of heaven falls upon their union in the grave."—In almost the first expedition in the Colonial wars, the fidelity and bravery of the Anglo Americans shone in the most striking colors, a little band of Virginia Riflemen, alone, saving the defeated army from unmitigated disgrace. And on that occasion the foresight, military tactics and heroism of the young Washington at once outshone and for ever obscured the fame of the haughty and self-sufficient Braddock.

The Colonists, we repeat, were true to the home government till they were obliged to resist. They were not rash; they raised no arm of rebellion against the mother country till their wrongs were so aggravating that her own great Pitt rejoiced that they had resisted. When driven to arms, they felt the justice of their cause; they entered upon the contest resolved on "liberty or death;"

"They fought like brave men, long and well;"

they gained their Independence; and the glorious struggle of which it was the fruit, is narrated in glowing language in the magnificent volume before us.

To write a new history of the drama of Seventy-Six, would seem to require more courage than ability. The greatest minds in the country have been tasked to do it, and the work has been done nobly. Mr. LOSSING, in going over the ground, does it with true modesty. He is willing his work should be considered merely "*an echo* of the sweet voices of others who have chanted the heroics of the War of Independence." Such *is*, in fact, the character of the book; and who can expect it to be otherwise? Surely no one. And yet we are glad Mr. LOSSING *has* echoed those "sweet tones." He has a patriotic spirit, and sufficient literary ability to prepare a history, just such as the youth of America will find delight and profit in reading. The style of the work is neither slip-shod nor ornate, neither dry nor florid. It has not the dove-tailed compactness of Bancroft's nor the uniform strength and elegance of Prescott's; but it is plain without being childish, and possesses sufficient literary verbiage to render it interesting to the more cultivated class of historical students. The faults of the work are too few and trifling to need designation. While its body is but little more than a careful compilation —a liberal but credited use of other historians' labors—the Appendix contains several documents replete with valuable information, with which the youth of our country are generally unacquainted. The pictorial embellishments will form, to the young in particular, one of the most attractive features of the book. They are mostly "illustrative of facts, and fo[illegible] part of the record." The engravings of batt[illegible]though not all of them perfect, are spirited, and greatly add to the interest of the narrative. The portraits of distinguished individuals of "the times that tried men's souls," are no less than forty-five in number, and are said to have been copied with care from engravings enjoying public approbation. We most heartily recommend this work, and especially to the youth of the country, to whom the author dedicates it,

For sale at Pecks'.

THE POWER OF THE SOUL OVER THE BODY, considered in relation to Health and Morals. By GEORGE MOORE, M. D., member of the Royal College of Physicians of London, etc., etc. New-York. Harper & Brothers, publishers, 1847.

This book is No. 25 of the "New Miscellany." Those who have read "The Body and the Mind," to which we lately devoted considerable space in remarks and extracts, can form some idea of the style and general character of this volume. It is divided into two parts, and contains, in all, thirty chapters. A great variety of topics, touching the body and soul, their connection with each other, and the influence of the latter over the former, are discussed, and the book forms a valuable addition to this choice series of Miscellaneous works. We may refer to it again. For sale by Hawks.

PICTORIAL HISTORY OF ENGLAND, No. Twenty-Seven. HARPER AND BROTHERS, 82 Cliff-st., New-York. To be completed in about forty numbers. 26 cts.

This magnificent work is progressing rapidly, and will be all published in a few months. Number twenty-seven brings the history down to the Commonwealth. Hawks, agent.

ANOTHER BALLOON ASCENSION.—Last week on Friday, Mr. WISE made another ascension from Morris' Garden in the north part of the city. At four o'clock P. M., he rose and passed directly over the city in a southerly direction, at the height of about one mile, and *landed* in Lake Erie about three miles from the light house. He was taken up by the yawl of the brig *Eureka*, and got safely back to the city, "high," but not "dry."

GEN. TOM THUMB, will pay our city a visit next week, arriving on Monday the 16th. He is the *genuine* General, a man of refinement—in one word "a gentleman and scholar." Let our friends avail themselves of the privilege of seeing the littlest great man of the age. He leaves here for a tour through the Canadas, and will be in Toronto on the 19th, and Montreal on the 23d instant.

The best route for "M." and for every body else who goes from this city to the Falls, is by the Niagara river. The scenery is beautiful and one gets a good view of old Fort Erie, Grand and Navy Islands, and other places not unknown to fame. The Emerald, a safe and fast steamer, leaves Buffalo every morning and afternoon for Chippewa, two miles from the Falls, where a railway connects with the same.

THE HOME JOURNAL.—The publishers of this excellent weekly, are giving their readers "DOMBEY AND SON," (Dicken's new work) in numbers, *gratis*. This liberality on the part of Morris and Willis, will not be forgotten by their patrons. The Journal, by the way, is one of the raciest family papers in the country.

THE AMERICAN REVIEW for this month was out promptly, and is very welcome to our table. Its contents are as follows: "The Chicago Convention;" "The Council of Three;" "The life of John Rutledge;" "Suicide;" "The Planet Neptune;" "Life of Joseph Reed" (review); "Heine;" "Was it well," by L. L. Noble; "Natalie;" "A Word of Encouragement;" "Emerson's Poems," (reviewed); "Fresh Gleanings;" and "Critical Notices." Hawks, of this city, agent.

THE YOUNG AMERICAN'S MAGAZINE for August contains original articles by Mrs. E. O. Smith, (Jack Downing's Lady) Horace Greeley, D. H. Howard, the Editor, and other able writers, and four or five very choice selections. This is a work which has a *heart* to it. Published two-monthly at $1,20 a year. GEO. W. LIGHT. Boston, editor and Proprietor.

THE UNION MAGAZINE for August, excels the first number in interest and ability. The article on "Social Life" by H. T. Tuckerman, is in a spirited style, and we most fully believe in its sentiment. Park Benjamin, Mrs. Osgood, T. S. Arthur, C. F. Hoffman, Mrs. Sigourney, Mrs. Ellet, Miss H. F. Gould, and Mrs. Hewitt, also contribute. "Harvest," No. two of "Western Sketches" by the Editor, is in her own peculiar vein. The first engraving—a beautiful mezzotint—is certainly unique, and will elicit many a hearty laugh.

THE BINDERY ESTABLISHMENT of GEO. H. READ, advertized on another page, our friends who have work in his line to be done, will do well to bear in mind. The establishment is large, and dispatch, neatness and durability characterize its work.

INDICTED.—The Grand Jury of the U. S. District Court, sitting at Columbus, the Chronicle learns, have found true bills for manslaughter against B. Higgins, of Sandusky City, and D. N. Barney, of Cleveland, owners of the steamer Chesapeake. Also against the Captain, Clerk, and 1st and 2d Mates of said boat.—*Cincinnati Atlas.*

The *Chronicle* is in error. Bills for manslaughter have been found against the Captain, Clerk and first and second Mates of said boat, and the bills found against Messrs. HIGGINS & BARNEY, the alleged owners of the boat, are for a violation of the United States law. In reference to Mr. BARNEY, it is but just to state that he was in no wise connected with the ownership of the boat at the time of the disaster, having disposed of his interest in the same on the first day of January last.

CHURCH DISCIPLINE.—The N. Y. Observer, suggests that churches should compel their members who are able, to pay their honest debts; and make it a matter of church discipline.

☞ The propeller *Goliath* commenced taking in a load of 120 tons native copper at the Sault Ste. Marie on Tuesday morning last.

Organization of the Buffalo City Bible Society.

A meeting of many individuals from such of the congregations in the city, as from the community of religious sentiment can cordially unite in the furtherance of the important objects of this Society, was held last Sunday evening at the First Presbyterian Church. Our city is peculiarly in need of the aid of such a Society. It is composed to so great an extent of people who in leaving home, have ceased to be subject to the ordinary restraints, that the circulation of the Scriptures seems even more necesary than in places where the habits of the population are more settled. It is a field in which those who desire the welfare of mankind should engage with all their energies. Hitherto it has depended rather upon the efforts of one congregation than upon the united exertion of the Christian community. Division and dissension are among the chief impediments to religious progress, and whatever progress, without merging essential doctrines, is made in Christian union is an advancement for the best of all public causes. N. H. GARDINER presided. The proceedings of the meeting were opened by an impressive prayer by the Rev. Dr. TUCKER, of the Washington Street Baptist Church, who afterwards introduced the following resolution:

Whereas: There are stsong reasons to believe that there are numerous families in this city, living without the Bible—and as it is one of the first christian duties to furnish such families with th the sacred volume, therefore,

Resolved, That we proceed to reorganize a Bible Society for this city, to be denominated the Buffalo City Bible Society, auxiliary to the American B. S., and adopt the printed Constitution recommended in their annual report, preparatory to an effort to supply each destitute family in the city with a copy of the Holy Scriptures.

Dr. TUCKER added a few remarks as to the influence of the Holy Scriptures, upon individuals and communities, and pledged the efforts of his denomination to the cause.

Rev. Mr. HEACOCK, of the Lafayette Street Church, offered the following resolution:

That the influence of the Bible upon the young men, as a class, of a growing and commercial community, makes the geue al distribution of the scriptures in our city a matter of imperative christian duty.

He alluded with much effect to the dangers and temptations surrounding young men in our city.

Rev. Mr. ABBOTT, and the Rev. Mr. THOMAS, of the Niagara Street Methodist Church, also addressed the meeting, in some excellent remarks upon the subject of bible distribution, and upon the matters embraced in the resolution.

The resolution was adopted.

Rev. MANLY TOOKER, Agent of the American Bible Society for Western New York presented the following resolution:

That experience has shown the feasibility, as well as practical importance, of united effort among christians of different names in circulating the sacred scriptures.

Dr. HOPKINS congratulated the meeting and the friends of the cause on the prevalent spirit of hearty and zealous union.

The resolution was adopted.

A benediction was pronounced by the Rev. Mr. STERNBERG, and an invitation given to those who chose, to remain and organize a Bible Society. A large number remained, and organized by the adoption of the following Constitution:

ART. 1. This Society shall be called the Buffalo City Bible Society, Auxiliary to the American Bible Society.

ART. 2. The object of the Society shall be to promote the circulation of the Holy Scriptures "without note or comment," and, in English, those of the commonly received version.

ART. 3. All persons contributing any sum to its funds, shall be members for one year; those contributing one dollar or more, shall receive, (if called for within twelve months) a common Bible in return; those contributing *fifteen* dollars at one time, or *twenty* dollars at *two* payments, shall be members for life.

ART. 4. All funds not wanted for circulating the Scriptures within the Society's own limits, shall be paid over annually to the Parent Society, to aid distributions among the destitute in other parts of the country, and in foreign lands.

ART. 5. The officers of the Society shall consist of a President, Vice President, Secretary, and Treasurer, whose duties shall be such as their respective titles import.

ART. 6. The management of the Society shall be entrusted to an Executive Committee of ten, with the Secretary and Treasurer—five to constitute a quorum, which shall appoint its own Chairman and make its own By-Laws.

ART. 7. It shall be the duty of this Committee to meet frequently on adjournment, or on call of the Chairman; to keep a good supply of books on hand; to appoint local distributors; to see that collections in some way are made annually in every congregation; and that all funds are forwarded early to the Parent Society, with a statement as to the portion designed for the payment of books, and that as a free donation.

ART. 8. There shall be a general meeting of the Society on the evening of the 2d Wednesday of November of each year, when a full report of their doings shall be presented by the Committee, (a copy of which shall be furnished to the Parent Society) and when a new election of officers and committee shall take place. Should the Society fail of an annual meeting, the same officers and committee shall be continued until the election does occur.

ART. 9. No alteration shall be made in this Constitution, except at an annual meeting, and by consent of two-thirds of the members present.

After the adoption of the Constitution, the Society proceeded to the election of the following officers:

President—NOAH H. GARDNER.
Vice President—DANIEL BOWEN.
Secretary—D. M. VANDERPOOL.
Treasurer—GEORGE W. TIFFT.

EXECUTIVE COMMITTEE.

James Sully,	Sidney Shepard,
D. W. Williams,	Isaac Stone,
H. H. Reynolds,	Walter Brace,
Geo. B. Walbridge,	Jacob Kretner.

WATERLOO.—On the outskirts of a forest is the little village of Waterloo, whence the principal portions of the plain will be found about two miles distant. May no "citizen of the world" set foot on this sadly memorable plain without solemnly reflecting that "seventy thousand men were slaughtered on the field of Waterloo!"—And may no one return from it without a firm resove to do something towards the prevention of war, and the promotion of that feeling which recognises the perfect brotherhood of the great family of nations.—*Brackhand's Continental Guide.*

An Affecting Letter.

Lieut. FLETCHER, of the Alton (Ill.) Volunteers, was among the killed at Buena Vista. He was a widower and the father of a little girl, two years old. His remains, with others, were recently buried at Alton, and his little daughter, accompanied by her grand-parents, attended the funeral. The night before the battle, Lieut. F. wrote the following lettter, which presents, in a gratifying light, his paternal affections:

CAMP BUENA VISTA, Mexico, Jan. 14, 1847.

DEAR COLONEL:—Tomorrow we expect to have an engagement with a superior Mexican force, and on the eve of the affair, I have believed it proper to address you a few lines. As you are well aware, the object nearest my heart is the welfare of my *little child;* and, so far as I have been able, I have provided for her. My wages, to the amount of two hundred and eighty dollars, are due me from the Government; besides a small sum owing me as well as the contents of my trunk, and the books and other articles I may own, I have, in a memorandum in my trunk, left to her, and placed the whole in charge of Capt. Baker, to be forwarded to you in case I should *fall* —all of which I doubt not you will most religiously see appropriated to her use, as may best seem fit and proper by you and mother.

And now, with respect to the child. Should I *fall*, I leave her *entirely* with *you* and *your wife*; but I have written to my brother, requesting him to throw his brotherly protection over her; and if, at any time, you think fit to send her to him, he will receive her as his own child and protect her as such. Should she remain with you, I wish that she should receive as good an *education* as the little means left her will afford; and above all things, teach her that *truth* and virtue are to woman, what the soul is to the body—the life of its life. *Teach* her that to be *just* to all—in thought—in word—in deed, is the true —the great aim of a good mind; and those who strive to accomplish that purpose, seldom fail to live at peace with the world, and accomplish the "Great Destiny" for which they are created. I would say a thousand things more about her, and my wishes for her; but that would be superfluous—so I will revert to other subjects. * *

In death as in life, ever yours,

E. F. FLETCHER.

The Crops and Harvests of the West.

One of the editors of the *Courier*, who has recently made a journey through the States of Ohio and Indiana, along the route of the Wabash and Erie Canal, thus gives the results of his personal observations of the condition of the crops and the harvest in that region. His statements agree with those we have received from other authentic sources, and can, no doubt, be relied upon as correct:

It affords us pleasure to be able to state, that so far as our notice and information extended, there is every reason to believe that the amount of grain to come forward will be even larger than last year. The wheat has, of course, been already harvested, and unless an excess of wet weather has in a few sections prevented it from being housed in good order, the grain has come in of a superior quality, and with a fair average yield. The thinness of the straw, before the full heading out of the plant, gave little promise of more than half a crop in many parts, but the plumpness of the berry and the unusual length of the heads, has amply compensated for the sparseness of the stalk.

Indeed, most of the grain harvested will weigh 62 to 66 pounds to the bushel, and consequently make much more flour than last year's growth, which ranged from 50 to 60 pounds. The same number of pounds, therefore, of good, heavy wheat, will command in price from ten to twenty per cent. more than the lighter grain.

On farms opened from timbered lands, wheat seems to be a surer crop than on the prairies, or "openings" or "barrens." This has especially proved to be the case this year. In Indiana, we have known of many extensive wheat fields, on the prairies and "barrens," that were ploughed up this spring, so unpromising did they look, and spring crops put in. But although numerous, these failures have been unsufficient to affect the general average.

Rumors of deficiency in the wheat crop of Illinois, Wisconsin and Iowa, were rife at the west in the spring, but though we did not pass into those states, we have been assured by those who had, that the spring wheat which is extensively sown there, was coming in remarkably well, and would make up for the short comings of the regular crop. The spring wheat enters largely into the consumption of those portions of the west where it is raised, leaving the more merchantable commodity for shipping to the eastern market.

The red chaff wheat is principally raised in the States of Ohio, Indiana and Illinois, and the white in Michigan and Wisconsin. The former is said to make the most bread to the bushel, but the white is certainly preferable for shipment—selling more readily and a shade higher. There are other minor varieties to be found at the west, but the great bulk of production is, and will continue to be, of those old regular "stand-by" kinds. Some fancy farmers have experimented there, as elsewhere, with various new-fangled foreign species, as the Italian, the Egyptian, the Asiatic, and from the Baltic and the Black Sea, but somehow they don't take with the mass of producers. At least we do not hear of the arrival of such grains, in notable quantities.

There will be "any quantity" of oats, throughout the west, as, although uncut, when we left, the yield promised to be the most abundant. We have never seen them look finer, and they will turn out 40 or 50 bushels to the acre, which is very fair for western farming.

Potatoes—so far as dug for table use—exhibit a healthy appearance, and are much better in yield and condition than last year. Though not a staple of great importance, they are very decidedly missed, when they come up missing.

The prospects of the corn crop, too, are much better than the prevalence of cool weather in June gave reason to hope for. The low temperature and frequent showers that then proved so favorable to the healthy growth of the wheat, were by no means so congenial to corn; but the subsequent hot weather of July has worked wonders with that essential crop, and we have never seen it in better color, and generally in more thrifty condition. This favorable result is not a whit less important to the west than the safe harvesting of the wheat; for the value of the one is as great to her as the other—notwithstanding we have all our agricultural prices based on that of wheat alone. Indeed, of the two, the corn product is the more indispensable to the west, as it enters so largely into the domestic consumption of the country. Take away the corn, and the western farmer has lost his under-pinning entirely. His hogs, his stock, and his whole household, are at once placed in the vocative.

MAINE—PLURALITY LAW.—The subject of the election of members of Congress, and county officers, by a plurality instead of requiring a majority, as now, and the alteration of the Constitution, so as to extend the plurality system to Gov., members of the Senate and House of Representatives, was resumed in the Senate of Maine last Saturday. After some discussion it passed the Senate by a two-thirds vote, nineteen to nine.

In the House, in the evening of the same day, the plurality bill was passed by a vote of 91 to 17, and the plurality resolves for the amendment of the Constitution by a vote of 93 to 16.

It has, therefore, passed both Houses, by a two-thirds vote—and, so far as the election of members of Congress and county officers is concerned, it will go at once into operation. The others, being amendments to the Constitution, cannot be adopted until they receive the affirmative votes of a majority of the people. The vote will be taken at the September election—and, from what we can learn, there is little or no doubt the amendments will be carried.—*Boston Atlas.*

NEW YORK, Aug. 6th, 7 P. M.

Government has arranged with Rothchilds to place money in Mexico for the use of the Army, to be reimbursed here.

Nelson C. Marseilles, a clerk in the postoffice, was arrested this afternoon, on a charge of extracting money from letters passing this office. Several letters, from which money had been stolen, were found in his possession.

The Brazilian Slaves have been again remanded to the custody of Capt. De Costa, by Judge Edwards, on the ground that Judge Daily had passed upon the case and stopped farther proceedings on *habeas corpus*.

A Telegraphic despatch from Wheeling, to the Tribune, states that advices from Covington, Ky. to Monday night, give pretty full returns of the first day's voting in five counties of the 10th Congressional District, last represented by the Hon. J. W. Tibbatts, Democrat. Major John P. Gaines, Whig, is 556 ahead—so far, a gain of 266 from 1845, when Tibbatts carried the District by 242 majority. Major Gaines is now a prisoner in Mexico.

A despatch from Philadelphia, in reference to the Mexican news, failure of negotiations, &c., says that the British Minister has interfered, and for what purpose does not proclaim.

Richard Kidder Mead, democratic candidate, has been elected to Congress in Petersburgh district, in place of G. C. Dromgoole. His majority is supposed to be over 200.

The *Tribune* has received the following by telegraph:

RICHMOND, August 6.

By an arrival at New Orleans, from Mexico, we have intelligence of the failure of the peace negotiations.

Scott was preparing for an immediate advance upon the Capital. He was expected to move forward on the 16th of July.

Santa Anna was preparing to give fight with an army of 25,000.

Another skirmish between Gen. Pierce and the Guerillas.

The Mexicans were defeated.

Santa Fe has been totally destroyed by order of Gov. Wilson.

Price Current—August 11, 1847.

The money market is easy, and no difficulty is experienced in procuring accommodations on good business paper. Due caution, however, is observed on the part of the banks in negociating paper, based on produce operations, and the amount discounted within the past week has not been unusually large. In western funds there is rather more doing, the low rate at which they are purchased having had a tendency to increase the circulation in this quarter. There is about the same amount of Canada afloat as was noticed last week, and although as a general thing brokers purchase in accordance with the appended table, cases occur in which they are taken at a less rate.

BUFFALO WOOL DEPOT.

The attention of the public was called this spring to this new enterprise. The great importance of the wool trade—the rapid increase of production west of us renders any attempt at system that shall be beneficial to the producer and consumer of peculiar interest to an immense number of people.

There is no agricultural product of which the real value is so little known to the producer, as that of wool—and it is so from the fact that few or no manufacturers work more than one grade of wool, and that in every flock there is a variety of grades. The manufacturer wants but one kind, and if he can procure that kind, is willing to pay a fair price for it.

The plan adopted by Mr. PETERS has now been well tested at this place, and has operated in a highly satisfactory manner.

In his depot Mr. PETERS makes *ten* sorts. Merino wool is No. 1—and from that down to No. 5, which is the coarsest common wool. Saxony wool is sorted into extra—prime 1 and prime 2, and then he makes combing and de laines sorts. His sales are perhaps the best test of the successful operation of the system. During the week the depot sales have exceeded 20,000 lbs, at the following rates.

No. 5, 24c—No. 4, 27c—No. 3, 30c—No. 2, 35, and No. 1, 40c.

To all wool deniers and growers west, it is of the greatest interest, for they are [illegible] the market value for their wool, and before it leaves their doors they know exactly what it will cost them to get their wool to market. The depot charge is one cent. per pound for receiving, sorting and selling. Although the depot was only opened the 1st of June last, wool has been received there from six different States, and sales thus far have been made at prices which will bear favorable comparison with either New York or Boston markets. So important do we deem the enterprise, not only to our city but to the whole country, that we shall from time to time give depot prices of wool. It is but fair to state that street sales range from 20 to 30, with a slight advance on extra lots.

A Legal Ballad.

BY JOHN G. SAXE.

An attorney was taking a turn,
In his shabby habiliments dressed:
His coat was most shockingly worn,
And the rust had invested his vest.

His breeches had suffered a breach,
His linen and worsted were worse:
He had scarce a whole crown in his hat,
And not half a crown in his purse.

And thus as he wandered along,
A cheerless and comfortless elf,
He sought for relief in a song,
Or complainingly talked to himself.

"Most unfortunate man that I am.
My only client is grief;
The case is, I've "no case" at all,
And in brief, I've ne'er had a brief.

"The profession's already so full
Of lawyers so full of profession,
That a modest young man like myself,
Can't make the slightest impression.

"They grant I'm acquaintd with grants,
Can devise a "devise" or a plea,
Can make a good deed in "fee simple,"
But can't get the simplest fee.

"I've waited and waited in vain,
Expecting an "opening" to find,
Where an honest young lawyer might gain
Some reward for the toil of his mind."

While thus he was wandering along,
His eye accidentally fell
On a very deep hole in the ground,
And he sighed to himself, "it's all well."

To curb his emotion, he sat
On the curb-stone the space of a minute,
Then cried, "Here's an opening at last,"
And in less than a jiffy was in it.

Next day twelve citizens came,
The "coroner's 'quest" to attend;
To the end that it might be determined
How the man had determined his end.

"The man was a lawyer, it seems,"
Said the foreman, who "opened" of course..
"A lawyer, alas!" sighed another,
"He undoubtedly died of remorse."

A third said he "knew the deceased—
An attorney, well versed in the laws:
And as to the cause of his death,
'Twas no doubt for want of a "cause." "

The coroners at length gave a verdict,
Which finally settled the matter,
That the young man was drowned, because
"*He could not keep his head above water.*"

MARRIED.

On the 3d instant, by Rev. Mr. Wilkinson, Mr. JOHN WEBER, and Miss JANE A. E. WARREN.

On the 1st instant, by P. A. Child, Esq., Mr. PETER GROW, and Miss ELIZABETH MILLER, of Humberstone, C. W.

On the 25th ult., by the same, Mr. EDWARD SEAMAN, and Miss HELEN M. WHEATON.

On the 21th ult., by the same, Mr. STEPHEN CLIFFORD, and Miss BRIDGET FLEEHARTY.

In Cheektowaga, on the 29th ultimo, by the Rev. L. A. Skinner, Mr. A. L. GREEN, of Olivet, Mich., and EUNICE M., only daughter of I. N. Ely, of the former place.

At South Wales, on the 1st inst., by the Rev. R. Pennell, Mr. HENRY CHADBOURNE, of this city, and Miss JULIA M. ANDREWS, of the former place.

At Lancaster, on the 2d instant, very suddenly, of apoplexy, Mrs. MARY A. TAYLOR, wife of A. W. Taylor, Principal of the "Union School" at that place, aged 23 years.

At Black Rock, on the 7th inst., by Rev. A. P. Mather, Mr. WILLIAM DAVIS, and Miss JENNETT FINNEY, all of that place.

On the 5th inst., by the same, Mr. WILLIAM DUNCAN, of Brantford, C. W., and Miss BRIDGET COLLINS, of Hamburgh.

DIED.

On the 4th inst., Mrs JULIA ANN, wife of Daniel P. Lee, in her 30th year.

On the 5th inst., JOHN, only son of John D. and Clarissa J. Shepard, aged 8 months.

At Burlington, Vt., at the residence of Dr. J. Smith, on the 25th ult., after a short illness of congestive fever, Miss CAROLINE E., only daughter of Job Gorton, Esq., of Black Rock, N. Y. aged 19 years.

She had left home with the design of visiting friends in Mass., and was stopping by the way a little time with friends in Burlington, when sickness and death overtook her. [illegible] Papers in Mass. and N. Hampshire will please copy.

BUFFALO MUSICAL INSTITUTE FOR YOUNG LADIES.

At the residence of Prof. W. R. Coppock—Composer and Teacher of the Piano Forte, Organ, Singing and Composition.

An institute devoted exclusively to Musical Education is not yet common in this country; but in Europe the test of experience fully shows its great advantages over the too general superficial manner in which this important part of polite education is acquired. The advantages this institution offers to those desirous of completing their studies as Organists—or practical players of the Piano Forte, together with a thorough system of imparting the same to others is fully established by the many precedents of the past 15 years. The pupils are constantly guarded in their practice, against all bad habits, and from the various stages of progress they may be in, are continually stimulated to effort and industry, by association with each other. The family too, are all players, and the theory is amusingly discussed, impressing its rules in more pleasing manner, and more lasting upon the understanding, than by the mere dry study of an elaborate book. Music is composed and arranged from time to time, showing the various styles and harmonies analytically, and adapted for performance on several Pianos at the same time. This teaches a thorough knowledge of counting, and dividing passages into their given time. Vocal music is particularly attended to, and when the pupil has a moderate share of talent, we hesitate not to say, a correct and pleasing singer can be made. The Piano Fortes used are all new, and of the finest quality, and every inducement will be given to render the true spirit with us profitable. The building is commodious, and has a fine garden attached, with Green houses, Bathing rooms, &c., and is pleasantly situatuated in Seventh street, between Niagara Street, and the Falls rail road, and about mid-way to Prospect Hill.

Terms made known upon application at the Institute, or by mail, post paid, directed Prof. Coppock, Buffalo

Prof Coppock, keeps constantly a choice selection of Piano Fortes for sale.

Buffalo, August 3, 1847.

PRINTERS' FURNISHING WAREHOUSE.

WILLIAM PRESCOTT, Manufacturer of Printing Inks, No. 6, United States Hotel Block, Pearl St., Buffalo. Printing Presses, Metal and Wood Type, Cards, and every other description of Printers' materials constantly on hand at New York prices, adding transportation. Also, sole Agent for the sale of C J. Gayler's Patent Double, and Improved Single Salamander Book Safes. n18 3m.

REMOVAL.

WILLIAM J. MAY has removed to No. 274 Main St, in Kremlin Stores, where he will be happy to see his old customers. One price, good goods, small profits and fair dealing, will always be the rule at No. 274. no17 3m.

CHEAP CASH BOOK STORE.

The Pleasant Memory.

ON THE DEATH OF A BEAUTIFUL GIRL.

BY MRS. L. H. SIGOURNEY.

A form was shrinking from the breath
Of each unfriendly gale,
That twelve short summers scarce had rear'd
In beauty sweetly frail,
And soon, no more, for pastime goy
She left her quiet chair; —
A pleasant memory is that child,
With cheek so pale and fair.

A chill and trembling hand she rais'd,
The water drop to shed
Upon the winter-shelter'd plants
That blossom'd round her bed;
And then, her gentle head she laid
Beneath the unsullied snow; —
A pleasant memory is the child
Who slumbereth there so low.

There beam'd a thought, a holy smile,
No pencil's power could paint,
As of a strange, new happiness
She spoke in murmurs faint;
Then, like a babe, by mother lull'd,
Clos'd soft the wearied eye; —
A pleasant memory is the child
Who hath her home on high.

From the Saturday Evening Post.

Maids of All Work.

BY ANNA FLEMING.

Woman's love of dress is a common theme of man's animadversion. Moral lessons devoted to the innumerable evils resulting from this cause have been abundantly lavished upon society, ever since clothes were worn at all. Popular writers, *men* writers, of the present day, join in the cry, and declare a war of extermination against all ornamental articles of female apparel. The shops where such things are procured are spoken of, somewhat as if they were so many deep and dangerous gulfs, into which we are said to plunge headlong, regardless of the consequences, and to come out with new bonnets and shawls, to the utter ruin of husbands and fathers.

This severity may be merited in Europe, no doubt it is, but the case, (with some exceptions, of course,) is different in America. For a few years, very young girls do take great pleasure in their dress, and endeavor, by the work of their hands, to heighten the effect of their charms; but it soon passes away. Once married, and the serious cares of life begun, how generally do we see them gradually becoming utterly careless of their appearance.

Then the men begin again, and talk about "*want of neatness.*"

The fact is, that in this country, in families of small or even moderate means, the women are ever worked. We have all heard of such things as cooks, house-maids and nurses. We also know pretty well what the word seamstress and teacher mean. In Europe, each one of these capacities is said to require separate qualifications. How does it happen then, that so many American women unite all these in their own persons? We have no word in America to describe the "many-sided" personages they become. The English expression, *maid-of-all-work*, comes nearest to it.

And yet men, with a sort of romantic elevation do not understand these things. Perhaps the following little sketch will explain our meaning.

Mr. Elton was just returned from a two years' cruize in the Mediterranean. He had left his wife and children with his mother-in-law during his absence, and was now warmly welcomed by all. There was much to ask, and much to tell on both sides, and it was some weeks before any thing but the past could be spoken of. But when this excitement began to subside, bright visions of housekeeping cheered the heart of both man and wife, and many were the plans proposed by him, and assented to by her.

Let us listen to some of it.

"We shall not have a great deal of money, Mary, but we shall be very happy. Wealth is not happiness, you know."

Mary had an idea that *some money* was necessary to comfort, at least; she also thought that comfort was one of the ingredients of happiness, but she was of a timid disposition, and she did not say so.

"We shall require a good house," continued Mr. Elton, "very small houses are very inconvenient you know."

"Would not a small one be better. Servants' wages will cost us a great deal more, I am afraid."

"Oh, nothing at all; servants are great plagues: every body says so. There is a Spanish proverb which says, speaking of an enemy; "May he have many servants." As the Spaniards find them so very troublesome, how can we hope for a better fate. I am determined against many servants."

Mary was young and easily persuaded. She assented.

"We need not send any of the children to school; you can easily teach the elder to read. You will have nothing to do, you know, and that will be a delightful occupation for you. Remember what Thompson says,

"'Delightful task to rear the tender thought,
And teach the young idea how to shoot.'"

"Two hours a day will be sufficient for them both."

"I am afraid Harry is [illegible] me. I tried to teach him last summer, but he would not pay me the slightest attention. Perhaps though he may be better now; when you are at home."

"No doubt he will, and we shall have a delightful home. I will read aloud to you in the evenings, or you shall sing to me. By-the-bye, don't forget to buy a cookery book when you go out next—you will find it invaluable. I shall not be able to afford an expensive cook, and you will not object to supply various little deficiencies. An economical housekeeper is an excellent thing."

Mary was about as ignorant of cooking as she was of ship building. This part of the conver-

sation was, therefore, to say the least, not agreeable; so she changed the subject, and asked,

"Are you determined upon not sending Harry and Elizabeth to school?"

"By all means! think how cheerful they will make the house. They are old enough to be companions for you, now."

"I wish Harry would get over that dreadful habit he has of killing flies."

"You should not mind that—children will be children."

"But it is so horribly cruel."

"All boys are so; I was the same myself, and I am sure I am no Nero, now."

"No, I am sure you are not."

"There is one thing, Mary, that I had to say to you. I should so much like to see you always dressed in white—a woman never looks so well as when entirely in white. Do get plenty of white dresses—and from morning till night—if you wish to please me, let me never see you in anything else."

In a few weeks, after innumerable plans and counter-plans, small and great; after Mr. Elton and his wife had agreed that the latter was to perform the most laborious tasks, and to be an angel of sweetness and good humor withal, the new house was taken and furnished. It was a much larger house than the size of the family required; but that is the American custom. A very large sum of money was expended upon handsome furniture, so that very little remained for housekeeping expenses; but that is the American custom, too. A servant just arrived from Ireland in a state of semi-barbarism, but *very good-natured*, was engaged at low wages, to perform the various household services, of many of which she had never even heard. Mary found, as many have found before her, that it was easier to do almost everything herself than to make the hopeless attempt to teach the habits of our country to her New Zealander. But in so doing the piano was abandoned, and her ringlets neglected.

One morning Mr. Elton came in with some plants.

"Here, Mary, see what I have bought you. A fine collection of roots; I will plant them in the beds. If you will attend to them every morning, and water them twi[illegible] a day, with the bushes we have already, our garden will soon become a little Paradise. I have ordered a fine watering-pot."

Mary was delighted, and cheerfully agreed to devote some time before breakfast every morning to the plants.

"There is nothing so healthy," continued Mr. Elton, "the English women are a great deal in their gardens, and it is said that that is one reason why they are so very robust. I wish I could see you looking a little more healthy."

Whilst her husband read the newspapers every morning, through the hot weather, Mary watered the plants; but [illegible] the watering-pot was very large and heavy, sh[illegible]bly watered her own feet at the same ti[illegible] came in from the little Paradise very h[illegible] her white dress covered with catterpillars. Every body knows that these are tenacious creatures. Getting them off a dress is a process which arouses all their natural obstinacy, and one which is apt to cost them their life. Swans have been said to sing, when dying. Some fishes also, are said to exhibit beautiful and changing colors in their last hour. A caterpillar's death has no such advantages. After breakfast, whilst Mr. Elton was out, visiting his friends, etc., Mary began her round of household duties. During the time she spent in the society of the emigrant from "County Tyrone," the children were in the street, except Georgy, who was at that *interesting age*, when children climb upon every thing, cry for every thing, and throw every thing into the fire or out of the window. When the culinary operations were in some progress, Mrs. Elton having put the baby to sleep, and picked up all the china he had been allowed to break, and all the other articles which had been given him to strew over the floor by way of keeping him quiet, went in search of the elder ones. If they could be induced to come in doors, they were made to spell; if not, they were let alone. This state of things went on for three months, at the end of which time, they were sent to school, to "get them out of the way," as American mothers say.

By degrees the white dresses were replaced by dingy brown ones. Mr. Elton asked the reason why. He was told of various washing and ironing difficulties, that he could not understand—how should he? By degrees Mrs. Elton lost her cheerful smile and her color, her forehead began to be marked with deep lines. The children said she was cross, Mr. Elton said so, too; they did not know how incessant toil injures a delicate frame. We said before that she never [illegible] on the piano now; the piano had bec[illegible] for the baby; it was so much *easier* to [illegible] on it when he wished to do so, tha[illegible] it for fear of injury to the instrum[illegible] hair was often in disorder, but it wa[illegible] to [illegible] the child pull her hair than to hear [illegible] She could not bear to hear him cry. Mr. [illegible]tho't it very wrong that she should give up he[illegible]sic, but he believed her when she said she never had any time now to play, and he agreed with her in hating to hear the child cry.

It was not long before the gradual process of *fading*, that melancholy thing, from which so few American women are exempt, began to show itself.

It never entered Mrs. Elton's head that any of this might possibly be partly her own fault, that running up and down stairs incessantly *will* exhaust the strength, that nailing down carpets, and nailing up curtains, and carrying heavy children, etc., etc., *will* injure the finest form, that the thousand inevitable (so they say) and continually recurring acts of labor, not cheerful out of door labor, followed by amusement, but dull, depressing house-work, fully accounts for all that has been said respecting the frail and perishable nature of female beauty and health in America.

It never occurred to her that the time and attention devoted to teaching her servants might possibly be better spent in instructing her children, that the energies devoted to pots and pans might have been exerted upon something higher and better.

Strange to say these women never complain of their lot, never try to improve it, Year after year they go on in this manner like the woman in Schiller's "Song of the Bell," the description of whom, after summing up every possible sort of labor, ends with the line

"And rests never."

Is there much danger, is there a[illegible] danger, that such as these will ever be too f[illegible]?

Whilst we [illegible]ur own s[illegible]ach they deserve for [illegible]inflicte[illegible]th equal justice exonerate m[illegible]n the matter. The extreme[illegible] with [illegible] their household arrangem[illegible]times [illegible]ulated, is seldom owing t[illegible]. [illegible], poor [illegible]tures! they hear of thes[illegible]ngs with a [illegible] mystif[illegible] air, and a co[illegible]onate benevol[illegible]e which [illegible]ds us to [illegible] if [illegible] arcan[illegible] of domestic grieve[illegible] revealed to th[illegible] they would find a p[illegible]edy for [illegible] much that is amiss; reco[illegible]at if there [illegible] many cases where such a [illegible] hardship is indispensable,

there are yet innumerable others where it is very different, and where the sacrifice of a woman's health and cheerfulness is dearly earned by the most delicious pies and puddings, the best swept rooms, or the brightest of door handles.

Schools in Mississippi.

To those who are fixed by circumstances to a single spot or a single State, things may look quite gloomy or prosperous which to the traveller who judges from comparisons may appear the reverse. This thought occurs to me in reading late Nos. of the Ohio School Journal, where I find that education in that State is far behind what I suppose should be its point of excellence. We are accustomed, in Mississippi, to think ourselves fairly at the foot of the ladder in things of science.

Without a School Law of any practicable importance or a School Officer of any use at all; without a State Superintendent or a State College, or a [illegible] of any kind that is prospering; without a State Geologist or a Scientific Officer of any [illegible]; without a Mineralogical Cabinet a twelvemonth old, or a book of Science printed in the State: without a Book Printing establishment indeed without any thing but Cotton Bags, Wealth and Ignorance, we are claimed to be in our infancy of Intellect, real grubs in Science. But a new light is promised to us. There is decidedly a healthy action going on in the subject of Education, and men who have opportunities of knowing men who have worked up hill in Mississippi for year, now see a way opening before them, which they never saw before.

Teachers are more sought after and better retained. If no better paid (and prices have receded from the exorbitant rates of 1837) yet they are more regularly and more cheerfully paid.

Schools of both sexes are filling where they have been vacant for years. To instance a few: The Holy Springs Female Institute, under charge of Rev. M. Wetherby, numbers largely over 100, and Mount Sylvan Male Academy, by Rev. R. Morris, (only three Sessions old), seventy-one.—The different denominations are establishing schools or bring their heads together to talk about it.

The masons are stirring on the subject. The next Legislature is expected to appoint a Geologist and establish sound School Laws. The State University at Oxford is going up at the rate of $25,000 per year, and will be opened within two years.

These are the rays which tell of the rising sun, not many degrees obscured.

But now we want Teachers. Now we want men educated for the profession, educated at Normal Schools, grounded into the knowledge of all the tactics of this more than holy war.

Ohioans! we have heard of you, and we invite you [illegible] with your books and Apparatus and join us. Come to this *Slave State*, and be sure to manage your *tongues and your sentiments* discreetly, and these planters will receive you gladly. They want just such men as they think you are, and you shall have their sons and daughters to educate in abundance. Come and bring your plans of Teachers' Conventions and Teachers' Institutes and Associations, and these Teachers will welcome you. They want light on these things, and they think you have got it.—Come and help us, and in ten years more, this great and wealthy State will take that high position in Science which Nature has already given her in Commercial affairs.—*Ohio School Journal.*

"I've done with Tobacco."

What! after so long a servitude? Done with it, all done, and you will never use it again, not a particle of it. My friend, my heart is boiling over with the warmest congratulations, and I am to send them in so many directions that I am perplexed where to begin first: but not to lose time in such perplexity, I congratulate your own person. You have done a capital thing for your own *personal cleanliness.* No human being can be neat and yet use tobacco. You can no more bring the two things together, than you can the northern and southern pole. If you have pitched your snuff and tobacco box overboard, and sent your pipe and cigar after them, and have made an utter repudiation of the whole concern, then you are rid of unclean things; and because there is both beauty and comfort in cleanliness I give you joy and deliverance.

And you are a more fragrant member of the human family. Your must take it kindly, my friend, but it has been the fact that your contiguity to your friends has not been the most agreeable from this cause. The sweet and balmy atmosphere has been troubled by your presence, and many a one in the communings of conversation with you, has suffered something more than a "welcome fragrance." But you have done with the case of offence, have you? More comfortable therefore, will be your contiguity with your species. And I give you joy thereon.

2. But I must hasten to congratulate your *wife.* My good woman, your husband has made a noble triumph. Do but think of it. He says he is done with tobacco! You can now preside over your domestic affairs with a serene temper. You shall not be vexed with filthy spittoons, and bespattered andirons, and offensive blemishes on carpets and floors, etc. Will not all this take at least one of those wrinkles from your brow?—You had better have a jubilee on this deliverance. Suffer the suggestion, you will be a *better wife* for all this. You must give your good man one of the sweetest smiles so long as your own is the sweetest of your deliverance.

3. I cannot forbear congratulating also *your pew in church*—there have been sad sights there. It would have seemed that there is room enough in the creation without making the sanctuary the scene of such a practice. But there will be more sweetness and wholesomeness in the pew than there has been. The house of prayer will have one more section of it purified. That's a comfort.

4. *Your purse,* my friend, comes in for a share of this congratulation. You have stopped one very serious leak in it, who will dare dispute that? It will now be more apt to fill up, and grow portly and become heavier, and be a great pleasure to its owner.

And perhaps the widow of [illegible] fatherless may get a crumb or two more [illegible] the stoppage of that waste gate of your [illegible]nce.

5. I congratulate *the sm[illegible]y of your family.* If the father makes a funeral pile of the whole tobacco concern the sons are less likely to give up themselves to the dominion of that undeniable narcotic. If you are a hearty reformer in this matter, you certainly will damp the aspirations of the lads for this form of human greatness.—The little fellows, some of them at least, think that it is one of the most glorious testimonies and prerogatives and privileges of manhood, and that they are themselves pretty considerably advanced towards that exalted condition of humanity, if they can but snuff, smoke or chew as father does. So, my dear sir, you have made it less likely, than it was before your reform, that the

tobacco mania should have abbettors from our fireside.

But I cannot add any more links now to the chain of my congratulations. But will hasten to my conclusion, which is a most hearty welcome to the ranks of that portion of the human family who have neither never defiled themselves with tobacco or having done so, have had the good sense and conscience to make a clear escape from that kind of delinquency. I make you welcome also to all the quietness of mind; calmnesss of nerves, cleanliness of person, household purity, and feminine smiles, which a thorough purgation from tobacco carries in its train. And I make you welcome, with us to as smashing a warfare as moral suasion will suffer us to carry on against pipes, and snuff and tobacco boxes, and all paraphernalia generated by indulgence in the Indian weed.

Self-Education.

The Education, moral and intellectual, of every individual, must be, chiefly, his own work. There is a prevailing and a fatal mistake on this subject. It seems to be supposed that if a young man be sent first to a grammar school, and then to college, he must of course become a scholar; and the pupil, himself, is apt to imagine that he is to be the mere passive recipient of instruction, as he is of the light and atmosphere which surround him. But, this dream of indolence must be dissipated, and you must be awakened to the important truth, that, if you aspire to excellence, you must become active and vigorous co-operators with your teachers, and work out your own distinction with an ardor that cannot be quenched, a perseverance that considers nothing done, while anything yet remains to be done. Rely upon it, that the ancients were right *Quis quc suæ fortunæ faber*—both in morals and intellect, we give their final shade to our own characters, and thus become, emphatically, the architects of our own fortunes. How else should it happen, gentlemen, that young men, who have had precisely the same opportunities, should be continually presenting us with such different results, and rushing to such opposite destinies? Difference of talent will not solve it, because that difference is very often in favor of the disappointed candidate. You shall see, issuing from the walls of the same school—nay, sometimes from the bosom of the same family—two young men, of whom the one shall be admitted to be a genius of high order, the other, scarcely above the point of mediocrity: yet; you shall see the genius sinking and perishing in poverty, obscurity and wretchedness; while, on the other hand, you shall observe the *mediocrs* plodding his slow but sure way up the hill of life, gaining steadfast footing at every step, and mounting at length to eminence and distinction, an ornament to his family, a blessing to his country. Now whose work is this? Manifestly their own. They are the architects of their respective fortunes. The best seminary of learning that can open its portals to you, can do no more than to afford you the opportunity of instruction; but it must depend at least on yourselves, whether you will be instructed or not, or to what point you will push your instruction.—And if this be assured—I speak from observation, *a certain truth*—*There is no excellence without great labor.* It is the *fiat* of Fate from which no power of genius can absolve you. Genius unexerted is like the poor moth that flatters around a candle till it scorches itself to death. If genius be desirable at all, it is only of that great and magnanimous kind, which, like the condor of South America, pitches from the summit of Chimborazo above the clouds, and sustains itself at pleasure, in that empyreal region, with an energy rather invigorated than weakened by the effort. It is this capacity for high and long continued exertion—this vigorous power of profound and searching investigation—this careering and wide-sweeping comprehension of mind—and those long reaches of thought that

> Pluck bright honor from the pale faced moon
> Or drive into the bottom of the deep,
> Where fathom line could never touch the ground,
> And drag up drowned honor by the locks.

This is the prowess, and these the hardy achievments which are to enrol your names among the great men of the earth.

But how are you to gain the nerve and the courage for enterprises of this pith and moment? I will tell you: As Milo gained that *hoc signo vinces*: for this *must* be *your* work, not that of *your teachers*. Be you not wanting to yourselves, and you will accomplish all that your parents, friends and country have a right to expect.—*Wirt.*

Anecdote of a Parrot.—A Quaker lady in England had a little servant girl, whom she frequently called into the parlor to instruct her in reading, and as she had a low, mumbling voice, her mistress had frequently occasion to reprove her, telling her *to speak up—can if thee will—mutter, mutter, mutter, mutter.* A favorite parrot, which was caged in the parlor, from the frequent reiteration, learned to repeat the form of reproof verbatim. It happened that a ministering friend, in his travels, visited this family, and had what is called a family sitting, in which the friend felt a concern to speak, and beginning in a rather low voice, the parrot sung out—*speak up—can if thee will—mutter, mutter, mutter, mutter*—the preacher raised his voice a little. But presently he heard the same command—*speak up—can if thee will—mutter, mutter, mutter, mutter*—and the reproof was repeated until the preacher found that nothing but the audibility of his voice would silence the pert reprover. It is needless to state that Poll was never after permitted to be present during a family sitting.

Musical Catechism.—We find the following afloat in the papers:

What is a slur?

Almost any remark, which one singer makes about another.

What is a rest?

Going out of the choir to get some refreshment during sermon time.

What is singing "with the understanding?"

Marking time on the floor with the foot.

What is a staccato movement?

Leaving the choir in a huff, because one is dissatisfied with the leader.

What is a swell?

A professor of music, who pretends to know everything about the sentence, while he cannot conceal his ignorance.

How a Farmer out West preserves his Eggs.—A two gallon pot is filled with eggs; and one pint of lime, of the consistency of common white wash, is poured in, and the pot is filled with water. A board is then placed on the top, and the water, which is never changed, as well as the eggs, remains pure and sweet. This practice is the one most common in France, the inhabitants of which, to their love of frogs and soup, add also, it appears, a very commendable taste for eggs.

From the Buffalo Commercial Advertiser.

St. John's Compass.

It is singular that this community, which has so much to do with inland commerce, and whose wealth and prosperity are so dependant upon it, should not have shown some interest in a recent great discovery—I mean that of the rule which enables the mariner at all times and in all places under the sun, to ascertain the precise variation of his compass. To the discoverer of this rule I am in a great degree a stranger; it is not therefore to compliment him that this public notice of this instrument is made. The proposition demonstrated by him has hitherto been considered an absurdity. Astronomers, Geographers, Navigators, all have supposed it impossible to detect the vagaries of the needle. Since the first Navigator ventured beyond the pillars of Hercules into the broad Atlantic to this day, one thing has been wanting to this invaluable instrument. Its true variation from the poles could never be ascertained under any circumstances. The mariner never laid his course with the certainty that his variations therefrom could be detected: and numerous accidents and losses prove this uncertainty. To remedy this defect has been the study of scientific men for ages. Its immense importance will at once be perceived. The discovery would amply repay years of patient exhausting labor. It must forever associate the name of the discoverer with that of the inventor, and make it a familiar sound wherever canvass whitens water. I wish our citizens would examine the compass of Mr St. John; the most unenlightened on the subject of Magnetism can comprehend its result: there is no escape from it. Attract the needle with a magnet, and the satellites attached to it, and moving with it, will tell with unerring certainty the degree of variation. The theory you may not understand, but the fact is evident. It remains to be ascertained whether the rule is true under all circumstances—and so far as the compass has been tried it has not yet failed.

This I am informed is the fact, and farther that it has been subjected to the test of experiment at Washington, and triumphed in every instance.—It is indeed a wonderful instrument and will yet be of inestimable benefit to the world. I trust that Mr. St. John will be rewarded for his patient toil in perfecting his discovery. Like other discoverers he may never be rewarded—but some less deserving man of another generation will build a fortune on his labors. It has been my lot to be connected in some degree with the marine of the ocean and the lakes. I know of large losses that have been paid by insurers, which never would have happened with St. John's Compass in the binnacle, and of many a gallant bark that has laid her bones on our coast, that with this unerring instrument might long have "walked the waters." I will not trouble you farther, but after witnessing the result of experiments with this instrument, I could not refrain from expressing my gratification at that result. Never having heard of it until a day or two since, my surprise was great that it had never come to my knowledge before, and you will pardon to the garrulity of an old man this tribute to an interesting and very important discovery.

The possession of the home of the Montezumas is not of half so much importance to this country as the discovery of the law that controls the variation of the Mariner's Compass.

P.

From the Buffalo Commercial Advertiser.

A Trip to Chicago in the St. Louis.

NUMBER I.

On the evening of Monday the 29th of June, the *St. Louis* cast off her moorings in Buffalo Creek. She bore with her a crowd of people, most happily diversified, and drawn from all parts of the Union. There were editors of papers of all politics, politicians of all hues, Statesmen of divers dimensions, clergymen, poets, literary people, plain people, common people, all kinds of agreeable, instructive, polished and happy folks—indeed it seemed as though, somewhat like the ark, our steamer had congregated in it, and frequently in pairs too, the most excellent specimens of all the varieties of our race. (Indeed I heard a sober-looking gentleman inquire whether Captain Wheeler's name was not Noah, and he seemed disappointed when informed that it was Fred! Perhaps he was thereby cheated of a sparkling sentiment, having reference to our living cargo, he had conceived and would have else delivered at one of our daily festivals.) But there is no likeness without a difference, and no unclean animal was admitted into our ark, unless a pig in the forecastle, and a literary gentleman in the cabin, who was somewhat careless in the matter of his hair and linen, may be so styled. But then, these were both useful in their respective ways, and added materially to the gratification, carnal and spiritual, of those who liked them.

The last bell sent forth its last toll, the gangplanks were hauled in and the gang-ways closed, our band of music on the hurricane deck struck into a triumphant air, the last line was loosed, and with a tinkle of her little bell, and a dash of her wheels, the *St. Louis* headed into the stream, and so commenced the voyage. But such a commencement! One that I most sincerely hope can be experienced only at Buffalo. A passenger who was somewhat te[illegible]is talk, and therein only, so far as I [illegible], thought it was as tedious, and nearly [illegible]erous, as being embayed among the icebergs of the North.—The harbor below was crowded with craft of all descriptions, and it was funny and instructive both, to note the admirable patience and consummate skill, with which our large steamer was worked through the seemingly compact mass, for a full quarter of a mile. Her heavy fenders were rubbing continually; now grating against some tall brig or schooner, now threatening to crush an interloping canal boat, and now rolling and jerk-

ing against the side of a plebeian propeller, or the massive guards of some huge leviathan, with its aristocratic decks o'ertopping even our own. On we went however, at a snail's pace, picking our way—now backing, now hauling, now pushing off, now waiting until some lubberly captain pulled some dingy, wave-worn hulk aside, and now gaining a few feet by the rare motion of our paddles, until, at last, our noble steamer, emerging from the crash, rounded the light-house, and dashed westward, like a triton, over the fast darkening waves.

"How beautiful is night!"—particularly in its solemn quietude upon our lakes. As the flying steamer coursed along, the streets of the city showed their brilliant lines of light, and the churches and public buildings shot their spires and domes into the clear, starlit air. The stir of its still noisy streets was lost in the distance, and deep repose seemed to hover the city. It was beautiful—inexpressibly beautiful! And, as its lights faded, how attractive became the beacon, the all of Buffalo that was left to us, whose homes and hearts are there. The shivering stream of splendor with which it topped the wavelets, was my cynosure, and when that light was utterly eclipsed, and not before, I left the stanchion to which I had clung so long, and retired to my stateroom, abandoning the deck to the merry groupes and pairs of chatters and of flirters, who, for aught I know, abode there contentedly the liveleng night. F.

NUMBER II.

I was late at breakfast, and still later upon deck the next morning, for, under favorable circumstances, such as I enjoyed in the night, I love to wrap sleep around me, like a cloak, and nestle in its folds; and when morning, with its rosy fingers, would pluck it from me, I hug it all the closer. To me there was naught of uncommon interest in that portion of Lake Erie, and I delight in that half-waking sleep, when the Will has power, and fashions the dreams that slumber generates, according to our fancy, into the most delicious forms. I would have waked later, had it not been for a merry clatter in the cabin, and for the odor which penetrated the keyhole, and could not be transformed into a prairie perfume, nor the scent of ambrosia, nor anything but what it was,—the exhalation of a most capital, well-ordered breakfast. And so I laid aside my cloak, and welcomed the morning of another cloudless, beautiful, happy day.

When I emerged upon the deck, we had passed Erie, and were running on our straight course from Buffalo to Cleveland, along the coast. It is a pity, and yet no pity, that that coast is so low. It pleases not the eye, indeed, to ecstacy, though it has its humble beauty. But, were there no such neutral tints in Nature, where would be the efficacy of her decided colorings? If all her hues were gorgeous, and all her scenery of at least a certain brokenness and altitude, her richness of color would seem tame, and her scenery monotonous as now. And yet, if that line of coast, here parallel with our course, and there curving into an extended bay ending in a point projecting some miles into the Lake, and everywhere presenting an unvarying, wave-washed bank of clay, or slate, were backed by mountains, or even by such a range of hills as makes Chautauque charming, I would like it better.

This determining distances on the water is not so easy as the gentleman from Inland-town imagines. He says he'd swim ashore and back, with ease, in thirty minutes. I have journeyed somewhat, good sir, upon these waters, and could not guess the distance within a mile,—but, you may rely upon it, to swim to yonder bluff would be a feat requiring at least the aid of a pair of life preservers. Take notice, that, though the country is wooded, it looks as though 'twere mossed, and you cannot distinguish separate trees. Your eye, though keen, distinguishes no living thing upon the shore, and yet it is a cultivated and populous township we are passing. Can you chuck a biscuit into that steamer bound down, and now inshore abreast of us? You say it is a small steamer a quarter of a mile away:—I think it is quite a large one, and I think it must be more than one, and perhaps nearly two miles, from us, for, in this clear day, the men upon her upper deck, there, close by the wheel-house, are points which wear no semblance of humanity. You are not satisfied! Well, we'll inquire—but not of the man at the wheel—that would be against all rule.—Here comes one of the Mates—ask him.—About five miles to the shore, he says. This eye-measurement by the inexperienced is very fallacious. Vision, on an unbroken level, whether of land or water, has little to depend upon in its estimate of distances. Your mistake is a very common one. I have been often deceived in this same way, and doubt not I'll be so again. Everything depends upon use in such matters.

At two o'clock, P. M., we arrived at Cleveland, where we received some most acceptable accessions to our numbers, and remained there some hours. Of this important and delightful city, I may make some particular mention when I come to write of the downward trip,—but now, merely remarking, that we explored it thoroughly, and enjoyed it fully as a four hours' sojourn would permit,—we'll leave it;—nor will we linger o'er our course to the Detroit River, which we reached with early morning light on the first day of July,—for I am as impatient now as I was then, to be careering o'er the dark waters of the Upper Lakes. I love Lake Erie,—for it once satisfied my amplest notions of the majesty and loveliness of water scenery.—Its pale green face in calms has charms for me, and I love to watch the white waves breaking on her vast expanse. But I have seen Huron, and stormy Michigan, and looked upon their dark blue waters, telling

of soundless depths, and have lingered in their islands, and felt their power, and my soul panteth after them, and with them in view, will not be satisfied with aught but them, however lovely.

F.

If things inanimate could see, speak and hear, how great a knowledge of human nature stripped of all conventionalities and disguise might not a key hole, a bureau, a quarter of a dollar, or a mere cent convey to our minds! Hans Christian Anderson, a charming Danish writer represents the moon as giving an account of the scenes on which she has shone. One evening she said:

Often have I seen young officers, parading for the first time in their splendid uniforms—I have seen maidens in their ball-dress—the handsome bride of a prince arrayed in her festal attire; but no joy to be compared to that which I witnessed last evening in a child, a little girl four years of age. She had received a present of a new little blue frock, and a new rose-colored bonnet. The finery was already put on, and all present called out for candles, for the light of the moon-beams that shone in at the window was far too little. "Light, light!" was the cry. There stood the maiden as stiff as a doll; her little arms anxiously stretched out from the frock, and the fingers wide apart from each other; and oh, how her eyes and every feature beamed with joy!

"Tomorrow you shall go out," said her mother. And the little girl looked up at her bonnet, then down at her frock, and smiled with rapture. "Mother," said she, "what will the dogs think when they see me in my smart dress?"

And on another evening the the moon with all the silvery mildness and simplicity of Anderson's own beautiful writings, said:

I looked down upon the Tyrol with a soft and saddened smile, said the Moon, and the pine trees cast their deep shadows upon the rugged rocks.

* * * * * * *

High up, between two pointed summits of the western acclivity of the mountain-range, stands a lonely nunnery, looking like a swallow's nest wedged in between the rocks. Two of the sisters were above in the tower, tolling the bell; they were both young, and they looked forth over the mountains into the wide world beyond. A travelling carriage rolled past on the road below; the postillion's horn sounded, and as the poor nuns looked down on it, their thoughts unconsciously followed the glance; a tear glistened in the eye of the younger sister—the horn was heard more and more faintly, until at length the convent bells silenced its dying sound

---

Creatures with Thousands of Eyes.—What would be thought of a quadruped whose head, with the exception of the mouth and place of juncture with the neck, was covered by two enormous masses of eyes, numbering upwards of 12,000 in each mass? Yet such is the condition of the organs of vision in the dragon fly. In the common bee the same structure is not less apparent. The fiery eyes of many gad flies, (Tabani) which present vivid bands of purple and green, are composed of similar lenses, and each eye contains nearly seven thousand. The ant has fifty lenses; the house fly four thousand; while above seventeen thousand have been counted in the eye of a butterfly, and more than twenty-five thousand in that of a species of beetle.—*Batterson's Introduction to Zoology.*

More Barn Burning in Taghkanic.—On Thursday night last a large barn on the premises occupied (and we believe now owned) by Robert Bush in the town of Taghkanic, was set on fire and burned to the ground. The fire was first discovered about 2 or 3 o'clock at night. The barn contained the principal part of Mr. Rush's crops of Grain, Hay, &c., and nearly all his farming utensils. Several stacks of grain outside the barn were also burned. There was no insurance as we understand, on the building or its contents, companies and agents being very reluctant to take risks in that neighborhood. The loss is estimated at from $800 to $1,000. The farm in question, which was recently purchased by Mr. Bush from Robert Swift Livingston, was formerly occupied, as we are informed, by a man named McIntyre, who was ejected not long since. When or where this dreadful state of things is to end cannot be foreseen. It certainly seems that the desperadoes who thus apply the midnight torch, could and would be ferreted out and brought to justice if the inhabitants of that section generally felt a disposition to do it.—*Hudson Rep*

Military Composition.—We have been favored, by a gentleman of this city, with the copy of a letter written by Gen. Scott to the Hon. Millard Fillmore. It is said to be authentic; it is annexed:

Headquarters of the Army.

My Dear Sir: I have received the two letters (one from the Rev. Mr. Angier, and the other signed by Mr. Van Wyck,) asking on several grounds the discharge of James Thompson, a private of the second Regiment of Artillery. 1st—He has, since his enlistment, reformed his habits. This is an argument in favor of his serving out his time lest he should relapse, if discharged, before confirmed in his reformation. 2d—He has become pious. This makes him at once a better soldier and better man, and fortunately we are not without many pious officers and men in our ranks; but 3d—It is alleged that he has imbibed conscientious scruples against performing military duty. If the man be mad he can be discharged on a surgeon's certificate to that effect—but if he has only turned coward, we have ample means of punishing him if he should, when ordered, refuse to fight.

I return the letters you enclosed, and remain, my dear sir, with great esteem, yours truly,

WINFIELD SCOTT.

Hon. M. Fillmore.

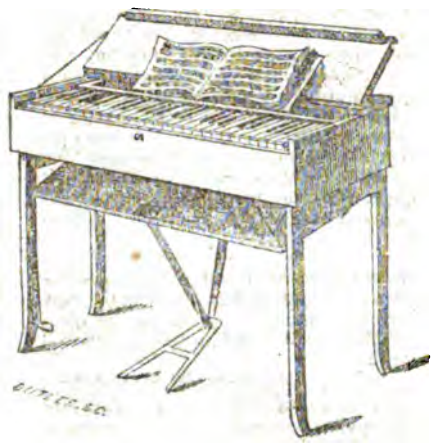
It is almost unnecessary to offer any comment on this letter; it speaks for itself. It is equal in point to the famous military order of the battle of Cerro Gordo.—*N. Y. Herald.*

Where does she belong?—A female, apparently about 25 years of age, about a middling size, with a black hair and dark eyes, was taken to the Poor House in Kingsville, in this county, on the —th ult. She had on a dark calico dress, considerably worn—no bonnet, shoes or stockings. She was first seen in Denmark, in this county—seems entirely bewildered, and likes to be in the wood, where she says she belongs. She has the appearance of having been in this condition for some time. She appears to understand how to do house work, but, owing to her bewildered state, it is very difficult to get her to do any thing. No clue has as yet been obtained as to her name or history, save that she says her father's name was William S. Rhodes, and she will take the same name.—*Conneaut Reporter.*

Labor Saving Soap.—To make it, take 2 lbs. of sal soda, 2 pounds of yellow bar soap, 2 qts. of water, or in like proportion. Cut the soap in thin slices, and boil together two hours, and then strain through a cloth into a tight box or tub; let it cool and it is fit for use. [illegible] it freeze.

To use it: Put the clo[illegible] the night before you wash. The [illegible]ning put the water into your kettle or [illegible] To every two pails of water add one pound of the soap. As soon as the water with its dissolved soap boils, wring out the clothes from the water in which they had been at soak during the night, and put them in the boiler without any rubbing. Let them boil one hour, then suds and rinse them, and they will be clean and white. They will need no rubbing, except a little on such places as are soiled, and for that no washboard will be required. The clothes should be rinsed in two waters.

House-Keepers, cut out this receipt and preserve it.



View of the Instrument when open for use.

Carhart's Improved Melodeon.

The above cut is a correct representation of a new Musical Instrument as yet but little known in the Musical World, and which is destined, we have no doubt, to be extensively introduced. The extreme cheapness, portability, and beauty of the Melodeon cannot but commend it as an universal favorite. It is thus described by Mr. GEORGE A. PRINCE, of 200 Main street, who has been engaged in introducing it to the public during the past year: —

"It is now about one year since I first offered these instruments for sale, and during that time the increased demand for them has been unparalleled. Ten workmen have been constantly employed in the manufacture, and yet the makers have not been able to supply the demand. An additional number of workmen have however been employed, and in future I hope to be able to supply all demands promptly.

"For the benefit of those residing at a distance, and consequently unable to inspect the Melodeon before purchassing, I will endeavor to give a short description of the instrument.

"The cases are made of Rosewood, and are as handsomely finished as any Piano Forte. The Key-Board is precisely the same as the Piano or Organ, and the tone (which is very beautiful,) closely resembles that of the Flute Stop of the Organ—the notes speak the instant the keys are touched, and will admit of the performance of as rapid passages as the Piano. The pedal on the left is intended for a *swell*, and with which the most beautiful effects can be produced—the pedal directly under the instrument supplies the wind, and works so easy that a child can manage it without any exertion. The bellows (which is something entirely new, for which a patent was granted in Dece[illegible]) is a reversed or exhaustion bellows, and [illegible]his in a measure which produces the peculiar tone. The instrument can be *immediately made portable* without detaching any part, the bellows receding into the body of the instrument, and the legs folding under, and springing to their places, leaving the whole in a compact form as represented in the cut below. Each instrument has a packing case secured by lock and key, and the whole when packed and ready for transportation weighs but forty-five pounds, and costs but forty-five dollars. The volume of tone is equal to that of a small organ, and by means of the swell may be increased or diminished at the pleasure of the performer—it is sufficiently loud for small churches, and is well calculated for a parlor instrument. Hundreds have examined them, and all have been loud in their praise, but the best evidence of their merit is the rapid sale. Bt it is a *new* in-trument, a new invention, and as yet but little known in the musical world, and it is for this reason that I call to it the attention of all lovers of music, believing that there are thousands who would lose no time in securing one were they aware of the existence of such an instrument, and *the low price at which it could be obtained.*

DIMENSIONS OPEN — Height 2 feet 7 inches, Length 2 feet 5 inches, Depth 13¾ inches.

DIMENSIONS CLOSED—Height 6 inches, Length 2 feet 5 inches, Depth 13¾ inches.

Orders from a distance are promptly supplied by Mr. PRINCE, from his establishment, No. 200 Main Street, Buffalo.

SENSATION OF BEING HANGED. — I have the most perfect recollection, even of the slightest sensation which I experienced; and were the whole business to recommence in an hour from this moment, I should not feel the least concern. When the rope had been fastened about my neck, and when the executioner had pushed me from the ladder, I was seized with a violent pain about the throat. Shortly afterwards I felt nothing.— The air inflated my lungs slowly, but punched up as they were, the slightest particle of the balmy breeze revived me; and besides being slightly balanced in mid-air, I might be said to breathe it at every pore. I can even recollect that this swing-swang motion was not without its charms. I beheld external objects as it were through a thin veil of gauze; my ear was rather fatigued by a stilly silence: I began gradually to lose myself in my meditations, though I can no longer exactly recollect the subject of them, unless it was the money I had won the evening before from my comrade Gregorio. All of a sudden I gasped for breath: I could no longer perceive objects distinctly; I no longer felt the swing-swang motion; I was dead.—*The half-hanged Italian—Monthly Magazine.*

HORRIBLE ACCIDENT.—An accident of a shocking character, happened yesterday afternoon at the boat yard of W. W. Smith, on St. Paul st, The frame of a canal boat was upon the stocks, and a German named Derick Wissels, was sitting underneath, putting on the bottom boards, when the spikes gave way, letting the boat down upon him, crushing his head and face in a horrible manner, the former being completely smashed down! He lived but a very few minutes. Several others were at work on the boat, but all escaped without injury. The German resided near Green's Tavern, at the Landing, and leaves a wife and one child. He was an industrious, sober mechanic.—*Roch. Adv.*

A witty auctioneer of Norfolk, a few nights since, finding his company slow at bidding for clocks, put up "the last," and said, "Now, gentlemen, I present you with a new kind of clock; it is called the Santa Anna clock, and warranted to run without stopping,"

Did God so Will It?

BY ELIZA COOK.

Did God so will it? Truth is in the tone
That so arraigns the evil deeds of man,
And worshipers at the Eternal Throne
Will breathe it forth in face of mortal ban.
We note dark scenes that crowd upon our eyes,
Rousing the bosom but to chafe and chill it;
Oh, who shall gaze, nor feel the question rise—
Did God so will it?

The holy word, typed by the gentle bird
Of holy peace, is often yelled around
As a fierce war-cry—scaring while 't is heard,
Baffling and baying where bold thought is found.
"Be merciful," is the divine behest;
Priests with the mission, how do ye fulfill it?
Even as tyranny and strife attest—
Did God so will it?

The red-skinned savage holds his hunting field
As Nature's heritage by human law,
Content with what the bush and river yield,
His rugged wigwam and his tawny squaw.
But the smooth white-face drives him back and back;
Let his voice tell of right, and might shall still it,
Till his free steps are thrust from their own track—
Did God so will it?

The heirs of fortune eat, drink, laugh, and sleep,
Scarce knowing Winter's cold from Summer's heat;
Strange contrast with the lank pinched forms that creep
With roofless heads, and bleeding, heartless feet.
While sated Wealth reclines to cull and sip,
Where the full feast is decked with flowery fillet,
Wonder and Hunger ask with moody lip—
Did God so will it?

'T is a fit question when the coward hand
Deals needless anguish to the patient brute;
Proud upright thing of clay, thou had'st command
To rule, but not to torture the poor mute.
When thou would'st urge the brave steed to a task,
Knowing the mean, inhuman work will kill it,
Hearest not thou the voice of conscience ask—
Did God so will it?

Crime clothed in greatness holds a wondrous claim
On the world's tenderness—'t is few will dare
To call foul conduct by its proper name
When it can prowl and prey in golden lair;
But let the pauper sin—Virtue, disgraced,
Rears a high seat, and Vengeance stern must fill it,
Justice, thy bandage is not fairly placed—
Did God so will it?

'T is a fit question to be put to man
When he would trample hearts already sad,
Reckless what pressing trials crowd the span
Of others' days—so that his own is glad.
'T is a broad taxing but the chainless mind
Will dare to raise the doubtings that shall thrill it,
Inquiring oft, 'mid factions base and blind,
Did God so will it?

Who can look out upon the earth and see
Much that is there, without a startling fear
That Man has darkly set the upas tree
Where Nature gave him vineyard fruits to rear?
Sorrow, oppression, carnage, madness, pain—
Read the world's record—note how these shall fill it;
Shrink not, but question straight with heart and brain,
Did God so will it?

The art of loving our neighbor as ourselves, and even of loving our enemy, consists in keeping our eyes on the man in him.

For the Western Literary Messenger.

A Singular Letter.

MR. EDITOR—I once had a very dear friend, whose life seemed marked for disappointment; one of those ardent passion-full beings, who are ever painting life in the most brilliant, or most gloomy colors. He loved whom he loved with all his soul; and I doubt if he ever hated any one. I was deprived of his society by the misery of a disappointment which drove him into a long and gloomy seclusion from the world. He met one like himself, a lady whose soul lived in her "large, bright, spiritual eyes," and spoke, in their intense and eager glance, a spiritual language, which his soul but too well understood. He did not pause to think, but laying the reins on the back of his passion, he was soon irretrievably lost in the hopeless toils of a hopeless love. For she was married, though to one all unlike herself—a cold, money getting man. My friend was far too honorable to think of hope—and he fled from home, not to conquer his passion, but to indulge it where he could with safety. Not long since I received from him the following singular letter, which, for the sake of the singular ideas it contains of perfection and sadness, I send to you.

PROVINCE OF DESIDERIA, LAND OF GEMITUS.
September, 184–.

MY DEAR MUTUUS AFFECTUS:—

Wonder not at finding me in this province. You know my passionate character too well, I think, to need any explanation of the motives which led me here. The conflict of love and despair left me no other retreat. The land of Gemitus received its name from the *respiration* of its inhabitants. The atmosphere seems not to contain sufficient of the vital principle unless inhaled in large quantities, so that every breath is a deep and long-drawn *sigh*. And this sighing respiration of its inhabitants gave it the name of Gemitus, which you know is the old Roman word for a sigh. This particular province of *Desideria*, received its title from the particular sentiment which universally prevails in the hearts of all residents, native and foreign. Desideria you know is a word for which we have in English no equivalent. It expresses that hopeless, pining, that consuming longing for the *absent*, or the dead, which the Latins expressed directly by this word, but which we can only express by a *description*. It is this sentiment which le[illegible] its dwellers to the twilight shades of i[illegible]g willows, and among the pale tinted fl[illegible]t droop on their long slender stems. Her[illegible]neet beings of the purest and noblest sensibilities—fair young maidens leaving the glittering shows of the cold world's pageantries, to pine over the unreturning absence of "lover and friend." Here the mother's love weeps over the sad, sweet memories of the bright eyed, golden headed little ones whom the grave has hidden from her sight. All eyes beam with the softened liquid light of chastened and cherished grief. And from the willow bow

ers I hear the plaintive melodies in which the broken heart is pouring out, like the dying swan, its few remains of life. All glorious things are here, but they are shrouded in twilight. The sun shines never with the naked glare that wilts your flowers, and dazzles your eyes; but like an astral lamp, sheds a softened sheen. And here am I, my being occupied with one only thought, and memory eternally whispering the same sad tale. Yet would I not be different. Life, in all its deep and awful mysteries, is present as it never was before. I look down into the depths of my being and start at the slumbering capacities it holds. And do you know, I have come to think that all that is perfect is sad? You may charge my mind with disease, but look upon life even in your world, where hurling confusions hide truth from your sight much of the time. Does not every thing that deeply affects you, make you somewhat sad? Is not earnestness at all times tinged with sadness? Go and lay down beneath the blue canopy, and gaze into the serene and azure depths till the sublime vastness has entered your heart, and there will be a gentle sadness with it too. Go stand beneath the falling cataract at Niagara, and when the thunder of its roar goes up like the mighty anthem of its praise to God—when the might, the majesty, the terror of the scene has fastened on your heart, a sad atmosphere will settle over all, like the mists that are generated by the pouring torrent, and rise forever around those sublimities. Go, stand beside the most perfect human loveliness, and gaze on beauty till you wish to live only for the sake of that vision, and you will be sad. Listen to the most perfect music, and when your soul floats on its cadent harmonies, is spell-bound in the witchery of woman's voice, God's blessed gift to her, even in the mildest thrills which go like waves of ecstacy through your frame, you will be conscious of a gentle sadness. So every thing as it appaoaches perfection is attended with this chastened and chastening influence. Will not heaven then be sad? Sadness is not misery.—It is the *effluence of intensity*—whether of feeling, or, beauty or glory. I conceive a sadness of heaven which would, to me, in no degree impair its bliss, or dim its brightness. It is as if the blazing brilliance of Jehovah's presence was softened by a medium which made it *not less glorious*, but less dazzling; and so all its glories and raptures bounded and chastened by this [illegible]manation from its perfectness. Tell me [illegible]he sublime sadness which rests over t[illegible]eautiful and distant heavens the dimness of our own vision or the real presence which surrounds their brightness, and will not the melody of heavenly songs be like the music of Caryl's harp—

"Pleasant and mournful to the soul."

But, my dear friend, you will weary with my sad philosophy, and yet, by your leave, I think it would not injure you occasionally to look beneath the superfices of life, and find that

—"In those abysses hide
Beauty and wealth unknown."

And so I leave you for the present to ponder over a grief which years have not abated, and to wander with *Thoughts* alone for my companions. May they visit you ever in pleasant shapes.—Farewell." B.

THE CROSS ON TRINITY CHURCH.—The following, which we copy from the N. Y. *Commercial Advertiser*, conveys an impressive moral in beautiful language:

When the sky is clear and the sun is shining, it is scarcely more striking or prominent than other objects. But when sombre clouds, "enshring sulphurous fire," loom up from the horizon and spread their leaden-hued pall over the cerulean space; and comparative darkness and oppressive gloom enwrap surrounding objects: and anxious mortals hurry to and fro as though they feared some indefinite but impending evil; and men, whose souls are constructed on the duplex movement principle and whose limits of vibration are profit and loss, snatch their perishable wares from the side-walks and hurry them under shelter; and the young winds whistle their alarm, and cowering to the very dust, rush madly along the streets as though they too sought a hiding place; when the very sun has put on sack-cloth and all is cheerless and threatening—then that cross stands forth in bold relief from the lowering sky, firm amid all the commotion and shining brightest and most gloriously as the darkness darkens.

What a moral! What a lesson of hope for man! No one, who knows, will accuse us of Puseyism or its kindred superstitious faith, Roman Catholicism, yet we own that the removal of that cross—emblem of our faith, shining like burnished gold in the dark hours, and bright with glistening beauty caught from rays that reach not lower objects—would deprive us of many a pleasant and profitable thought; and a man can ill spare even one such consolation on his weary pilgrimage.—That cross—as a type or memento only—has its morals, its lessons of hope and truth which our feeble pen may but feebly echo. Yet this truth we cannot fail to see—it is most attractive, most suggestive, most inspiring, at the very moment when every thing else within the range of vision indicates disorder, darkness and despair.

'Tis even so. Elevated above the commotion beneath, immovable when every thing below is quivering in the violence of the gale, looming larger and more distinct as the clouds multiply and the rains descend, catching, concentrating upon itself and throwing back upon our contemplative vision rays of light gathered from regions beyond our ken, it becomes at once a type of that unseen cross which is the radiant star of hope when the sun of prosperity has set deep beyond the distant horizon—the guiding star to one's faith and the center of one's affections—a constellation of hope in the darkened sky and an assurance of a blissful immortality.

From Mexico.

The steamer Fashion has arrived at N. Orleans from Vera Cruz. She left the latter port on the 2d ult.

Gen. Scott was at Puebla on the 30th of July, when there was strong probability of an immediate advance on the capital. Gen. Valencia had arrived at the capital with four thousand troops. Gen. Pierce arrived at Perote after an action with the guerillas near the National Bridge. Lieut. Sipton, of Indiana, and the surgeon of the Pennsylvania regiment, are dead.

The courier of the British Legation arrived at Vera Cruz on the 31st, with correspondence from the capital of the 29th, and from Puebla to the 30th.

Mr. Kendall represents the chances of peace in an unfavorable light. He says Scott will march immediately on the arrival of Pierce—certainly in the first week in August, and it is more than probable that the hardest fight yet will be at the city of Mexico. The Mexicans were prepared to meet him, having all their fortifications completed, and twenty-five thousand men. The English Legation was secretly exerting every influence to keep the Americans out of the capitol.

Other letters to the Picayune, represent the chance of peace in a more favorable light, and think the resistance to our advance will be almost nominal. Congress had referred Mr. Buchanan's letter back to the Executive and thrown on him the responsibilities of the war. The peace party at the capital was strong and increasing. They have no faith in their Generals.

The Sun, of Anahuac, says that when the guerillas attacked Pierce, 600 Americans approached under their fire until within 100 yards of the Mexicans, when our forces opened a deadly fire, forcing them to an immediate retreat. While the Mexicans were retreating, the American cavalry rushed upon them, killing about one hundred.

The position of the Mexicans was one of the strongest in the country, but the Americans passed the bridge after a short engagement, and arrived at Perote in safety. Gen. Scott despatching Gen. Smith's brigade from Puebla to meet them at Peroto.

The Commercial Times considers the news a full confirmation of the failure of Mr. Trist's mission, and that all prospects of peace are dissipated. Its correspondence says there has been a contest about their constitutional rights, between Congress and Santa Anna, each charging the responsibility of making peace upon the other. The discussion has shown, what was generally supposed, that the latter personage sincerely desires the patching up of the difference between the two countries. He is ambitious of the dictatorship. When Congress dissolved, it was done by the withdrawal of such a number of members, as to leave the remainder below a constitutional quorum.

Santa Anna held a council of general officers, at which it was resolved to effect one more encounter, either by marching against Scott at Puebla, or rejecting the propositions for negotiations, calmly await his advance and act on the defensive. In order to be free to act, Government issued a decree suspending all newspapers except the official organ.

The Delta says that Congress had met and adjourned without coming to any decision upon the propositions of our Government. All letters from the capital agree that Gen. Scott can take the city without difficulty, and that the foreign merchants of the capital are anxious for his arrival. Lieutenant Whipple had arrived at the capital. He is treated well and expects soon to be exchanged.

Com. Perry has withdrawn his forces from Tabasco in consequence of the sickness prevailing among them, until the sickly season passes. The Sun of Anahuac attributes this withdrawal to the overwhelming force of the enemy, and fear of an attack. Gen. Almonte was still in confinement at Mejicalzingo. Alvarez was in the capital about the middle of July, and had several long interviews with Santa Anna. Mr. Trist had been indisposed, but was convalescent.

Editorial Department.

J. CLEMENT, EDITOR.

Mental Development:—Its importance to Females, particularly Mothers.

Mrs. Kirkland very queerly remarks that the condition of the women of the present day seems to bear no little resemblance to that of the unfortunate hens in the basket of the poulterer—restless, crowded and uncomfortable, evincing, ever and anon, by a faint, uneasy chirping, a desire for wider bounds, and occasionally risking strangulation by a spasmodic effort, which only forces the aspiring head through a mesh in the strong netting, occasions a great cackling among the sisterhood, and earns a rap on the pate from the hard-hearted owner." Now the fact is, a *part* of this "chirping" is made by a few of the bolder "biddies" who aspire to the *political* privileges of chanticleer. For such we have but little sympathy. The hens have occasion to chirp, but not because they cannot roost on the ballot box.

In our opinion, the apparent indifference of many among the male portion of community, as it regards the mental development of woman, is one of *her* greatest grievances. We often hear husbands *boast* that their wives are better employed than in reading, and that they have no time to devote to it. Such husbands—and they are *only* husbands, not *men*—cherish the mean and contemptible idea that females should be acquainted with nothing but domestic, manual labor. The truth is a part of their education should be obtained in the kitchen, but they can never be completely fitted to become mothers there. "The fireside virtues," as Mrs. Hugo Reid truthfully declares, "are not properly cultivated by a mere *house*-wife.

'Well ordered home man's chief delight to make,'

is a task which the accomplished woman can alone efficiently perform; she alone can make her fireside a scene of happiness and improvement to all who approach it; she alone can clearly show her children that the paths of wisdom and virtue are also those of pleasantness and peace; she alone will be as able and as solicitous to aid their mental development as to care for their physical comfort."

To mothers is assigned a considerable degree of the task of education. They are the first teachers of their offspring, and the character and often the amount of instruction are determined in a measure, by the mental habits and capabilities of the mother. Hence let the following remarks by Dr. Channing be pondered well. by husbands and those who expect to be. Though having particular reference to professional teachers, they may, with equal propriety, be applied to mothers, and may be considered a master plea for the mental development of the latter:

"Higher ability," says he, "is required for an educator of the young than for being a statesman. The statesman must study and manage the passions and prejudices of the community; the educator must study the essential, the deepest, the loftiest principles of human nature. The statesman works with coarse instruments for coarse ends; the educator is to work by the most refined influences on that delicate, ethereal essence—the immortal soul. * * * According to these views, we think it a greater work to educate a child in the true and large sense of the word, than to rule a state."

A Careless Critic.—A critic in the American Review for July, is very severe on Omoo. But while he points out the faults in the style of the book, he betrays a carelessness which lays *himself* open to criticism. Quoting some of its good things (and he finds a few) he says "there are hundreds of such happy expressions in Omoo, and as many passages of description as good, or better, than we have quoted."—that is, passages as good *than* we have quoted, or better.

Daniel Boone's Sword.—The Galena *Mercury* says: "We have in our possession at this office, the identical sword used by Daniel Boone, in his many battles with the Indians, in Ohio and Kentucky. It is a rough looking piece of furniture. The blade is short and roughly made, but appears to be good steel; the haft, or handle, is covered with a piece of buckhorn, and the guard is made of iron wrought to the thickness of one-eight of an inch.

It was the first, and for a long time the only sword in Kentucky; at the battle of Blue Licks it was the only one in possession of the whites. It was afterwards lost in the Licking river by Col. Todd, where it lay for several years, but was finally recovered, and identified by Mrs. Todd as the same sword which her husband had borrowed from Daniel Boone.

Commissioned.—Augustus H. Seward, the eldest son of ex-Gov. Seward, has received a commission as second Lieutenant in General Worth's Regiment of Infantry, the Tenth. He left Auburn on Wednesday to join his regiment.

☞ A man somewhat intoxicated entered Provoost's Soap Factory through a window, late on Saturday night, and dropped into a kettle of hot soap and was so severely sca[illegible] that his recovery is doubtful. He is a sailor employe[illegible] schooner *Sea-Gull*, and named Arthur Cole.

☞ A German, named Henry Frohmans, was working on the tower of St. John's Church, when an apparatus for hoisting stone and mortar gave way, and he was precipitated head foremost from the height of 80 feet. His death was of course instantaneous. Verdict in accordance with the above circumstances. An error has appeared in the morning papers as regards the number of his family. He left only one child and she has attained the age of seventeen years. The expenses attending the funeral will be defrayed out of the funds belonging to St. John's Church.

☞ Sudden Death at the Falls.—Peter G. Stuyvesant, Esq., from the city of New York, was found drowned in a cold plunging bath, on Bath Island, about seven o'clock last night. The discovery was made by two gentlemen, who, being desirous of a bath, asked Mr. Jacobs, the keeper of the bath, if it was occupied, they having seen the body of a man floating in it. He had entered the bath about half past 5 o'clock, having then returned with his family from Goat Island, and sent them to the Cataract House. It would appear probable that the sudden change of temperature produced serous congestion of the brain, and possibly of the lungs also. His remains will be taken to New York, and leave this place by the afternoon train of cars.—*Com. Adv.*

☞ The potatoes in this and the adjoining counties have generally a favorable appearance, and exhibit no premature signs of blight or decay, but an observant and judicious farmer informs us that the disease has in some instances made its appearance already.

☞ As an illustration of the capabilities of Buffalo, we may mention that last week there were gentlemen from one of the richest agricultural counties in this state, (Monroe county) purchasing, for use in that county, wool, wheat and corn.

☞ The Next State Fair.—The Saratoga Republican gives an extended account of the arrangements already made by the officers of the State Society for the next State Fair to be held at Saratoga on the 14th, 15th and 16th of September next. Thus early, says that paper, "are our landlords receiving orders for rooms, and agriculturists in various parts of the Union are directing preparations for this great and interesting exhibition."

☞ It will give many of our readers, much pleasure to hear that the subscriptions for the Buffalo University—the first public educational establishment of a higher grade than our common schools—are going on favorably.

☞ Mr. Wise made his 61th ærial voyage from Rochester last Saturday afternoon. He went up nearly perpendicularly to a great height, and then took a north east course, landing in Brighton about two miles and a half from the city. The receipts were very far from covering the expenses. In his memorandum for publication, Mr. Wise says:

There is but one point or peculiarity in my trip, that I shall particularly mention. I have noticed that certain sounds, produced on the surface of the earth, have a remarkable peculiar effect upon the ear of the æronaut when over them. Water-falls are the most remarkable. Even a common mill-dam produces a wonderful noise to one's ears when a mile above it. The Genesee Falls made a noise to my ears when above them over a mile, at least an hundred times louder than did Niagara when I stood upon its very brink.

☞ There was a distressing accident on the St. Lawrence river Saturday last, a week, by which many females were drowned. The Quebec Canadian says seven of the females drowned were mothers of families; the other eight were young women, and the young man, who made the sixteenth victim, was 17 years of age. The young woman, one of the three saved, is said to have been seriously injured.

NEW YORK AND ERIE RAILROAD.—The work on this road is pushed forward, it is said, with great vigor. It is intended to complete it from Otisville, the present terminus, to Port Jervis during the coming autumn. The distance is only twelve miles and contains much the hardest and heaviest work on the whole line of the road.—Upwards *of two thousand* men are now employed on those twelve miles. The directors are confident that when opened to Port Jervis, the receipts of the road will be increased at least thirty per cent.

It gives us pleasure to hear so good an account of the progress of this great, almost national, work, and we trust it will, hereafter, encounter none of the difficulties that have hitherto so seriously retarded its prosecution, and even jeopardged its existence. The New York and Erie is one of those great trunks of railway designed, like the Baltimore & Ohio and the Charleston & Nashville, to connect the seaboard with the West and is second to neither of these in importance or the aggregate of business it will command. In the general increase of business throughout the country, and the necessity for its prompt despatch, facilities such as will be afforded by the construction of this road are absolutely indispensable, and we look forward to its completion as a new era in the history of the trade, commerce and prosperity of the West.

In this connection it is with much gratification that we are able to say that the gentlemen having in charge the Attica & Hornellsville road—the link designed to connect this city with the New York & Erie, and make Buffalo in fact the western terminus of that work—fully appreciate the important interests committed to their charge, and will be able to command the amplest means to complete their road in the most substantial manner as speedily as may be desirable. The whole line from this city to New York, we confidently trust will be finished and in operation by the close of the year 1849, or early in the season of 1850.—Before that time the various companies on the line from here to Albany will have re-constructed their roads and re-laid the track with the heavy rail, and we shall then only need—what we must have—a railroad round the south shore of Lake Erie, and thence to the Mississippi, to make Buffalo as great a focus of railway traffic as it now is of trade by lake and canal craft. No jealousy need be entertained of the drafts made upon western trade by the Baltimore & Ohio, or routes still farther south. They are too far south to affect the trade that naturally tends hitherward, and were not this the fact, the business would suffice for all.

Production and consequent traffic have thus far greatly exceeded the commercial facilities that have been created. Take our harbor for an illustration. If all the projects that have been devised for its improvement and extension were at once undertaken and vigorously prosecuted, they would not be found more than sufficient when completed. The same is true of the various works designed to carry off the products of the vast and rapidly enlarging region that tends to this port as a common centre. Each year widens the area of our commercial transactions. The completion of the Illinois & Michigan Canal—an event that will be witnessed this fall—will draw hitherward a large share of the trade of Southern Illinois, Missouri and Iowa, that heretofore has descended the Mississippi and found New Orleans almost its exclusive market. Soon, too, the basin of Lake Superior will be opened, and in a few years will be witnessed there changes as magical as those which in the last ten years have made the shores of Lake Michigan a wonder and a miracle. The merely physical progress of our country at this time, is beyond all former precedent, yet none who watch it with observant eye, can doubt that all we see is but a faint foreshadowing of what is to come, if wise forecast and intelligennt enterprize shall govern our future movements.—*Com. Advertiser.*

The Mexican Rumors.

From the N. O. Picayune, Aug. 3.

Little light has been thrown since our last upon the rumored entry of Gen. Scott into the city of Mexico. The propeller Washington has arrived, having left Vera Cruz on the 22d ult.—not so late as the Massachusetts—Tampico on the 25th and Brazos on the 27th. The brig Mary Jane has also arrived from Tampico, having left there on the 26th ult. So far as we can learn, the latest accounts from Tampico made no mention whatever of Gen. Scott's victory. Letters of the 25th in abundance have been received in town from Tampico. They say not a word of the entrance said to have been made on the 17th—eight days previously.

It is clear that there was no such story current in Tampico. Private letters would have mentioned it, and Capt. Hussey, of the Mary Jane, would have heard of it. He heard nothing of the kind. How far communications between Tampico and the capital have been interrupted by the late expedition of Col. DeRussey, we have been unable to learn; we have no later Mexican papers by either of the arrivals. But even were the usual mail entirely broken up, it would seem as if so important an event as the fall of the capital must inevitably have reached Tampico in eight or nine days, transmitted "from mouth to mouth."

The National finds a confirmation of the news of its extra in a letter from the Brazos of the 27th, which says that an account of Scott's victory had been read to the troops at Matamoros on parade the evening of the [illegible]th. At Galveston they had the same rep[illegible]0th, brought by a vessel which left the [illegible]nde on the 26th. How far the original [illegible]r is confirmed by its prevalence at Matamoros on the 26th, and the absolute silence in regard to it at Tampico the same day, every reader can judge by a glance at the map.

We have taken some pains to follow to their sources many reports in relation to Gen. Scott's position. We still incline to the belief that he did not march from Puebla before the 15th. By the map most in vogue Puebla is eighty-seven miles from the capital, and we do not believe that his march will be entirely unopposed. We have thus barely indicated some points which the reader will consider in forming his opinion. It is

now supposed that our next intelligence from Vera Cruz will be brought by the Fashion. She left here on Thursday, the 22d ult., for that port, and should there be intelligence of importance to be communicated, it is thought she would return at once.

From the Army of Gen. Taylor.

The propeller Washington, from Vera Cruz and Tampico, touched at the Brazos on the 27th ult. and received a mail from the army of Gen. Taylor.

The American flag of the 24th ult. contains not a word of any interest here.

Passengers from Matamoros, who came over on the Washington, tell us that the day that they left that city news was received there by Mexican merchants that Gen. Scott had had an action with the Mexicans at Rio Frio and defeated them totally, with a loss on his part of three hundred men. This news the Bee says was read at the head of the troops at Matamoros.

We presume this was done on the 26th—the day before the Washington left the Brazos. If Gen. Scott entered Mexico on the 17th ult., this would give nine days for the news to reach Matamoros—a distance of 250 leagues by the way of San Louis Potosi and the Tula pass. The time is amply sufficient for the transmission of the news. But we have accounts to the 26th from Tampico also, which is several hundred miles nearer the capital, and yet not a word of Gen. Scott's victory.

Furthermore, our correspondent at Monterey, writing on the 13th, says they had received a rumor there that Gen. Scott had defeated a very large force, under Santa Anna near the city of Mexico. This was a Mexican rumor, and very possibly was as authentic as the one which reached Matamoros a few days later.

Correspondence of the N. O. Picayune.

MONTEREY, Mexico, July 13, 1847.

The day we started for Mamalequi an interesting incident occurred at Gen. Taylor's camp. A Mexican lady residing in Monterey drove up to the general's tent, accompanied by three young children, two girls and a boy, and solicited advice from him. She said she was extremely anxious that her children should be properly and thoroughly educated at some good institution in the United States, and particularly that they should be taught the English language, and she was desirous of taking them herself to the United States for that purpose, but being totally unacquainted there, wished the advice of some competent person as to what course she should pursue.

The general gave her good advice, and promised her conveyance and escort to the Brazos by the next train that goes down. She appeared to be a very intelligent and lady-like person, and of very pleasing manners. A happy thing would it be for Mexico if she had a few more such mothers as this one—probably would her destiny be changed.

Everything is pretty quiet here, but I suppose Dr. Lushington will be on hand this afternoon, creating some little confusion, as the five companies of the Massachusetts regiment are to be paid off today.

The unruly ones were taught a pretty severe lesson on Sunday last. Six or eight had been tried by courtmartial for drunkenness, disobedience of orders, and offences of that character, and they received their sentence in presence of the battalion. One sergeant was reduced to the ranks, and the rest were sentenced to do police duty and wear a ball and chain, for various periods of from one week to one month. It will do a world of good if followed up properly.

Intelligence was received here a few days since from San Luis, via Saltillo, that Gen. Scott had met a very large force under Santa Anna, near the city of Mexico, and defeated them. It is reported here that Maj. Chevalie, of the Texas Rangers, met with a serious accident a few days since at Saltillo, from which it is feared he will not recover. He was about starting for Parras, and while on horseback was taken with a fit and fell to the ground, receiving severe injuries. This may delay the expedition to Parras for some days. Gen. Cushing proceeds tomorrow morning to Saltillo to take command of his brigade, or such portion of it as is in the field there.

The inhabitants of Monterey seem to be gradually returning to the city.. At mass in the cathedral on Sunday morning there were full four hundred able-bodied men upon their knees, and nearly as many women and children.

A rumor is current here today, brought in by a Mexican, that a party which started from here day before yesterday morning, numbering something like twenty, were attacked near Agua Frio, on their way down, by a party of rancheros, and nearly half their number killed.

The party consisted of Col. Reuben Davis, 2d Mississippi regiment, Capt. Davis, assistant quartermaster U. S. A., and others. I place little confidence in the report, as it comes from a Mexican source, although the informant most positively avers that he saw six dead bodies himself. [This rumor was totally false—all the parties mentioned arrived here today.] The health of the city is good—at Saltillo not so good as it has been, the North Carolina and Mississippi troops suffering severely from diarrhœa.

Very late from Oregon and California.

Among the passengers last night on board the *Tributary*, from St. Joseph, were Messrs. Shaw and Bolder, direct from Oregon. They left the frontier settlement of that country on the 5th of May, and arrived at St. Joseph on the 27th ult., having made the trip in eighty-three days. The company to which they were attached, was composed of nineteen persons, three or four of whom stopped on the route. They met with little difficulty on the route, except from the Pawnees, who levied contributions upon them, in the shape of clothes, tobacco, a few mules, &c. Their danger might have been more serious had it not been for the intervention of an old chief, who gave them the protection of forty of his warriors for a fifteen miles race, and then deemed their services of sufficient value to enforce a further contribution.

These gentlemen inform us, that the emigrants to California and Oregon were making very handsome progress, being some twenty-five days ahead of the time usually occupied by the emigrants. One company, Davidson's, was met at Big Sandy, and two at Green River. The Mormons, with six hundred and seventy-six wagons, were met at the forks of the Platte, on their route to California. The *Twelve Apostles*, as they are called, were at Fort Bridger, and it was understood that the Mormons would not proceed, this season, further than the neighborhood of the Salt Lake. All the emigrants, as we have said, were getting along very well.

At Fort Hall, these gentlemen met with Mr. Samuel Brannan, and four others, who had arrived there for the purpose of piloting the emigrants on the route to California. From Mr. Brannan, who is described as the editor of the "California Star," they obtained information up to the 25th of May—the most important of which is, that Col. Fremont had been placed under arrest by Gen. Kearny, for disobedience of orders,

and ordered to the United States for trial. He either had left, or would leave immediately, for the States. Commodore Stockton was also on his way home. The American fleet was engaged in operations against Mazatlan, Acapulco and other towns in Lower California, and the troops had been ordered in the same direction.—Gen. Kearny, it was understood, would leave for California in time to reach home in September.—Things were not in a very quiet er settled condition.

These gentlemen add, if possible, to the horror of the accounts heretofore received in relation to the sufferings of the emigrating parties which failed to reach California last winter. Seventy-three of them perished in the snow, and from famine, and the living survived only by feasting on their dead companions. Among the number of this unfortunate party was a miscreant, by the name of Keysberg, who left the States in Col. Russell's company. He had a wife with him, and contrived, at the extremity of their sufferings, to send her to the California settlements, when relieved by persons who went out to aid them. This villian remained behind to rob the dead and living of their property. A family of the name of Donner, of Springfield, Ill., was robbed by him of about $4,000, which he *cached* along with other spoils. He was suspected, threatened, and finally preparations were made to hang him up, and then he disclosed the places where the money was to be found. To add to the enormity of his offences, he is said to have boasted of having lived, for a time, upon the dead body of Mrs. George Donner, even when provisions were within his reach. Other enormities are told of this devil incarnate, but he survived them all and was employed in the army at the last accounts. The whole of the family of Reeds, connexions of the Donners, has reached Sutter's settlement in safety, after enduring almost incredible sufferings.

It was the expectation of these gentlemen to be accompanied from Oregon by Commodore Drake, of the British ship *Modeste*, Mr. John J. Campbell, and perhaps others. But as they failed to meet them at the time appointed, at Fort Hall, this party traveled slowly, in the hope of being overtaken by them. This they did not do; and they are probably some fifteen days behind. As the party is small, the Pawnees may, it is feared, deal roughly with them, should they be met by them.

Regarding the affairs of Oregon, we have been able to obtain no news which would interest this section of the country.

The *Republican* of the next day adds the following:

The gentlemen who have recently arrived from Oregon have placed at our disposal a file of the *Oregon Spectator*, from March 4th, to April 29th. They are filled with discussions upon the relative merits of particular routes of travel, and matters purely local in their character.

We notice the appointment of J. Quinn Thornton, formerly of this State, and more recently of Quincy, Ill., to be Supreme Judge of Oregon territory, vice P. H. Burne, resigned.

William Hibbert, lately of Illinois, died at Oregon City on the 10th of March.

The Oregon Treaty does not appear to have been at all acceptable to the *Spectator*, or to any portion of the people of Oregon. Several versions of the treaty were received there, but the true one, which was received in the St. Louis *Republican*, of the 30th of July, was less acceptable than any of the others. Doubts were loudly expressed of its genuineness, but these doubts finally gave way, about the middle of April, as an official copy of the treaty, after its ratification, was then received. The *Spectator* says: "What we published in our last, as purporting to be the treaty, proves to be such, although we doubted it at the time. We can say nothing for the document, but much against it. It certainly, in our estimation, can never be popular with the great body of the Americans in Oregon. We shall wait anxiously to see how this singular circumstance can be accounted for at home, and how this surprising and unconditional surrender of right will be justified."

An election was to be held, on the first Monday of June, for Governor, county officers, and members of the Legislature. A. L. Lovejoy is announced as a candidate for Governor.

D. E. White, Indian Agent for the Oregon Territory, who was in the States in the early portion of last year, and took his departure for Oregon in July or August, by the way of Panama, had not reached Oregon City when these gentlemen left, and fears were entertained for his safety.

We ought to have stated, yesterday, that *all* the persons composing the family of the Donners, of Springfield, Ill., perished in the California mountains, last winter.

NEW YORK, Aug. 16th—7 P. M.

We have arrivals but no later news from Mexico. Santa Anna is in effect Dictator, a quorum of the National Congress cannot be got together. A council of Generals hope to await Gen. Scott's march instead of marching upon him. Money to support the army is collected with extreme difficulty. Santa Anna is said to have 23,000 men and near 100 pieces of artillery in the capital.

Col. Harney and his Dragoons with a white flag were allowed to go as far as Rio Frio. Canalizo and the Mexican soldiers were so frightened at the sight of him as to run away leaving their private baggage behind.

Gen. Almote has been sent off with but one day's notice to take command of Tulacingo, which his friends call a persecution. Filizola was between Durango and Saltillo, with 1,000 men, supposed to be watching for Gen. Taylor.

Pacheco is Minister of foreign relations, in place of Ibarra.

Tampico news to 30th ult, is received.

Lieut. Tannahill supposed to be killed in De Russy's expedition, is alive.

Prisoners doing well.

It is said Gen. Garay has 14 prisoners—20 fewer than reported were killed. Garay has 3,000 men within 10 miles of Tampico. He cuts off nearly all supplies from the country and has stopped interior trade. The U. S. Schooner Petrel with increased armament and a detachment of marines passed up the Panuco on the 29th, supposed to intimidate Garay's men, and prevent interception of despatches from Gen. [illegible]r.

Some Louisiana volunteers have been stealing cartridges and selling them to the Mexicans for 12½ cts. each. The troops are healthy.

INDICTED FOR MANSLAUGHTER.—The grand jury of the Court of Sessions indicted, yesterday, H. L. Kellogg, captain of the steamboat Niagara, and Hosea Birdsell, the engineer of the said boat, both of whom are indicted for manslaughter in the third degree, in causing the death of two firemen of the above boat, and scalding several of the passengers, by carrying too much steam, which blew up the steam chest, thereby causing the loss of life and limb. Capt. Fairchild of the 8th ward, arrested, yesterday, Hosea Birdsell, the engineer, on a bench warrant, issued by the court of Sessions, on the above charge, and the court held him to bail in the sum of $5000.—*N. Y. H.*

Rise!

BY T. BUCHANAN READ.

Who are ye who sit and murmur
O'er your grievance hard and long?
Who are ye whose necks are trodden
By the iron foot of wrong?
Wear ye not God's mighty image?
Rise! assert it, and be strong!

Can ye see your wives and children
Under old oppressions cower
And not feel your right arm aching
With the fulness of their power?
Rise! a life of idle groan'ng
Is not worth one well wrought hour!

Able bodied, idle minded!
Do you weep beneath your pain?
Or, with empty cant of Freedom,
Do ye stagger with your chain?
Hear ye not your weaker brother?
Rise! or wear the curse of Cain!

Will ye sit in dust and ashes,
Gazing on the proud and great?
Know ye not that soul and sinew
Must achieve their own estate?
Rise! to action—or in garrets
Dream, and so deserve your fate!

Are ye Freemen—Freemen truly?
Do ye act as Freemen do?
Are your rulers not your leaders?
Are they many, are you few?
Rise! with purpose firm, and teach them
They must first be ruled by you.

Unto you belongs the vessel,
And the freedom of the sea;
Will you hear your servants dictate
What her freight or laws shall be?
Rise! and hurl their errors over,
Like the worthless chest of tea!

LATEST FROM GROSSE ISLE—CONTINUED MORTALITY AMONG THE EMIGRANTS.—The Canadian papers continue to give distressing accounts of the mortality among the emigrants reaching Canada. The Quebec Chronicle, of Tuesday, states that the latest intelligence from the Quarantine station is gloomy in the extreme. We are informed upon the most reliable authority, that since the season commenced, the sickness has not been more severe or the circumstances more perplexing to those in authority, than at present. The number in hospital yesterday was 2240. It was never so crowded, and the mortality is alarming. Captain Reid, of the Marquis of Breadalbane, died in hospital on the 7th, and the captain of the Virginius, the day after his arrival at Grosse Isle.

GREAT FIRE AT PORTLAND, ME.—The Telegraph [illegible] says there was a great fire at Portland [illegible] noon that day. It broke out in Foy's Twi[illegible]story, and one hundred or more houses on Front street, and the same number on Cotton street, are reported as destroyed. We trust there is some exaggeration in the report.

MARRIED.

On the 12th instant, by J. G. Dickie, Esq., Mr. LEANDER STONE, to Miss SARAH E. FURMAN.

On the 13th inst., by Rev. F. W. Graves, Capt. WM. DRURY, and Miss MARGARET CARRUTHERS, all of this city.

In this city, on the 13th inst., by Rev. F. W. Graves, Mr. JOEL M. FELLOWS, of Clay, Onondaga county, and Miss MARIA C. EASTWAY, of Eden, Erie county, N. Y.

Also, by the same, Mr. WM. VAN BRANT and Miss CAROLINE SHAVER, all of this city.

At Eden, on the 8th instant, by —— Wells, Esq., Mr. SAMUEL LAKE, of McHenry county, Illinois, and Miss SYLPHINA PIERCE, of Boston, in this county.

In Rochester, on the 5th inst., by Rev. Mr. Hall, Mr. JAMES M. GANSON, of this city, and Miss NANCY S., daughter of Ira Belden, of Rochester.

DIED.

This morning, 11th instant, CHARLES M. COOPER, Esq., son of Joseph and Hannah Cooper, aged 32 years.

On the 11th instant, of consumption, Miss MARIA SHUMWAY, aged 22 years.

In this city, on the 12th inst., at the residence of I. T. Hathaway, in the 17th year of her age, Miss MARY N., daughter of Doct. James and Catharine A. Billings, of Batavia.

Last evening, Miss PARTHENIA BEARD, aged 31 years.

At the residence of her father, at Cold Spring, on the morning of the 14th instant, SUSAN MARIA, daughter of William Hodge, Esq., aged 21 years.

At Hamburgh, on the 10th inst., GEORGE PATTERSON GARDNER, son of Capt. Charles Gardner, aged 8½ years.

GEORGE H. READ,

BLANK BOOK MANUFACTORY AND BOOK BINDERY, Commercial Advertiser Buildings, 161 Main Street, Buffalo. Over the office of the Daily Commercial Advertiser

Blank Books of all descriptions ruled and bound to any pattern.

Periodicals, Music Books, Newspapers, Magazines, Old Books, etc., carefully arranged and bound in every variety of style, and at moderate prices. Ladies Albums, Port Folios, etc., made to order. as

BUFFALO MUSICAL INSTITUTE FOR YOUNG LADIES.

At the residence of Prof. W. R. Coppock—Composer and Teacher of the Piano Forte, Organ, Singing and Composition.

An institute devoted exclusively to Musical Education is not yet common in this country; but in Europe the test of experience fully shows its great advantages over the too general superficial manner in which this important part of polite education is acquired. The advantages this institution offers to those desirous of completing their studies as Organists—or practical players of the Piano Forte, together with a thorough system of imparting the same to others is fully established by the many precedents of the past 15 years. The pupils are constantly guarded in their practice, against all bad habits, and from the various stages of progress they may be in, are continually stimulated to effort and industry, by association with each other. The family too, are all players, and the theory is amusingly discussed, impressing its rules in a more pleasing manner, and more lasting upon the understanding, than by the mere dry study of an elaborate book. Music is composed and arranged from time to time, showing the various styles and harmonies analytically, and adapted for performance on several Pianos at the same time. This teaches a thorough knowledge of counting, and dividing passages into the given time. Vocal music is pattern ally attended to, and when the pupil has a moderate share of talent, we hesitate not to say, a correct and pleasing singer can be made. The Piano Fortes used are all new, and of the finest quality, and every endeavor will be given to render the true spirit with as profitable. The building is commodious, and has a fine garden attached, with Green houses, Bathing rooms, &c., and is pleasantly situatuated in Seventh street, between Niagara Street, and the Falls rail road, and about midway to Prospect hill

Terms made known upon application at the Institute, or by mail, post paid, directed Prof. Coppock, Buffalo

Prof Coppock, keeps constantly a choice selection of Piano Fortes for sale,

Buffalo, August 3, 1847.

PRINTERS' FURNISHING WAREHOUSE.

WILLIAM PRESCOTT, Manufacturer of Printing Inks, No. 6, United States Hotel Block, Pearl St., Buffalo. Printing Presses, Metal and Wood Type, Cards, and every other description of Printers' materials constantly on hand at New York prices, adding transportation. Also, sole Agent for the sale of C. J. Gayler's Patent Double, and Improved Single Salamander Book Safes. 6m.

REMOVAL.

WILLIAM J. MAY has removed to No. 274 Main St., in Kremlin Stores, where he will be happy to see his old customers. One price, good goods, small profits and fair dealing, will always be the rule at No 274 no12 3m.

CHEAP CASH BOOK STORE.

The subscriber, dealer in Books and Stationery, at 188 Main Street, 4 doors above Seneca, keeps constantly on hand, an extensive stock, embracing the most valuable selections from Ancient and Modern Literature and a general variety of Theological, Classical, Gift and School Books, &c., &c. The Amateurs of Knowledge and Literature, in the purchase of Books or Stationery are respectfully solicited to call. Print and Cap Paper at wholesale.

Buffalo, April 20, 1847. F. W. BREED.

WESTERN
LITERARY MESSENGER.

VOLUME IX. BUFFALO, SATURDAY, AUGUST 28, 1847. NUMBER IV.

For the Western Literary Messenger.

Fragment to Sarah.

BY E. J. EAMES.

I.

It is a scene I like sometimes,
But on this eve a musing sadness
Had gathered o'er my changeful mood,
And I ill could brook their eager gladness:—
So I turned away to a spot where lay
Picture and book and rare engraving,
And sat me down to indulge the want
That filled my spirit in its craving.
But listless I bent o'er the rich bound page—
Careless I glanc'd at the golden edge—
Then open'd a scrap-book in hopes to find
A charm for the gloom of an idle mind.

II.

Many quaint things were in the book,
Maxim an I riddle, rhyme and story—
But one alone enchain'd my eye
Though it told no tale of fame and glory.
And my heart-strings stirr'd with every word,
For I felt the touch of the minstrel's fingers,
I knew that beautiful lay was thine,
O, yet its sweetness round me lingers.
Tender and graceful each soft'ning hue—
From the sweet well-spring thy fancy drew,—
Oh! ever young sister, may *purity*
Breathe forth in each line that comes from thee,

III.

For purity adds the sweetest flower
To the fairy wreath of the Poet's twining;
And *natural* beauty of thought wins more
Than words with the scholar's smoothness shining.
More than art-wove lays that seek for praise
Doth a true taste prize the pearls of feeling
That be half hid in the heart's pure cells,
Gently their loveliness revealing.
Be such the thoughts,—and only such—
That spring 'neath thy fancy's wooing touch,
So shalt thou have the holy power
To charm ofttimes a lonely hour.

For the Western Literary Messenger.

The Elevation of Woman.

BY GEORGE MILLER.

The modern civilization of Europe, when compared with its ancient, and with the civilization of Asia, ancient or modern, is immeasurably superior, chiefly in this, that woman holds a higher position in the social scale. We feel warranted in speaking of Asiatic civilization as one unbroken whole, because it is observable, that, as touching the matter of which we treat, whilst European manners have undergone a radical change, those of the nations of Asia remain the same they were at the earliest period of which we have authentic account.

A brief notice, therefore, of the origin and progress of that wonderful revolution which has given to woman a commanding position among the nations of Europe, and among a portion, at least, of their descendants in this western world, will not, we trust, prove either useless or uninteresting.

We are aware, indeed, that the measure of respect so largely entertained for "the sex," in our day, is usually ascribed to other causes than those to which we would now call the reader's attention. Her elevation is claimed—and in a very important sense *justly* claimed—as a practical result of the pure energy of the Christian Faith. Among the many evidences of its divine origin, our religion commends itself remarkably in this, that it alone, of all the systems which have obtained among men, assigns to the sexes social equality, and, elevating woman to her "appropriate sphere," crowns her with dignity and honor.

Paganism, on the other hand, has, in all its forms, degraded and debased the female. The globe around, it has reduced her to abject slavery, and subjected her, an unresisting victim, to the cruel caprice of her master.

Among the aborigines of our own continent, polygamy was permitted and practised. Divorce took place by simple separation, or desertion, and without the least formality. The wife of the Indian was his slave.

Nor has paganism done more for woman on the plains of Asia. The millions of China hold her in neither veneration nor respect. She is there, to this day, bought and sold—an article of traffic. Mohammed but sanctioned and perpetuated that grossness which he found everywhere interwoven with the manners of the east. Polygamy, and its invariable concomitant—the utter degradation of both sexes—effeminacy in the male, and unquestioning subjection in the female—reign coextensive with the wide influence of his creed.

Neither was the genial influence of woman felt in the social circles of Greece. The Greek held her in servitude; compelled her into seclusion; regarded her as a domestic menial, wholly inferior to man, and unworthy to share his confidence, or to participate in his more serious employments.

At Rome, her condition was very similar. For, though it be true, that we read of a few instances of Roman matrons, whose exalted excellence challenged for them a place in the public annals, and in public regard; yet, it is none the less true, that to woman, *as such*, was assigned a low position in the social scale. And, whatever regard conspicuous examples of female virtue may have exacted from the haughty citizens of that republic, in her better days, their remembrance seems not to have stayed the rapid degeneracy of her people. Vice finally triumphed over the censorship; the grossest crimes were pleasantly styled the way of the world; manners became dissolute; debauchery more and more prevailed, until, at the advent of Christianity, public and private morals were become wholly and irreclaimably corrupt. Society had arrived at that stage where, recovery being past all hope, its speedy and entire dissolution was inevitable.

Now, it requires no argument to show, that the religion of Christ—regarded merely as a system of ethics—was irreconcilably at war with this wide spread scene of social desolation. It inculcates purity; the integrity and sanctity of marriage; an inviolable regard for the obligations of social and domestic life. These and kindred duties, it illustrates and enjoins as elementary principles, and enforces by the highest sanctions.

But, it is apparent, that tribes and nations, such as we have described, would be least likely to embrace such a religion. Their manners and customs would furnish a soil seemingly but ill adapted for the growth of such principles. Vicious practices, interwoven with the structure of society, are not easily eradicated. Institutions, social or domestic, which work an entire depravation of the mass, are not readily supplanted by those of a higher order. We accordingly find that Christian institutions, planted in Asia Minor, in Syria, in Greece, in Egypt, in Italy, and the Isles of the Mediterranean, did not long remain. The Christian code found no enduring home in those ungenial climes. "The light" could but feebly pierce the noxious vapors and death-dealing damps of those unpropitious skies, and soon "the candlesticks" were removed. The tree, whose leaves were for "the healing of the nations," had an Asiatic origin, to be soon transplanted. Its vigorous growth was for other skies. Another and far distant people was destined first to enjoy its shade. To find the willing recipients of a pure faith, we turn our eyes in another direction.

In *the woods of Germany* we behold a race whose native manners and habits seem better adapted to the reception of a self-denying code. It was there, that a distinct, peculiar people—barbarian as yet—was being disciplined in all those hardy and ennobling qualities upon which might successfully be engrafted the sterner virtues of a pure and exalted faith. It was there that *a natural stock*—yet wild and rude—awaited the *scions* of revealed truth.

To the "Treatise" of Tacitus, written about the year 98, must we chiefly refer for a nearer view of that remarkable people, whose existence had been known to the Romans but little more than a century, and whose armies of emigration, in less than four centuries afterwards, finally overthrew, in all the west of Europe, the mighty fabric of Roman empire, and permanently seated themselves in its fairest provinces, subjugating or exterminating the ancient possessors.

The vigor of these barbarian hordes displaced the enervated sons of Roman civilization. They impressed their own genius upon the countries they subdued, and brought with them, from the woods of the north, the germ of modern manners, and modern institutions.

Now, the German tribes are particularly distinguished from all others, whether ancient or modern, civilized or savage, of which we have any account, for the high-toned veneration with which they regarded their women. Our limits forbid even reference to all those passages of the "Treatise" which illustrate our statement. A few of the more prominent must suffice:

"To a German mind," says Tacitus, "the idea of a woman being led into captivity was most insupportable."

Again, "There was, in their opinion, something sacred in the female sex, and even the power of foretelling future events. Their advice, therefore, was always heard; they were always consulted, and their responses deemed oracular."

"They accompanied their husbands, fathers, and sons to the field of battle. In the heat of the engagement, the soldier heard the shrieks of his wife, and the cries of his children. These are the darling witnesses of his conduct, the applauders of his valor. Undismayed at the sight of the wounded, the women count each honorable scar, and suck the gushing blood."

Thus their sentiments and pursuits did not run counter to those of the other sex. Whatever was deemed worthy the effort and employment of the tribe, engaged *their* minds. The sexes were one in sentiment. They labored together for the same common object. They felt their interests to be identical.

The same author farther informs us that, among these tribes, marriage was considered a strict and sacred institution.

"In the national character there is nothing so truly commendable. In this respect they differ from all other savages. To be content with one wife is peculiar to the Germans. The married state is with them a life of affection and female constancy. Vice is not treated as matter of jest, nor is profligacy called the fashion of the age."

Such, in brief, were the manners of those fierce invaders, destined to introduce into Europe a new order of things; to plant new institutions; to work out for the human race enlightenment, improvement, elevation. Here are the men—here the women—*by* whom and *for* whom Christianity must produce her noblest fruits. They were, indeed, "the scourge of God" to the base, degenerate, and corrupt Roman. To them was committed to pour a tide of noble blood through the provinces of Europe, and to preserve and transmit to our times the leaven of an incorruptible faith. Their "mission" is as distinctly marked as that of the Jewish people. They were clearly within the controlling Omniscience of Him, who, in His own time, swept, as with the besom of destruction, Roman civilization from the earth. These tribes were the ministers of his vengeance. Historians have told us that, if called on to point out the period of extremist misery and suffering of the human race, they would, without hesitation, select those centuries, during which the Goth and the Vandal were depopulating Europe, and pouring, in lava-tide, towards the sunny provinces of the south.

But, out of terrible confusion has risen order, and beauty from ashes. The sun of modern civilization beams with a healing lustre upon the nations.

The gloom of the middle ages has passed away. But, during that rayless period, were sown the seeds of mighty events. There were germinating glorious institutions; magnificent results had there a beginning. And, as we behold the human race emerge from the thick darkness, lo! woman graces the scene. She inspires the generous thought, and proud hearts do her homage. Her power is acknowledged—her enchantment felt.

"—— Her eyes
Rain influence and award the prize."

She gains the ascendant, at first, in man's lighter moments, and then, in his more serious occupations. *In him—in her*—we recognize those features whose rugged outline captivated us in the woods of Germany. They are the same, yet not the same. Culture has done for them much. But, above all, religion—"the religion of the cross"—has softened their asperities, mellowed their character, refined their intercourse, and united them, each to the other, by all the attractions of an earthly, and by all the sanctions of spiritual, regard. The two are one: They stand on the platform of social equality. Neither is the slave of the other. They share in joy and sorrow, in weal and woe. Mutual hopes animate; mutual cares ennoble; mutual fears depress. Such, then, are *the influences*, and such *the transformation* being wrought in all the relations of social and domestic, public and private life.

MASSILLON, O.

UNKINDNESS.—More hearts pine away in secret anguish for unkindness, from those who should be their comforters, than for any other calamity in life.—*Young.*

The Left Eye.

A CALMUC TALE.—FROM THE RUSSIAN.

A rich old man who resided at the extremity of the camp, quite apart from the rest, had three daughters, the youngest of whom, named *Kookju*, was as much distinguished for her beauty, as for her extraordinary wisdom.

One morning as he was about driving his cattle for sale to the Chan's market-place, he begged his daughters to tell him what present they wished him to bring to them on his return. The two eldest asked him for trinkets; but the handsome and wise Kookju said that she wanted no present, but that she had a request to make which it would be difficult and even dangerous for him to execute. Upon which the father, who loved her more than the two others, swore that he would do her wish, though it were at the price of his live. "If it be so," replied Kookju, "I beg you do as follows:—sell all your cattle except the short-tailed ox, and ask no other price for it except *the Chan's left eye.*" The old man was startled; however, remembering his oath, and confiding in his daughter's wisdom, he resolved to do as she bade him.

After having sold all his cattle, and being asked the price of the short-tailed ox, he said that he would sell it for nothing else but the Chan's left eye. The report of this singular and daring request soon reached the ears of the Chan's courtiers. At first they admonished him not to use such an offensive speech against the sovereign; but when they found that he persevered in his strange demand, they bound him and carried him before the Chan. The old man threw himself at the Prince's feet, and confessed that his demand had been made at the request of his daughter, of whose motives he was perfectly ignorant; and the Chan, suspecting that some secret must be hidden under this extraordinary request, dismissed the old man under the condition that he would bring him the daughter who had made it.

Kookju appeared, and the Chan asked:

"Why didst thou instruct thy father to demand my left eye?"

"Because I expected, my Prince, that after so strange a request, curiosity would urge thee to send for me. I wish to tell thee a truth important to thyself and thy people."

"Name it!"

"Prince," replied Kookju, "when two persons appear before thee in a cause, the wealthy and noble generally stand on thy right hand, whilst the poor and humble stand on thy left. I have heard in my solitude that though most frequently favorest the noble and rich. This is the reason why I persuaded my father to ask for thy *Left Eye;* it being of no use to thee, since thou never seest the poor and unprotected."

The Chan, incensed and surprised at the daring of this maiden, commanded his court to try her. The court was opened, and the President, who was the eldest Lama, proposed that they should try whether her strange proceeding was the effect of malice or of wisdom.

Their first step was to send to Kookju a log of wood, cut even on all sides, ordering her to find out which was the root and which the top;—Kookju threw it into the water, and soon knew the answer, on seeing the root sinking, whilst the top rose to the surface.

From this trial the court was convinced that Kookju had not offended the Chan from motives of malice, but the inspiration of wisdom granted her from above. But not so the Chan: his vanity was hurt; and he resolved to puzzle her with questions, in order to prove that she was not wise. He therefore ordered her before him, and asked;

"On sending a number of maidens into the wood to gather apples, which of them will bring home most?"

"She," replied Kookju, "who, instead of climbing up the trees, remains below and picks up those which have fallen off from maturity or the shaking of the branches."

The Chan then led her to a fen, and asked her which would be the readiest way to get over it—and Kookju said, "to cross it would be the farthest, going round nearest." The Chan felt vexed at the readiness and propriety of her replies; and after having reflected for some time, he again inquired:

"Which is the safest means of becoming known to many?"

"By assisting many that are unknown."

"Which is the surest means of always leading a virtuous life?"

"To begin every morning with prayer, and conclude every evening with a good action."

"Who is truly wise?"

"He who does not believe himself so."

"Which are the requisites of a good wife?"

"She should be beautiful as a pea hen, gentle as a lamb, prudent as a mouse, just as a faithful mirror, pure as the scale of a fish; she must mourn for her deceased husband like a she camel, and live in her widowhood like a bird which has lost its wings."

The Chan was astonished at the wisdom of the Kookju; yet, enraged at her having reproached him with injustice, he still wished to destroy her.

After a few days he thought he had found means for attaining his object. He sent for her and asked her to determine the true worth of all his treasures; after which he promised to absolve her from malice in questioning his justice, and to admit that she intended, as a wise woman, merely to warn him.

The maiden consented, yet under the condition that the Chan would promise her implicit obedience to her commands for four days. She requested that he would eat no food during that time. On the last day, she placed a dish of meat before him, and said, "Confess, oh, Chan! that all thy treasures are not worth as much as this joint of meat!" The Chan was so struck with the truth of her remark, that he confessed the truth of it, acknowledged her as wise, married her to his son, and permitted her constantly to remind him to use his *Left Eye.*

Dufavel's Adventure in the Well.

One morning, early in September 1836, as Dufavel, one of the laborer's employed in sinking a well at a place near Lyons, in France, was about to descend in order to begin his work, one of his companions called out to him not to go down, as the ground was giving way, and threatened to fall in. Dufavel, however, did not profit by the warning, but, exclaiming, "I shall have plenty of time to go down for my basket first," he entered the well, which was sixty-[illegible] feet in depth,—When about half way down, he heard some large stones falling; but he nevertheless continued his descent, and reached the bottom in safety. After placing two pieces of plank in his basket he was preparing to reascend, when he suddenly heard a crashing sound above his head, and, looking up, he saw five of the side supports of the well breaking at once. Greatly alarmed, he shouted for assistance as loudly as he was able; but the next moment a large mass of the sandy soil fell upon him, precluding the possibility of his escape. By a singular good fortune, the broken supports fell together in such a manner, that they formed a species of arch over his head, and prevented the

sand from pouring down, which must have smothered him at once. To appearance, however, he was separated from the rest of the world, and doomed to perish by suffocation or famine. He had a wife and child, who now came into his mind, and the thought of them made him feel still more bitterly his imprudent obstinacy in descending into the well, after being warned of the danger to which he was exposing himself.

But although Dufavel regretted the past and feared for the future, he did not give way to despair. Calm and self-possessed, he raised his heart in prayer to God, and adopted every precaution in his power to prolong his life. His basket was fastened to the cord by which he had descended; and when his comrades above began to pull the rope, in the hope of drawing him up to the surface, he observed that, in their vain efforts, they were causing his basket to strike against the broken planks above him in such a manner, as to bring down stones and other things. He therefore cut the rope with his knife, which he had no sooner done, than it was drawn up by those at the top of the well: and, when his friends saw the rope so cut, they knew that he must be alive, and determine to make every exertion to save him.

The hole made by the passage of this rope through the sand that had fallen in, was of the greatest use to Dufavel: through it he received a supply of fresh air, and after a while, his friends contrived to convey food to him, and even to speak to him. Of course he was in utter darkness; but he was enabled, in a curious manner, to keep a reckoning of time. A large fly was shut up with him, and kept him company all the time that he remained there. When he heard it buzzing about, he knew that it was day, and when the fly was silent, he knew that it was night.—The fly boarded as well as lodged with him; he was as careful as he could not to interrupt it while taking its share of his meal; when he touched it, it would fly away, buzzing as if offended, but soon return again. He often said afterwards, that the company of this fly had been a great consolation to him.

More skilful persons than the poor laborers of the village of Champvert were soon engaged in the attempt to liberate Dufavel. The municipal authorities of Lyons procured the assistance of a band of military miners, who, under the direction of experienced officers, began to form a subterranean passage for the purpose of relieving him. Prayers for his safety were daily offered up in the churches of Lyons, and the most intense interest prevailed; it was found necessary to erect a barricade, and station a guard of soldiers round the scene of the accident, to keep off the flocking crowd from the neighborhood, all eager to obtain news, and see what was being done.

The cavity at the bottom of the well, over which the wooden rafters had so providentially formed a sort of roof, was at first about seven feet in heighth; but owing to the sand constantly running through, and pressing down the roof from above, by the third day the space became so small, that the poor man could no longer stand, or even sit upright, but was crushed upon the ground in a peculiarly painful manner, his legs doubled under him, and his head pressed on one side against his left shoulder. His arms however, were free, and he used his knife to cut away such parts of the woodwork as particularly incommoded him, and to widen the hole the passage of the rope had made. Through this hole, by means of a small bottle, soup and wine were let down to him, and, after a few days, what was quite as important, a narrow bag to receive and bring to the surface the constantly accumulating sand, which must soon have smothered him, if this means of removing it had not been devised, and he had not had strength and energy for such a painful labor as the constantly filling and refilling the bag soon became. Of course, any *pressure* from above would have forced in the temporary roof, so that nothing could be attempted in the way of removing the mass of sand, &c., that had fallen in.—They dared not touch the surface above; but they contrived, by means of a tube, to speak to him. A cousin of his, himself a well-digger, was let down for this purpose. This man spoke to Dufavel, and assured him that the miners were making progress, and would soon reach him; he inquired after his wife and child, and charged his cousin to tell her from him, to be of good cheer, and not lose heart, at this time he had been a week in the well.

Day succeeded day, and still the expectations of the miners were deceived. They worked night and day, but such was the treacherous nature of the soil, that neither pickaxe nor shovel could be used; the foremost miner worked upon his knees, inserting cautiously a flat piece of wood into the ground, and afterwards gathering up with his hands, and passing to those behind him, the sand which he thus disturbed. On the twelfth day of his imprisonment, they calculated they were only twelve inches from him, and yet it took them two days longer before they were able to reach him. Every minute the ground was giving way; and it sometimes took them many hours to repair the damage that a single moment had produced.—Besides, they felt it necessary to proceed with the utmost caution, when they approached Dufavel, for there was great reason to fear, whenever an opening was made, the mass of sand above his head would fall down and suffocate him. At length, about two o'clock in the morning of Friday, 16th September, they made a small opening into the well, just above his shoulders. The poor man shouted for joy, and was able with his knife to assist in extricating himself. He was carefully conveyed along the horizontal gallery, and wrapped in blankets before he was drawn up into the open air. Several medical men were in attendance, and one of them had him conveyed to his house, and put to bed.

We will not attempt to describe Dufavel's happy meeting with his wife, nor the tears of joy which he shed over his infant boy, who did not at first recognize him, muffled up as he was obliged to be to protect him from the cold, and his chin covered with a beard of more than a fortnight's growth. In the evening he was so well, that Dr. Bianvenu consented to his being conveyed to his own home; and he was accordingly transported thither in a litter, attended by a great concourse of happy and thankful spectaters.

The Evening Cloud.

BY PROFESSOR WILSON.

A cloud lay cradled by the setting sun;
A gleam of crimson tinged its braided snow.
Long had I watched the glory moving on
O'er the soft radiance of the lake below.
Tranquil its spirit seemed, and floated slow.
E'en in its very motion there was rest!
While every breath of eve that chanced to blow,
Wafted the traveller to the beauteous west.
Emblem, methought of the departed soul
To whose white robe there's beam of light is given;
And, by the breath of mercy made to roll,
Right onward to the golden gates of Heaven,
Where to the eye of faith it peaceful lies,
And tells to man his glorious destinies.

Anecdotes of English Judges.

To Americans of the legal profession, the names of the most celebrated among English Judges are familiar as household words. For this reason, as well as for their intrinsic merit we copy from TOWNSHEND'S "Lives of Twelve Eminent Judges," a few lively and entertaining anecdotes:

THURLOW AND ROSSLYN.

"Lord Thurlow survived his lucky rival more than a twelvemonth, and on hearing of his death at Bath, said candidly, 'Well, I hated the fellow, he could *parlez-vous* better than I could; but he was a gentleman!' His dislike afterwards vented itself in a bitter gibe. Being informed, we know not how truly, that George the Third, who had been laboring under mental hallucination, exclaimed on Lord Rosslyn's death, 'I have lost then the greatest scoundrel in my dominions!' 'Said he so?' exclaimed Lord Thurlow; 'then by — he is sane!'"

SCANT LAWYERS' FARE.

"When Lord Lyndhurst, then Chief Baron, first visited Dolgelly, he expressed his surprise to the high sheriff that there should not be a single prisoner for trial. That worthy official seemed afraid that his lordship might be offended at such a state of things, and answered, with much concern for the honor of Merionethshire, 'I can assure you, my lord, the whole country has been in pursuit of a sheep-stealer!'"

ELLENBOROUGH had many humorous and witty sayings, but they generally evinced his harsh and overbearing temper:

"When Mr. Park (the late Justice Allen Park) had been moved, in some case that appealed to the feelings, to repeated exclamations, and had called Heaven to witness and so forth, while addressing the jury—'Pray, sir,' said my lord, 'pray, don't swear in that way here in court!' The effect of this interruption, in a grave tone, was irresistible, and Mr. Park heartily joined in laughing at this unexpected practical pleasantry. When another counsel, too much addicted to self-praise, had declared, in the course of his address, that such things were enough to drive one from the profession of the law. 'Don't threaten the court,' said his lordship, 'with such a terrible calamity.' The austere lectures which he sometimes read flippant pedantry, or hopeless imbecility, are often remembered and quoted with malicious glee, for they possess a character of quaint and grave sarcasm peculiar to the man. An eminent conveyancer, who prided himself on having answered thirty thousand cases, came express from the Court of Chancery to the King's Bench to argue a question of real property. Taking for granted, rather too rashly, that common-law lawyers are little more acquainted with the Digest of Cruise than with the laws of China, he commenced his erudite harangue by observing, 'that an estate in fee-simple was the highest estate known to the law of England.' 'Stay, stay,' interrupted the Chief Justice, with consummate gravity, 'let me write that down.' He wrote, and read, slowly and deliberately, the note which he had taken of this A. B. C. axiom—'An estate in fee-simple is the highest estate known to the law of England. The court, sir, is indebted to you for the information.'

There was only one person present who did not perceive the irony, and that was the learned counsel who incurred it. But though impervious to irony, it was impossible even for his self-love to avoid understanding the home-thrust lunged by the judge at the conclusion of his harangue. He had exhausted the year books, and all the mysteries of real property law, in a sleepy oration which effectually cleared the court; insensible alike to the grim repose of the bench and the yawning impatience of the ushers, when, at the close of some parenthetical and apparently interminable sentences, the clock struck four, and the judges started to their feet; he appealed to know when it would be their *pleasure* to hear the remainder of his argument. 'Mr. P.,' rejoined the chief, 'we are bound to hear you, and shall do so on Friday; but *pleasure* has been long out of the question.' The hesitations of dulness and vagaries of fancy received from him no quarter. A young counsel commenced his stammering speech with the remark, 'The unfortunate client who appears by me,' and then came to a full stop; beginning again, and after an embarrassed pause, with a repetion of the remark, 'My unfortunate client,' he did not find his fluency of speech quickened by the calm raillery of the judge, who interposed in his softest tone, 'Pray go on—so far the Court is quite with you.' The late Sir Thomas Mackintosh, who used to chuckle over the narration of this incident, would however, sigh at the remembrance of its cruelty, and cruel it undoubtedly was. Another barrister was advancing rapidly into the regions of poetry in a grave argument at banc, and observing, 'It is written in the large volume of nature,' when the judge instantly recalled his wandering imagination by the caustic query, 'In what page, pray?' When a favorite pleader, Mr. Gazelee, was making an excursion, somewhat unexpected by his hearers as unwonted in him, into a pathetic topic, 'Are we not sir, rather getting now into the high sentimental latitudes?' The barn-door flight of the English special pleader was far inferior in sublimity to that of an Irish counsellor, who thought proper to suppose 'an eagle soaring high above the mists of earth, winging its daring flight against a mid-day sun, till the contemplation becomes too dazzling for humanity, and mortal eyes gaze after it in vain;' here the orator faltered, and after an abortive effort or two, sat down in confusion. 'The next time, sir,' said the judge, 'you bring an eagle into Court, I should recommend you to clip his wings.'"

ERSKINE was often unscrupulous but was sometimes outdone by one BEARCROFT

"A young gentleman of good family had married a woman of the town. His relatives and acquaintance deserted him. She plunged her husband into debt, and almost ruined him by her extravagance. He mustered courage to defend an action for goods furnished to her at enormous prices. Erskine was counsel for the defendant; and, aware of the wife's previous character, was obliged to make it a ground of appeal to the jury. He praised the amiable feelings of the husband, who had sought to restore his wife to the path of virtue, and inveighed against her base ingratitude, to which the plaintiff had lent himself. 'For her he gave up his family and sacrificed all his connexions.' When Bearcroft came to reply, he treated Erskine's eulogium of his client's virtue, and the demerits of his wife, as mere burlesque. 'My friend reproaches his client's wife with forgetfulness of the debt of gratitude which she owes him, that for her he had given up all his connexions: but the balance of obligation will be found on her side—for, for him, she gave up all mankind.'"

ERSKINE IN COURT.

"A witness was put into the box, who travelled to get orders. This description of persons go indiscriminately by the name of riders and travellers, but most affect the latter. 'You are, I un-

derstand, a rider?' 'A traveller, sir,' was the reply. 'Pray,' said Erskine, 'are you addicted to that failing usually imputed to travellers?' Another of the fraternity having baffled his cross-examination, he suddenly remarked, 'You were born and bred in Manchester, I perceive.' The witness admitted that it was so. 'I knew it,' said Erskine carelessly, "from the absurd tie of your neckcloth.' The traveller's weak point was touched, for he fancied that his dress had been perfect; and the counsel gained his object—the man's presence of mind was gone.

"When induced to make a personal observation on a witness, Erskine divested it of asperity by a tone of jest and good humor. In a cause at Guildhall, brought to recover the value of a quantity of whalebone, a witness was called of impenetrable stupidity. There are two descriptions of whalebone, of different value, the long and the thick. The defence turned on the quality delivered, that an inferior article had been charged at the price of the best. A witness for the defence baffled every attempt at explanation by his dulness. He confounded thick whalebone with long in such a manner that Erskine was forced to give it up. 'Why, man, you don't seem to know the difference between what is thick and what is long. Now, I'll tell you the difference. You are a thick headed fellow, and you are not a long-headed one!'

"In a cause at Guildhall, Mingay spoke of one Bolt, a wharfinger on the Thames, who loved litigation, and whose name regularly appeared as plaintiff or defendant in the cause-paper of the sittings after term, in very harsh terms, for his dishonest and litigious spirit. 'Gentlemen,' replied Erskine, 'the counsel has taken unwarrantable liberties with my client's good name. He is so remarkably of an opposite character, that he goes by the name of Bolt-upright.' This was all invention."

The last words of TENTERDEN, uttered by him in the delirium of death were, "Gentlemen of the Jury, you may retire."

☞ In Baron DERCSENYI's "Researches for a Philanthropical remedy against Communism," he specifies a remedial plan against the poisons which he thinks Owen and Fourier have taught. His remedy is based on what he deems the

FOUR PRINCIPAL WANTS OF MAN.

"1st. That a man, when he feels himself competent to work, may be able to find an employment that will afford him sufficient means to procure his daily bread; at the same time he desires that his employment may not be one that would degrade him in the eyes of the other classes of society. Besides, the possibility of his obtaining a livelihood of this nature ought not to depend upon the chance of the harvest being good, or upon the times being favorable to commerce and manufacture, or otherwise.

"2. The second principal want or desire of man, which, though I rank it as the second, is almost as important as the first (save to the thoughtless and frivolous, who, though such are to be found, form exceptions to the rule) is to be able to save sufficient to provide (at least for a short period) against sickness or accidents

"3. The third want of man is, that as parents they may be able to find the means, not only of supporting their children, but also of giving them an education suited to the class they belong to: a desire that with many parents is felt even more ardently than the two former.

"4. Fourthly comes the want or desire, in order to provide for old age, misfortunes, and, above all, to secure a better position for their prosperity, that a capital may be obtained bearing interest; and when it is obtained or inherited, that they be able to hold it without risk."

A BRITISH OUTRAGE ON AMERICAN SOIL.—Whilst at St. Peters, on the Upper Mississippi, a few days ago, we learned the following facts from a gentleman conversant with them, and whose authority is beyond question in this city, where he is well known. The circumstance may be regarded as trivial in itself, so far as the fate of the guilty men are concerned; but be this as it may, it is still an invasion of our soil, and an insult to our national jurisdiction. Although it may be a more humble, it is not a less exceptionable act, than the burning of the Caroline by British soldiers, in American waters, about which so much excitement was created a few years ago. In another aspect, it is yet more deserving of the consideration of our Government.

It is well known to every one familiar with the Indian trade carried on within the United States, that, when the American trader has been forced into conflict with the British trader, the former has been compelled to yield, even on American soil, to the arrogance and assumptions of the latter. The trader of the Hudson Bay Company is not only backed and sustained by the power of that great Company, but he is supported and defended by the British government itself. At the present time, the Hudson Bay Company has its own employees in the office of judge; jurors are selected from its tenants, and they take cognizance of every offence, even to those involving life. Even now, an American citizen is held to bail to answer in a court of their own creation, for an alleged offence against a law of their own enactment. In such a tribunal, thus constituted and influenced, the result of the trial is not doubtful.

Whilst their acts and their insolence are confined to their own side of the line, and exercised upon their own subjects, and do not affect American citizens, we might be disposed to let them pass. But even in their exactions, and especially in the *tarif of duties* which this overgrown Company imposes on merchandise purchased in the United States by the tenants of the Company, and carried into their jurisdiction, it might be well for our government to inquire whether there is not a want of conformity with the treaties subsisting between us and Great Britain. Of this, hereafter.

The outrage to which we allude has been stated to us as follows:

Pierre Chouteau, Jr. and Co., the successors of the American Fur Company, have a trading establishment in the Sioux country, on the head waters of the Red River of the North, several miles within the American territory and from the line dividing us from the British colonies. For some time past—in fact, ever since the apprehended difficulties between the two countries concerning the Oregon boundary—the British Government have kept stationed in the vicinity of Selkirk's settlement, a body of regular troops, who, it is now well understood, were intended, if hostilities had occurred, to take Fort Snelling and other posts and property on the Upper Mississippi. A short time since, some of these troops, as is alleged, deserted and came across into the American territory, and, we believe, some of them entered into the employ of the American traders. Subsequently, a British officer, with a force of regular soldiers, came over to the American trading station, and arrested these men, asserting that they were deserters. Against this act of invasion of our soil, and insult to our national authority, the agent at the station remonstrated.

He had neither the authority, or the means of resistance: nor was he disposed to protect the men against a lawful seizure, but he earnestly protested against the British Government exercising this high prerogative upon our soil, and this, too, without investigation, or the shadow of authority from the United States. His remonstrance and protests were unheeded: the men were seized, bound, and carried back into the British possessions. The fate of the parties arrested is not known.

It is unnecessary to dwell upon the illegality of this act, or the insult it gives to the jurisdiction of the Government of the United States. All we now add is, that, for the truth of the facts, the testimony of men of the highest respectability may be had, if the Government thinks proper to look into it.—*St. Louis Rep.*

☞ Several of the New York papers contain brief obituaries of Mr. STUYVESANT, whose death whilst bathing at the Falls, we announced a few days ago. We extract the following:

DEATH OF PETER STUYVESANT.—Another of our old citizens is gathered to his fathers Peter G. Stuyvesant is dead. He was seventy-five years of age, and the proprietor of a large estate in the upper wards, formerly the Stuyvesant farm, inherited from his great ancestor, the celebrated Dutch governor of the same name. His property was so heavily taxed during the speculation mania of 1836, that he had to forfeit it for the assessments, but subsequently recovered it, and the estate is now probably worth fifteen millions of dollars. He died childless. His lady survives him. He was a man of excellent character, and took an active part in benevolent enterprises.—Since 1832 he has been a manager and for some time a Vice President of the American Bible Society. The N. Y. Historical Society, of which he was one of the earliest members, elected him their President for several years in succession. His character shone brightest in private life, where his pleasing manners were displayed to admiring circles. His death was very sudden. He had gone on an excursion up the lakes. with his lady and niece, and died while bathing in the "plunging bath," near the hotel. He had enjoyed excellent health, and although seventy-five years of age, he exhibited the buoyancy of middle life. We have not heard what disposition he has made of his property.

A HINT TO LADIES.—The Philadelphia Pennsylvanian publishes, from the pen of a lady, the following remarks on dress:

"Speaking of beauty, I wish people would dress pleasantly, benevolently. I saw a lovely girl today looking unlovely and unlovable, because her muslin dress was stiffly starched. *to keep clean the longer.* My laundress tries in vain to persuade me into the barbarous custom. To my mind a woman should always look as soft to the touch as a flower, and as pure. All her garments should be made of the finest and softest material possible; material that will easily dispose itself into folds, falling gracefully around her; and not, by being liable to ruffle it every moment, compel her to stiff attidudes and starched demeanor, denying her all luxury of lounge and loll; why, my very words would grow prim and precise, were I to wear a dress which depended on flour or potato for its propriety."

The steamer Albany has been sold by Captain Gager to the Boston Rail Road Company, and is to be overhauled and fitted up to run next season in a daily line between Detroit and Buffalo, in connection with said railroad.—*Clev. P. Dealer.*

Indian Attack-Eight Americans Killed.

The Indians on the Southwestern frontier are beginning to display a bold hostility, that, unless promptly and severely repressed, promises seriously to endanger, if not wholly inter upt communication with our troops in New Mexico. We have heretofore given accounts of Indian attacks upon small bands of traders and detachment of troops going to or returning from Santa Fe, but unless the parties were very small the Indians rarely ventured to do more than hover upon their flanks, and pick up a stray horse or two, or plunder a wagon that lagged behind. But by the western mail this morning we have news of a daring and bloody assault made by them upon a large detachment of the St. Louis Battalion bound for Santa Fe. This intelligence comes in a letter, dated Camp on Arkansas River, July 23, and was forwarded by a St. Louis correspondent to the *Louisville Courier*, from which we copy. The writer says:

The battalion has not moved together since we left Fort Leavenworth; Captains Shepard and Woecham were separate, while Captains Cunningham, Paul and Carnes were in one body, under the command of Lieut. Col. Easton. I have never heard any reason assigned why the other two companies do not join us, although I have enquired often.

On the evening of the 20th instant, while some of our men had crossed the Arkansas river (on the banks of which we were encamped,) for the purpose of procuring fire wood, the Indians pounced upon them, and before any assistance could be rendered, eight of them were killed and four wounded. The alarm was soon in camp that the Indians had attacked our men on the opposite shore, and in a few moments Capt. Barnes' Co., which was encamped at a point nearest the river, hastened to their relief, but before they could get in musket range the Indians had made good their retreat on their horses. Capt. McNair's Company of Cavalry, which has been with us since we left Council Grove, were soon in their saddles and in pursuit, but they did not succeed in overtaking them.

The party of Indians which made the attack was about 30 in number. Scouting parties, in all numbering, it is supposed, between three and four hundred, were seen on the surrounding heights. They were well mounted, and were, it is supposed, Camanches. Fifty of our men were across the river at the time attack was made, but were in small parties and entirely unarmed. Nearly all of the killed and wounded were horribly lanced and scalped. One of them was literally covered with lance and arrow wounds. The names of the killed and wounded are as follows: Company D—Killed—Capt. Paul, P. Porter and Charles Fraas. Wounded—Company of Capt. Barnes—Wm. Duncan, Lodwick, James and H. Barlow. Killed—Volunteer Regiment—J. Johnson, and ——, wounded. We will remain here four or five days, to repair wagons and to rig up Hayden's train of wagons, which are now lying at the Ford, the cattle for which were nearly all stolen by the Indians, preventing them from going over.

The report that the Fort had been surprised by the Indians proves to be erroneous. The Indians attacked and killed three men, but did not burn the Fort.

The man who built and has charge of it says he will abandon it unless some thirty men of our battalion are ordered to remain with him—of which I think there is no probability.

DEATH OF THE WHOLESALE MURDERER.—William Freeman, the murderer of the Van Nest family near Auburn, died in jail at that place on Saturday morning last, as we learn from the *Advertiser*. He has been in a most miserable condition for some weeks past, and all who have seen him within that time have become satisfied that whatever he may have been when he committed the horrid act for which he has been so long imprisoned, he had become a perfect idiot. A telegraphic despatch was sent to Dr. Brigham, of Utica, advising him of the fact, and on Saturday evening he visited Auburn, and held a post mortem examination upon the body, the result of which will probably be given hereafter.

From the Knickerbocker for August

Church-Yard Flowers.

BY W. H. C. HOSMER.

I.

Flowers of the Church-yard!
Ye are as bright of hue
As sisters that in greener spots
Quaff drops of morning dew:
A charm to the home of Death ye gave,
Springing in beauty on Childhood's grave:
Waving your heads in the wind, to and fro,
Types of the innocent sleeper below.

II.

Flowers of the Church-yard!
A part of her ye seem
Who in that heavy slumber lies
That knows no pleasant dream:
I saw her blue eyes in your violet gems,
The grace of her form in your flexible stems,
In diamonds of morn on your petals that lay
Her tears, that the sunshine of joy chased away.

III.

Flowres of the Church-yard!
Your leaves are odorous still;
Ye died before the biting frost
Of winter-time could kill:
Though vanished our lost one from earth's fading bowers,
Remembrance of her is like fragrance of flowers;
She dawned on our vision, a creature of light,
And passed ere the day was o'er-clouded by night.

IV.

Flowers of the Church-yard!
Her narrow house was cold;
Ye sprang, and warmed with summer tints
The damp and gloomy mould:
Thus came, when the path of existence was drear,
Our darling the hearth of our homestead to cheer,
But, ah! when our blossom was fairest to sight,
Gnawed the worm of decay, and descended the blight!

V.

Flowers of the Church-yard!
Another spring will wake
A painted band as deep in dye
Her grave couch bright to make;
But, ah! never more will our threshold be crossed
By mortal the peer of our loved and our lost;
Darkened earth was too poor such a treasure to own—
Heaven's casket is meet for such jewels alone.

AVON, June, 1847.

Rural Department.

Farming Utensils of the Mexicans.

The farming utensils of the Mexicans are of the rudest possible description. It has been well said, that they seem to be opposed to change of every kind, except in their governors and government. The same utensils which were used by Cortez, at the conquest, in the sixteenth century, are used at this day in Mexico.

Riding, on the 10th of December, up the valley in which Barras is situated, I came to a field where they were sowing wheat. The sower was sowing the wheat broadcast on the unploughed ground. Twenty-three ploughs followed each other, on the same land, ploughing the wheat in. A contrivance for a harrow levelled the ground after the ploughs. Each plough was drawn by two oxen. The ploughs were of the same pattern used by the Romans two thousand years since. They were made of the fork of a small tree, one prong of which answers for the beam, and was cut long enough to fasten the oxen to; the other prong was cut off about four feet long, and sharpened at the end, and a single stick fastened into the fork and projecting back made the handle. This was the whole plough—lock, stock and barrel. When a forked tree cannot be found, the short stick is mortised into the long one. The short prong was the coulter—the long one the beam. This was fastened by a raw-hide thong to the ox yoke, which, in turn, was fastened in front of, and to the horns of the oxen, by another raw-hide throng. The handle was held by a peon, who was armed in the other hand with a long pole, with a sharp goad in the end of it, which he unsparingly plunged into the oxen to quicken their speed, or to change their direction.

Some of the better ploughs have the coulter shod with a piece of iron, resembling a bull-tongue, eight inches long, and tapering from thence to two inches at the point. This is the greatest improvement made upon the plough.

The ground is never throughly broken up, and is only scratched into furrows a few inches deep. Efforts have been made to introduce better ploughs, and some have been brought from the United States. But the Mexicans did not like to use them. They were soon broken or thrown aside as useless, because no one would plough with them.

The harrow was as simple a contrivance as the plough, and consisted of a single stick of square timber, the size of a joist, fastened in two places with a raw hide rope to keep it square to the front, and drawn by a yoke of oxen to level the ground.

The *metate*, or stone corn-mill, used for preparing *tortillas*, is the same article that was used by the Indians at the first conquest of Mexico.

Their hoes are clumsy, rough machines, decidedly worse than the meanest hoe in Old Virginia—and that is about as bad a character as I know how to give them.

Their axes are long and clumsy, with blades about three inches wide, and resemble the upper part of a pick-axe or grubbing-hoe. It looks remarkable that they should ever be able to peck a tree down with one. The great superiority of the American axe is so evident, that some few venturesome persons have commenced the use of them.

A Mexican cart is the most unique of all their inventions. It has not a piece of iron in it or about it. It is constructed entirely of wood and raw-hide. The axletree is a rough-hewed log, rounded at the ends. The wheels are made of knotty liveoak, two feet and a half through the hub, and trimmed down to seven inches in the tread. Two slabs of the same width are pinned on to the centre piece, to give rotundity to the wheel. A heavy tongue is mortised into the axle, and has a wooden pin inserted through the upper end, by which to fasten it to the yoke.—The body is made of wooden poles, inserted into round saplings eight feet long. This is used for hauling wood, etc. When they wish to haul corn, corn-stalks are placed across the wooden poles, and lashed tightly to them with strips of raw-hide. When wheat or shelled corn is to be carried, they line the inside of the stalk bed with matting made of the *palmilla*, which resembles the material of which gunny-bags are made.

The ox yoke is a piece of timber five inches wide and three inches thick, slightly indented near each end. This is tied in front of and across the horns, with a piece of tough raw-hide. Another piece fastens the yoke tightly to the tongue of the cart. A second yoke of cattle is usually

fastened to the cart. A strong rope of raw-hide, of sufficient length, fastens their yoke to the tongue of the cart.

The driver moves along by the side of the cart sometimes on foot and sometimes riding an ugly, ill-natured looking mustang, with a long ox-goad in his hand. He uses this very freely, and when he wishes to "file left," he pops his goad into the off ox, who screws his tail and runs round his fellow, and changes the direction of the cart.—They move more briskly than American oxen. This is no wonder, for they are all taught to "walk Spanish."

They haul very large loads in these carts, and travel as fast as horse teams usually do on a journey. A Mexican frequently carries his wife and children in these carts. He then puts a raw-hide on the bottom, to keep the children from falling through, and puts another over the top for a cover, when in crawls the whole family. As soon as "all's set," he hisses at his oxen, as a bear hunter would do when close on brnin, and off starts the whole contrivance, with a full band of road music.

Some ladies in the United States seem to be fond of travelling in stages and railroad cars with squalling children, to the great annoyance of their fellow-passengers. I would advise such, by all means, to try a Mexican cart, for however much a cross grained brat may scream and ball, it would not in the least disturb his neighbors, or interfere with the harsh discord produced by the outlandish *screeching* of a Mexican cart.

Potato Digging Machine.—We have received from Mr. C. Bradbury, of Philadelphia, a drawing and description of a machine, invented, arranged and calculated for digging potatoes by the cart load, and thoroughly cleansing and separating them from the earth, &c., by merely hauling the machine through the field by a horse or yoke of oxen. The machine is mounted on a pair of wheels, and consists of a large cylinder of open work with scoops of pointed rods projecting at proper intervals from the periphery. This cylinder is mounted on pivots and so connected to the wheels by gear work, as to revolve in a direction contrary to that of the wheels; and in its revolutions, each scoop takes up a hill of potatoes and by its rotary motion, sifts out the earth therefrom, and deposits the potatoes in a central receptacle, and throws the vines and weeds out at the sides. We cannot give a very specific description without an engraving, but have no doubt that such a machine might be so constructed as to do this work thoroughly and rapidly where the soil is light and free from stones.—*Scientific American.*

From the Buffalo Commercial Advertiser.

A Trip to Chicago in the St. Louis.

NUMBER III.

There is a striking general similarity in three of the Straits or Rivers connecting the Great Lakes—the St. Clair, the Detroit, and that portion of the Niagara above the Falls; and it is almost or quite impossible to designate the particular features which make them, as they are, so very different to the eye. They have nearly the same volume, and glide on in broad, swift, clear currents, between shores presenting abrupt, low banks, or verdant slopes, and among islands now plashy and rush-covered, and now dry and wooded: and yet they vary widely from each other, and their diversity is in themselves, and independent of all villages, and buildings, and cultivation, and changes wrought by human labor upon their beauteous margins. So peculiar are they in their common grandeur, and yet so strong is their unlikeness, though inexpressible, that were one, familiar with the three, to be transported, in his sleep, from a remote region, and placed upon either, on any portion of it, however wild and untamed, he'd name it correctly soon as he waked. They are like beateous sisters born in the same hour: and they are twins too,—for, when Nature, in her throes, depressed the beds of Michigan, and Huron, and Green Erie, and reversed their outlet to the Sea, she gave these Rivers birth. They are most lovely, and amid our Water Deities might be termed the Graces, were they not too majestic. I love the St. Clair, the wildest and most impetuous of these noble sisters;—I love the Detroit, so much more staid and equable; but, of them all, the ever-varying, dimpling, sportful Niagara, most surely commands my heart's devotion.

How delightful was our too swift passage up the Detroit. We here made our first complaint of the St. Louis: she carried us so rapidly apast its scenery. A slower boat would have better suited us, who love to linger amidst the beautiful in Nature. But upward she ploughed her way, in early morn, to the great and rising city of Detroit, and allowing us but a few short hours to admire the substantial growth, and tasteful dwellings, wafted us on remorselessly. We could scarce say "How lovely!" ere the scene faded.—But then, as it vanished, new beauties came in view, appearing and departing in rapid succession. See that fantastic thorn, and that old embowered cottage by the river's side! How those cattle, which stood so quietly in the smooth, shallow water before us, a minute since, lazily flapping their fat sides, and chewing the cud of seeming contemplation, rush to the bank affrighted, as the waves in our wake swell and and dash up among them! How charming that knoll, whose sweet, grassy mantle, descends in a long sweep to the water's edge and mingles with it! What a quiet, venerable grove! Surely it shelters the graves of the great ones of the forest-loving Hurons! Don Quixote might here have freely indulged his insane propensity to fight with wind-mills, for, though they are planted thickly on the Canadian shore, they seem as lifeless as the enterprize that uses them in place of steam-mills. See, there's another! How picturesque are their low towers and jutting tops, on the river points and headlands, where they are placed to catch the air, that wings its way more freely close to the river's course! How gracefully those gulls float and wheel in the air, or drop into the wave, and swim like foam upon it! There is a black one, smaller, and more graceful than the others! They seem to heed us, as we foam along, no more than do those two bare-legged men, who, bending downward, with a long rope on their shoulders, slowly walk

along the beach of that meadowy isle, towing that little schooner against the current. But, what is this? It is too bad,—we are out of the river already, and this dreary expanse of shallow water is Lake St. Clair. Were its famed flats in the Detroit River, there would be less grumbling about them. I see no beauty in this lustreless sheet of dingy water, with its flat shores, dim in the distance. I'll go into the cabin, and listen, an hour or so, to a discussion among the politicians, or an amicable argument between theologists, or a chit-chat among the ladies, God bless them!—or the conversation of our literati, who are always talking, or—no, no! Upon the whole, I'll get my old friend, JOHN SMITH, who dropped in among us at Detroit, to sit with me upon the forecastle, and spin a yarn. F.

News by the Cambria.

We copy the following from the *Albany Evening Journal*, the only paper that has come to hand containing any report of the *Cambria's* news except that received by Telegraph, which we have heretofore given:

The Queen and Prince Albert were to leave London for Scotland on the 9th inst.

John Walter, Esq., principal proprietor of the London Times, died on the 28th ult. He had been at the head of that establishment for 44 years.

Mr. Macaulay, the distinguished and brilliant writer, lost his seat in Parliament from the city of Edinburgh on account of his vote in favor of a Catholic Education bill.

THE BRITISH PARLIAMENT.

Her Majesty prorogated Parliament on the 23d ult. The following is the Queen's Speech:

"MY LORDS AND GENTLEMEN,

I have much satisfaction in being able to release you from the duties of a laborious and anxious session. I cannot take leave of you without expressing my grateful sense of the assiduity and zeal with which you have applied yourselves to the consideration of the public interests.

Your attention has been principally directed to the measures of immediate relief, which a great and unprecedented calamity rendered necessary.

I have given my cheerful assent to those laws which, by allowing the free admission of grain, and by affording facilities for the use of sugar in breweries and distilleries, tend to increase the quantity of human food, and to promote commercial intercourse.

I rejoice to find that you have in no instance proposed new restrictions, or interfered with the liberty of foreign or internal trade, as a mode of relieving distress. I feel assured that such measures are generally ineffectual, and, in some cases, aggravate the evils for the alleviation of which they are adopted.

I cordially approve of the acts of large and liberal bounty by which you have assuaged the sufferings of my Irish subjects. I have also readily given my sanction to a law to make better provision for the permanent relief of the destitute in Ireland. I have likewise given my assent to various bills calculated to promote the agriculture and develope the industry of that portion of the United Kingdom. My attention shall be directed to such further measures as may be conducive to those salutary purposes.

My relations with foreign powers continue to inspire me with confidence in the maintenance of peace.

It has afforded me great satisfaction to find that the measures which, in concert with the King of the French, the Queen of Spain, and the Queen of Portugal, I have taken for the pacification of Portugal, have been attended with success; and that the civil war, which for many months had afflicted that country, has at last been brought to a bloodless termination.

I indulge the hope that future differences between political parties in that country may be settled without an appeal to arms.

GENTLEMEN OF THE HOUSE OF COMMONS,

I thank you for your willingness in granting me the necessary supplies; they shall be applied with due care and economy to the public service.

I am happy to inform you that, notwithstanding the high price of food, the revenue has up to present time been more productive than I had reason to anticipate. The increased use of articles of general consumption has chiefly contributed to this result. The revenue derived from sugar especially has been greatly augmented by the removal of the prohibitory duties on foreign sugar.

The various grants which you have made for education in the United Kingdom will, I trust, be conducive to the religious and moral improvement of my people.

MY LORDS AND GENTLEMEN,

I think proper to inform you that it is my intention immediately to dissolve the present Parliament.

I rely with confidence on the loyalty to the throne, and attachment to the free institutions of this country, which animate the great body of my people. I join with them in supplications to Almighty God, that the dearth by which we have been afflicted may, by the Divine blessing, be converted into cheapness and plenty."

DONATION OF FOOD FROM THE U. STATES.

On the 20th ult., the following interesting debate took place:

Mr. Brotherton moved an address to her Majesty "that she be graciously pleased to direct that there be laid before this House a copy of the letter from the Secretary of State for Foreign Affairs to her Britannic Majesty's Minister at Washington, acknowledging the donations in food and money of the legislature and citizens of the United States of America for the relief of the famine in Ireland." The hon. gentleman then referred to the great amount of misery and destitution which had been experienced in Ireland, and to the very large contributions raised in America for the relief of that country, one committee having raised a sum of not less than £109,000, and another of £60,000. The expedition with which these large contributions were converted into food and transmitted to Ireland was also matter of surprise, as well as gratitute.

The hon. gentleman having read extracts from several letters received from various parts of the United States, to show the promptitude with which the humane exertions of the American people were conducted, proceeded to observe, that after the manifestation of such kindly feelings on their part, we could do no less than give expression to the gratitude which we felt. (Hear, hear.) He regarded the conduct of America, in this respect, as of great importance, seeing it tended to confirm those friendly relations that existed between the two countries, and would aid in laying the foundations of lasting peace. These reasons justified him in moving that this address be presented to her Majesty, simply with the view of eliciting the strong expressions of national gratitude which he was certain were felt in every part of her Majesty's dominions. (Hear, hear.)

Mr. W. Brown concurred in what had been said by the hon. gentleman with regard to the

effect upon the amicable relations of the two countries which the recent conduct of America was calculated to produce. It was not merely the amount of their contributions, but the promptness with which vessels were placed at the disposal of the contributors for the transmission of grain to Ireland, and the kindness and hospitality which were shown to those who went from this country to procure provisions, that demanded their gratitude and esteem. (Hear, hear.) There was one feature in the transaction deserving of particular notice, namely, that part of the donations came from our red brethren in the west.

Lord Palmerston—I have very great pleasure in acquiescing in and supporting the motion of my hon. friend. The only regret I can feel on the occasion is, that although the despatch for which he has moved expresses in strong terms the feelings of her Majesty's Government and the feelings which we believe animate the whole of the British nation, still I am sensible that no terms which could have been employed by me could adequately convey the feelings of thankfulness and admiration which the conduct of our brethren in the United States must have excited amongst all classes of her Majesty's subjects.

As my hon. friend has stated, not only was the supply sent large, liberal, and generous in amount, but the manner in which it was sent, the promptitude with which it was forwarded, and the strong feeling of interest which was expressed on the part of all those who had contributed to that supply, were more almost than could possibly be expected on the part of persons who, however united to us in origin, and bound to us by every tie of language and religion, of manners and habits, still, being separated by a mighty expanse of ocean, could not be animated perhaps by the same extent of sympathy by which our brethren in the United States have been so honorably distinguished.

I agree with my hon. friend that transactions of this nature are calculated to cement in the strongest manner those ties which ought to unite kindred nations, and it is this circumstance which ought not to be lost sight of—that while on the one hand acts of generosity such as these bind and rivet the affections of those upon whom they have been conferred, on the other hand they tend, by the very exercise which accompanies them of good and kindly feelings, to increase the affection of those by whom they are done towards those who have been the objects of those generous acts. And therefore, sir, both in regard to the feelings which those actions proclaim in America, I am happy to think that whatever may have been the sufferings and calamities which gave rise to these acts, at all events they will so far have been attended with happy results, that they have afforded to our brethren in the United States an opportunity of doing that which will never be forgotten by the people of this country, and, I hope, for a long time, will increase the good feeling of the people of the United States towards their brethren in this country. [Cheers.]

Lord Morpeth said, as he had very peculiar opportunities of noticing the warmth of feeling which existed in every part of the Union towards the inhabitants of this, which they called "the old" country, he could not help declaring his participation in the feelings of satisfaction and thankfulness exposed by the honorable member and his noble friend. It was impossible to overrate the strength of those feelings, evinced by the warmth of sympathy which had been called forth in America, and by the liberal and substantial tokens which had accompanied it, and which, he trusted, would be considered to be amply acknowledged by the despatch of his noble friend.

But he was not sorry that, before Parliament rose, feelings such as those expressed by the honorable members had found a vent within the walls of that House. He had received letters recently from New York, describing the measures taken there for securing the health and comfort of the destitute emigrants from this country, and at Boston an island had been set apart for, and appropriated to hospitals. He believed that the same kindly spirit prevailed all over the Union, from Maine to New Orleans, and although occasionally causes of soreness and subjects of altercation would unavoidably arise between the two countries, as between other nations, the touch-stone of calamity was only wanting to call forth at all times whatever was most generous and kind in our nature. He bore with pleasure his testimony to the value of those feelings which the calamities of Ireland had elicited in America. (Hear, hear.)

The motion was then agreed to.

A Touching Sight.—Standing a moment with a friend on Main street, on Thursday evening, we saw a spectacle which deeply stirred our sympathies. A man some forty years old, reeling with liquor and bearing in his face the marks of habitual drunkenness, came staggering up the sidewalk. To his hand his little son—a boy of some 8 years—clung with a tight grip of both his own. As the father, once or twice while we looked, stumbled and nearly fell, the little fellow braced his feet, and exerted all his strength to save him; his eyes all the time streaming with tears, and heavy sobs breaking from his young breast. What a sad change of duties and responsibilities! The father; impotent, not from the visitations of Providence but from his own vices, led and protected by his tender offspring whom he himself should protect and lead! Oh damnable vice, that strips manhood of its strength and dignity, and drenches the cheek of youth with the tears of premature sorrow.—*Cincinnati Atlas.*

The Rapidity of English Railway Traveling.—The Rev. Frederic H. Hedge of Bangor, who is now traveling abroad, takes occasion in one of his late letters graphically to convey an idea of the rapidity with which the cars took him from Coventry to London. "Our speed," he says, "seemed to increase with every station, as if feeling the attraction of the mighty maelstrom, —sucked irresistibly in by a systole from the heart of the world. And on we whirled, thunder, scream and rattle, now swallowed up by some mile-long Orcus of a tunnel, confounding the senses with Stygian fumes and infernal reverberations; now vomited forth again in bright day, and ever faster, until we were quietly deposited in Easton square.

A cab conveyed me to my lodgings, and within three weeks from the time of leaving Boston, I was settled in London, having already seen some of the chief *notabilia* of England."

A Revolting Scene.—A few days since, we understand, the horses attached to the hearse employed to convey the bodies of the deceased emigrants to the Roman Catholic burying ground, in Toronto, Canada, ran away, and in turning one of the streets, the hearse was upset and dashed to pieces, throwing out *three* coffins, and from which *four* bodies, almost in a state of nature, were cast upon the ground? The bodies were reduced almost to skeletons, and greatly discolored by disease.—*Roch. Adv.*

Editorial Department.

J. CLEMENT, EDITOR.

An Obituary Notice.

"Brilliant and beautiful! And can it be
That in thy radiant eye there dwells no light—
Upon thy cheek no smile? I little dreamed
At our late meeting, when thy cheering voice,
Breathed the soul's harmony, what shadowy form
Then rose between us, and with icy dart
Wrote, '*Ye shall meet no more!*' I little dreamed
That thy elastic step, Death's darkened vale
Would tread before me."

A few weeks since, in passing from Huron to Toledo, O., on the steamer Indiana, we became acquainted with a young lady who, in company with two sisters, some cousins and other friends, was taking a trip on lake Erie for pleasure. She was one of those gentle, fine-wrought spirits whose presence is ennobling and refining, "a rare and radiant maiden" whom one, though a stranger, hopes to meet again, and who seems too blooming to ever know blight or decay. The excellencies of her character were marked and striking, and more than one fellow traveller, in parting with her at Toledo, wished her well and hoped to meet her again. We had never seen her before—we are not to meet her again. She returned from that ride, to sicken in this city and, in three weeks, be carried to her home in Batavia, Genesee county, a lifeless corpse!

Miss MARY URILLA BILLINGS (whose demise was announced last week) was a daughter of Dr. JAMES A. BILLINGS, who has resided in Batavia for the last thirty years. She died at the age of 16 years and 11 months. For one so young she exhibited remarkable strength of mind, and her understanding was as clear as that of ordinary persons at twenty-five. In an eminent degree, she seemed to possess

"—— that keen glance of intellect which reads,
Intuitive, the deep and mazy springs
Of human action."

and being conversant with the sciences, well read in literary matters, and endowed with easy habits of communication, her conversation possessed a richness which it was a luxury to enjoy. Among other accomplishments, she was well versed in the science of music, and her voice seemed to have the softness of an Æolian harp. And yet, to all appearance, she was unconscious of her superior endowments. She was wholly devoid of affectation, the solidity of her character teaching her to despise it. She would sing when invited to, without making paologies and without the slightest attempt at vain airs.

We learn, through an acquaintance of hers in this city, that she was uniformly affable and urbane in her manners; that she was ready to forgive the injuries and overlook the faults of associates; and that she possessed a strong love of the beautiful, alike in the natural, the mental and the moral world. Her sickness was brief and severe, yet she bore her pains like a Christian, and left a large circle of near and devoted friends to lament her sudden exit from the shifting scenes of mortal life.

THE KNICKERBOCKER for this month is made up, in the prose department, of the most readable papers that one often sees within the blue covering of old Driedrich's monthly scrap book. "The Oregon Trail" and the "Illeberg Papers" are continued, and among the articles which are published entire, "Northern Mythology" and "Milton's Satan and Byron's Lucifer Compared," will attract attention. Poems are contributed by E. C. Hine, W. H. C. Hosmer, Esq., J. Clement, T. W. Parsons, and J. G. Saxe, Esq. The last named has ten verses of Rail road Rhymes, the measure of which "chords" most beautifully with the motion of the cars. The first verse is as follows:

"Singing through the forests,
Rattling over ridges,
Shooting under arches,
Rumbling over bridges;
Whizzing through the mountains,
Buzzing o'er the vale—
Bless me!—this is pleasant,
Riding on a rail!"

The Editor of this magazine, LEWIS GAYLOR CLARK, Esq., took a trip up the lakes a few weeks ago, passing through Buffalo. He thus speaks of our city:

"There is no such place as Buffalo—*Buffalo is New-York!*' That was what we said to an excellent and esteemed friend, who had but recently swayed the metropolitan sceptre of that wonderful city, what time we were 'about town' with him. It was precisely our thought. You walk about the wharves, and for a mile see sail and steam-craft of every degree, and many of them of the largest class, choking the very stream; while the smokes from the great steamers, going out or coming in, are continually seen trading their long shadows over the waters of the beautiful harbor. Then look at the streets and buildings, public and private, and the life, the *busy* life that pervades and fills them! It was like Gotham, for example, to see a large block of flour and wheat storage-buildings going up, and the full flour-barrels, which were to be stored, forming the supports to the successive scaffoldings of the masons. Main-street, for a mile and a half, is 'New-York all over,' in its buildings, its bustle, and its various businesses. And *did n't* the town look glorious, as surveyed by us, standing in the round-top of the noble steamer HENDRICK HUDSON, Captain D. HOWE, (a vessel which, in every internal and external attribute of excellence and beauty, is excelled, if at all, by only *one* boat on the Hudson,) as she swept out into the harbor, a little after night-fall? It was a scene to be *seen*, not to be written about."

The above is found on the "Editor's Table," which is unusually well "set." The following small slice is among the edibles:

"A friend, writing from Newport, (Rhode Island,) says: 'I heard a very 'bull' here the other day. A lady had all her cherries stolen, in one night. The gardener was charging it on the robins. She was not to be 'done' in that way, and replied: 'I guess they were *two-legged* robins!' Probability certainly favored her conclusion!'"

THE DEMOCRATIC REVIEW for August opens with a valuable paper on "Mexico—The Church, and Peace," which is followed by an article on "The Existence of the Deity," of striking strength and merit. Then follow something about "De Tocqueville" and a review of Prescott's "Peru." The raciest article in this issue is a continuation of "Odds and Ends from a Portfolio," from which, under the head of ANACHRONISMS, BULLS AND BLUNDERS, we find the following:—

"But we must have a taste of real Hibernian wit and blunder. We begin with a certain Irishman, whose friend being arraigned for stealing a goose, and who having brought a neighbor to testify to the said emblem of wisdom having been in his possession ever since she was a gosling, and which testimony cleared him; Pat himself falling into a similar scrape respecting a *gun*, resorted to a like expedient, by prevailing on a countryman to assert, that he remembered the gun in his possession ever since it was a pistol. Walpole tells another story almost as good. An Irish baronet met his nurse one day, when the latter requested alms. 'I will give you nothing,' said he; 'you played me a mighty scandalous trick in my infancy.' The old woman, in amazement, inquired what injury she had done him? He answered, '*I was a fine boy, but you changed me.*' This is the very confusion of personal identity. It reminds us of the man, who, on being rescued from drowning in the Seine, promised never again to venture into the water till he had learned to swim. Never did a son of Erin utter a bull more replete with that confusion of identity they are so remarkable for, than that of honest Pat, who, being asked if his sister had been endowed by heaven with a son or daughter? Replied, '*Faith, I do not know whether I am an uncle or an aunt.*' But what can exceed the absurdity of the Irishman, who requested a history of the world before the creation? Yet this anachroniam of ideas is not unparalleled: there was a rabbi, mentioned by Bayle, who asserted that 'Providence questioned Adam concerning the Creation before he was born.' Corneille, the poet of the French court, in its Augustan age, utters some silly things withal; for example, he makes the voice of a certain princess to inform us that *half herself has buried the other half*—

"Weep eyes; melt into tears these cheeks to lave;
One half myself lays t'other in the grave."

"And an Indian poet intimates a no less astounding circumstance, concerning a celebrated hero, who finally falls in the action, and continues fighting, *even after he is slain*—

"Nor yet perceived the vital spirit fled,
But still fought on, nor knew that he was dead."

An elegant likeness of Mr. RICHARD VAUX, engraved by T. DONEY, serves as a frontispiece to this number of the Review.

LOUIS THE FOURTEENTH, and the Court of France in the Seventeenth Century By Miss Pardoe. New York: Harper & Brothers.

Numbers Three and Four of this work are out, and contain several beautiful embellishments. The third number concludes the second volume; hence the six parts, when complete, will make two volumes. They will be large, elegant, and valuable. For sale at Hawks.

THE MONTHS, a little volume of poetry by W. H. C. HOSMER, Esq., eastern papers say, has been issued by TICKNOR & Co., Boston. It appears in an elegant dress, and would not only ornament but enrich the centre table. About two years ago, in reviewing Mr. H.'s famous Indian poem, "YONNONDIO." in the *Southern* Literary Messenger, we saw fit to place him as second to only two poets in the country—Bryant and Street—as a sketcher of natural scenery. Since then his "Months" have appeared (originally in the New-York Tribune) and has elevated the author still higher in this sphere of poetic "etchings." Much as we admire Mr. Street's daguerreotype pictures of rural scenes, they possess less warmth, and no more truth to nature, than the "Months."—But we hope soon to meet with these poems in their new dress and have the privilege of introducing them more directly to the reader. The earliest opportunity will be embraced to notice them on their reception, when extracts will be given to substantiate what we have herein said relative to their superior excellencies. Some of our booksellers are about ordering them.

FRESH GLEANINGS, or, *A New Sheaf from the Old Fields of Continental Europe.* By IK. MARVEL. Complete in two Parts, at fifty cents each. New York: Harper & Brothers, 1847.

These volumes are written in the running hand style, and by a jolly-hearted and very companionable traveller. The "Sheaf" contains some chaff, but the grain preponderates; and the reader will be well satisfied with the "Gleanings" which the author has made "from beyond the waters." The volumes appear in paper covers, and may be found at the Literary Depot in the Post Office

---

TO READERS AND CORRESPONDENTS.—The readers of the Messenger will see by our first page, that Mrs. FAMES still remembers us. She may be considered a regular contributor. Letters have been received within a week pass from H. W. ROCKWELL, Esq., of Utica, and W. H. C. HOSMER, Esq., of Avon, each stating that their earliest leisure would be devoted to the service of our sheet.

We are obliged to Mrs. C. A. CHAMBERLAIN of Terre Haute, Ia., for her "*Song.*" Her poetry has always been well received by our readers.

Two communications have been received from a new contributor at Dansville, Liv. Co., and are filed for insertion. Let us hear from the young lady regularly.

"A CHARADE" will have admittance ere long, though our columns are very crowded just now.

"*To Niagara*" (second poem) and "*Childhood*," cannot appear.

JOSEPHUS ILLUSTRATED, No. 3, is issued, and may be found at Hawks. The Harpers will make a magnificent edition of this important work.

THE NEW BOOK STORE of Messrs. DERBY and HEWSON, 164 Main street, is a very valuable addition to this part of the trade of our city. In each of the several departments, Law, School, Library, and Miscellaneous Books, the assortment is excellent and extensive; and one can find almost any book there which he may call for.

LOST, an editorial knife of four blades, with the handle off and all the blades missing. We fear somebody has "cut sticks" with it.

SUSPENSION BRIDGE AT THE FALLS.—The *Hamilton* (C. W.) *Gazette* says the stock books for this undertaking were opened in that city, at the office of the Great Western Railroad, on Tuesday last, when the whole amount of Stock was subscribed for in a few hours, and the required one per cent. at once paid down. The Gazette adds that plans, &c., will be at once advertised for, and a sufficient length of time will, no doubt, be given, to enable persons in Europe to furnish plans and estimates of the work; thus securing every advantage which experience and genius may combine.

Farther Foreign Items by the Cambria.

The Freiburg Gazette gives an account of the destructive hail storm, which on the 20th July pursued its devastating course from Greisheim to Hugelheim. Fields and gardens are destroyed. All hearts are disconsolate at this fresh and unlooked-for calamity, which has befallen us before we have had time to recover from famine and death.

Fifteen vessels loaded with Indian corn, which is now a mere drug in the market, arrived in port since our last, an interval of three days.—*Limerick Chronicle.*

The London Atlas, speaking of the reported marriage of the Duke of Wellington and Miss Burdett Coutts, says: "There is no longer any doubt that the preliminary arrangements are nearly completed."

The Cork Examiner mentions the failure of six houses in the corn trade at Limerick, whose united liabilities amount to £300,000.

FRANCE.

TRIAL OF M. PELLAPRA.—On the 23d ult. the last act of the Teste and Cubieres drama terminated with the trial of M. Pellapra. The proceedings were little more than formal, the accused having already confessed.

M. Pellapra admitted his guilt in offering a bribe of 100,000 francs to a member of the Cabinet; and in doing so, he burst into tears. After some deliberation, the Court sentenced the accused to civil degradation, and a fine of 10,000 francs. The fine was paid in the course of the evening, and the prisoner was released.

Although the judgment of the Court was not delivered till five o'clock, M. Pellapra was the same evening seen in his box at one of the theatres; where he seemed to enjoy an excellent comedy with as much gusto as if he had not been engaged in the tragedy of the morning.

M. Teste continues overwhelmed with his disgrace. Since his removal to the Conciergerie, the symptoms of cerebral congestion have much increased, and fears are entertained for the result.

The July anniversary days passed off quietly. Preparations had been made against a riot, but there were no signs of any.

The Chamber of Peers voted, on the 30th ult., the bill for authorizing the city of Paris to contract a loan of 25,000,000 of francs, by 87 to 20; and the project of a law relative to foreign refugees, by 100 to 7.

The King, Queen, and the Royal Family, left the Palace of the Tulleries after the fireworks, on the 29th ult., and returned to the Chateau of Neuilly.

A frightful accident occurred, on the 21st ult., at the arsenal of Rochefort. While twenty-one persons were engaged in a workshop, where rockets, catridges, and similar articles were made, an explosion took place, and fourteen persons were killed, and others were much injured. A fire resulted from the disaster, and burnt for three hours.

SPAIN.

THE DIFFERENCES BETWEEN QUEEN ISABEL AND HER HUSBAND.—Accounts from Madrid state that the Queen left the capital on the 18th ult, and the King had entered it; but they did not meet, and there is nothing like a reconcilliation. Before her departure for La Granja, the Queen expressed a wish that the King should not be allowed to reside in the palace, during her absence. The King issued orders for his apartments to be prepared, and gave instructions for a guard of honor to be in readiness; but General Cordova arrived at the palace from the Ministry of War, with an order prohibiting the King from taking up his residence there.

A Royal Levee was held at La Granja, on the 24th. The King still continued at the Prado. A report prevailed that the Cortes would be convoked after the return of the Court from La Granja.

BELGIUM.

BRUSSELS.—It is stated that King Leopold has abandoned all thoughts of abdicating the crown. Louis Phillippe and his daughter hope, according to the opinion of his medical attendants, that the mild influence of autumn, joined to the efforts of the faculty, will, in restoring health to the body, operate a happy change in the state of the royal patient.

RUSSIA AND CIRCASSIA.

THE CIRCASSIAN WAR.—The Augsburg Gazette states that on the 8th June a terrible combat took place between a Russian division, commanded by General Lepiski, and the mountaineers, under the orders of Mohammed Juba. Nearly 5000 fell on the field, neither party claiming the victory. The Circassians are greatly in want of powder, paying, it is said, 300 Turkish piastres the pound for it.

The cholera has broken out in the Caucasus, and rages in the very theatre of the war.

TURKEY.

CONSTANTINOPLE, July 14.—It is stated that though the Porte had not approved the decision of Prince Metternich with respect to the difference existing between Turkey and Greece, the ambassadors of the five Powers intended jointly to impress upon the Divan the necessity of acceding to it, and it was believed that the question would be speedily and finally adjusted.

INDIA AND CHINA.

THE OVERLAND MAIL.—On the 20th of July, the Calcutta mail arrived in London. The news is not important. India remained tranquil.

CHINA.

The state of affairs in China was still unsatisfactory. Up to the 23d of Mary, when the last accounts left Canton, all business remained suspended, and fresh disturbances were anticipated. The mob had menaced the governor, Keying, for his recent concessions to foreigners, and threatened to burn his palace if he attempted to

give effect to the terms of the late treaty; especially in so far as regarded a concession to the English of adequate land for dwellings, warehouses, &c., on the Honan side of the river, a site for the erection of a church, in the vicinity of the present factories, and space for the formation of a cemetery at Whampoa. Mr. Pope, who had been appointed to inspect the grounds for these purposes, had been obliged to abandon the attempt. Under these circumstances, a fresh expedition against Canton was expected. The Pluto was stationed opposite the British factory, and the Scout was ordered to approach as near as possible to the city.

A letter published in the London Times, from Hong Kong, of the 25th of May, states that the latest intelligence which had been received in the Island from Canton represented that city to be perfectly quiet, as indeed it had been ever since the departure of the English forces, with the exception of a slight disturbance which had occurred on the occasion of a meeting held at the Consul House, near the factories, by the persons interested in the land to be occupied at Honan by foreign merchants, under the late agreement. The disturbance was, however, promptly repressed. The Chinese authorities had evinced great alacrity in punishing parties who had misconducted themselves.

Frightful Loss of Life in a Belgian Coal Mine—Brussels, July 19.—On the night of the 16th inst., a destructive fire broke out on the premises connected with the Marihaye Coal Works, near Seraing. It originated in the engine room near the mouth of the pit, and rapidly spread, catching in its progress, and burning, the ladder and ropes which served for descending into the coal pit, and thus cutting off for the time all means of escape for 164 workmen who were at work therein. The first signal of their danger was the appearance of dense columns of smoke which came down the mouth of the pit. The workmen immediately rushed to the ladders, but the foremost, after ascending them a short distance, were either suffocated and fell dead on the ground, or killed by the falling of burning materials from the top of the shaft. The fire was, after great efforts, mastered, and a descent into the pit made, when a most frightful sight presented itself. The dead, the dying, and the wounded, lay all scattered about the place. Forty-nine dead bodies were taken out of the pit, and thirty-one alive, but most of them badly wounded. Search was being made for the remainder.

According to a recent statement of Mr. McGregor respecting the Oregon Question, Mr. Webster has the credit of settling that intricate affair. At the time, Mr. Pakenham refused to negotiate on the 49th parallel as the basis of a treaty, and when by that refusal the danger of a rupture between Great Britain and the United States became really imminent, Mr. Webster wrote a letter to Mr. McGregor, in which he strongly deprecated Mr. Pakenham's conduct, which, he said, if persisted in and adopted by the British Government, would certainly embroil the two countries, and he suggested an equitable compromise as the basis of an adjustment. Mr. McGregor agreed with Mr. Webster in the propriety of giving and taking, to avoid a rupture, and the contents of Mr. Webster's letter were communicated to Lord John Russell, who was then in Edinburgh, and he approved of Mr. Webster's proposal, and requested that it might be communicated to Lord Aberdeen. The result was, that the first steamer that left England afterwards, took to the United States the proposal on which the Treaty of Oregon was founded.

Perhaps the most important circumstance connected with the elections is the return of Baron Rothschild, the rich Jew, to represent the first commercial city of the world. Every member of the Church o England is alarmed at this; for it is feared that the established church will be endangered by admitting Jews to Parliament. Lord John Russell, however, has expressed his gratification at the result of the poll, and said he rejoiced that the disabilities which affected Roman Catholics and dissenters having been removed, the day had now arrived for the removal of the last vestiges of religious intolerance, by the election of Rothschild: and he hoped the next Parliament would have the glory of establishing at once the completion of the great social edifice of civil, commercial and religious freedom.

The recent elections give several remarkable specimens of the uncertainty of political life.—For instance, the rich and talented Bulwer is rejected at Lincoln. Mr. Samuel Warren, the powerful writer and eminent barrister, is put down by such a stump orator as Duncombe; and not only was he treated thus, but Mr. Wakley, the editor of the Lancet, heaped unmerited abuse upon him and his popular works—"The Diary of a Physician," and "Ten Thousand a Year."—The brilliant writer and eloquent member Macaulay, of Edinburgh, is rejected, to make room for a man who is entirely unknown in the political world! Mr. Fielden, of Oldham, a worthy free-trader and active man, is turned aside to make room for W. J. Fox, the Unitarian clergyman and League orator. Mr. Fox will soon gain for himself a great reputation, for he is one of the few really eloquent men now in public life.

Cobden and Bright are elected, the latter without opposition. Dr. Browning is returned, and Lord Ashley, the latter beating Roebuck, in Bath. Fergus O'Connor, the Chartist, is also returned from Nottingham, and with Mr. Walter, son of the late proprietor of the Times. Serjeant Talfourd is also elected.

Lieut. Whipple.—This officer, who was recently captured on the outskirts of Vera Cruz, by some guerrillas, has addressed a letter to his friends, relieving them from any apprehension as to his fate. His letter, which we cannot find room for today, speaks in terms the most eulogistic of the kind and handsome treatment which he has received from his captors. It is gratifying to find one instance of this kind among the many of bad faith and cruelty that have characterized the Mexicans. —*Albany Argus.*

STATE OF NEW YORK, } Albany, August 3
SECRETARY'S OFFICE, } 1847.

To the Sheriff of the County of Erie:

Sir: Notice is hereby given, that at the next general election to be held on the Tuesday succeeding the first Monday of November next, the following officers are to be elected, to wit:

STATE.

A Secretary of State, Comptroller, State Treasurer, Attorney-General, State Engineer and Surveyor, Three Canal Commissioners, and Three Inspectors of State Prisons.

DISTRICT.

One Senator for the Thirty-First Senate District, consisting of the county of Erie.

COUNTY.

Also, the following officers for the said county, to wit: Four Members of Assembly, one to be elected in each Assembly District.

Yours, respectfully,
N. S. BENTON, Secretary of State.

Erie County Sheriff's Office, }
Buffalo, August 6, 1847. }

A general election is to be held in the County of Erie, on the second day of November next, at which which will be chosen the officers mentioned in the notice from the Secretary of State, of which a copy is annexed.

au6oawtno2 TIMOTHY A. HOPKINS, Sherif.

For the Western Literary Messenger.

Stanzas.

In the land of the east flows a beautiful stream,
As lovely as poet ere saw in a dream;
Through forest and meadow it dances along,
With light on its ripples and joy in its song!

And oh! the bright waters are clear as the light,
That the moon sheds abroad at the noon of the night,
And the flowers on its margin—the first in the year—
With blushes the loveliest, that streamlet endear,

But unheeding the beauty that glows by its side,
Through plain and through valley its bright waters glide,
Till, a streamlet no longer, glad, sparkling and free,
A river it rolls to the fathomless sea.

But mark how 'tis shorn of its beauty and grace!
The smile has departed that glowed on its face,
And turbid and gloomy it rushes along
No smile on its billows, no joy in its song!

No flowers on its borders are blossoming now,
With their loveliness glassed in the mirror below;
But o'er its dark surge, in their glory and pride,
With canvass and streamers, the armaments ride.

As I thought of the course of that beautiful stream,
How much to my heart like man's life did it seem!
When it gushed through the meadow translucent and wild,
How much it resembled the innocent child!

And then when the ocean it met in its wrath,
When its billows were turbid, and dark was its path,
Like manhood it seemed to my fond dreaming heart,
When the soul and its primitive purity part!

BUFFALO, Aug. 2, 1847. D. F. D.

NEW YORK, Aug. 23—P. M.

A letter dated Tampico, Aug. 6th, says Gen. SCOTT marched for the Capital on the 5th inst. Reports say the Mexicans advanced and intercepted correspondence with SCOTT and SANTA ANNA.

SANTA ANNA had commenced withdrawing his troops, thereby creating great excitement in the Capital. He issues a manifesto, stating it was only a ruse to enable him to surround SCOTT.

Another letter dated Tampico 9th, states that the vomito was prevailing in its worst forms.—Great mortality amongst the Americans. News from Mexico the day previous, says that SCOTT had not moved with his present force. This of course is a Mexican account. News of intercepted correspondence between SCOTT and SANTA ANNA confirmed.

A dozen houses burnt in New York last night; mostly dwelling houses at the head of Water and Front sts.

A SPECTACLE INDEED!—The annexed paragraph is taken from the *National Era*, a newspaper printed at the Capital of this boasted land of Freedom!

A SPECTACLE.—We were informed, as our paper was about to go to press, that last Saturday afternoon a coffle of slaves, to the number of one hundred, was marched over the Long Bridge, across the Potomac, in broad daylight, in full view of the President's House. At the same hour, we presume, the United States band of music, which every Saturday afternoon is listened to by numerous visitors to the President's grounds, was playing, with patriotic fervor, "Hail Columbia" or "Yankee Doodle."

When will the hour come when the City of Washington, the beautiful Capital of this great Republic, shall be relieved from the disgrace of such spectacles?

SENTENCED FOR ROBBING THE MAIL.—A young man named Sidney H. Hendryx, was convicted at the U. S. District Court at Auburn, Judge Conkling presiding, of purloining two letters from the Postoffice at Lyons, Wayne county, some time in April last, and was sentenced on Saturday to State's Prison for a period of *ten years*.

MARRIED.

At Painesville, O., by Rev. C. Smith, Mr. AUGUSTUS F. TRIPP, of this city, and Miss MARY M. STEELE, of the former place.

Also, at the same time and place, by the same, Mr. C. C. PEASE, and Miss HANNAH C. STEELE, both of Painesville.

DIED.

Last evening, 12th instant, MARY BELL, daughter of Charles and Isabella Barrow, aged 2 years and 5 months.

On the 22d inst., Mrs. FRANCES S., wife of Robert Russell, Esq., aged 47 years.

On the 20th inst., THOMAS, infant son of Thomas and Rachel Crothers, aged 4 months.

On the 23d inst., at the residence of Samuel Hecox, in the town of Black Rock, EMILY LOUISE, wife of Mr. William H. Hecox, of Buffalo, aged 23 years.

GEORGE H. READ,

BUFFALO MUSICAL INSTITUTE FOR YOUNG LADIES.

At the residence of Prof. W. R. Coppock—Composer and Teacher of the Piano Forte, Organ, Singing and Composition.

An institute devoted exclusively to Musical Education is not yet common in this country; but in Europe the test of experience fully shows its great advantages over the too general superficial manner in which this important part of polite education is acquired. The advantages this institution offers to those desirous of completing their studies as Organists—or practical players of the Piano Forte, together with a thorough system of imparting the same to others is fully established by the many precedents of the past 10 years. The pupils are constantly guarded in their practice, against all bad habits, and from the various stages of progress they may be in, are continually stimulated to effort and industry, by association with each other. The family too, are all players, and the theory is amusingly discussed, impressing its rules in a more pleasing manner, and more lasting upon the understanding, than by the mere dry study of an elaborate book. Music is composed and arranged from time to time, showing the various styles and harmonies analyzed, and adapted for performance on several Pianos at the same time. This teaches a thorough knowledge of counting, and dividing passages into their given time. Vocal music is particularly attended to, and when the pupil has a moderate share of talent, we hesitate not to say, a correct and pleasing singer can be made. The Piano Fortes used are all new, and of the finest quality, and every inducement will be given to render the true spirit with as profitable. The building is commodious, and has a fine garden attached, with Green houses, Bathing rooms, &c., and is pleasantly situatuated in Seventh street, between Niagara Street, and the Falls rail road, and about midway to Prospect hill

Terms made known upon application at the Institute, or by mail, post paid, directed Prof. Coppock, Buffalo.

Prof. Coppock, keeps constantly a choice selection of Piano Fortes for sale.

Buffalo, August 3, 1847.

PRINTERS' FURNISHING WAREHOUSE.

WILLIAM PRESCOTT, Manufacturer of Printing Inks, No. 6, United States Hotel Block, Pearl St., Buffalo. Printing Presses, Metal and Wood Type, Cards, and every other description of Printers' materials constantly on hand at New York prices, adding transportation. Also, sole Agent for the sale of C. J. Gayler's Patent Double, and Improved Single Salamander Book Safes. n18 3m.

REMOVAL.

WILLIAM J. MAY has removed to No. 274 Main St., in Kremlin Stores, where he will be happy to see his old customers. One price, good goods, small profits and fair dealing, will always be the rule at No. 274 no17 3m.

CHEAP CASH BOOK STORE.

The subscriber, dealer in Books and Stationery, at 256 Main Street, 4 doors above Seneca, keeps constantly on hand, an extensive stock, embracing the most valuable selections from American and Modern Literature and a general variety of Theological, Classical, Gift and School Books, &c., &c. The Amateurs of Knowledge and all interested in the purchase of Books or Stationery are respectfully solicited to call. Print and Cap Paper at wholesale.

Buffalo, April 20, 1847. F. W BREED.

JEWETT, THOMAS & CO.

PUBLISHERS,

No paper will be discontinued until all arrearages are paid except at the option of the publishers.

All communications must be post paid, in order to be taken from the Post Office.

PRINTING AND BOOK BINDING neatly and promptly executed at prices as low as any other establishment.

Steam Press of Jewett, Thomas & Co.

WESTERN LITERARY MESSENGER.

VOLUME IX. BUFFALO, SATURDAY, SEPTEMBER 4, 1847. NUMBER V.

For the Western Literary Messenger.

To Fanny Forrester.

SUGGESTED BY HER "REPLY" TO THE NATIONAL PRESS.

I.

Go, lady! for a smile of love
Will ever light thy onward way,
Whose radiance like the sun above,
Turns deepest darkness into day.
No tender tie may bind thee here;
Where be thy chosen one, would be,—
Thy love doth lend thy timid feet,
To heathen lands beyond the sea.

II.

What human soul that doth not thrill,
To list the hope thy words impart—
The world is not all gloom and sin,
For good hath place in every heart,
Some bud which meek Devotion's sun
May bid to bloom upon the wild,
To scatter fragrance o'er its path
And lead to heaven its erring child.

III.

Ah! lady, it were joy refined
Unto my soul, to see thee now;
Methinks the beauty of thy mind,
Must sit enthroned upon thy brow.
But go, the bounding ocean spreads
Its waves to bear thee from thy home;
Go! but unnumbered friends are thine,
Where'er thy wandering feet may roam.

ROYALTON, N. Y. IDA VALE.

Be Chatty.

BY ELIZABETH OAKES SMITH.

In the scripture record of the miracle of casting out a dumb devil, it is said that after the ejectment, the man spake. Far be it from me to tamper with forbidden arts—to descend into the arcana of the sorcerer, for the material whereby to exorcise the sullen fiend; yet, when I have seen the good cheer of a whole household shrouded by the sulky humor of one, I have forgotten the scruples of my piety, and have found myself instinctively uttering the words of the exorcist, "Te adjuro per"—and have stayed my speech in terror at the profane presumption. There are those that will not be charmed, charm we never so wisely; and 't were well to leave them till such time as a miracle shall be wrought in their behalf.

But to all others, to those who can tell the freshness and the buoyancy of heart which are the best evidence of a strong, healthful and honest humanity, we would say—Be chatty. Talk, even if you fail to say brilliant or profound things; for the gem of thought is for the few, while the harmless, pleasant one is appreciated by the many. The eagle lives in the cold mountain region, amid the thunder and the tempest; but the birds that sing nestle in vales and woodlands, close to earth, and thence bear their music towards heaven.

Give way to moods—be they whimsical, grotesque, or even "funny:"—and when these are past, be wise—but not over-wise—grave, earnest, and whole-hearted. This is the way to build up a true humanity—being of fibre, of resource and reliability—instead of becoming, what education is apt to make us, cut and angled, pasteboard and painted images—such good conventionalists that we can be warranted "safe," "not liable to break out of harness," &c.

Never trust your silent man with long, thin, compressed lips. He who is afraid to give his thoughts an airing, has those not safe to be trusted out. Do not mistake his owldom for thought. It is out of "abundance" that the mouth speaks; and where it is silent, there is either bankruptcy or something worse. Thought grows stagnant when not coined to utterance. Young has said some really fine things upon this subject, which show in the morbidness of his "thoughts" like stars of "night." The life turns inward upon itself, when expression is denied, and generates intolerable evils; just as damp caverns produce the toad, the lizard and the bat. None are so nearly allied to the angels that they can dare sit and commune only with themselves, trusting, in sublime egotism, to the scheme of truth thus elaborated—which, being mixed with the passions and prejudices from which none are exempt, will be but a distorted, earth-made idol, instead of the pure effulgence which we are bound to seek.—The danger, too, is great, lest by this solitary brooding, we become like those deadly serpents, of which it is said that sometimes, having no means of relieving themselves of the poison which they generate, it accumulates and is re-absorbed again and again into the system, till at length they swell and die, from their own venom.

It is too much the disposition among our people, to defraud the home circle of the treasures of thought and fancy, for the purpose of casting them before the public. He or she who should feel that the dearest offering, the brightest garland, is the very one, above all others, to grace the shrine of the Penates, will sit in solitary abstraction, concocting a story or rounding a paragraph which is to appear in a Magazine, there to be read by indifferent and careless eyes—perhaps not read at all, and forgotten—while the same things, given with a glowing heart by a voice dear to the few, might be long remembered and treasured in the affections, as gems of worth and beauty. It is weak and foolish to leave the good ever at our feet, to pursue a will-o-the-wisp.

"I am not ambitious in my love,"

said the simple hearted Miranda:—the prettiest thing she could have said; for love, to exist at all must have a lodgment fixed, such as ambition does not afford, and there be cherished: it must have smiles of tenderness, and words of affectionate fondness, which sink into the soul's utterance of sympathy and perfect peace.

There is nothing more subtly fascinating than a graceful tone of conversation. I will not say that all may excel in this most desirable and elegant accomplishment: but I do say that, with an ordinary share of attention, by readiness of sympathy, the absence of self, and the presence of a pleasant voice, all may become chatty, agreeable, and so essential to the social circle, that its mem-

bers will fell as if a limb were lost when one is absent. And here let me remark, that where the character is harmonious, the voice is always in keeping.

Let us talk, then; talk, and not write—or write to give new charms to home. Talent is so universal among us, that almost any one of ordinary ability may construct a respectable story, may do the second hand work of translating, or, with a tolerably musical ear, measure language into verse. But let not such imagine that it is incumbent upon them to go forth, and unfurl the banner of twaddledom in the face and eyes of a whole community.

Genius, unlike talent, is an especial dowry from the hand of God, missioned forth direct and truthful; and sorrowful likewise—its office being not one of enjoyment merely, but also of suffering. For this cause was it given to the world, that it might be a mouth-piece for the many—a great beating heart—not a half, not a distorted, but a full humanity. It treads the wine-press that others may drink, and become strong and joyful. It has neither staff nor scrip for its journey: alone, and pierced by the archers, it yet goes onward, impelled by a power which, though felt, is but imperfectly comprehended.

Genious has its errors. Manifold they may be; but they are the errors of impulse, and not the gross, hypocritical ones of a cold, unimpassioned intellect. And through these very errors, it sometimes, in its recoil, grasps at a great truth which the world will embrace and honor. The man of genius *must* act, write and speak; because it is a great necessity of his being. Cromwell, who stands as the embodiment of democracy, acted from the stirrings of his great, rough, strong manhood, which was too earnest to be still; and Milton wrote his cathedral song in blindness and neglect, because the swelling anthems of the spiritual world so vibrated in his own soul that he could not be silent. And John Wesley, who combined the politician and the preacher, felt himself circumscribed, and suffocated, in houses built with hands; and he led forth his people to woods and rocks, re-converting the universe into God's own temple. He founded a new order of things, because of the primitive urgency of his own strong being.

Such are the Mount Blancs of our race, standing apart as points by means of which we measure the infinite distances of inferior minds.—The dreamy eloquence of Coleridge will long be remembered; but what is said of his talent in conversation, is the best tribute to his genius, giving it the stamp of earnest, unaffected truth—the impulse of thought without the stirrings of vanity. "It was his subject that inspired him, not his auditor; and he talked as well to a ploughboy as to a philosopher."

There are many of whom it might be said, that however beautiful may be their written thought, their conversation is far more excellent and effective. All may have affectionate and endeared listeners in their own circle: and it is amid the congenial only that the truly gifted find themselves "enlarged," as the old Pilgrims used to say; that is, find a free utterance—the rein given to thought, fancy and humor. They cast themselves upon the protection of love, and sing forth the melodies of a harp of a thousand strings. Well for such it is, that they feel themselves protected by taste and conventionalism. Otherwise they would be silent: for who could talk, in a case like that of which the poet speaks, where he says,

> "There's a chiel amang ye takin' notes,
> And faith he'll prent it;"

or plunge into all the vagaries of a lively and varied intellect, with a Boswell by his side, wrapt in silent admiration? The unpremeditated out-pourings of thought, where friend meets friend, are the most beautiful utterings of language; the inspirations of recognized and appreciated thought—the highest and holiest of all human inspirations: and these are pleasures in which all may share, in a greater or less degree.

Be CHATTY, then. Live not as if seeking some far off, unattainable good, but open your eyes to the blossoms lying at the threshold of the nearest door. Give the tongue its work to do, as usher to the soul. Talk, and make glad the hearts about you. Dread a silent household; for where gladness is, (and gladness cannot be long banished from innocent hearts,) it will sing forth its secret harmonies, just as the brook, the bird and the young child, find a voice. It is the stagnant and slimy pool that is silent; while the clear fresh stream sings rejoicing on its way.—*Young American's Magazine.*

Doctor Chalmers.

The obituary of 1847 promises to be emblazoned with many illustrious names. Daniel O'Connell has scarcely passed away from amongst us, when we are startled by the intelligence of the sudden death of Thomas Chalmers. Another eminent benefacter of the million has perished. The lamentations over her great Patriot are responded to by the lamentations of Scotland over the great Moralist. With both do we sympathise from the innermost recesses of our heart. Through the haze of death we recognize the oratorical and liberative glory of O'Connell: through the haze of death, too, we perceive the equable light of the celebrity of Chalmers. Their hearts may be motionless, but their fame cannot be extinguished.

Thomas Chalmers is generally believed to have been born somewhere about the year 1780, in a little village called Anstruther, situated on the right margin as you sail southwards up the estuary of the Forth. The birthplace of this eminent man—an insignificant fishing place—is, consequently, regarded as among those spots which have been sanctified by the presence of the childhood of genius. Every endeavor seems to have been made for the development of those seeds of wisdom which we maintain, with all deference to the immortal Locke, were visibly implanted by Providence in his fruitful and capacious intellect. From the first there was manifestly an innate tendency towards the acquisition of knowledge and the exercise of virtue on the part of Thomas Chalmers; that tendency was assiduously encouraged by his scholastic and spiritual instructors, at the University of St. Andrew's. Such were the distinguished indications of his ability while a student in that northern academy of learning, that he was frequently selected as a mathematical assistant at the classes of Professor Vilant. On his presentation, in 1803, to the incumbency of Kilmany, Thomas Chalmers was a living contradiction to that assertion of Professor Playfair that the Scottish clergy was unadorned by the combination of rhetorical fluency and profound erudition, graceful declamations and bookish enlightenment. From the first moment of his appearance in the pulpit of Kilmany Church the renown of Chalmers resounded through the whole of the island. The music of his tongue, rising from the golden chambers of his imagination, and harmonized by the breathings of his morality, entranced his hearers, took their judgments by storm, and ravished their senses as it were with the utterance of a prophet.

Dr. Chalmers, however, was immeasurably greater as a moralist than he was as an orator.—

It was by the combination of those two marvellous qualifications that he acquired such supreme influence over his contemporaries, and elicited so much of the admiration of mankind. As an orator and as a moralist, Dr. Chalmers must hold for ever a conspicuous place among the promoters of civilization and the practical benefacters of the human family. His greatness in that respect is undoubted and permanent. Nor were the efforts of this extraordinary man restricted within the limits of oral tuition; as an ethical and metaphysical writer he has assumed and enviable position, His literary compositions are an effect essentially of a declamatory character, they indicate unmistakably the spontaneous torrent of eloquence that rushed perpetually through his mind—the eloquence of the very conception of his thoughts, and the eloquence with which those thoughts were habitually expressed. Whether he indicated his ideas by the movements of the lip or pen, the language was always resonant with wisdom, it was occasionally embellished by rhetorical decorations, and was invariably inculcative of generous and ennobling principles.

Upon the remarkable ecclesiastical movement which in 1843 attached so much of mingled obloquy and applause to the name of Dr. Chalmers we shall say nothing. It is scarcely possible to conceive, however, that this virtuous and learned man was actuated in that movement by any but the purest motives and the loftiest aspirations.

Gifted beyond most men in the capacity and brilliancy of his intelligence. Thomas Chalmers was in like manner gifted with a sublime elevation of purpose. His memory is his panegyric. —*Evening Sun, London.*

Storks.—There are great numbers of these birds in the south of Russia. Before migrating, which they always do at the approach of winter, they assemble from all parts, and kill the young ones that are not strong enough to accompany them in their long flight. This characteristic is remarkable, and in strong contrast to the affection they generally display towards their young. Of this, the following anecdote, related to me by a merchant of my acquaintance, is an example.

He was od his way to Kharkoff, when he observed, one evening, several peasants assembled around something in a field near a village. Ordering the driver to stop, he alighted from his carriage, and went up to them to see what was going on. Arriving at the spot, he found that they were looking at two dead storks which were lying on the grass, and upon his inquiring the reason of their taking such an interest in these birds, one of the bystanders gave him the following singular account.

The storks had a nest in the field they were then lying in. The hen bird had been sitting that morning, and the male left her as usual in search of food. During his absence, the female, either with the same intention, or to have a bit of gossip with some of the other storks in the neighborhood, also took her departure. No sooner had she left her nest, than a species of hawk, very common in the steppes, seeing the eggs unprotected, pounced upon them and sucked them.—A short time after this, the male bird returned, and finding the eggs destroyed, he threw himself down upon the shells and gave way to every demonstration of grief. The female also returned, but as soon he observed her, he rose up, attacked her with his beak, and seizing her between his claws, soared up with her to a great height. He then compressed his own wings, and both falling to the ground together, were instantly killed!—*Capt. Jesse's Travels.*

The Child and the Dew-Drop.

BY MRS. L. H. SIGOURNEY.

"Father! there are no dew-drops on my rose.
I came to seek them, but they all are gone.
Was night so niggard? or did morning steal
Those diamonds, ere her time?"

"Be patient, boy,"
Soon, the soft falling of a summer shower
Drew quiet music from the quivering leaves,
And thro' the hollows of the freshen'd grass
Drew lines of silver.

Then, a bow sprung forth,
Spanning the skies.

"See, child! those glorious hues,
Violet and gold. The dew-drops thou didst mourn,
Mingle and sparkle there. Remember well,
That what is pure and beautiful on earth
Shall smile in Heaven."

He knew not that he spake
Prophetic words. But ere the infant moon
Swell'd to a perfect orb her crescent pale,
The spirit of that fair and loving child,
Which briefly on the parent's breast had hung,
And trembled like a dew-drop, was exhal'd,
And went to Heaven.

Youth's Cabinet.

The Queen and Jenny Lind.—At Her Majesty's concert, at which Mdlle. Jenny Lind, in addition to Grisi, Alboni, Standigl and other leading artists had the honor of singing, it was remarked that the selection of music was by no means calculated to elicit the powers of the Swedish nightingale. But, in one piece, a solo, in which Mdlle. Lind was accompanied by Signor Costa on the piano forte, it was remarked that (probably from the two distinguished musicians not having been accustomed to perform together,) the accompaniment was injuring the effect of the vocalism. Her Majesty's quick ear noted this, and leaving her seat, the Queen walked up to Mdlle. Jenny Lind, and apprised her that she was at perfect liberty to select some composition in which she could accompany herself. Jenny Lind profited by this gracious permission, and, taking her seat at the instrument, sang some Swedish melodies which enchanted the whole court. We have been favored with this anecdote from a high quarter, and gladly avail ourselves of it, as an illustration not only of Her Majesty's refined musical taste, but of her innate kindliness of disposition.—*London Court Journal.*

Anecdote of David Crocket.—David once visited a menagerie at Washington, and pausing a moment before a particularly hideous monkey, exclaimed, "What a resemblance to the Hon. Mr. ——!" The words were scarcely spoken when he turned, had, to his utter astonishment, saw, standing at his side, the very man whom he had complimented. "I beg your pardon," said the gallant Colonel, "I would not have made the remark had I known that you were near me; and I am ready to make the most humble apology for my unpardonable rudeness. but," looking first at the insulted member of Congress, whose face was anything but lovely, and then at the animal that he had compared to him, "hang me if I can tell whether I ought to apologise to you or to the monkey."

Friendship and Love.—Nine times out of ten it is over the *Bridge of Sighs* we pass the narrow gulf from youth to manhood. The farewells of friendship have indeed something of the melancholy but not the anguish of those of love. Perhaps it would be better if we could get rid of love altogether. Friendship is the *wine* of existence, but love is the *dram drinking.*—*Burlington Gazette.*

From the Buffalo Commercial Advertiser.

A Trip to Chicago in the St. Louis.

JOHN SMITH'S YARNS.

NUMBER IV.

I would tell you, F., the story of that wreck, were I in the humor, and were this the place to tell it. But I am not in the humor. As you know, I am rather a quiet-loving man, and being in a throng disturbs me. This boat seems to me like a Babel, and the confusion of its tongues confuses me, and makes me too cross to spin a long yarn, like the one you ask for. No, no! Wait till we reach Milwaukee, where I can point with my finger to her stranded hull, and the sad memories of that horrid night will rush upon me in all their freshness, and I'll moan it out to you, as it comes back, like the gushes of a dying tempest, or, when we sit upon the hurricane deck, with the solemn stars shining on the rolling bosom of Lake Michigan, and we are crossing from the Manitous, as gaily and as gallantly as did the *Boston* some twenty hours ere she was tossed ashore by the strong sea, as though she were a cockboat,—then, when we are all alone, I'll tell you the sad story, how she was wrecked. But now, I am out of humor—too sensitive to the petty annoyances around me, to bring my heart into a proper state for such a tale. I am not as snappish as a dog-fish, nor am I ill-fashioned as a mud-pout, nor as prickly as a sea hedge-hog! So, none of your unsavory comparisons, your fishy similes. Well, if the truth must out, yesterday I lost a five pound bass off the head of Hog Island. I had him surely hooked too, right through the nose! I had been catching young ones, and felt melancholy, and when he bit, tho' it was gently, and he twenty feet below, I knew him at once, as well as though I had caught and weighed him a hundred times, and I experienced all—

> "The stern joy that warriors feel,
> In foemen worthy of their steel."

Oh what a strong but deliberate tug he gave when I first twitched him! And then he paused an instant, as though in wonder that he, ever before so free, should be restrained; and then he gave another tug, and being assured that something held him, sought with a mighty rush to assert his freedom. Vain effort—for I turned him, and kept him circling reel-less as I was, and with fine tackle, for full three minutes. In vain he rubbed the bottom, and tried his utmost strength: poor S. had taught me, and I smiled at the impotence of his great vigor, when opposed to my slight tackle, but superior sleight. But now he tries the surface, and with a sudden leap darts from it full two feet in the air, shaking his head as though to throw off the hook, and looking indignant, and angry, and as noble too as would a young Triton in the same predicament. He was a noble fellow—none of your green-scaled, big-mouthed fish that pass for Black Bass in the muddy waters of the West, but a genuine, shining, small mouthed Lake Erie Bass, beautiful as a brook trout, lusty as a porpoise, savage as a shark. The second leap he made was o'er the surface, straight towards me—and he looked as though he wished to spring upon me—it was a clean three-foot jump; and, being foiled, he described a huge circle, and run along side of the boat, close by the gunwale, I holding my rod up, and my line sawing the water, and throwing it off in sparkles, when, O heavens! a fool, a ninny, an animal as stupid as was Caliban when drunk, a fellow whom I had employed to row the skiff, seated in the stern, smoking a pipe as dirty as his own visage, says, "here he comes!" and grasps the line, and pulls—and all is lost! I am sad, and mad, and almost quarrelsome, and if you had seen that fish, and felt him as I did, and lost him so, you too would be as uncompanionable as I.—But I will recover my serenity, provided I vent my spleen. So, sit you here beside me, and I'll snarl and grumble where none can hear.

What a goose that fellow looks like, in his cockney dress, bespattered as he is with tags, and flowers, and flummery, and clogged with chains and rings, and gew gaws. Let him go! But see that dapper fellow, in a plain but natty dress. What a knowing look he has! He is very quiet, and would assume the indifference of an Indian. He is a man of vast experience, and prides himself upon his knowledge of the world. He would fain impress us with the notion that he is a man of superior knowledge, and hence he did not enjoy the river as you did, and will admire nothing. He'll shine out presently. He is, I take it, a travelling clerk of some New York or Boston firm, who has traversed these Lakes before, and knows all about them. He knows no body on board, and asks no question, for that would argue ignorance. Should some slight emergency arise, he'll tell every body who will listen to him, what ought to be done—he'll hang about the mates until he's thrust out of the way, and narrowly escape being kicked overboard by the captain—and then he'll worry some quiet passenger with his nonsense, or add to the terror of some nervous woman by his twaddle. Hang him, I say! He is the counterpart of one I met here, in the spring—and yet turned out to be a right good fellow, as may this one too. If you are determined to have that yarn, here goes. We are approaching the very spot.

Last spring, I went up to Mackinac, in the *Saratoga*, a glorious boat, most gloriously commanded! By the bye, what a variety of nature's nobility walk the quarter-decks—or would if they had them, of our steamers. I might mention many. Our own Captain WHEELER is a good sailor and a fine fellow; but I never like to praise one in his own house. And there's STANNARD, of the *Saratoga*, quiet and retiring, but as stern, decided, and self sustained a man as ever commanded on these Lakes—no peril unnerves him, and he seems equal to any danger. And there's HOWE, of the *Hendrik Hudson*, the gentleman who presides o'er the perpetual pleasure of his noble craft, as though he were the very soul of gaiety—

and yet who is more the seaman? And then there's BLAKE—old Blake—who is looked up to as a father by all the others—rough as rude Boreas with whom he has battled from boyhood, and yet at heart as gentle as humanity herself. When he dies, there'll be many a wet eye among those who toil upon these Lakes. But I'm forgetting my yarn. I'll light a segar and give it you, between the puffs. F.

NUMBER V.

Well, F., to resume—or rather to commence, for I have scarce begun yet. It was spring when I passed up in the *Saratoga*. But, you'll remember that we are farther north than when at home, and May, in her maturity, scatters few flowers, and but faintly tips the woods with green, on the St. Clair. Now, the land scenery, tho' low, is pretty. The scattered buildings on our left, white in the noonday sun, backed by the long dark green line of forest, and looking over that interminable meadow, make a landscape by no means unworthy a true painter's study, though it is too expanded for a picture. But then, earth was but awaking from her torpor, and seemed scarce living, and those vast marshes were all barren and desolate. The stakes that mark out the channel on the Flats, were not all in place, and the wind had lowered the water, and so the *Saratoga* grounded about half a mile above. Ah! there's a steamer just entering the river. Where are you looking, F.? This channel is as tortuous as a metaphysician's mode of coming at plain truth—and we'll box the compass once at least in passing it. If you wont take my word for it, incredulous that you are—ask the man at the wheel! Look behind—there—dont you see her white steam rising some miles away, amid the treetops! That's the mouth of the St. Clair River. It enters the lake by three mouths. One of them is far away on the Canadian side—this is the American channel—the boundary line follows the middle of the intermediate one, which, as is said, could be easily and cheaply made permanently navigable. But then, how can two nations join in an improvement which must result to their common good, and not to the exclusive benefit of either. But the *Saratoga* grounded, and it was a memorable scene, though one 'tis hard to describe. She took it very easily, for she had rubbed the bottom several times, as we are doing now, and, when she struck, was moving slowly, feeling her way. She felt the indignity however, for the steam escaped in sighs—and then with a snort of indignation, and a strong thrust of the engine that shook her frame, she moved forward a foot or two, and went on harder than ever—and her escape pipe sent forth a long continued murmur. There we lay for a full hour. Those little lighters, hopeful of a job, hovered around us, as a pack of prairie wolves await, and scarce await, the dying struggle of the wounded buffalo bull, ere they rush in and rend him. They had a very piratical look, I do assure you; and we were in the mood to credit the stories of the uncharitable, who say that the channel stakes are not safe in their positions with lighters about. It certainly was a tedious hour—for though the sunlight sparkled in the water, all was desolate—there was naught of life abroad in the air, and on the water, were only those dingy, ugly craft, moving stealthily around, as though waiting their opportunity to pounce upon us, and five large, white-breasted gulls, seated in line, upon a floating log, a few rods ahead, solemnly watching us. The engine was tried more than once, forward and backward, but the lead was thrown and showed no change of depth—the pole, held perpendicularly from the upper deck upon the bottom, remained straight as a plummet.—Our state seemed unpromising indeed: when suddenly our yawl, with the first mate, appeared at the bow, and soundings were taken in all directions, and reported to the Captain; and then she took one of the anchors at her stern, and planted it at a distance and returned. In the meantime I stood upon the upper deck, absorbed in aimless musing, such as the scene inspired, when a quick voice at my very ear, rattled out something like this: "It's all wrong, Sir. The Captain 's mistaken. There's the channel out there. If he'd only pull her out that way, we'd be off in a minute. This detention is scandalous," &c. &c. I looked up, and saw at my elbow, not an old seawern tar, nor a hardy weather-beaten sailor, but a dapper little fellow, a haberdasher who had never seen water save around New York, one who would call the goose-ponds of Long Island, Lakes, and the Fountain in the Park, a Cataract! I hardly knew whether to laugh or be angry. But I kept my temper, and merely murmuring, "ne sutor," &c., I turned abruptly on my heel, and left him, ere he could catch my button; and then I took a line from my trunk, and a bait from the kitchen, and tried fishing from the guards, for a minute or so. But I heard the clank of the chains, and the stern click of the stop holding the windlass, as the sailors with the "yo heave o!" turned it, and drew upon the anchor, and could see the pole decline from the perpendicular, tho' often carried ahead. In a few minutes the anchor was at the bow, the engine resumed its labor, and leaving behind her a long train of muddy water, the *Saratoga* regained the channel.—Slowly but joyously we passed the narrow path, threading the channel, until we neared the River. Then she put forth her strength, and quivering as she struck its impetuous current, sped like an arrow up the wild St. Clair. F.

NUMBER VI.

As John was ending his yarn, a pattering of feet and exclamations upon the upper deck, summoned me thither. The long line of rushes o'ertopping the shoals and gathering into wet islands in this portion of the lake, had disappeared, and our good steamer was entering the river, which flowed in a wide, swift channel between meadows edged with narrow marshes. On the left a herd of cattle, intermixed with houses, was grazing

quietly, not far from a low board shanty, which stood by the margin of the stream, some fifty rods ahead. But I had scarce time to glance around, ere my attention was absorbed by the imminent peril that threatened, or seemed to threaten, a whole family of innocents. A sober-suited wood duck, who had hatched in a hollow branch of some tall tree upon the river, a dozen young ones, and kept them safe from owls, and from that felon hawk skimming the meadow, had, but a few days since, aided by her gay-appareled, crested lord, with difficulty conveyed them from their high birth-place to the water that laved its feet, and led them triumphantly to practice their young oary feet and tender bills among the marshes.—As fate would have it, she was crossing, with her callow brood, from left to right, as we appeared, and taking us for some slow-moving brig, or schooner, or affrighted by the commotion of our progress, persisted, and was now but a rod or two before us. The little ones, with their tiny paddles, and unfledged wings, were striving, with their utmost strength, to outstrip our rushing prow; the mother, fearful and distructed as she was, put not forth her vigor to avoid the common peril, but swam slowly just in the van of her endangered offspring. It was pleasant to observe the sympathy evinced for that poor family. Even learned men caught the gentle infection from the ladies, who, under the influence of their good impulses, broke through all rules, and called upon the man at the wheel to stop the boat or turn her aside—but he, with his eye directed far ahead, lining our course, knew naught of the occasion of this unwonted interference, and hesitated to obey an unaccustomed order, even of that high authority which swayed and ruled us in all our voyage. Just then, when the wave curling forward from our bow, threatened to whelm the hindmost, the mother abandoned her vain forward effort, and diverged, and, in an instant, all disappeared—but in another appeared again, close to the guard, struggling to avoid the wheel which came thundering on, threatening destruction, Then, at length, fear overcame maternal love, and the duck rose from the river, and, with a plaintive whistle, flew to the marsh upon the right and hid herself, despairing. But, thank heaven! the pretty, downy little ones, weathered the wheel, and were seen tossing in safety on the broken waves it left behind—and then we all breathed freer, and were the happier for their escape.

Let Statesmen, or Philosophers proclaim just such reasons for it as they can, or choose to, but it is a truth, that greater energy characterizes the frontier settlers on this, than on the other side of that imaginary line which divides us from Canada. You behold every where a denser population, and more wealth, and taste, and comfort on the American, than on the Canada soil. The British bank of the St. Clair is equal if not superior to ours in natural beauty and fertility. The same skies overhang, and the same waters lave both. And yet, on the left bank, a few scattered habitations, and little docks jutting into the river to supply steamers with fuel, and one or two sleepy hamlets, are all, or nearly all the proofs of human occupation. But the right side of the river, has thriving villages, beauteous farms, steam mills, ship yards with schooners and steamers on the stocks, and a thousand other evidences of that laborious enterprise which educes the resources of a country and makes its people happy.

The country bordering the river, though level, is very pretty. Its scenery is similar to that on the Detroit, but, having been settled and reclaimed much later, does not present those beauties which only a judicious cultivation can impart to an extended plain, whether of prairie or of woodland. Sooth to say, mere expanse, however vast, unless it possess mobility, or stirring association, has little power over me. The prairie, when the first wonder's over, seems tame. And I have looked indifferently from the ridge that skirts Ontario, down upon the illimitable forest plain that lies beneath. But the great Sea, and the mighty Lakes, full of life and motion, replete with mystery, and ever changing in their grand aspects, entrance my soul with their majestic beauty, and fill me with awful admiration.

This beauty is a quality rather in him who bows before it, than in what he bows to. It has no fixed residence, nor permanent abiding. What pleases me today, may well disgust tomorrow.—What I admire may seem loathly to my neighbor. It is not alike with all men, and is by no means a mere eye-pleasure. Vision is the same in all, and beauty is but an ascription of the soul or mind. The mind sees it in utility: the soul recognizes it, irrespective of all use, in nature, and her movements. But mind and soul are so blended in our nature, if they be not one, that utility and loveliness are oft confounded.—Where am I driving? How comes it that I, who love to muse rather than think, and who never before was guilty of metaphysics, have plunged so suddenly into their labyrinthine mazes, where I am sure to lose myself, or senses, unless I extricate myself at once?—Why, forsooth, I asked one of the mates, which was more beautiful, this River, or my own Niagara, and he told me, this was the handsomer,—because you could run anywhere in it with a first class steamboat!

I put the same question to John Smith, and John spoke, as lawyers say, in substance, as to the effect following, that is to say:

I cannot assuredly make up my mind. They say there is capital angling in the St. Clair, and I have caught good perch, and pretty fair bass in its waters. They say the yellow perch on the Flats are often three pounders. I'd like to strike one, but I don't believe they make much play. The Flats are abominable interruption of navigation—a nuisance that ought to be abated. No Steamer dare attempt to cross them at night, unless the moon and stars give out a light rivalling day splendor. This scenery was almost ugly

when I went up in the Spring: But, when the *Saratoga* returned a few days after, it was lovelier than even now. We had wooded above, but somehow the fuel was of an indifferent quality, and we rather loitered in the night crossing old Saginaw, and, though we drove down the river with our utmost speed, we reached its mouth too late to venture upon the Flats. We turned up the river and lay all night by a wood pile in Canada. But, oh, how changed the scenery. A Southerly wind had brought up the dun, heavy clouds, which hung in long folds, and slowly moving, dropped fatness as they went, o'er all the land, and the meadows and woods, so dead and dull before, were robed in the fresh, tender verdure of refreshing Spring. Here I stayed John's eloquence, by bidding him good day. He's rather tedious sometimes!

We wooded on the Canadian side, and then proceeded upward to Port Sarnia, near the head of the River, and lay there from sunset until night fairly set in. The gay appearance of our Steamer, and our Band, drew from the village all its inhabitants, with whom we interchanged courtesies. They were in naught distinguished from the ordinary population of a small, and rather secluded town. But, whatever their singularities might be, they seemed jovial, kind-hearted folks, and certainly had "music in their souls"—for they were delighted with the performances of our musicians, and 'twas hard to tell, whether they were best pleased with "Hail Columbia" and "Yankee Doodle," or the loyal British tunes with which they were regaled. In truth I shrewdly suspected the former were the greater favorites. F.

FOUND OUT.—A certain notable housewife had observed that her stock of pickled cockles were running remarkably low, and she spoke to the cook accordingly. The cook's character was at stake. Unwilling to give warning with such an imputation upon her honesty, she nevertheless felt that all confidence between her mistress and herself was at an end. One day the jar containing the pickles being placed as usual on the dresser, while she was engaged in basting a joint before the fire, she happened to turn suddenly round, and beheld to her great indignation, a favorite magpie, perched on its side, and dipping its beak down the open neck with every symptom of gratification. The mystery was explained, the thief detected. Grasping the ladle of scalding grease which she held in her hand the exasperated lady dashed the whole contents over the hapless pet, accompanied by the exclamation, "Oh, oh! you've been at the pickled cockles, have ye?" Poor Mag, of course, was dreadfully burnt; most of his feathers came off, leaving his little round pate, which had caught the principal part of the volley, entirely bare The poor bird moped about lost all his spirit, and never spoke for a year.—At length, when he had pretty well recovered, and was begining to chatter again, a gentleman called at the house, who on taking off his hat, discovered a very bald head! The magpie, who was in the room appeared evidently struck by the circumstance, hopping upon the back of his chair, he looked him hastily over, and suddenly exclaimed in the ear of the astonished visiter, "Oh, oh! you've been at the pickled cockles, have ye?"

☞ The N. Y. *Express* narrates the following interesting incident in connection with the conflagration of Mr. KIRKMAN's establishment in Catharine street on Thursday evening:

So sudden and quick was the spread of the flames that Mr. K. and his family came very near being destroyed by them. One of his daughters, Miss Margaret Kirkman, a young lady about 19 years of age, only escaped, after being severely burnt, by jumping from the fourth story front window of the room in which she slept. It was for some moments a scene of the most thrilling and agonizing interest to those who had assembled in front of the burning building. The fourth story, though even with the rest of the edifice, has very small attic windows. At one of these Miss K. appeared, shrieking in alarm, the fire evidently behind her and the smoke pouring out over her head—no ladders had yet arrived, and her destruction seemed inevitable—she tried at first to escape the flames, by which she had been already severely burnt, got out on the sill of the window, but it was evident she must soon perish there, and the cry was raised for her to jump—other voices, among which, by this timet was that of her father, exclaiming, "not yet, wai, a moment till we get ready for you." A feather bed was instantly procured, held about three feet from the ground by six gallant hearts, who were in great jeopardy that she might fall upon and injure one or more of them, but they heeded not and cared not for that. By this time Miss Kirkman, to escape from the smoke and flames, was then compelled to let herself down, and was seen hanging by her extended arms from the window. "Jump now," was the cry. Vast numbers of persons had now assembled, and were lookers on upon the agonizing scene. The young lady soon let go her hold from that dizzy height of upward of 50 feet, and in an instant was whirled toward the sidewalk. The heart of every person in that vast multitude started in thrilling emotion and suspense, doubtful as to her fate. In a few moments the cry was raised, "she is safe!" and three hearty cheers went up, which made the very welkin ring.

THE CHAMPION LIBRARY.—The *Cleveland Herald* contains a report of the interesting ceremonies of laying the corner stone of a new institution bearing this name at Chagrin Falls on the 23d instant. The following extract from a report prepared by Rev. Mr. NASH, and read as a part of the proceedings, will explain the character of the institution, and the circumstances under which it was founded. It is an honorable and deserved tribute to one of the most estimable men of our State.

Aristarchus Champion, Esq., a native of Connecticut, a graduate of Yale College, a gentleman of legal attainments, for many years past a citizen of Rochester, N.Y., a member of the Congregational Church, a staunch friend of Temperance, a liberal patron of evangelical principles, sound learning and virtuous habits, having formerly, when examining these Falls with a design of purchasing, lost his way, and with his guide, been obliged to encamp for a night on this ground, in the midst of a then unbroken forest, now, at an expense of *several thousand dollars*, here founds an institution; and by his own unsolicited munificence, as sole proprietor projector, erects this edifice and furnishes an extensive Library, a useful Reading Room, and large accommodations for a Lyceum—which he bestows upon the present and future inhabitants of this village and its vicinity, for their improvement in science, the arts and literature; in virtue, morality and religion; in whatever is lovely, honest and of good report.

Rural Department.

Agricultural Statistics.

The Agricultural report by the Commissioner of Patents, for 1847, has been published. We have not yet seen it, but we find in some of our exchanges statistical tables copied from the report. These tables are not made up from the most authentic data, in all cases, and therefore should be taken with some caution, especially if the compiler be not a man thoroughly conversant with the subject, and such a man is not the present Commissioner of Patents. The mode in which the information is obtained is this: The Commissioner addresses a circular to many gentlemen throughout the country, noted for the interest they take in such matters, asking them to fill up the accompanying blanks, with their estimate of crops in their several counties. These estimates must necessarily be loose, and often erroneous, for a man may be a very good tiller of the soil or breeder, and at the same time wholly incompetent to perform the service required. The mode adopted is, however, the best possible one in the absence of proper governmental provisions for ascertaining the facts authentically, and the results stated by the Commissioner may probably be relied upon as a tolerable close approximation to the truth. The *Pennsylvanian* publishes the following table showing, as thus estimated, the aggregates of the principal articles of agricultural product in the United States, for the years 1840 and 1845:

	1840.	1845.
Wheat, ... bush	84,605,000	106,348,000
Barley, ...	4,156,000	5,160,000
Oats, ...	123,675,000	163,208,000
Rye, ...	18,600,000	27,173,000
Buckwheat, ...	7,224,000	10,208,000
Indian Corn, ...	377,368,000	417,599,000
Potatoes, ...	108,249,000	88,392,000
Hay, ... tons	10,035,000	14,065,000
Flax and Hemp, . . .	180,000	37,500
Tobacco, ... lbs.	219,093,000	187,422,000
Cotton, ...	790,479,000	958,000,000
Rice, ...	80,393,000	89,765,000
Silk, Cocoon, ...	33,400	486,530
Sugar, ...	150,444,000	255,026,000

This table shows a large increase in the productive industry of the country, but large as it appears, we suspect it is less than the reality.—Certainly, at no period in our history, has the country made greater physical progress, notwithstanding all opposing obstacles, than during the last five years. How we have been enabled to overcome these obstacles, and enjoy comparative prosperity in spite of the evils of bad government, is explained in the following remarks, copied from the report:

"Every year introduces, likewise, to the agriculturist, some additional implement by which his labor is lessened, or better done; and, while he is thus saved somewhat of the sweat of his brow, he is likewise assured of the greater profit from the fruits of his industry. There is, thus, mutual dependence as to the pursuits of the farmer and those of the artizan. Mechanical industry presents him with the results of her inventive genius. With these in hand, he forces from the earth her increase, and, by the blessings of a kind Providence, is enabled to pour out to the community around him a lavish of Nature's bounties, such as no other country can so universally boast. In view of his own approved tools and means of culture, he may well wonder how his fathers, and even himself, formerly, could have been satisfied with the ruder ones which have been so long in use. We are, however, but at the commencement of these better things.

The researches of each successive year, and the multiplied facilities added to the train of conveniences enjoyed, authorize the belief that the advancement of agricultural industry is destined far to exceed any that has yet been seen."

Beside the table given above, we find one showing the products of wheat, corn, potatoes, tobacco and cotton, in the several States for the year 1840, and another of the same character for 1845. We have not room for these tables today, but the following comparison, by a writer in the *Albany Argus*, of the facts they disclose, will be found interesting:

"In the article of WHEAT it will be seen that New York, which in 1840 ranked as the third wheat growing State of the Union, in 1845 ranked as the first State, Ohio holding the second place, and Pennsylvania the third. The States of Georgia and Maine show a decrease. The increase in Vermont and Tennessee is nearly 100 per cent. The increase in Pennsylvania is very small; but that in North Carolina is the smallest of any of the States. The increase in Arkansas, if the statements are correct, is astonishingly large, from 106,000 bushels in 1840 to 2,247,000 do. in 1845; Michigan stands next among the States, but her increase is not so great as that of the then territories of Iowa and Wisconsin.

In CORN Tennessee maintains its ascendancy as the greatest corn growing State, producing nearly one sixth of the whole amount raised; Ohio ranks second, and Kentucky third—these three States producing nearly one-half of the whole. The States of Kentucky, Ohio and Tennessee show an increase of about 20,000,000 of bushels each. Massachusetts and New Jersey show large increases. Missouri and Florida a decrease. But the greatest decrease is in the States of Maryland, over 50 per cent., Virginia, North and South Carolina, and in Mississippi, where the decrease is from 13,000,000 to 2,000,000 of bushels; whereas Georgia, Louisiana and Alabama show a large increase.

In POTATOES there appears to be a less of 20 millions of bushels in the aggregate raised. This throws a shade of doubt on the correctness of the table for 1845. Of this New York loses 9 millions, and yet maintains her rank as the greatest potatoe growing State in the Union. Some few of the States show an increase; but there is a decrease in the majority, in that of Vermont of nearly 50 per cent. Michigan shows the largest increase.

In TOBACCO Kentucky raised the greatest amount in 1845, an increase of 10 millions of pounds over 1840; Virginia a decrease of 45 millions of pounds. Maryland also shows a decrease; North Carolina, Tennessee and Missouri, large increases.

In COTTON Mississippi holds her position as the largest producer, showing an increase of 42 millions of pounds, and an aggregate of 30 millions of pounds greater than raised in any other State. The greatest increase is in Arkansas; Virginia shows a decrease, North Carolina also, of 12 millions, and South Carolina of 16 millions. The other States show an increase; that of Georgia about 42 millions."

Our Charlie.

BY THOMAS MACKERALL.

A little son—an only son have we:
(God bless the lad, and keep him night and day,
And lead him softly o'er this stony way!)
He is blue-eyed, and flaxen hair has he,
(Such, long ago, mine was wont to be—
And people say he much resembles me.)
I've never never heard a bird or runlet sing
So sweetly as he talks. His words are small
Sweet words—oh! how deliciously they fall!—
Much like the sound of silver bells they ring,
And fill the house with music. Beauty lies
As naturally upon his cheek as bloom
Upon a peach. Like morning vapor, flies
Before his smile my mind's unfrequent gloom.

A jocund child is he, and full of fun:
He laughs with happy heartiness; and he
His half-closed eyelids twinkles roguishly,
Till from their lashes tears start up and run.
The drops are bright as diamonds. When they roll
Adown his cheek, they seem to be the o'erflowing
Of the deep well of love within his soul—
The human tenderness of his nature showing.
'Tis pleasant to look upon him while he sleeps:
His plump and chubby arms, and delicate fingers—
The half-form'd smile that round his red lips creeps;
The intellectual glow that faintly lingers
Upon his countenance, as if he talks
With some bright angel on his nightly walks.

We tremble when we think that many a storm
May beat upon him in the time to come—
That his now beautiful and fragile form
May bear a burden sore and wearisome.
Yet, so the stain of guiltiness and shame
Be never placed upon his soul and name—
So he preserve his virtue though he die—
And to his God, his race, his country prove
A faithful man, whom praise nor gold can buy,
Nor threats of vile, designing men can move—
We ask no more. We trust that He who leads
The footsteps of the feeble lamb, will hold
This lamb of ours in mercy's pasture fold,
Where every inmate near the loving Shepherd feeds.

For the Western Literary Messenger.

Correspondence.

New Haven, Conn., Aug. 14.

Friend Clement:—New-Haven is classic ground. One feels this as he reposes under the cool and grateful shade of those old giant elms that have sheltered sages, and the past flits before him like the scenes of a diaram. One feels it as he strolls through the most interesting portions of these Halls, consecrated to learning, through the cabinets containing the collections of Geologists, and the college libraries, in one of which is a fine piece of statuary, a bust, I think, of Prof. Day, in fine white Italian marble, desecrated, however, by being placed upon a block of *wood* for a pedestal which has not the merit of being even a decent imitation of marble: one feels it in the enjoyment of the luxurious quiet that reigns around, as if the very atmosphere partook of the spirit of the place, and as the pleasant converse of a friend falls upon the ear, one is not inapt to feel that no nearer approach to heaven could be asked for in this world than to live in New Haven (free from heart corroding care) with those he loves. The charm of society in New Haven consists in its being beyond any of that offensive and vulgar affectation of superiority, that characterises the manners of many otherwise well bred Americans in other cities. Their position needs no such attempts at propping up, and the universally cheerful and easy tone that prevails, convinces the stranger at once that he is in the society of men and women of superior breeding and intellect. But the reflection that you are treading upon classic ground, forces itself upon you most impressively, as you enter the high arches and massive gateway of the cemetry. The curious and beautiful monuments that rise in every direction, remind you where repose the ashes of the illustrious dead. A galaxy of bright names flit across the memory as vividly as if the forms of those who rendered them illustrious were standing in array in the habiliments of the grave. Among them none will be longer remembered than a Webster or an Edwards. On the base of the monument of the first of these stands a simple and eloquent eulogy conspicuously cut in "bas relief." No terse Greek couplet or labored Latin phraze could half so well have told posterity that this was the tomb of no ordinary man as that one word—Webster. Here and there the marble tells of some college classmate whose young ambitious dreams of success—perhaps fame—were never realized over whose fate friends were called upon to weep bitterly. How soothing to those friends was this testimonial of the respect of his fellows.

How insensibly each syllable of those mournful and measured lines of Willis steal over one as he looks upon the grave which that poet has immortalized.

> "Ye've gathered to your place of prayer
> With slow and measured tread;
> Your ranks are full, your mates all there,
> But the soul of one has fled."

Yonder dark block of marble blazons the achievements of one who has written his name in blood. To defend one's country successfully is glorious and deserves a country's gratitude as well as praise: but to be a *great* butcherer of human beings, a famous cut throat as he who is successful with the sword must be, merely for a name. I'd rather be the humblest clod that ever breathed, with a free conscience, and fill ever so humble a hole in the earth, than Napoleon or Wellington. Here is a plain stone that plainly indicates the ruling passion of the sleeper beneath. He was one of the thousand O. Johnson Smiths, or Q. Peter Jones'es who flourish in this age of Sir E. Lytton Bulwerisms.

To what an astonishing extent are these little namby pambyisms carved in the present literary age, for the apparent purpose of obtaining a sort of Byronic personal notoriety. Bulwer manufactures a new style of name which is universally copied by ambitious dry good clerks and newly fledged pettifoggers. Scott clothes himself in the mysteries of Waverly, and suddenly plunges

upon the literary world like a lion roused from his lair. Carlyle pours forth his rich thoughts in a style that can neither be understood by "christian pagan or man" capable of no christian explanation. Much ink and paper are used in convincing the complaining and unbelieving that Carlyle must be Carlyle or he would be nothing, but his letter to his kinsman in this country has shown that no man can write better English than he, these are but instances.

My heart ached too for a poet—it was poor Percival—how I have been delighted with his smoothly flowing numbers, and here he is, the remnant of a man, a hermit living in apparent indigence shunning the society of men and more particularly women, alas! what wretched girl has created this havoc, but it may not be so. How delightful is a ride out of New Haven, the scenery, the pleasant residences along the thickly populated districts, the perfumed breeze gathering sweets from a thousand gardens, the old associations that gather around the scenes of this country's early history, all tend to render it exceedingly delightful to an American. A short distance out of Bridgeport is Tom Thumb's home, as it is called, Barnum's new residence. It is in the Moorish style of architecture with round towers and minarets, the front of Chinese work presenting an exceedingly cobwebish appearance though certainly very beautiful. It is said to have something of the appearance in minature of Windsor Palace. Yours in haste, A.

NOTE BY THE EDITOR.—We take the liberty of saying that the above letter is from the pen of Mr. N. W. ADAMS, a young gentleman of this place, who, for sometime past, has been a correspondent of eastern papers, and whose articles have occasionally appeared in the Commercial Advertiser of this city. The distinguished family whose name he bears, have reason to feel confident of the future for this young relative, as this interesting and graceful communication shows. Diligent and persevering as a man of business, he is, as the reader will perceive, quite as ready in other things.

Munchausenism.

Those who are fond of the tallest kind of romancing, will read the following with pleasure. It is gravely published in the N. Y. *Sun* as the veritable narrative of the hair-breadth scapes of a person who acted in the double capacity of courier and spy for SANTA ANNA and Mr. BEACH of the *Sun*:

JULY 30—I left the city of Mexico in company with a few friends at 7 o'clock A. M. We had British passports and a strong guard, ostensibly for a British officer, to see us safe through the fortifications which are going up at Pinon, a remarkable mountain pass sixteen or seventeen miles from the city of Mexico, on the road to Puebla by way of St. Martin. At Pinon the road winds around between two volcanic mountains, each commanding a point or turn in the road — Between these two hills is an extensive fortification nearly completed and on which I found *thirty-five thousand men at work*. Of these, two companies were Europeans, deserters from the United States Army, and to their skill may be attributed the superiority displayed in the works. The guard now left us. Our party consisted of four, viz: the British officer, two Englishmen interested in one of the mines, and myself. At about 50 miles from the capital we overtook twenty-two straggling Mexicans, and made their acquaintance. At first we were afraid of them, but finally accepted their services as guides. The British officer, however, was suspicious. He had despatches of great importance. Every body seems to know him, but he would give his name to no one. He exhibited a British flag, fifteen inches by eight or ten, which was at once respected by every guerilla party or public officer on the road. In two instances he received letters on the way to carry short distances. The two British miners having left us, the British officer concluded to proceed alone, leaving me with the twenty-one Mexicans. It was getting late, and I put up at the next Rancho, about sixty miles from the capital.

JULY 31.—At one o'clock this morning, being still awake, I heard horsemen approaching, and saw the guerillas with drawn swords coming up to my door. I had *twenty-four shots* in four of Turner's New York revolvers, which stuck in my belt. Drawing one, I opened the door and fired five shots in rapid succession. Two of the riders fell and were immediately borne off by their comrades. I now called out to the landlord and demanded an explanation, prefacing my demand with the declaration that he deserved instant death for his treachery. He denied the imputation and accused my own men. He said, in an under tone, that my guides were professional robbers; and that they were employed by their chiefs at the capital to follow us, and rob and kill all, the British officers included.

Then, said I, we shall probably be attacked again, and to you I shall direct the first fatal shot. I then tied him to my door outside, and there he remained till morning. I started early, and took the arms of the twenty-one Mexicans on my own horse, and told them to follow to St. Martin's. When I got three miles east of Martin's I ordered a halt, called the ringleader up before me, reproved his treachery, and then shot him dead on the spot, in presence of his terrified companions. They commenced begging for their lives, which I spared, and they scampered off on their mules, and I put spurs to my noble horse and soon reached Puebla, where I delivered the muskets to the U. S. authorities [A musket weighs ten or twelve pounds. This veracious courier, therefore, must have galloped up to Puebla with nearly 250 lbs. weight of muskets, to say nothing of his private arsenal that he carried.] I saw numerous guerilla bands on the mountains but met no opposition on the road. I left Puebla in the afternoon, in company with two or three Mexican gentlemen. They took another road. Ten or twelve miles out I overtook five U. S soldiers, returning home by the way of Vera Cruz.— We halted forty miles from Puebla, and having taken refreshments at a hacienda, enquired the nearest and most secluded route to Jalapa.— The planter, a kind and obliging man, directed us over the hills, by a path which disclosed the beauties of this splendid country. Nothing could surpass the luxuriance and beauty of the plantations. The people saluted us in a friendly and cordial manner. We dined at a hacienda whose proprietor treated us like Princes. But we had not got more than a half a mile from his house before my spy glass revealed an assemblage of Mexican cavalry and infantry, numbering seventy or eighty men, two miles ahead. As the cavalry approached, we turned about, they

sounded a charge, and, as we got under the protection of a ridge in an adjoining field, fired upon us, without effect. Seizing this opportunity, we put spurs and bounded off, getting beyond reach of their fire before they could reload. We took to the main road and were chased to within a league of Perote by fifty-five of them. Their horses were fresher than ours, and it was only by throwing away all our extra baggage and scattering doubloons on the road that we got rid of the villians. I threw away one hundred and fifty ounces, (doubloons) one hundred of which I received from Santa Anna for bringing on a package of letters addressed to Mexicans at or near Vera Cruz. [Just before he made nothing of carrying off 250 lbs. weight of muskets, and now he throws away 10 lbs. of gold, worth nearly $2,400, to lighten himself. Of course both stories are true—all the stories published in the *Sun* are.] One of the villains who fired at my head was the owner of the hacienda at which we had dined, who had followed us, probably to se us caught in the trap he had prepared. I shall remember him on my return to Mexico. We passed Perote a little to the left. I learned that Walker had 1400 men in the castle, and that Gen. Pierce had just arrived from Vera Cruz with 3500 men. Both commands would proceed at once to reinforce Scott, leaving probably four hundred men in the castle. Thus Scott has now about twenty thousand men. We encountered no interruption until within two leagues of Jalapa, where we encamped for the night. We could see guerilla parties on all the hills, and signal fires were kept up during the night.

August 1. The appearance of the hills during the night was unfavorable. Hostile bands surrounded us on all hands, and four of my companions resolved to abandon their horses. They took to the chapparal, and I fear never will be heard of again. Their names were Sergeant Knapp, of New York, or Boston; Corporal Hamilton, a relative of Hon. John C. Hamilton, of New York city; and private Thompson, from one of the southern states; and Wilson, a bugler, of one of the Carolinas.

Sergeant Melton, of Mississippi, proceeded with me on horseback. This morning we employee a Mexican to show us the main road, which we had abandoned, to avoid Jalapa. His pay was to be one dollar. He had hardly gone thirty yards before he plead hunger, and received our permission to get food at a neighboring *ranch*. We accompanied him. Soon his wife came in and told us we were in great danger—five robbers were coming. We mounted and had proceeded only a short distance when we halted again at another *ranch*, for a drink. My suspicions were now aroused by seeing forty or fifty robbers coming after us at full speed. I ordered him to proceed, and on gaining the road, accused him of delaying and betraying us. He freely confessed his crime, and immediately fell on his knees.—After giving him time for a short prayer, I put a revolver to his head and he fell, a corpse. We galloped off, the robbers following in hot pursuit. Only three of them could keep in sight of us.—Melton remarked that we were too many for three, and so, slacking our speed till they came near enough, we wheeled, and at the first fire shot two of them, the third got off. We dismounted and rifled the corpses of their money and clothing, putting the latter upon our own persons, the better to pass for real Mexicans. I found twenty doubloons, with some small coin and, silver buttons.

We were now above suspicion, and encountered no obstacles until within seven miles of Santa Fe, near Vera Cruz. We passed round by the Orizaba road, but only to encounter new bands of robbers, who chased us to within a league or two of Vera Cruz. We now got a breathing spell, and stopped at a *ranch* occupied by milkmen and butchers. While refreshing ourselves, one of the Spanish butchers went towards Vera Cruz, and returned with a party, who met us on the road. They asked if we were friends or enemies, where we were going, and our business. I told them we were on business for Santa Anna, and passed ahead. I had hardly gone twenty paces, when they closed upon Sergeant Melton, who was a short distance behind me. I heard a fellow ask the leader of the gang what he should do, and he replied—"*kill them both!*" At that instant I saw a sabre run through Melton, coming out some inches behind—as he fell, they *lassoed* him and dragged him into the chapparal. Meantime I kept them at bay by discharging my revolvers, and galloped off, pointing them and firing over my shoulder. I galloped up to the walls of Vera Cruz, turned my horse loose—one of the best ever seen in Mexico, once the property of a Mexican robber, and well worth five hundred dollars—ran to the office of Collector Dimond, said a few words to him, and jumped aboard the Great Western, as she swung off for Havana.

Horrible Atrocities in Nassau--Murders and Incendiaries.

Correspondence of the Troy Budget,

NASSAU, Rensselaer Co. Aug. 23.

On the night of the 13th inst., a woman near Nassau village had her throat cut, or cut it herself, as we believed at the time. The facts yet remain enveloped in mystery. The matter would have rested quietly had nothing else occurred, but on Thursday morning Mr. Phelps, the old man who formerly kept the hotel in Nassau, but who, having been turned out of doors by his son, had of late lived upon the charity of the place, was found dead in bed, and bore indisputable marks of violence. His death was occasioned by a wound from an axe, which he could not have inflicted himself. Several arrests have been made and a court of inquiry is yet in session, but nothing positive has been elicited to throw any light upon the subject. Suspicion, however, rests upon his son, a man by the name of Tompkins, and an Irishman. The affair will be thoroughly investigated.

A boy living with a man not far from this place recently died, and there is reason to suppose by foul means. And it is reported today that the child of the woman who was found dead has been murdered, but I have no particulars.

Last night Mr. C. B. Hudson's barn, containing about 10 tons of hay, was burned by an incendiary; and a man in Waldon has been arrested for passing counterfeit money. This for the present concludes the list of atrocities.

IMPORTANT MOVE IN THE GOVERNMENT OF THE CANADAS.—A document emanating from the office of the Secretary of the English Colonies, has lately come to light. It is dated as far back as December last, and appears in a late number of the Montreal Herald. The English Secretary of State indicates in this document a design to incorporate the whole of the British North American Colonies, as an ultimate measure; in the meantime taking the first steps to that consummation by giving the several governments a common custom house and a common post office.—The Montreal Herald, viewing the despatch favorably, adds, that it is plain that the great railway from Halifax to Toronto forms a portion of the plan which the Secretary contemplates.

Editorial Department.

J. CLEMENT, EDITOR.

Patriots and Heroes.*

The patriot and hero combined, is a truly great man. Loving his country and being faithful to her interests, he endures the severest hardships and deprivations, and exposes himself to the most imminent perils, in defence of her rights and honor. To contemplate the life of such a man cannot fail of being highly profitable; for he must possess many noble qualities which stand out in conspicuous colors on the scroll of his history, and their display before the mind's eye fires the soul with new and sacred ardor, and leads one to aim after true greatness.

The life of Washington—a pure patriot and a hero without an equal on the page of history—has all the sublimity of mountain scenery, all the majesty of the marshalled hosts of the nightly heavens, and all the purity and splendor of the noontide skies of Summer with their white and rosy clouds: and he who seriously meditates on the long and brilliant career of that man, will find himself, at the close of his meditations, a better man. Such is the influence of the life of Greene, a compear in arms of Washington and second *only* to him, in wisdom to plan in the camp, skill to execute on the field of battle and purity of motive and loftiness of action on all occasions.—Washington once said of him that there was not "an officer of the army, nor a man in America, more sincerely attached to the interests of his country. Could he best promote her interests in the character of a *corporal*, he would exchange, as I firmly believe, without a murmur, the epaulette for the knot. For, although he is not without ambition, that ambition has not for its object the highest rank, so much as the *greatest good*." Another competent judge, particularly of military merit—Luzerne, the minister of France—once complimented him as follows:—"Others generals subdue their eminence by the means with which their country or the sovereign furnished them, but Greene appears to subdue his enemy by his own means. He commenced his campaign without either an army, provisions or milertary stores. He has asked for nothing since, and yet, scarcely a post arrives from the south that does not bring intelligence of some new advantage gained over his foe. He conquers by magic. History furnishes no parallel to this."

But the most instructive enconium was pronounced on him by a member of the Society of Friends, to which Greene had formerly belonged, and from which he had been cut off on his enlisting in the army. When the war was over, the worthy General returned to his native state, where he was received with marked respect even by those who had refused to consider him a christian brother. "On a certain occasion, one of the members of the society was enquired of, to know how he could reconcile his conscience with the attention he paid to General Greene, whose profession was that of war? He promptly replied: "Friend, it is not a suit of uniform that can either make or spoil a man. True, I do not approve of this many colored apparel, but whetever may be the form or color of his coat, Nathaniel Greene still retains the same sound head and virtuous heart, that gained him the love and esteem of our society.'"

Scarcely less profitable is a survey of the life of the true and noble hearted Irish General, Richard Montgomery. He was a second Wolfe in enterprise, daring and bravery—now building batteries of ice, and now pushing his way where the stoutest heart might quail without disgrace—and he possessed so many of the nobler qualities of our nature that his character seemed to be

> "A combination, and a form indeed,
> Where every God did set his seal,
> To give the world assurance of a man."

"In Montgomery," says an excellent biographer, the Americans lost one of the bravest and most accomplished generals that ever led an army to the field. But he was not more illustrious for his skill and courage as an officer, than he was esteemed for his private virtues. He possessed a mind endowed with every accomplishment, and a person in which every manly grace shone with conspicuous lustre."

The contemplation of such characters, we have before said, is ennobling; and such were the patriots and heroes, with scarcely an exception, who distinguished themselves in the American Revolution, and whose "Lives," by JOHN S. JENKINS, we have lately been delighted in reading. The work is in one volume, medium size, and contains a short and condense sketch of the following worthies who fought in the battles for American Freedom:—Ethan Allen, Daniel Boon, Geo. Clinton, Horatio Gates, Nathaniel Green, Nathan Hale, Henry Knox, Richard Montgomery, Israel Putnam, John Stark and John Sullivan. The book, as a whole, is well written, though a *few* such badly constructed sentences as the following, are found: "The firmness, intrepidity and self-sacrificing devotion of N. Hale, to the welfare of his country, led to one of the most interesting, though painful, incidents, that transpired during the revolutionary war." (p. 173.) According to this construction Hale was intrepid *to the welfare of his country*. The sentence should read thus: "The firmness and intrepidity of Nathan Hale, and his self-sacrificing devotion to the welfare of his country, led, etc. Such carlessness, if often exhibited, would be inexensible in one professing to be a biographer; as it is, the book is not materially marred by faults of any kind. It is an excellent work, useful, alike for the aged and the young; but the latter in particular we most earn-

*The lives of Patriots and Heroes distinguished in the battles of American Freedom. By JOHN S. JENKINS, J. C. Derby & Co, 1847.

eatly urge to read it. For sale at Derby and Hewson's, 164 Main Street.

THE COLUMBIAN for September has already reached our table. The engravings are excellent in conception and execution. In "Moses going to the Fair" every one will at once recognize the good old Vicar and his family, and remember the consequences which followed this adventure. "The wigwam" has all the wildness and roughness of American forest scenery. T. S. Arthur contributes a story—"The Lottery Ticket," which every young man in this and all other cities should "learn by heart." Arthur always uses fiction as every one should, to "point a moral," not to display the graces of language. Mrs. Stephens and Mrs. Osgood also enrich this no.

CONSTITUTION OF THE STATE OF NEW-YORK.—We are indebted to Derby and Hewson, for a well printed, pamphlet edition of this valuable document. It is for sale at their bookstore, 164 Main street.

☞ Descriptive Catalogue of Fruit and Ornamental Trees, Flowering Shrubs, and Green House Plants, cultivated and for sale at the Buffalo Nursery and Horticultural Garden, by BENJAMIN HODGE: For 1847-1848.

The above is the title of a beautifully executed pamphlet of 64 pages, octavo, recently issued by Mr. HODGE.—We were aware, that for a few years past an increased attention had been awakened in this vicinity on the subject of Horticulture—but certainly we had not supposed our Nurserymen here had kept so even a pace with the improvements of the day, in all sections, as the catalogue of Mr. HODGE would indicate; we find it in extent, equal to any of the oldest nurseries in the State, and comprising all that is standard and choice in the various departments, of Fruit, Flowers, Shrubs, and Ornamental Plants. Mr. HODGE is an enthusiastic lover of his profession, and has spared no pains or expense in importing the newest and most choice specimens to enrich his collection.

The present catalogue contains about 200 varieties of Apples; nearly the same number of Pears, including the new and choice varieties from the establishment of Mons. VAN HOUTLE, Belgium, and T. RIVERS & Co., London; 50 varieties of the Plumb; upwards of 50 varieties Cherries, including all the new French sorts; over 40 varieties Peaches; some 20 varieties Apricots and Nectarines; 28 varieties native and Foreign Grapes; and of Quinces, Currants, Raspberries, Strawberries, &c. &c. all the newest and most popular sorts.

Among the Ornamental Trees and Shrubs, making a list of over 8 pages, we notice all the recent introductions, together with the old and standard favorites. The catalogue of Roses alone, occupies upwards of ten pages, and include nearly every choice variety now known in this country, in the several classes of Garden or Hardy Roses, Moss Roses, Prairie and Climbing Roses, Hybrid China, and Hybrid Perpetuals, Bourbon, Bengal, Damask, Tea-scented, Noisette and Tree or Standard Roses, all of which are scientifically classed, so as to enable the Amateur, to make a selection with care. The list of Hardy-herbaceous Perennials, Carnations, Verbenæ, &c. is large and comprehensive; of Dahlias, there are 65 varieties, including all the new and rare kinds introduced at the English Horticultural Shows the last year. A list of choice and rare Camelia Japonicas, Azaleas, Daphnes, &c. conclude the catalogue, and the whole is interspersed with observations and directions as to soil, mode of culture, transplanting, &c., making it a valuable book to the Horticulturist, and giving ample evidence that in this branch our Nurserymen are not in the least behind their brethren in older cities or towns.

Death of Silas Wright.

We received last evening, by the Canada Telegraph, the sad intelligence that SILAS WRIGHT died yesterday morning, in an apoplectic fit, at his residence in St. Lawrence County. The announcement that any one whom we have been accustomed to regard as a strong, hearty man, in the full possession of his intellectual faculties, has been struck down by death, and that the form, but a day before so noble, and animated with a bright, genial spirit, is now but a mouldering mass of lifeless clay, is at all times calculated to arrest the grave attention of even the most thoughtless: but when, as in this case, one of the great men of the Nation, to whom thousands looked for the realization, not only of their personal aspirations, but of great, and by them highly cherished schemes of national policy, is, without previous warning, stricken down in the full majestic maturity of his powers, the blow comes with the strange, startling suddenness of thunder in the serene clear sky, and may well awake profound and solemn thought on the vanities and uncertainties of life, and the mysterious dispensations of Divine Providence.

Although but a private citizen, beautifully illustrating, in his retirement, and the pursuits to which he was there devoted, the character of a true citizen of the Republic, no man scarcely in the country, even the highest in the pride of place, filled a larger space in the public eye. He had lately been defeated, and we may say without personal asperity, for we refer only to measures of public policy, justly so; but it was hoped by his troops of attached friends that under happier auspices, and with broader and higher issues, the country might have the benefit of his large experience and great powers in a station more elevated than any he had previously filled. But pallid death visits alike the palaces of kings and cottages of peasants, and he, around whom so many hopes clustered, now lies in cold obstruction and decay.

We have not time, were this the proper occasion, to attempt a review of Mr. WRIGHT'S public services. We have differed widely from him in regard to many questions of State and National policy, but, though thus politically opposed, we can bear testimony to his great simplicity of personal character, his kind, genial temperament, his eminent intellectual powers, and the modesty with which he has borne his great honors. His death will cause a void in the political world that it seems almost impossible to fill, but of that we would not now speak. Mr. WRIGHT, though a partisan, was one of the great men whose fame is the property of the whole country, and as such we would sincerely deplore his death.

☞ We understand an Association has been formed by the proprietors of the steamers running to the upper Lakes, for the remainder of the season—rates as follows: cabin fare to Chicago, or any port on Lake Michigan, $10, steerage $5; to Erie $1,00 and 2,00; to Cleveland $1,50 and 3,00; Detroit, $2,00 and 4,00. Freight, 50 cts. per 100 lbs., and $1,00 bbl. bulk.

☞ It is said that the Buffalo and Attica Railroad Company intend to erect a large depot for freight, on a lot next to and east of Bogert's Elevator, fronting on the Creek and on Ohio street. It will be a great advantage to have a depot connecting the Railroad with the Lake business, and the importance will be vastly increased by the N. Y. and Erie Railroad, and the Hornelsville Railroad also. The track for the new depot will part from the present line, near the eastern boundary of the city. It is also said to be in contemplation to enlarge the passenger depot on Exchange street. These improvements are amply justified by the rapidly increasing receipts of the Company.

☞ We learn from a Detroit paper that a Mr. Torrence Sibley, who was from Massachusetts, and was on his way to visit a brother at Tecumseh, is supposed to have been drowned, by rushing overboard from a steamboat, between Buffalo and Dunkirk. He was a somnambulist, and is believed to have committed this act in alarm from the influence of some horrible dream.

☞ State Agricultural Society.—We give the following abridged stat ment for the benefit of such of our readers as may be interested in this distant celebration. The sum of $3,400 has been appropriated for premiums at the forthcoming Exhibition. One dollar must be paid by each exhibitor. Stock and articles for competition must be on hand on Monday, Sept. 13, and duly entered and arranged on that day, or they cannot compete at all. The judges will be at Saratoga on that day:

The next meeting of the Executive Committee will be held at Saratoga Springs, at the U. S. Hotel, on Monday, the 13th day of Sept., at 12 o'clock M.

☞ A Floating Elevator.—Messrs. L. Barker and John Pagin are converting the old steamboat Thomas Jefferson into a floating Elevator, to be used in transferring grain from lake vessels into mills, canal boats, or warehouses. This she can do at the rate of 2000 bushels an hour. By means of this contrivance, grain may be cheaply placed for winter storage in warehouses which have not machinery for the purpose.

A patent for this improvement has recently been taken out by Mr. Pagin, one of the owners of the Thomas Jefferson, and this is the first practical application. Such an invention might be usefully employed on the St. Clair Flats, in relieving downward bound vessels when they are too heavily laden. The steam engine employed is of 20 horse power, and made by Messrs. Bell and McNeish—the boiler by Mr. Newman.

☞ We are requested to state for the information of the travelling public, that the Lake Ontario U. S. Line of Steamers for Montreal, will continue to run seven days each week until the 19th of September. After that date, six days each week until the close of navigation.

☞ State Agricultural Fair.—The Hon. Silas Wright had been expected to deliver the Annual address at this Exhibition. Possibly it had been already prepared, and if so we hope it will be published. Ex-President Van Buren and Mr. Webster are expected to be present.

A Dramatic Prize.—Mr. Edwin Forrest offers a liberal opportunity for the production of something worthy of American literature—proposing to give the sum of three thousand dollars for the best original tragedy, in five acts, the production of an American citizen; or in case no good acting play should be produced, one thousand dollars for the best tragedy so put in.

The Chinese still going to law—"losing a cow to win a cat." Excellent.

From Mexico.

The papers received by this morning's mail, contain several columns of details of the news from Mexico, a brief report of which was received by Telegraph on Saturday. The substance of all these accounts will be found below. The attack of the train from Vera Cruz, under escort commanded by Major Lally, was made when about 24 miles from that town, though the annoyances commenced when just without the walls. The main affair is thus described:

Attacks were made upon the front, rear and centre trains—they were repulsed at all points, and we advanced to this encampment, but our loss is severe. Two officers were severely wounded, Capt. James H. Caldwell, of Voltigeurs, and Capt. Arthur C. Cummings, 11th Infantry—the former a native of Maryland, the latter of Virginia. Ten men, non-commissioned officers and privates, were wounded; none were killed outright, but one has died since, and some are perhaps dangerously wounded. Hopes are entertained for the recovery of the two Captains.—The writer thinks the command will make its way through securely, perhaps fighting for many days. We are about twelve miles from the National Bridge and move on a few miles to-day. The Sun of Anahuac says eight of our men were killed, including Capt. Loyalls of the Georgia mounted men, and twenty-five of the enemy. Gen. Wilson immediately ordered out reinforcements. Verbal reports say the Americans had thirty men wounded and as many horses killed. Serious fears are entertained for the safety of the train, the Mexicans having made extensive preparations to cut off. The Mexicans are under the impression that the train has a million dollars in specie.

It was reported at Vera Cruz that the Mexicans had destroyed a part of the National Bridge, and created defensive works. A decisive action was expected at this point. The Sun of Anahuac sets down the number of Guerilas at four thousand. Col. Wilson is convalescent. The health of Vera Cruz is more favorable. The Spanish minister was expected at Vera Cruz on the 25th, on his way to Spain. Kendall, from Puebla, writes that Capt. Ruff, with his Rifles, has given the Guerillas at San Juan De Los Llanos, a severe drubbing, killed 43 and wounded some 50.

August 5th.—He writes that the account of Ruff's adventure is fully confirmed. Major Gaines thinks Santa Anna has about 15,000 tolerably disciplined, uniformed and drilled troops, besides undisciplined recruits, adding little strength to his army. Kendall adds that since he commenced this letter, Scott's orders to march the army have been issued, and gives particulars as per first despatch. The sick and convalescent he left behind. Scott was accompanied by Quitman, and the whole army will probably be concentrated at some point beside the capital.

On the 6th, Kendall writes that Pierce arrived this morning, his men though jaded and travel worn, making a most soldierly appearance. He came through without losing a man, though he was attacked several times. Kendall says a hundred conflicting rumors are afloat—one that Valencia is coming out with twelve thousand men to attack us in the front, while Alvarez, with five thousand Pintos, makes a demonstration in the rear. Another rumor says that Santa Anna has disarmed three thousand of the National Guard, who were discovered plotting against him, and all was confusion worse confounded. Still another, that Puebla was to be attacked after our

army had left, the garrison put to the sword, and the citizens punished for their good treatment of the Yankees.

Kendall believes there is no shadow of foundation for any of these rumors. He concludes his letter late at night by saying that Gen. Twiggs will move tomorrow morning. Report continue to come in that large bodies of the enemy are moving in the neighborhood. He had just heard of a thousand guerillas seen at El Pinal. The Delta's Vera Cruz correspondent says a letter received from Puebla, dated the 11th, to a mercantile house, states that Gen. Scott moved forward that day. Tampico was very unhealthy — The yellow fever had broken out in the Anton Lizardo garrison.

At Tampico they were constantly expecting a night attack from Garray. Nothing further from Gen. Taylor. The Diario Del Gobierno, 3d Aug. says the Commercial Times, seems to announce a desire on the part of Santa Anna and his ministers to prepare the minds of the people for pacific arrangements. El Solden denounces as puerile, the Diario's ideas of waiting until victory crowns the Mexican arms, before making or receiving overtures of peace.

Advices three days later have been received at New Orleans, by the arrival of the steamer Alabama.

The only additional intelligence, however, is 1st, that ex-President Paredes had effected a landing on the coast of Mexico, and succeded in making his way to the interior; 2nd, that Col. Wilson had died of the yellow fever.

NEW YORK, August 30—7 P. M.

Conner's Type Foundry, Mercer's Dining Saloon, Bell's Printing Office, and three small shops, corner of Ann and Nassau streets, were burned last night—loss, 40 to 50,000 dollars—Insurance, $6,000.

Mr. Cummings and wife, poor people, living in the fourth story of one of the buildings, were burned to death.

The Southern Mail, at Baltimore, brings no news from the army.

A hurricane at Kingston, Indiana, did great damage to the crops, and killed many cattle. Welch & Delevan's Circus destroyed, and Levi North, the great Equestrian Rider, killed.

Capt. Drake has arrived at St. Louis from Oregon, which place he left on the 6th of May—all quiet. Crops promise well. Capt. Drake saw men from California on the 4th of July. Gen. Kearney in command. Lieut. Stockton is at Monterey. Several of our ships were at San Francisco. Oregon emigrants were getting on well.

WAR QUESTIONS.—The Union begins to see that "the Whigs will have a lean and embarrassing majority in the next Congress." We cannot tell how lean it will be, but we fancy it will not be strong enough to make it prudent for the Whigs to waste themselves in foolish divisions: but that it will be exceedingly "embarrassing" to Mr Polk and his administration, there is not the least doubt. It may be put down as a settled thing that the next Congress will not vote away the public money without knowing what is to be done with it, and it may be assumed as equally certain that Mr. Polk will be called upon for a more particular account than has yet been rendered of various sums which have been already appropriated and expended. There will be many other very "embarrassing" measures which the next House of Representatives will insist upon, and some of the most "embarrassing" questions will be asked that any President has ever been called upon to answer.—*Providence Journal.*

TEN DAYS LATER FROM EUROPE

NEW YORK, Aug. 29—8 P. M.

The *Gundelquixer* arrived yesterday, bringing dates to the 14th inst. Her news is of importance, and will effect the interests of many produce dealers in this country.

There was a great panic in the money market, causing general depression. Many large houses have failed. They were mostly corn dealers whose aggregate indebtedness is one million three hundred thousand pounds sterling Among them are, C. DOUGLASS & Co., LESLIE, ALEXANDER & Co., SHEPARD KING and MELLVILLE, PERIN & Co.

Bank interest 5½a6½ Consols. Failures still going on. Trade in manufactures dull.

The weather continues fine, and the crops are good.

Cotton dull; perhaps one-eighth of a penny lower. Trade dull.

Breadstuffs unsettled by the crisis in the money market.

The receipts are enormous, and the quotations still have a downward tendency.

Flour in Liverpool; 25s26s. In London, 27a 28. Corn 26a30s, and very dull. Wheat 66a 68. On the continent crops favorable, and markets dull.

The *Union* arrived at Cherbourg in 14½ days.

There is no miscellaneous news of importance.

The monetary panic occupies public attention.

TEN THOUSAND VOLUNTEERS ORDERED OUT.—We learn that the Government has finally determined upon making a requisition for ten thousand more volunteers, under the original law authorizing the raising of fifty thousand men. We are led to believe that the requisition is made principally upon the Western States. We may expect that the call for the additional volunteers will reach us through the papers in a day or two. The design of the Government is to have thirty thousand men under Gen. Scott's orders by the end of September. The sooner the better.—*N. O. Pic., August* 20.

STATE OF NEW YORK, SECRETARY'S OFFICE, } ALBANY, August 3 1847.

To the Sheriff of the County of Erie:

SIR: Notice is hereby given, that at the next general election to be held on the Tuesday succeeding the first Monday of November next, the following officers are to be elected, to wit:

STATE.

A Secretary of State, Comptroller, State Treasurer, Attorney General, State Engineer and Surveyor, Three Canal Commissioners, and Three Inspectors of State Prisons.

DISTRICT.

One Senator for the Thirty-First Senate District, consisting of the county of Erie.

COUNTY.

Also, the following officers for the said county, to wit: Four Members of Assembly, one to be elected in each Assembly District.

Yours, respectfully,
N. S. BENTON, Secretary of State.

ERIE COUNTY SHERIF'S OFFICE, Buffalo, August 6, 1847.

A general election is to be held in the County of Erie, on the second day of November next, at which will be chosen the officers mentioned in the notice from the Secretary of State, of which a copy is annexed

TIMOTHY A. HOPKINS, Sherif.

For the Western Literary Messenger.

Two Lessons.

With evergreens yon mountain's breast
Is spread, save yonder summit bare,
Where once an eagle built his nest,
Hign in the boundless fields of air.

And oft with childhood's chosen mate,
Tried I that lofty rock to climb—
We could not scale the mountain great
Yet higher would we rise each time.

From this I have a lesson learned,
If failure's mine to try again;
For honor is by labor earned,
And we excel by toil and pain.

The eaglets from that mountain's brink
Would soar their new-fledged wings to try,
But they disdained to earthward sink
And rose aloft toward the sky.

We learned from this to aim on high,
Nor stoop unto earth's lowly things,
But soar away unto the sky,
As the young eaglet upward springs:

ROYALTON, N. Y. J. H. B.

A SON STABBED BY HIS FATHER!—A painful case of stabbing occurred at West Bloomfield, Ontario Co., on Thursday last.—The circumstances, as we learn from a gentleman from that town, are as follows: A man named Benjamin Peck, residing in the village, had for a number of years been on bad terms with one of his sons, Mathew Peck, the two not having spoken together, except occasionally, in a number of years. The feud was of long standing, and had grown and strengthened with time.

On Thursday last, the father went to the shop of the son, who is a wagon maker, when the latter requested him to leave the premises: remarking that they were not on speaking terms, and would prefer that he should not visit his shop.—The father immediately laid his hand upon the son's shoulder, and with a sharp knife inflicted several severe wounds on his arm, and another in the side, the blade of the knife passing out underneath the arm. Although pretty severe, the wounds are not dangerous.—*Rock. D. Adv.*

BUFFALO MUSICAL INSTITUTE FOR YOUNG LADIES.

At the residence of Prof. W. R. Coppock—Composer and Teacher of the Piano Forte, Organ, Singing and Composition.

An institute devoted exclusively to Musical Education is not yet common in this country; but in Europe the test of experience fully shows its great advantages over the too general superficial manner in which this important part of polite education is acquired. The advantages this institution offers to those desirous of completing their studies as Organists—or practical players of the Piano Forte, together with a thorough system of imparting the same to others is fully established by the many precedents of the past 15 years. The pupils are constantly guarded in their practice, against all bad habits, and from the various stages of progress they may be in, are continually stimulated to effort and industry, by association with each other. The family too, are all players, and the theory is amusingly discussed, impressing its rules in a more pleasing manner, and more lasting upon the understanding, than by the mere dry study of an elaborate book. Music is composed and arranged from time to time, showing the various styles and harmonies analytically, and adapted for performance on several Pianos at the same time. This teaches a thorough knowledge of counting, and dividing passages into their given time. Vocal music is particularly attended to, and when the pupil has a moderate share of talent, we hesitate not to say, a correct and pleasing singer can be made. The Piano Fortes used are all new, and of the finest quality, and every inducement will be given to render the true spirit with as profitable. The building is commodious, and has a fine garden attached, with Green houses, Bathing rooms, &c., and is pleasantly situated in Seventh street, between Niagara street, and the Falls rail road, and about midway to Prospect hill

Terms made known upon application at the Institute, or by mail, post paid, directed Prof Coppock, Buffalo

Prof Coppock, keeps constantly a choice selection of Piano Fortes for sale,

Buffalo, August 3, 1847.

PRINTERS' FURNISHING WAREHOUSE.

WILLIAM PRESCOTT, Manufacturer of Printing Inks, No. 6, United States Hotel Block, Pearl St., Buffalo. Printing Presses, Metal and Wood Type, Cards, and every other description of Printers' materials constantly on hand at New York prices, adding transportation. Also, sole Agent for the sale of C. J. Gayler's Patent Double, and Improved Single Salamander Book Sides n18 3m.

REMOVAL.

WILLIAM J. MAY has removed to No. 274 Main St, in Kremlin Stores, where he will be happy to see his old customers. One price, good goods, small profits and fair dealing, will always be the rule at No. 274 m17 2m.

CHEAP CASH BOOK STORE.

Song.

BY MRS. C. A. CHAMBERLIN.

There's a light to earth's dim pathway given—
Like the sunbeam, it brooks no control;—
'Tis a halo whose beauty is heaven,
Let it circle thine innermost soul!

It may come when life's morning is bright,
It may come when its fairy tints wane—
But I charge thee to welcome that light,
For *thee* it will beam ne'er again!

There's a pearl in life's waters for thee!
And when thou that pure pearl hast found,
No mortal can e'er richer be
Than thou, of the Deity crowned!

But if coldly, its rays all divine,
Thou notest, and turn'st from its glow—
Though the wealth of the Indies be thine,
Thou art poor in thy heart's tent of snow!

There's a spirit-harp toned but for thee!
If its strain mingles not with thine own,
'Tis on earth but a lost melody—
Or a yearning, and sorrow-fraught moan!

TERRE HAUTE, Ia.

For the Western Literary Messenger.

Henry Landon.

A SKETCH—BY AZA.

Henry Landon was the only son of highly respectable and wealthy parents, who resided principally in the pleasant town of S——. Henry was an idolized child, and therefore neither pains nor expense were spared in his education. At an early age he entered B. college, and at nineteen graduated with distinguished honors. Henry was tall and graceful in figure, and his countenance, if not handsome, was interesting and full of intelligence. His disposition was naturally of so mild a character, and his manners so perfectly courteous and gentlemanly, on all occasions, as to render him beloved by all with whom he became acquainted. Mr. and Mrs. Landon were perfectly delighted with Henry's appearance and improvement, upon his return from college, and frequently declared that he was "all the fondest heart could wish" or require. Mr. Landon and lady were apparently amiable, but alas! they were also the votaries of fashion. The sparkling wine was ever to be seen upon their side-board, and Henry, before he was aware, had learned *to love* the beautiful poison. Soon after his return from college he commenced the study of Law, and applied himself with so much energy to his profession, that after the lapse of a few years he was considered decidedly the most talented and popular lawyer in the town of S——. Soon after entering upon the practice of his profession he had married a lovely young lady, at whose earnest request he had entirely abandoned the "wine cup," and for two or three years all was well.—Riches flowed in upon him, and he and his were happy. Alas! their sky was not always to be clear.

In a little more than two years after Henry's marriage, a young college friend came to visit him, and from the time of his arrival may be dated the commencement of trouble in this heretofore happy family. Henry's companion was a wild, dissolute young man, much given to gaming and every species of intemperance, and who was continually urging his host to taste again of the flowing goblet. Henry at first steadily refused, and as a reason for so doing, informed his companion that on his marriage day he had solemnly promised his wife never more to taste of aught that could intoxicate. The young man continued to urge for a season, but finding Landon still resolute, he changed the method of his proceedings, and branded him with the appellation of coward, and "hen-pecked husband." This last had the desired effect, for Henry, like many of his sex, would sooner stoop to commit a crime, however degrading, than be considered in any measure governed by a woman. He tasted,—he drank freely,—his appetite for strong drink returned with more than its former keenness, and in a short time he become a constant worshipper of Bacchus.

Two months passed, Henry had indeed abandoned the wine-cup, but it was for stronger drink—and he was now, at the dawn of almost every day, brought home from some midnight carousal, in a state of "beastly intoxication." His wife entreated him with tears to again abandon his cup and be happy; but the once kind, obliging and affectionate husband, was transformed into the brutal inebriate. She therefore received curses alone in answer to her prayers, and a command never more to mention the subject of reform to him.

One evening as Mrs. Landon was reading in her own apartment, she was startled by an unusual sound which seemed to proceed from the parlor below. Instantly she laid aside her books and directed her steps towards the scene of confusion, but before she had reached the entrance of the drawing-room, curses, dark and fearful as ever issued from mortal lips, assailed her ear, pronounced in the well known voice of her husband. She started back for an instant, and her cheek blanched with terror. Then regaining composure, she slowly opened the door. What a scene was before her! There, in the centre of the room stood her husband, his face red and swollen, and his eyes flashing with indignation. In one hand he held a decanter of rum, the other was closely clinched and presented in a threatening manner towards his college friend, and three wretched debauchees, (such as he would have scorned to look upon in former days,) who stood near him. Overturned by his side was the centre table, and all of its beautiful ornaments, together with a quantity of gaming cards, were scattered about the room. "I tell you, Burtney," said he to his college friend, "you are a cheat and a knave; you wished me to play that you might win my all, and now you have done it, and I am a beggar! I have not so much as a cent left to purchase another glass. Burtney, you"—and he uttered words too profane for pen to write, at the same time flinging the decanter at the head of his companion. Burtney caught it, and in another moment Henry Landon was stretched upon the carpet,

the blood issuing in a stream from his forehead, while the fragments of the broken decanter were scattered in every direction. At this sight Mrs. Landon uttered a loud scream, and rushing forward, fell in a swoon by her husband's side.—Burtney stood silently looking on, a diabolical smile upon his lip; two of the drunkards before mentioned commenced singing a rude Bacchanalian song, while the other was cursing and swearing like a maniac. The neighbors, hearing the confusion, hastened to the spot. Henry's drunken companions were turned from the house, and a servant dispatched for medical assistance. Mrs. Landon soon recovered, but Henry, after nearly recovering from his wounds, was seized with delirium tremens, and after a few days of excruciating agony, his spirit departed this life for an untried eternity, leaving a wife and child to sorrow, and to the cold charities of the world.

Dansville, N. Y.

Moral danger of Business.

I ask, if there is not good ground for the admonitions on this point, of every moral and holy teacher of every age? What means, if there is not, that eternal disingenuity of trade, that is ever putting on fair appearances and false pretences—of "the buyer that says, it is naught, but when he has gone his way, then boasteth"—of the seller, who is always exhibiting the best samples, not fair but false samples, of what he has to sell; of the seller, I say, who, to use the language of another, "if he is tying up a bundle of quills, will place several in the centre, of not half the value of the rest, and thus send forth a hundred liars, with a fair outside, to proclaim as many falsehoods to the world?" These practices, alas! have fallen into the regular course of the business of many. All men expect them; and therefore, you may say, that nobody is deceived. But deception is intended: else why are these things done?—What if nobody is deceived? The seller himself is corrupted. He may stand acquitted of dishonesty in the moral code of worldly traffic: no man may charge him with dishonesty; and yet to himself he is a dishonest man. Did I say that nobody is deceived. This man, the seller, is grossly, wofully deceived. He thinks to make a little profit by his contrivances; and he is selling, by pennyworths, the very integrity of his soul. Yes, the prettiest shop where these things are done, may be to the spiritual vision, a place of more than tragic interest. It is the stage on which the great action of life is performed. There stands a man, who, in the sharp collisions of daily traffic, might have polished his mind to the bright and beautiful image of truth, who might have put on the noble brow of candor, and cherished the very soul of uprightness. I have known such a man. I have looked into his humble shop. I have seen the mean and soiled articles with which he is dealing. And yet the process of things going on there, was as beautiful as if it had been done in heaven! But now, what is this man—the man who always turns up to you the better side of every thing he sells—the man of unceasing contrivances and expedients, his long life, to make things appear better than they are? But he the greatest merchant or the poorest huckster, he is a mean a knavish—and were I not awed by the thoughts of his immortality, I should say, a contemptible creature: whom nobody that knows him can love, whom nobody can trust, whom nobody can reverence. Not one thing in the dusty repository of things, great or small, which he deals with, is so vile as he. What is this *thing* then, which is done, in the house of traffic? I tell you, though you may have thought not so of it—I tell you that *there*, even *there*, a soul may be lost!—that that very structure, built for the gain of earth, may be the gate of hell! Say not that this fearful appellation should be applied to worse places than that. A man may as certainly corrupt all the integrity and virtue of his soul in a warehouse or a shop, as in a gambling-house or a brothel.—*Orville Dewey.*

Meager, the Irish Patriot.

It may not perhaps have escaped the notice of our numerous readers, that at the dinner given to Capt. Clarke, of the American Ship Victor, at Dublin, the bold and fiery eloquence of the gifted Irishman, whose name appears at the head of this article, created a startling sensation. On a recent public occasion this fearless champion gave utterance to the following strong sentiments, clothed in lofty and indignant language:

"What has famine done for England? It has been her best recruiting sergeant—it has purchased thousands of brilliant and unscrupulous men. The famine has been her best miner—it has discovered gold mines for her merchants in her bankrupt cities and putrid villages. The famine has been her best swordsmen—it has cut down thousands of her peasant foes. But there is one spot where this powerful agent of English lust must halt—one spot where it must purchase no recruits—one spot where it shall plant no cypress and rear no trophy—one spot where it shall cease to do the business and the butchery of England. It shall halt—it shall be powerless and paralyzed—where the Confederation sits. England! your gallant and impetuous enemy, is dead, your 'great difficulty' is at an end. Ireland, or rather the remains of Ireland, are yours at last.—Your red ensign flies—not from the Rath of Mullaghmast, where you played the cut-throat—nor from Limerick wall, where you played the perjurer—nor from the Senate house where you played the swindler—nor from the custom house, where you played the robber—but it flies from her thousand grave-yards, where the titled niggars of your cabinet won the battle which your soldiers could not terminate. Last year, from the Carpathian crags, we heard the shout of the Polish insurrectionists,—"there is hope for Poland, whilst in Poland there is a life to lose." Sir, there is hope for Ireland, whilst in Ireland there is a life to lose. True it is, thousands upon thousands of our people have been swept down, but thousands upon thousands still survive, and the awful fate of the dead should quicken the noble purposes of the living. The stakes are too high for us to give up the game until the last card has been played—too high for us to throw ourselves in despair upon the coffins of our starved and swindled partner.

"The desperate condition of the entire country demands and justifies bold and decisive policy.—From this hour we must look exclusively at home. Let us have done with the English Parliament—Send no more petitions across the channel. For 50 years you have petitioned and the result has been 500,000 deaths. Henceforth, be that Parliament accursed. Spurn it as a fraud, a nullity, a usurpation. You know it is worse than all this. You are knaves if you do not speak your convictions—you are cowards if you do not act as your convictions bid you act."

'Oh, I'm dead! I'm dead!' blubbered a little fellow the other day, as he went running into the house. 'What's the matter?' inquired the affrighted mother. 'Oh, I ran against a fence and stuck a *knot-hole* in my trowsers.'

Romance of the Nineteenth Century.

BY HORACE GREELEY.

We are in no danger of estimating too highly the extraordinary character of the age in which our lot has been cast, and of the influences by which we are surrounded. The Present is the proper theme of poetry, the fitting scene of romance. Whoever shall faintly realize the mighty events, the stirring impules, the lofty character of our times, is in no danger of passing through life groveling and unobservent as the dull beast that crops the thistles by the way side. The Past has its lessons, doubtless, and well is it for those who master and heed them; but were it otherwise, the present has themes enough of ennobling interest to employ all our faculties, to engross all our thoughts—save as they should contemplate the still grander, vaster Hereafter.

Do they talk to us of Grecian or Roman heroism? They say well: but genius died not with Greece; and heroism has scarcely a recorded achievement which our own age could not parallel. What momentary deed of reckless valor can compare with the life-long self-devotion of the Missionary, in some far cluster of Indian lodges, of Tartar huts, cut off from society, from sympathy, and from earthly hope? How easy, how common, to dare death with Alexander? How rare to live nobly as Washington, and feel no ambition but that of doing good! Take the efforts for the elevation of the African race in our day—ill directed as some of them appear—and yet Antiquity might well be challenged to produce anything, out of the sphere of Sacred History, half so heroic and divine. Let us then waste little time in looking back to earlier ages for high examples, and deeds that stir the blood. Let us not idly imagine that the Old World embosoms scenes and memorials dearer to the lover of truth, of freedom and of man, than those of our own clime. Let us repel alke the braggart's vain glory and the self-disparagement of degeneracy; yet cherish the faith that nowhere are there purer skies, more inspiring recollections or more magnificent landscapes, than those in which our own green land rejoices.

Those daily acts, those common impulses, which, viewed individually, and with microscopic or with soulless gaze, seem insignificant or trifling, take a different aspect, if regarded in a more catholic spirit. Those myriad hammers, which, impelled by brawny arms, are ringing out their rude melody, day by day, and contributing to the comfort and sustenance of man—those fleets of hardy fishers, now chasing the whale on the other side of the globe to give light to the city mansion and celerity to the wheels of the village factory—those armies of trappers, scattered through the glens of Rocky Mountains, each in stealthy solitude pursuing his deadly trade, whence dames of London and belles of Pekin alike shall borrow warmth and comeliness—let us contemplate these in their several classes, unmindful of the leagues of wood or plain or water which chance to divide them.—Readily enough do we perceive and acknowledge the grandeur of the great army which some chief or despot assembles and draws out, to feed his vanity by display or his ambition by carnage; but the larger and nobler armies whose weapons are the mattock and the spade, who overspread the hills and line the valleys, until beneath their rugged skill and persevering effort, a highway of commerce is opened where late the panther leaped, the deer disported—is not theirs the nobler spectacle—more worthy of the orator's apostrophe, the poet's song? Let us look boldly, broadly out on Nature's wide domain. Let us note the irregular yet persistent advance of the pioneers of civilization—the forest conquerors, before whose lusty strokes the sharp blades of the century-crowned wood-monarchs, rank after rank, come crashing to the earth. From age to age have they kept apart the soil and the sunshine, as they shall do no longer. Onward, still onward, pours the army of age-men, and still before them bow their stubborn foes. But yesterday, their advance was checked by the Ohio: to-day, it has crossed the Missouri, the Kansas, and is fast on the heels of the flying buffalo. In the eye of true discernment, what host of Xerxes or Cæsar, of Frederick or Napoleon, ever equalled this in majesty, in greatness of conquest, or in true glory?

The mastery of Man over Nature—this is an inspiring truth, which we must not suffer, from its familiarity, to lose its force. By the might of his intellect, man has not merely made the elephant his drudge, the lion his diversion, the whale his magazine, but even the subtlest and most terrible of the elements is made the submissive instrument of his will. He turns aside or garners up the lightning: the rivers toil in his workshops; the tides of ocean bear his burdens: the hurricane rages for his use and profit. Fire and water struggle for mastery that he may be whisked over hill and valley with the celerity of the sunbeam.—The stillness of the forest midnight is broken by the snort of the Iron Horse, as he drags the long train from lakes to ocean with a slave's docility—a giant's strength. Up the long hill he labors, over the deep glen he skims; the tops of the tall trees swaying around and below his narrow path. His sharp, quick breathings bespeak his impetuous progress; a stream of fire reflects its course. On dashes the resistless, tireless steed, and the morrow's sun shall find him at rest in some far mart of commerce, and the partakers of his wizard journey scattered to their vocations of trade or pleasure, unthinking of their night's adventure. What has old Romance wherewith to match the every-day realities of the Nineteenth Century?—*Young American's Magazine.*

HINTS AS TO SCHOOLING.—"A common error, into which many parents fall, is to send their children to an inferior school first, and afterwards place them in an establishment where they may, as it is termed, "finish" their education. Now, not only is the pupil a severe loser by this method, but the master to whose care he is at length confided experiences much additional trouble. He has not only now to lead the youth into a right path, but to lead him back from many a wrong one; not merely to urge him to the farther acquisition of good habits, but to endeavor to root out many that are faulty. It is related by Quintilian that those who went to learn music of Timotheus paid double price if they had received any previous instruction—a safeguard I would recommend to general adoption by good teachers. But there are other evils connected with such a system, not to mention those which result from change of plans to the student himself. It is obvious that no tutor can be expected to take much interest in the progress of children who are placed with him only as a *temporary* thing. Whereas, if it be understood that they are to continue with him so long as his treatment of them is what it ought to be, he has an incentive to diligence in the highest degree effecuve. He already looks upon them as the future ornaments of his school; and they immediately come under the influence of those well-regulated stimuli which urge them on to fill up the ranks of those who are about to finish their scholastic course. A well-directed establishment, where the morals, intellectual improvement, and health of the pupils are carefully and assiduously attended to, presents advantages which

ought to be appreciated by parents, although they are seldom valued by the pupils." We quite agree in the foregoing remarks. It is poor economy to send children to inferior schools at any time of their career, and least of all at commencement. It is best to begin with a good system, and continue with it. The fewer the changes, the better for the pupil.

A Trip to Chicago in the St. Louis.

NUMBER VII.

Night had spread her raven wings, and brooded over Lake Huron, when our impatient prow, pointing to Mackinac, more than two hundred miles away in the cool North, broke its dark surface into diverging lines of phosphorescent foam. Fort Gratiot was invisible, but its light at first outshone the full orbed moon, then faded into a little star in the horizon, then paled into a glow-worm spark, and then suddenly went out, while Heaven's pure host above shone all unchanging upon the bosom of the lake, worthy to mirror it.

The gay dance was over, the lingering good-night spoken, and all was still, save the regular jar of the engine, the tremulous rattling of the doors and casements, and the intermitting, gently-rushing sound of our swift progress. All things ministered to peaceful slumber. Her hundreds reposed as sweetly in that mighty steamer, upon the waves of Huron, as though its long regular swell, were the heaving of a sleeping mother's bosom, and they her infants. Is there no danger? Yea! not one, but many. But not one that is not known and prevented to the extent of human power and foresight. All are not sleepers here. Many eyes are watching, and the first appearance of peril will call forth all the energies of our commander, officers and crew.

Descend with me, and look into that pit.—There are the stokers, always on the watch, feeding from time to time those fiery furnaces, in the reflection of whose flames, they look like demons. There, in that room, you'll find the engineer, intent upon the clicking play of the machine that moves us. His eye commands it in all its material points, and at once detects the slightest variation from a true working of the whole.—The gauge, marking the pressure of the steam, is right before him—he measures and adjusts the revolutions of the wheels—and his ear is ever wakeful to the tinkle of the bells close by him, which, touched by the Pilot's hand above, warns him to stop, to back, to go ahead. He has his assistants, and here, in turn, they watch the live-long night in solitude. Nor think he's unemployed, and likely to sleep upon his post. Long companionship with that tremendous engine, has made him love it. He is elevated by the consciousness that he, and he alone controls it. To him, it is not mere iron and steel, but a sentient being, perchance a genius whom he, like a magician, makes subservient by his strong spells, bends it to his will, and with it conquers space, and braves the fury of the tempest. And there he sits, and ministers to it, and eyes it with pride, or communes with it as though it had a soul, and felt with him, the glory of their past triumphs, and longed for new ones.

Who are these men thinly scattered between decks? They are watchers for the common safety. Not a sound escapes them, nor would the smell of fire, nor any the least unusual change in matters here. But should fire break out?—There is the hose, by which, in an instant, a jet of water can be thrown by the engine in the deepest recess, the remotest corner of the vessel.—There too are the ranged buckets on the hurricane deck, full of water, and, at the very instant of need, strong hands, directed by cool heads, would wield them.

But should we deviate from our course, or the tornado strike us all unprepared, and hurl us on the rugged coast, or outlying rocks! See there the life-boats. Rely upon it there are means sufficient for the escape of all from shipwreck.—But shipwreck there is no cause to fear. Behold the man at the wheel, his hand ever on its spokes, and his eye glancing continually from the compass to the bow, and seldom wandering far to right or left, save when he notes the stars. He too, though a tried man, is watched, and were he to slumber an instant on his post, would be disgraced forever. And now the watch is being changed. One of the mates retires from the upper deck to sleep, the other, fresh from slumber, ere he takes his post, leans o'er the rail and peers through the dark towards the land, and listens intently—ascertains what way she heads, takes a long, sweeping view around, and then paces the deck, and there will pace, till day-breaks. Not a sound will break the silence unheard by him, not a light, however distant, rise o'er the wave unseen by him, not a token of a change in the weather occur and be unnoted by him. Danger betides us everywhere. On land or sea, it matters not how safe we deem ourselves, peril is ever present. But so far as human precaution, skill, and watchfulness can make us safe, we are so. Let us hope that God views us in mercy too—for without His sustaining will, these all are vain. With souls attuned to thankfulness, and trust in His goodness, and prayer for His protection, let us too address ourselves to rest. 'Tis past midnight, and the air is cool, as it comes sighing from the West. Good night! F.

JOHN SMITH'S YARNS.

NUMBER VIII.

The morn was beautiful, and as I gazed upon the dark lake waters, and inhaled the pure, cool air, I was excited perchance a little beyond the ordinary limits of my sober way of thinking.—And, as I gazed from the bow upon the waters I observed a phenomenon common enough indeed, but then novel to me. There was a low, rolling swell of dark blue waves upon the lake, and these waves were smooth, save that they were marked by what seemed tiny, elevated and parallel, but waving lines, like those a gentle breath

creates on oil,—and a little zephyr, in crossing, flecked them with darker spots, and so they looked like undulations of a rich velvet tissue. And I broke forth unwittingly, though John was by, into a rhapsody, about our vessel, and how she was so proud a proof of human wit, that Nature delighted to honor her, and spread her silken fabrics at her feet, while she marched onward, like a conqueror. "More truth than poetry," says John, "in that,"—and he pointed at his vest,—an old, dark blue vest, of watered silk, and then at the wave. My enthusiasm sunk at once,—for there was a strong resemblance. "Pshaw!" says John,—"why don't you select striking and expressive phrases in your descriptions? A rich, velvet tissue, forsooth! Why, no one will understand that. But, confine it to my old watered silk vest, and my friends at least, and all the tailors, will understand you!"—I went to breakfast forthwith.

What has come over my old friend? He is usually grave and rather saturnine. But now he chats with every one, and seems to be in favor with many. What means that knot of folks gathering around him? I'll go and see. As I live, he's telling an Indian tradition.—I wonder where he got it.—I'll note it down.

THE BLOWING BEAVER.

The tradition you desire me to relate, fair ladies, and learned gentlemen, like all of its like, is rude. It is connected with the Saw-geh-hah-naw, or, as it is usually pronounced, Saginaw Bay, which we crossed in the night, and which bears an evil name among navigators, for the tempests that blow, in or out of it, almost perpetually. The word is not Huron, as my learned friend Schoolcraft supposes it to be,—but is pure, unadulterated Ojibbeway, or, as we term it, Chippewa. It means the blowing beaver. The story was told me by my venerable friend Hole-in-the-day, the most powerful chieftain of the Chippewas. I shall always remember the story, less from any impressive merit of its own, than from the memorable scenery in which it was imparted to me, and the solemn manner of the old warrior.

We were sitting on the northern slope of a spur of the Porcupine mountains, after a hearty meal on a large doe the chief had slain. We were alone on the rough hill side, thinly sprinkled with birch and evergreens. Before us lay Lake Superior, which is indeed an ocean. The Apostle Islands, with the dull factory on one of them, were but eight or ten miles from us, and I saw, or thought I saw, the haze of Isle Royale in the distance. He was lamenting, as the nobler Indians always do, the degeneration of their tribe. He spoke of their former greatness, and of the time when the Chippewas ruled the whole land bordering on Huron, and struck the deer at the River of the tumbling waters. I asked him many questions about his nation's origin and history, and he answered them frankly, and with far more animation than I had ever before observed in one of his race. I will give you the tradition in question as nearly as I can in his words—that is, I will give you as close a translation of them as I can:

Listen, Brother! Manitou made the earth.—He thrust down his arm from the sun, in which he lives, and dragged it up from the bottom of the sea. He smiled upon it, and it brought forth all good plants and trees. There was no bad thing upon the earth. Then the Great Manitou took some mud from the bed of the great Lake, and made a man and a woman, and laid them in the morning sun, and in the evening they had life, and walked. But the Manitou saw that they were black, and he took hold of them by their heads, and lifted them over the sea, and so their noses being yet soft, were flattened. Then he made another man and woman out of the clay from the hills, and in the evening they lived, and walked; but the Manitou liked them not, because they were white, and so he carried his white children to another country far over the sea. Then he took more clay and fashioned it into another man and woman. And he touched yon hill top with his finger—here he pointed to a magnificent mountain—and it melted, and he took in his hand the copper that ran down from it, and spread it over the man and woman; and in the evening they walked, and lo they were red. Then the Manitou was pleased that he had made a people fit for the beautiful earth around these Lakes. This man and woman were the father and mother of the Chippewas. And they increased faster than the great trout of the waters,—for the Manitou gave them the birch tree for their canoes and wigwams, and corn for food, and filled the waters with fishes, and created for his red children the beaver, and the deer, the elk, the moose, and the buffalo. The squaws scratched the earth with little sticks, and the corn shot up and ripened; the warriors walked a little way, and brought home big game; the children of the Chippewas basked in the sunshine on the Lake of the Tumbling Waters, and played with agates and cornelians on the beach of Lake Superior. Then the bad Spirit looked down from the North Star upon the earth, and saw how happy were the Chippewas. And he thrust his hand down and gathered snow and rocks, and sprung upon the earth. And as he came down from the North, snow fell, and cold winds whistled about him, and the corn was blasted, and the Chippewas shivered with the cold. And he threw the snow and rocks abroad, and all fierce things were created, which have cold and stony hearts. The panther and the wolf drove away the game, and the rattlesnake struck the heel of the Chippewa; and the Bad Spirit laughed as he stalked along, like a great beast, with tusks, trampling the forest.—Then the Great Spirit hurled a huge piece of the moon, and and it struck the Bad Spirit on the head, and broke off his tusks, and was itself broken into very many pieces of pure copper, and they lie scattered over all the land. One of the largest fell in the Ontonagon River, and was car-

ried away but a few moons since by the white men. When he was so struck down, the Evil Spirit was terrified; and he rolled into the Lake, and turned into a big beaver, and dove to the bottom, and swam under the water until he reached the bottom of Saw-geh-hah-naw Bay, and there hid himself, and dare not come out again. There he lies still, panting with terror, and as he draws in, or expels his breath, the winds rush in and out of that accursed Bay.

John, where did you get that legend? It is not a legend, and never will be, if I can help it. It is only a tradition—an Indian tradition. Where did you get acquainted with Hole-in-the-day? I saw his name at the foot of an Indian treaty once. And then you did not meet him in the Porcupine Mountains? I never was there in my life—I never saw Lake Superior. John, John! What a liar you are getting to be! Pshaw, F., you ought to say poet, or antiquarian, or archæologist. The tradition is just as good, as genuine, as any you'll find in Heckewelder, or Schoolcraft, or any of those men who potter with note-books among the Indians. They are all lies, made by the Indians to suit the occasion, or please the white listener. I have heard about a million of them among the Senecas, and know how they are engendered. The white man asks for a tradition and the Indian gives him a story—and the white man dresses it up and publishes it. But I am not sure I have the merit of this one I related.—It seems to me that I have heard, or may have heard, somewhere, some such fable, or that I may have dreamed it. I plead not guilty of the fabrication—Mab or Momus made it.

All day we journeyed over the still, lone waters. Not a moving thing was ever in sight, save a large steamer a far off on the starboard hand, bound down. Not a particle of smoke escaped from her pipes, and naught indicated that she moved, save the white foam at her bow, and that seemed not to change. She was beautiful, indeed,—"a painted ship upon a painted ocean." Night was descending when we passed the light on Bois Blanc (pronounced buw-blow) Island, and covered all things when we moored at Mackinac. F.

NUMBER IX.

Three hours, dark hours of the evening, we lay at Mackinac. It is not well to tantalize with a mere taste, when we so speedily can give you the dainty. Farewell, beautiful Island, so soon to be revisited! We flitted through the Straits by night, passing the light ship anchored off Fort Wagoochince, or, as mariners indifferently pronounce it, Wabishanks, or Wabbeshanks. There she floats, through the season of navigation, marking the channel with her low lantern, held in place by a mushroom anchor and massive chain. What a life they lead who live in her the sweet summer through, cut off from land!

Morn broke, and we were skirting the western shore of Michigan, and passing the Foxes, which sleep far from the main, upon the gentle Lake. A long train of sandy isles rear themselves in line along this coast, their white sides gleaming amid the mists, and crowned with evergreens atop. As we issue from the Straits into Lake Michigan, we see the first of the Beavers, three or four in number. Then, after a long interval, come the two Foxes; and then, after another interval, the mysterious Manitous. Before noon, on the second day of July, we were taking in wood at the North Manitou; and we seized the opportunity to explore what we could of its recesses.

It lies some twelve miles from the main, and the opposite coast is as wild as the Island. Its length is eleven or twelve miles, its average breadth about six. It seems to be a mass of pure sand heaped up by the waves, and accumulated in the centre in a long high ridge, surmounted by two knolls, which show at a distance like circular forts. The lake, or western, and the northern sides, are quite elevated and precipitous, while it declines nearly to the level of the water to the south and east. The beach is a beautiful quartz sand, and the translucent waves dash up on it, over beds of pebbles of limestone whitened by the water, of coarse jasper, agate, and greenstone. A belt of hemlock, spruce, and tamarack, about half a mile wide, encompasses it, but the centre of the Island was densely covered with the most thrifty beech and maple, and this made it what it is, the principal wooding place for steamboats between the St. Clair River and Chicago. The South Manitou is essentially similar, but has on it only one pond, while the North has three; and its central ridge is topped only by one sand hill. The ponds on the North Manitou are described as clear, shallow pools, full of perch and bass; the largest is about twenty, some say fifty, feet above the Lake: and they have no apparent feeding stream, nor outlet.

And now for the inhabitants of the Isle. The greatest curiosities in this way are the human dwellers therein, comprising a merchant, from sixty to eighty choppers, some of whom have families, and the overseer, one of the company engaged in getting out the wood. The Company has built a long and substantial pier, at which steamers tie up to take in fuel. There is a little village near it, comprising the small store, a very good frame house, stables for the horses and oxen employed in drawing the wood, an ice-house, a storehouse for provisions,—all of which are imported, save fresh fish,—and a few huts of the choppers, the mass of whom, however, are scattered over the island. It is a strange, but peaceful and happy community.

The Lake has been known to be frozen to the mainland once only. And the opposite coast has few inhabitants except remnants of the Chippewa and Ottawa Indians, who visit the Manitous occasionally, in their bark canoes, to fish and trade. Whitefish abound here, but the Trout does not. It prefers a mossy bottom, and the bed of the Lake adjacent to these islands is scarcely aught but naked sand.

The brute inhabitants of the island are few in number. It has no deer, nor bear, nor any large animal; but has some otter, and abounds with rabbits, and chipmonks, or striped ground squirrels. There are said to be no snakes nor mosquitoes on it—(quere as to the mosquito) but the people do suffer from the sand-fly, and the far worse sand-flea.

What is the sand-flea? I put that question to the merchant, and will give you the substance of his answer: It is said to be very small, and like a flea in shape. I have suffered from this plague but never saw one. They do not bite by day, but only at night. In the daytime, they get up one's clothes and hide in the seams, and lie quiet until night, and then commences torture. The men, as the only remedy, get up and change their sleeping places. They prevent their assaults by tying their trousers at the bottom close to their ancles, so as to prevent these pests from getting up. Thank fortune they swarm on the sandy soil only for a month or so.

But what do you do in the winter to while away the time? Chop, read, work and play a thousand ways, and sometimes visit, or are visited by the Indians of the Michigan shore. The first steamer is looked for, O, how anxiously! It brings us the news of the five or six months during which we have been shut out from the world.

It would seem to be a sad life, but they who live it say not so. The island is quite salubrious, and wherever Health reigns, Pleasure abides.

Having taken on a large supply of most excellent wood, of which the standing price here is one dollar and fifty cents a cord—we left the Manitou, and coursing around its southern extremity, laid our course for Sheboygan, a rising town on the west coast of Lake Michigan. Naught of particular interest occurred in crossing, save that we saw the sun descend from behind a cloud, like a blood-red cone into the Lake. Yes! I had forgotten. Another incident occurred, which, with the dreary expanse before us, heightened the illusion that we were at sea. When we were seven or eight miles from the island, a woodpecker, with flagging wings, and the flickering flight almost peculiar to its species, overtook us, and would have alighted on our deck, but for a lady who, stepping forth with extended arms to welcome him, frightened the wanderer, and he turned towards a vessel in the distance. I hope he carried his red head thither safely, and found rest. A few minutes afterwards, a bold little bird, with a big, black, tufted head, alighted on the upper deck, and ensconced himself under a lifeboat. I had the pleasure of seeing him, soon after our arrival at Milwaukee, hopping upon the wood-pile on the wharf, and preening his wings.

We touched at Sheboygan not far from midnight, and arrived at Milwaukee early in the morning of the third day of July. F.

Children.—"Ye stand the nearest to God, ye little ones! The smallest planet is nearest to the sun."

A Patriarch.—One of the most estimable citizens residing in the vicinity of Philadelphia is Major Philip Reybolds, a gentleman largely and successfully engaged in agricultural pursuits. A correspondent of the *North American*, in correcting some errors in the account given in that paper of Mr. Clay's recent visit to Major R., gives the following interesting particulars respecting him and his family. He is a veritable patriarch:

And first—the Major has, *as yet*, but four sons-in-law; but these, united with his six sons—as they all pull together—are a formidable phalanx, and equal to any emergency. His flock of sheep are the antipodes to the Merinoes, being of the largest class of the long wooled breed, boasting a carcass 320 lbs., live weight, and a fleece of 17 lbs. when clipped. Nor do I coincide with your idea of the *Barony*. I consider the Major a "nature's nobleman." With a frame of body two yards and two inches in height, and a mind to fill it, I scarcely know a man his equal in external as well as internal endowments.—With a family of six daughters, and six sons, all grown to man's estate, and not a black spot amongst them, he may truly be said to be "the happy father of a happy family." But to see him as he is you must visit him at his own house on a Saturday evening, surrounded by his sons and their wives and children, taking counsel for the ensuing week; for it ought to be known, he is still the prime mover of all their actions, and, like the main spring and pendulum of a clock, sets and regulates all their movements for the next seven days. Messrs. Editors, I have been present on such occasions, and never have I seen a congregation so attentive to their duties, or a pastor more truly beloved and honored—good-looking, too, into the bargain.—In short, I consider the Major another Jacob, who, with his twelve tribes, have taken possession of another "Land of Canaan," and well do they till it.

But, sirs, will you, when you pay the visit you promise, and of which we hope soon to be favored with an account, just calculate how much happiness, union of purpose, stability of character, and success in life, is attributable to the female head of the establishment—an individual still remaining amongst them, to counsel and to comfort; and who, on a late occasion, received the grateful congratulations of *sixty-eight* members of her family under her own roof; rising up and calling her blessed! And may this blessing—the richest of all human possessions—rest upon and remain with her for many years to come!

The Slave Trade.—Last Thursday forenoon, at 11 o'clock, a coffle of slaves, to the number of eighty-five, was marched from this city, across the Long Bridge over the Potomac, for the South. They consisted of men, women and children; the men chained together: some of the women carrying children, walking with them; other women and children riding in two wagons which accompanied the train. Some were weeping; many were ragged; nearly all were barefoot; one was playing a fiddle—a not unfrequent accompaniment of such scenes!

The coffle, we presume, was chiefly made up of slaves purchased from the surrounding country in Maryland, which seems as if emptying its slaves wholesale into the "far South."

It is but two weeks since we had occasion to notice the departure of another coffle of one hundred slaves by the same route!

The Annexation of Texas with Slavery is producing its legitimate fruit.—*National Era.*

For the Western Literary Messenger.

A Tribute,

To the Memory of Miss Harriet K. Rogers of Buffalo, who died June 9, 1847.

Of gentleness and modesty possessed,
Young maidenhood sat nobly on her brow:
With all the graces which the meek e'er blest,
The Savior did her heart in youth endow.

For all a kindly smile she ever had,
And mellow words, that soothed the sorrowing heart;
To every child of want, lone, thinly clad,
Her ready gifts did joy and hope impart.

Parental love such treasure well may prize,
And sorrow that the fair and gentle one,
Impatient for her "mansion in the skies,"
Her course below, though bright, has briefly run.

And Christian Friendship, too, may well lament
The sacred wound her earthly band must feel;
But spirits sanctified, awhile though rent—
Be comforted, ye mourners—heaven will heal!

Buffalo Horticultural Rooms,
September 1, 1847.

The Committee on Flowers and Flowering-Plants, beg leave to offer the following report:

Your committee have examined with great pleasure the various bouquets, cut flowers and pot plants sent in for exhibition; and although we have protracted our show through August, from the backwardness of the season, which is certainly two weeks or more later than the last, September cannot vie in many respects with June, in its number of floral gems. We have notwithstanding, that noblest of flowers, the Dahlia. This flower in its perfection, is of recent introduction to this vicinity, and although we have for many years grown the numerous common kinds, to Mr. B. Hodge, of the Buffalo nursury, principally, are we indebted for the very splendid and perfect flowers exhibited. It were well perhaps in this place to quote from standard English writers the points, distinguishing excellence, in this flower, that we may be better understood as critic in estimating their qualities.

The Dahlia *variabilis* is the parent from which the almost innumerable varieties the present day have emanated,—and this is the more remarkable that from a single variety, so great a diversity of colors, such as crimson, scarlet, purple, white-orange, yellow, &c., should have been produced, and this without the process of hybridization, and still yet more singular, that among the great diversity of colors, that of a blue one has never appeared. The enthusiasm of European florists know no limits to effort; and even poverty-stricken Ireland, has, by her Dublin Horticultural Society, offered a premium of £2000 for the production of a blue Dahlia; and the Edinburgh Society has offered a prize of £1000 for the same supposed impossibility. The beauty of a Dahlia is estimated principally by the shape of the flower, which must be perfectly circular, without any of the petals projecting beyond the others, and full to the centre. The disk is an unpardonable defect, and disqualifies even an otherwise fine flower from competing for a prize. Dishonest florists frequently try to remove it artificially, after the flower has expanded. The size and color of the flowers are regarded as of secondary consequence to the form; though, of course, large flowers are prefered to small ones; and the colors, whatever they may be, must be clear and distinct—free from blotches, cloudiness, or muddiness.

Our season thus far has not been favorable to the free expansion of the flowers, and for the past few days the drying winds have been still more prejudicial. The Dahlia riots in a hot and humid atmosphere, and thrives best in a sandy loam which is not too rich. It is a native of the high and sandy plains of Mexico, from whence it was introduced by Baron Humbolt in the year 1798, and sent by him to Professor Cavarilles, of the Botanical Garden, Madrid, who gave the genus the name of Dahlia, in honor of the Sweedish professor, Dahlia.

There is another species of the Dahlia—D *Excelsa*—which is said to grow in Mexico, some thirty feet high, with a trunk thick in proportion.

The Dahlia, however, like other flowers falling into the hands of English and French florists, soon assume new features. Skill and genius convert stamens into petals, and give form and color, as it were, by mechanical contrivance. Of the many beautiful flowers Mr. Hodge exhibited, we might select, Standard of Pefection—a dark crimson: Nihel, bright red, tipped with white; Dupetet Thouars—deep yellow laced with red; Harlequin—white, variegated; Sir E. Antrobus—fiery crimson; Oddity—*a very odd one;* Ophir—a fine yellow, tipped with crimson; with many others. A few weeks later, and his whole stock will be in their their glory, which your committee trust will not pass unregarded by the Society.

Of other flowers there was a very liberal show, comprising Roses, Verbenas, Fuchsias, and Annuals in all their rich and gaudy pencillings and profusion, which will be enumerated in place.

Your committee were gratified by the accession of many new contributors, as well from all, or nearly all, the earliest members of the Society. A very fine pan of Dahlias were received from Mr. J. M. Whitney, of Rochester, to whom we would tender our thanks. A very tasteful bouquet of rich Balsams, Astors, French Marrigold, and other Annuals, were received from Mr. J. Drew, of the Public School No. 14—as cultivated in the school grounds by the scholars, and bespeak from us our highest respect. The various contributions amount to 87.

The throng of visitors during the day and evening, was as usual, large, and at the sale of bouquets and fruits, &c., the liberality of our citizens was fully exemplified.

The contributions were as follows:

From Mrs. L. F. Allen, a basket of cut flowers, Phlox, Columbine, Lobelia Cardinalis, Dianthus deltoides, althea, flora chinensis, Digitalis purpurea, &c., &c.

Miss Cornelia Maynard—Bouquet of rich Balsams, Phlox, Rocket, &c.

Miss C. A. Kellog—Bouquet of fine Dahlias, Monkshood, Balsams.

J. Drew, Public School, No. 14—A fine large bouquet of Balsams in varieties, French Marigolds, fine Asters, &c.

Miss Frances Darrow—A very tasteful bouquet of flowers, in varieties.

Miss Jaques—Bonquet, Dahlias, good; Phlox, Digitalis, &c.

Miss M. Haggart—4 very pretty bouquets of mixed flowers, Dahlias, Tiger lilly, Lichnidea, Geraniums, Balsams, &c., &c.

Miss S. N. Callender—A pretty bouquet of mixed flowers, Nasturtions, Balsams, Portulacca, Monk's Hood, Phlox, &c.

Mrs. H. Pratt—Rose bouquet, Ayrshire and Indica. very beautiful; Bouquet of Dahlias, do. Rose of Sharon, double Hollyhock, very fine.

Mr. J. W. Whitney, Rochester—A pan of 30 Dahlias, 9 varieties. These were not under name, but were good, 3 very fine.

Mrs. B. Hodge—4 large bouquets, comprising a large variety of annuals, Perennials, Biennials, and Greenhouse flowers, in rich profusion.

Mrs. W. B. Peck—Bouquet of beautiful Phlox drummondi, Tiger lilly, Honeysuckle.

Miss Mary J. Burrows—A very tasteful bouquet of Dahlias of 6 varieties, China Asters, very fine; Candy-tuft, Blue-bells, Balsams, &c.

Mr. D. Burt—A rich bouquet of Geraniums, Asters, ten week Stocks, &c.

Mrs. Chas. Howland—A Dahlia bouquet. 8 varieties, all good; three were very fine. Mrs. H. is famed for fine Dahlias, and shows good cultivation. Also, two other bouquets, comprised of Geraniums, Roses, Oleander, candy-tuft, &c.; very pretty.

Miss Mary Shumway—Two tasteful bouquets of gladiolus, asters, phlox, hemerocallis, &c.

Mrs. O. G. Steele—Two bouquets of Dahlias, Feverfew, Sweet Pea, Gilliflower, &c., very tastefully arranged.

Mrs. Volney Randall—A pretty bouquet of mixed Dahlias, Asters, Petunias, Prince's Feather, &c.

Mrs. Lewis Eaton—Three bouquets, of Dahlias in variety, some very choice; Roses, Asters, Candy-tufts, and Balsams in variety.

Miss Sarah Burrows—Bouquet of Dahlias, the yellow variety very fine; Roses, Canterbury Bell, Asters, &c., together with a plate of choice assorted Balsams.

Mrs. Dr. G. F. Pratt—Two bouquets of Roses, (Amie Vibert) very fine, beautiful Verbenas, Phacelia. &c.

Mrs. John C. Lord—A rich bouquet of Dahlias, comprising seven varieties, together with Balsams, Globe Amaranthus, Tiger Lily, and other fine annuals.

Mrs. Charles Taintor—A fine bouquet of Dahlias in variety. Phlox Drummondi, Asters and Balsams.

Mrs. S. G. Havens—Rich boquet of Roses, in variety; Asters, Verbenas, Sweet Pea, and other annuals.

Mrs. S. G. Austin—Fine boquets of Dahlias, in profusion, Balsams, Phlox, Carnations, Roses, Larkspur, and other rich annuals.

Rev. Mr. Hopkins—A fine collection of Pansies.

Mrs. Chas. H. S. Williams—A large boquet of annuals, comprising Gladiolus, Balsams, Nastortions, &c.

Mrs. H. B. Potter—A pan of rich Dahlias, four varieties, (Nihil and Antrobus beautiful.)

Mrs. Dickerson—Bouquet of fine annuals, including French Marigolds, Sweet Pea, Prince's Feather, &c. &c.

Capt. A. E. Hart—A splendid pyramid of Dahlias, standing three feet in height, surmounted with an exquisite bouquet of choice exotics, forming a most beautiful and appropriate centre ornament for the fruit table. The pyramid comprised 18 varieties of Dahlias, among which were many very choice. [Did our Society award premiums this contribution would have been richly entitled to one, both for the choice flowers exhibited and the taste displayed in putting them together.]

Mrs. P. Staats—A rich bouquet of Dahlias. Geraniums, Gladiolus, Asters, and other annuals.

Mrs. W. C. Sherwood—Four bouquets, choice Dahlias, Balsams, Tiger flower, &c.

Mrs. W. R. Coppock—Three bouquets, comprising 5 varieties, Roses, Verbenas, and other greenhouse plants.

Miss Lucy Bryant—Splendid flat bouquet, comprising Dahlias in variety, two var. Phlox, Asters, Althea frutex, and a rich variety of annuals.

Mrs. B. Hodge—Four very rich bouquets, including a choice collection of annuals, perennials, including four varieties Althea frutex, ten varieties Phlox, &c. &c.

Mrs. Dr. Tucker—Bouquets, of annuals.

Mrs. Robert Hollister—Two beautiful bouquets of choice Tea Roses, annuals and perennials.

Wm. Webb, Prospect Garden—Presented three gorgeous and choice bouquets, comprising nearly one hundred rare and standard Exotics, Roses, Annuals, and Perennials, under name, including Rondeletia Speciosa, Vinca Roses, Brugmansia Knightii, Ipomea Leanii, Fuschia Fulgens, Caccinea, rare, 17 varieties. Roses, including Admiral Despres, Eugene Sue, Smithii, Levison Gower, Eugene Jovin, Madame Debobe, Miss Fanny, Belle Travasia, Solfataire Blush Cluster, Arch Duke, Sanguinea, Agripina, White Tea, Indica, Tea Ordorata, Miss Lawrence, Maximus, La Marque and Cels. 22 varieties, Verbenas, Laulani Maloi Lobelia Gracilis, Salvia Patens, Calceolaria-meteor. Ragosa and Patens, Penstemon Gentianoides, campanulatum, Plumbago capensis, Hoya Caruosa, &c.

Mr. Webb also presented a fine bouquet of Dahlias, German Asters, Stocks, Feverfew, &c.; also a bouquet comprising nearly one hundred varieties choice Exotics and Perennials.

Mr. Webb's annuals stand unrivalled for their richness of colors and profusion, showing careful and thorough cultivation.

Mr. Webb also presented a collection of choice Achimines, including the Picta, Grandiflora, Longiflora, Rosea, and Pendunculata.

Mr. Benj. Hodge, Buffalo Nursery—A splendid collection of Dahlias, comprising 34 varieties; viz: Arethusa, (Brown's) Antagonist, Beeswing, (Drummond) Beauty of Chempsford, (Wicks) Cleopatra, (Atwell) Cinderella, (Dubras) Caleb Cope, (Schmitz) Dupetet Thouars, (Milliez) Duke of York, (Keynes) Evecque de Bayeux, (Oudin) Essex Primrose, (Wicks) Harlequin, (Dodd) Hero of the West, (Schmitz) Hero of Stonehenge, Henry Clay, Indispensable White, (Fassort) Lady Sale, (Smith's) Lady St-Maur, Lady Antrobus, Mrs. Shelley, Nihil, Novelty, Oddity, (Keynes) Ophir, (Edwards) Pontiac, (Schmetz) Prince of Wales, (Dodds) Queen of Trumps, Queen of Roses, (Widnall) Standard of Perfection, Sir E. Antrobus, (Keynes) Surprise, (Oakley) Viscount, Ressignenr, (Dubras) Victory of Sussex, (Sanfords) Ultimatum, Eximea, King of Silices, Admiral Stafford, Alba Purpurea, Beauty of Hydevale, Battle Rival, Charles XII, (Miller's) Dowager Lady Cooper, Duchess of Richmond, Duke of Bedford, Emma Noke, Glory of Plymouth, Grand Turk, Hero of Tippecanoe, La Tour d'Auvergne, Lord Morpeth, Lucina, Madam Miellez, Miss Percival, Mrs. Rushton, Mackenzie's Perfection, Orange Boven, Prince of Wales, (Girlings) Purple Boquet, Queen (Wednall's) Red Rover, Reliance, Rienzi, Sir John Seabright, Triumph (Miller's) Twiford Perfection, Unique (Ansel's) Will Watch, George the 4th.

Your committee have before noticed a portion of these, and would recommend this stock of noble flowers to the regards of the Society as an accession of floral charms truly valuable. Many of them are prize flowers of the English florists, and have been sold at from 5 to 10 guineas per plant.

Also, 25 varieties of Roses, as follows:—Hybrid Perpetual—Augustine Mouchelet, Julie Du-

pont, Lady Fordwich, Mrs. Crips, Prince Albert, Prince de Gales, Docteur Marjolin, Melanie Covnu; Lady Elphentine, Prince de Guilintine, Baron Prevost, Duc Amaule, Ponetue.

Bourbon—Boquet de Flore, Hermosa, Julie de Lyons, Souvenir de Malmaison, Henry Plantier.

Tea—Bon Silene, Cornea, Triumph de Luxumburgh.

Noisette. &c.—Amie Vibert, Lamrasque, Ophir, Agrippina.

Mr. E. Tyler.—A very beautiful boquet composed of roses, among which were Yellow Tea, Madam Despres, Henri Plantier, Hermosa, Ophir, Triumph de Luxemburgh, Jeune Despres, Belle Travasi, Agripina, Lamarque, White Tea, &c., Phlox Drummondi; Petunias, variety, *Beauty de Tour*, Verbenas, his new seedling (——) Fuchsias, in variety, Heliotropes, Abutilon, Dahlias in variety, &c., &c.

These boquets were very tastefully made up, and were sold under very spirited bidding.

W. R. COPPOCK,
E. FORD,
SETH C. HAWLEY.

REPORT ON FRUITS.

The Committee upon whom devolves the making a report on this important part of our exhibition, take pleasure in recording the fact, that the present occasion, gave evidence in a high degree of the usefulness of our society in promoting the growth of fruit—not so much in variety perhaps as in *extent*. The number of contributors of fruit, the present month are much larger, and the variety presented by individual contributors, is in very many instances much greater than at the corresponding exhibition last year. The show of plums, particularly were very fine, although many of our contributors, complained bitterly of the ravages of that great enemy to this favorite fruit, the curculio. Of peaches owing to the backwardness of the season, but few specimens were exhibited. The show of apples and other fruit from our practical nuserymen was truly fine, exhibiting good selections and careful cultivation, and altogether the report will show that our efforts as a society, have been productive of much benefit both among amateurs and professional cultivators.

Mr. B. Hodge, Buffalo Nursery, exhibited

Nectarines—early Newington, Red Roman and Golden.

Late Black Bigarreau Cherries.

Apples—Sweet Bough, early Strawberry, Sapson, Golden Sweeting (a fine summer apple) Summer Rose, early Dutch Codling, Red and Green Sweeting, (a fine apple for the season) Keswick Codling.

Abner Bryant and Sons, Erie County Nursery.

Grapes—White Madeira, Black Cluster.

Plums—Smith's Orleans, Princes Yellow Gage, Red Gage.

Apples—Red Sweeting, Golden Sweeting, Summer Queen, (this is a favorite apple) early Lustre, early Sweet Bough, William's Favorite, Hawthornden (a fine fruit) early Citron, Keswick Codlin.

Wm. Webb, Prospect Garden—Morrisons Pound Peach, Murray's Pine Apple Melon, a most delicious fruit.

C. F. S. Thomas—Princes Yellow Gage, Red Magnum Bonum, Smith's Orleans and Purple Plums. The Smith's Orleans is a rich and lucious fruit, ripening rather later than other varieties, is a prolific bearer and deserves more general cultivation.

Lewis F. Allen, Black Rock—Red Magnum Bonum, Sweet Damsons, 2 var. Plums, early Lustre Apples, Golden Sweeting, and Orange Bergamot Pear. Our worthy President with his usual liberality, brought extremely large samples of his fruit, the sale of which added materially to the funds of the society.

Mrs. E. A. Maynard—Red Mag. Bon. Plums, large and fine.

Mrs. Philo Allen—Red Mag. Bon. and Blue Plums, and fine Cherry Tomatoes.

Mrs. R. H. Maynard—a plate of fine Blue Plums.

Mrs. L. J. Waters—Mammoth Peppers of enormous size—the finest we recollect to have ever seen of the growth of this section. The Society would be benefitted by having some of the seed.

Miss M. Haggart—Blue Plums.

Mrs. E. Smith—fine Red Magnum Bonum Plums.

Miss Gertrude Allen, Black Rock, Sweet Damson Plums,

Master Richard Allen—Purple Plums.

Master Cleveland Allen—Large Blue Plums.

Mr. W. Evans—Red Mag. Bon. Plums—very fine.

Dr. G. F. Pratt—Peach Plum, a magnificient fruit which should be better known in this section—Princes Yellow Gage, Red Mag. Bon., Queen Claudia, very fine—Damsons, Splendid Washington Bolmar, Green Gages. The Doctor's fruits are generally the ne plus ultra, and his success in cultivation is worthy of imitation.

W. R. Coppock—Golden Chasselas, and Isabella grapes, grown under glass, Tomatoes in variety and Blue Plums.

John R. Lee—Red Mag. Bon. Plums, very fine.

J. R. Prince—Washington Bolmar Plums, which were highly magnificent.

C. Taintor—Purple Gage, Red Gage, Imperial Gage, and Washington Bolmar Plums, Mr T.'s fruit was all very fine.

Mrs. H. A. Salisbury—a plate of rich Golden Sweetings, very fine.

Mr. John Burdett—late English Cherries.

R. H. Heywood—Washington Bolmer Plums. A superb variety, and excellent fruit.

Mr. Thos. M. Foote—Superb peaches, variety not named.

From the Committee
C. F. S. THOMAS,
Secretary.

THE EFFECTS OF ETHER ON VEGETABLES.—An account is given in the London Athenæum of some curious experiments recently made by M. CLEMENS, Professor of Natural Sciences in the College of Vevay, Switzerland. The professor's object was to test the effects of ether on vegetable life and sensitiveness. The results of his experiments he has communicated in a memorial to the Academy of Sciences of the Canton of Vaud, and these go to prove that vegetables are as susceptible to the effects of ether as are animals. The professor says:

Take a branch of the common barberry and put it under a drinking glass with a small quantity of ether, for a minute at most if in the sun, and three minutes at most if in the shade, but at a temperature of not less than 59 deg. of Farenheit, and when it is withdrawn it will be found, on touching the stamina at their base, that they have lost all their irritability, which will not return in the first instance until after a considerable time, the influence of the ether having been much stronger. In the second case, on the contrary, the primitive irritability is recovered in half an hour. The plant may be etherized a second time, and this second etherization must not be longer than the first, and after half an hour the plant resumes all its vigor. To etherize a sensitive plant (mimosa pudica) the process must be continued for eight or ten minutes, and a proportionably longer time in the shade. The acetic chlorhydric and nitric ethers act in the same manner, but the sulphuric and acetic ethers are the most effective.

Paul Jones.

Headly in his sketch of Paul Jones relates the following anecdote:

The daring rover was hovering on the coast of Scotland, and just then threatening Kirkaldy.

"The inhabitants, as they saw her bearing steadily up towards the place, were filled with terror, and ran hither and thither in affright; but the good minister, Rev. Mr. Shirra, assembled his flock on the beach, to pray the Lord to deliver them from their enemies. He was an eccentric man—one of the quaintest of the quaint old Scotch divines, so that his prayers, even in those days, were often quoted for their oddity and even roughness.

"Whether the following prayer is literally true or not, it is difficult to tell; but there is little doubt that the invocation of the excited eccentric old man was sufficiently odd. It is said, that having gathered his congregation on the beach in full sight of the vessel, which under a press of canvass, was making a long tack that brought her close to the town, he knelt down on the sand, and thus began: "Now, dear Lord, dinna ye think it a shame for ye to send this vile pirate to rob our folk o' Kirkaldy; for ye ken they're puir enough already, and hae naething to spare. The way the wind blaws he'll be here in a jiffy and wha kens what he may do? He's nae too guid for ony thing. Mickle's the mischief he has done already; He'll burn their houses, tak their very claes, and tirl them to the sark. And waes me! wha kens but the bluidy villain might tak their lives? The puir weemen are 'maist frightened out o' it! I hae been lang a faithfu' servant to ye, Lord, but gin ye dinna turn the win' about, and blaw the scoundrel out of our gate, *I'll nae stir a foot*, but will just sit here till the tide comes. Sae tak ye'r will o't"

From California—Sufferings of Emigrants. —We find in the St. Louis *Reveille* the following interesting intelligence from California:

We conversed yesterday with Mr. William Peterson, a printer, of this city, who accompanied General Kearney in his recent expedition to California. He gave us a very animated description of the disastrous fight at San Pasqual, in which Capt. Moore, together with a number of the U. S. Dragoons, were killed. Mr. P. states that they descended from a ravine in the hills, Capt. Moore leading, with twenty-five men. A scattering fire was kept up on them by the Californians, until the command was drawn out into a small basin-like plain, at the foot of the ravine, when the order was given by the leaders of the foe to charge with lances, and a most disastrous assault was made upon the little American band. Of those killed, but one received a bullet-wound—all the others were lanced, some receiving several wounds. Captain Moore broke his sword in valiantly defending himself in this unequal fight.

The California Star contains a detailed account of the sufferings of the emigrants in the mountains of California. It is a dreadful chapter of horrors. The full story of their sufferings will probably never be written, nor can it be pictured in language—the agony of mind, the despair and frenzy, the crushed hopes of relief, and the continued and torturing thoughts of being thus shut out from all succor, amidst impenetrable drifts of snow, must have made up a sum of horrors too dreadful for human endurance.

Mr. P. informs us that he assisted to bury several of the party, on his route in. Four of them were recognized as Balis Williams, Lemuel Murphy, Mrs. Donner and Mrs. Murphy.—The last named female was lying near one of the huts, with her thigh cut away for food, and the saw used to dismember the body lying alongside of her.

The cannibal, Keisburg, it is supposed, killed Mrs. Donner, in order to gratify his whetted appetite for human food; and he stated to the party who found him engaged at his horrid meal, that he preferred it to cattle beef.

In speaking of these sufferings, the editor of the Star says:

"When this sad intelligence reaches the States, it will, we apprehend, occasion a considerable diminution in the emigration to California for a few years to come; but we trust, however, it will be productive of a good result, in awakening the authorities of the Union to the actual necessity of another and a better road to this country, until which is effected, a yearly occurrence of similar mishaps may be expected, and emigration, at length, entirely cease; for the difficulties and dangers are too appalling for even the bold and energetic emigrant to face, and he defers his "heart's wishes" in hopes of a better and more practical route to California."

One of the last acts of Gen. Kearney was to order that Lieut. Col. Burton should proceed by sea to Lower California, and take possession of that territory. They would disembark at La Paz.

There was colder weather in March, in California, than had been experienced there for twenty years.

Another Outrage—Men in Disguise.—On Thursday last, Sherif Hollenbeck and Deputy Sherif Allen, went to Taghkanic for the purpose of selling the property of Samuel Halstead and Philip B. Miller, which they had previously levied upon and advertised for sale. On arriving at Halstead's they found a large number of persons assembled, and at the appointed hour they set up for sale the articles they had levied upon but received no bid. The sale was then adjourned, and the officers started for Miller's. After proceeding part way, and while at the edge of a piece of woods they were waylaid by three persons in disguise and armed, one of whom attempted to seize the Sheriff's horse, but failed; as the Deputy Sherif came up, one of them aimed at him but the gun fortunately snapped. An attempt was also made to stop his horse but failing in this, one of them sung out to the man with the gun to shoot the horse, when the later fired, but without effect. The officers proceeded to Miller's, but as at the former place, a large number were in attendance, and no one would bid, no sale was effected.

On Friday afternoon, as Mr. Amos Thompson of this city was amuseing himself with his gun on Chelsea Beach he shot a peep, which fell into the water, and he waded in to get it. When immersed breast high, he was attacked by a blue shark, and his arm was severely lacerated. His cries brought several to his aid, by whose assistance the animal was driven into shoal water and killed. It was afterwards brought to the city.—*Boston Times, Aug.* 30.

Sad Accident and Death at Clinton Prison. —We learn from the Plattsburgh Republican, that on Tuesday, the 24th inst., Mr. George A. Jenkins, of Auburn, (the master mason of Clinton,) while directing hoisting of stone, was struck down by the falling of the tripod or shears, used for that purpose. He survived the blow (which was upon his head) but a few hours, and died without a return of consciousness.—*Albany Eve. Jour.*

Editorial Department.

J. CLEMENT, EDITOR.

THE MONTHS, by WILLIAM H. C. HOSMER. Boston: William D. Ticknor & Company, 1847.

However criminal it may appear in the eyes of some people, we confess we are an admirer of poetry. Nor are we so blind to the excellencies of home industry as to see no beauty in verse unless it savors of sea-brine and bears indubitable evidence of foreign manufacture. While we do not idolize the British poets, living or dead, we love and honor them as the sons of Genius and the chroniclers of whatever is great and glorious in the Fatherland: but they are not *all* the sons to which Genius lays claim in the noble Saxon line, however readily some *pseudo* professors of belles lettres, may turn up their lips at the mention of a native bard. Let them, pretending to be classic, and assuming critic airs,

> "With parrot praise, of 'Roman grandeur' speak,
> And, in bad English, eulogize the Greek;"

let them deem it an act of stupidity to acknowledge any thing like the "divine afflatus" in the ministrelsy of this land of spinning-jennies, "cultivators," and magnetic telegraphs:—for one, we take pride in pointing to a little band of American poets, who sweep the lyre with a hand that calls forth strains which, if not immortal themselves, thrill all that is immortal in the frame of man — The names of such men as Bryant, and Percival, and Halleck, will live while our prairies, vast and luxuriant, "roll and fluctuate to the eye:" while our broad lakes invite the water-craft of civilized life, and while the firm old mountains of the land, give back, from year to year and age to age, the shouts of Freedom and the song of Faith. And then their brothers in the band—Dana and Longfellow, and those of a kindred calibre, their bays will be green till the sea-weed has formed the winding-sheet of the *last* "bucanier;" and till the "Psalm of" Republican "Life" is ended on these shores.

Children of Song are springing up all over the land; and by fostering them with care, the true ones will reach the manhood of abiding and lofty fame, and glorify the land of their birth. Let the faintest luminary, if *really* a luminary, be watched and encouraged to come forth and shine.

The Hesperus of Western New York, is Mr. Hosmer: and as not only the brightest and perhaps the only star of determinate magnitude in this section, he may, with propriety, be pointed at, spoken of, and the colors of his light separated and analyzed. Having already pointed him out, we shall proceed to speak, in few words, of his volume of poems, leaving the task of applying the prism, to the critic.

No man reads Nature with more care or greater delight, than Mr. Hosmer. Living in one of the richest and most beautiful sections of country, where the hills and vales and widely spreading plains teem with voluptuous charms, he has but to look abroad over an ever-present and variegated landscape, and his vision is ravished, his soul is full. Well may he ask,

> "What pictures to poetic eye
> More beauteous than these wood-girt glades?"

and viewing the fields in June, he may, in sooth, declare that

> "Armida's garden, ever bright,
> And odorous with enchanted flowers,
> Was not more rich in bloom and light,
> Than now in this fair world of ours,
> While June floats on the melting air,
> *With rose-buds in his lustrous hair,*
> Above the grave of Spring."

Viewing every thing with a poet's eye, the simplest thing in nature, animate or inanimate, is transfered, by the wand of Hosmer, into an object of beauty, and becomes a golden thread in the web of Song. The choking dust of Summer is akin to a spirit of evil, and is put to rest

> "By music of the pattering rain;"

the mushroom, so unattractive to the millions except as an edible, displays a

> "*Roof of snow*
> *With roseate hangings draped below,*"

and is recognized as the veritable palace of the great family of little fairy folk; and the cob-webs in the closely cropped pastures, become the flags of elvish warriors, which have been dropped during their nocturnal skirmishes.

The fidelity with which the author paints rural scenes is not overmatched by any poet in the country. He takes his colors from nature just as she appears before him. Here is a true picture:

> "Yon mower, while the buckwheat falls
> In reddish swaths, his task to cheer,
> Some rude old ballad strain recalls
> That well I love to hear:
> The squirrel, frightened by his song,
> A neighboring cornfield's edge along
> Races in wild dismay,
> And startled cows, a noisy throng,
> Fly through the woods away."

And here is another—a winter piece—

> "A beech I spied, with mouldering heart,
> That still retained its withered leaves,
> Like some poor mother loath to part
> With the dead brood o'er which she grieves.
> Beneath my feet the crusted snow,
> Crackling, aroused from ambush low
> The partridge-hunted bird!
> And, loosened by a gleam of sun,
> Icicles falling, one by one,
> With tinkling sound, I heard.
>
> "And other music was afloat,
> That gave my pulse a joyous thrill,
> For louder far than bugle note
> Rang bay of hound upon the hill:
> I caught a glimpse of wounded fox
> Steering his course toward friendly rocks
> That walled a neighboring glen;
> His blood soon dyed the fleecy drift,
> O'er taken by pursuer swift,
> A bow-shot from his den.

"Where, girt by groves, a clearing spread,
The stubble, like a darkening beard
On the pale visage of the dead,
Above the level snow appeared.
While, breaking through the hazel brush,
Quail rose, in conveys, with a rush
Of short, quick-flapping wings;
And, resting on its 'figure four,'
I marked a trap, with straw roofed o'er,
Set for the silly things.

"The forest, though disrobed and cold,
And robbed of bird and singing rill,
Is glorious with its columns old,
And cheered by Beauty's presence still:
Wild vines, to oak and elm that cling,
Like cordage of a vessel swing,
And rattle in the gale;
And moss, that gives Decay a grace,
The roughest spot on Nature's face
Hides with adorning veil."

The reader will observe that the third and fourth lines in the first verse last quoted, contain a pretty, because happy, comparison; and that the writer displays true sympathy for Nature. This feeling is frequently exhibited elsewhere in the little volume which has called forth this article — Thus, on page 51,

"On a few children of the shade
That pale, fantastic painter—Frost—
Warm colors with cold hand hath laid,
Though not a leaf is lost:
Blood-drops may, here and there, be seen
On the low Sumach's vest of green,
As if its heart had bled."

And again on page 7, speaking of February,

"Cold, naked arms the swamp-ash spread,
And branches black its top that crowned,
Seemed mourning badges for the dead
And shrivelled leaves that lay around."

"The Months" are mainly of the descriptive order of composition; but from "the scenery of the beautiful country where he lives," the poet occasionally turns "to the busy scenes of life, and to the pages of history;" and the reflections that are here and there thrown in, not only give variety to the character of the reading, but display, in a new field and to good advantage, the poetic powers of the author. Thus one of the finest stanzas in the volume is the last one on April, a splendid tribute to "Earth's Laureate Bard," who was "warmed into being" by the "breath" of that month. It appeared in these columns immediately after the poem itself was published in the New-York Tribune. We refer the reader to the "Months" for the re-examination of this tribute to Shakspear, and for many other beautiful gems which we have scarcely began to point out. The work may be found at Peck's Book Store in this city.

The Literary World, "a gazette for authors, readers and publishers," edited by C. F. Hoffman, Esq., is by far the best weekly on our exchange list. The body of the work, aside from the advertising department, contains sixteen (three column) pages of the ablest criticism and the choicest miscellany; New York: three dollars per annum.

The Moral Tone of the Messenger.—In editing the Messenger we are guided by principle, and have always aimed to give it a high moral character. That we are succeeding in this respect is evident from the fact that ministers of almost every religious denomination are taking the paper for the use of their families and that our exchanges often speak of this feature of the paper. The last number of the *Christian Secretary*, published at Hartford, Conn., contains the following notice of our new volume:

"*Western Literary Messenger.*—We have received several numbers of a good literary paper under this title, printed at Buffalo, N. Y. It is a neat looking sheet of 16 pages octavo, and what is not often the case with papers of this class, is *an advocate of religion* and *good morals*. It has just entered its ninth volume, from which we infer that it is permanently established."

Errata, etc.—In our absence last week, a few annoying errors in our editorial leader and the letter from New Haven, went through the press. Such spelling as *milcrtary* and *diaram* (for diorama) is decidedly bad.

The article on the death of Silas Wright, should have been credited to the *Commercial Advertiser*. It was an excellent tribute to a great statesman; and should not have appeared as *editorial* in the Messenger. We cannot say that "we have differed widely from him [Mr. Wright] in regard to *many* questions of State and National policy."

Through Mr. Hawks, in the Post Office, we have just received from Harper & Brothers, No. 28 of the Pictorial History of England; No. 102 of the Library of Select Novels, (a Story by Mrs. Inchabald,) and Part 5 of Mrs. Pardoe's Louis the Fourteenth.

Tales in Verse, by Mary Mowett. New York, Harper & Brothers, pub., 28 Cliff St., 1847.

A neat little book of rhymed "Tales" which, are not *all* tales, but which are all beautiful pieces for the youthful mind, and are designed to add to the amusements of the fireside. How *many* juvenile throngs will be gladdened by this innocent and delightful companion! Let the young learn to love books. Hawks has the work.

Sketches of Natural History, by Mary Howitt; one volume, 12 mo.; New York: Harper & Brothers.

Another companion for the young, by one of the most fascinating authors of the day. Natural History illustrated (as this pretty volume is) not only interests the mind but pleases the eye. The engravings are numerous and nice, and the "Sketches" are all in Rhyme, which makes them doubly entertaining.—For sale at the Literrary Depot in the Post Office.

Persons wishing to subscribe for the Messenger, commencing with volume nine, will do well to forward their names without delay, as our files are rapidly decreasing. Any persons forward us two dollars strictly in advance, shall be credited eighteen months, i. e. three volumes.

Later from Europe.

The Steamer *Caledonia*, Capt. Lott, arrived at Boston this morning, bringing dates from Liverpool to the 19th August. The following are the quotations at Liverpool at that date:

Best Western Canal flour 26s a 26s 6d per barrel. Richmond and Alexandria, 25s a 25s 6d. Baltimore and Philadelphia, 24s a 25s. New Orleans, Ohio, 22s a 23s. Sour, 20s a 21s. United States White and Mixed, per 70 lbs., 7s 9d a 8s 6d. Red, 6s 9d a 7s 6d. Indian Corn, 25s a 30s per quarter. Corn Meal, per bbl., 12s a 13s 6d. Oats, per 45 lbs., 3s a 3s 4d. Barley, per 90 lbs., 3s 9d a 4s 3d. Oat Meal, per 240 lbs., 20s a 21s. Rye, per 480 lbs., 30s a 34s.

PROVISIONS.

Prime mess beef per tierse, new, 90s a 92s 6d. Ordinary, 82s a 88s. Mess per bbl. 50s a 56s—ordinary 42s a 48s. Pork—Prime mess per bbl. 65s a 70s. Old 55s a 60s. Mess 65s a 74s.—Prime 48s a 55s. Bacon, dried and smoked, old 35s a 40s pr. cwt. Long middles in salt, 45s a 65s. Short do. 45s a 62s. Cheese, fine, 52s a 55s per cwt.—middling, 46s a 49s—ordinars, 40s a 44s. Hams smoked or dryed in canvass, 40s a 54s per cwt. in sacks—salted 30s a 45s. Rice, Carolina dressed, 1st quality, 19s a 22s—2nd do. 18s 6d a 21s.

New York, Sept. 2, 7 P. M.

A serious downward tendency has taken place in the grain market since the departure of the Steamer of the 4th, only occasionally arrested by broken weather—this, however, has failed to give a firm tone to the market, though at our market yesterday the above quotations were freely realized, and greater confidence manifested among buyers.

The certainty of a beautiful harvest at home, coupled with continued large imports of foreign breadstuffs, forced upon our market by the necessities of holders, must exercise a still stronger depressing influence upon the trade; and it may be fairly inferred, that the markets have not as yet retrograded to any thing like the point to which they appear destined to fall

In the London market, also, a similar languor has taken place, which, accelerated by the alarming failures that have taken place, almost precludes the possibility of reaction up to the closing of the corn market yesterday. A very limited quantity of English had come to hand, and though there were scarcely any samples to offer, the demand was tolerably steady at average prices.—There was rather more nquiry for foreign wheat of the best quality, but middling to inferior kinds were quite neglected.

Commercial and Financial.—The money market owing to a variety of causes has been seriously depressed since our last advices per *Cambria*—the pressure continues to affect all branches of trade with unrelaxed severity, forcing prices downward and necessarily limiting operations to the smallest possible scale. The primary causes of this state of things, are the advanced rates of discount required by the Bank of England, whose example is followed by all the private and joint stock Banks of the Empire, and a succession of disastrous failures in the West Indies and American trade. Up to last night, the actual bankruptcies were little short of two millions, and it is apprehended that many of these will fall heavily upon American houses. Yesterday in London the public securities had somewhat recovered from the depression of the preceding day, and fluctuated merely from the turn of the market.

General Intelligence—A rumor is generally circulated that Louis Phillippe had been assassinated. London papers bring no confirmation.

The elections show an increase in favor of Liberal measures.

The Queen has arrived in Scotland.

Munro has been found guilty of the murder of Col. Fawcett, in a duel four years since.

Affairs of Spain are in a still embarrassed state.

Italy.—The various progress of Liberal opinions is viewed with great alarm by both France and Austria.

Ireland.—The elections have been somewhat more stormy than in this country, and the returns will stand very much as they did in the last Parliament.

Mr. O'Connells funeral was celebarted with great pomp.

The Caledonia takes 30,000 pounds in specie.

The Southern mail, at Baltimore, has no news.

A letter from Montevideo says there is a prospect of settlement, and civil armistice strictly observed.

The blockade is nearly nominal. An American ship, first one since the blockade began, went in and loaded,

---

ERIE COUNTY AGRICULTURAL FAIR.

The following have been appointed Committees for awarding Premiums at the next anniversary, which will be held at the Barracks on Wednesday and Thursday, 22d and 23d Sept. inst. The names are such as it is hoped will render probable great accuracy and impartiality:

Committee on Horses.—George Coit, Buffalo; George B. Gates, Black Rock; E. P. Beck, Wyoming Co.

Durham Cattle.—Amos Chilcott, Hamburgh; Nath'l E. Turner, Aurora; Hugh Ransom, Clarence.

Grade and Native Cattle.—Thos. C. Love, Buffalo; Apollos Hitchcock, Cheektawaga; J. W Hamlin, Aurora.

Devon Cattle.— —— Stebbins, Cheektawaga; John Wilkinson, Newstead; John M'Arthur, Buffalo.

Working Oxen.—Edward Paine, Aurora; Orange Mansfield, Clarence; Wm. S. Rees, Evans.

Fat Cattle.—John Bullymore, Orsamus Warren, Doct. Wallis, Aurora.

Milch Cows.—J. Carpenter, Wales; B. W. Pratt, Collins; John C. Bodine, Clarence.

Long Wool Sheep.—Augustus Rayner, Clarence; —— McDonald, Aurora; Geo. Paxon, Eden.

Middle Wool and Fat Sheep.—J. W. Hamlin, Aurora; Christian Metz, Clarence; Wm. W. Bull, Hamburgh.

Fine Wool Sheep—T. C. Peters; John Hitchcock, Cheektawaga; —— Clark, Black Rock.

Swine.—Wm. Bullymore, Buffalo; Job Whipple, Black Rock; Benj Johnson, Clarence.

Poultry.—Orsamus S. Marshall, Chas. Taintor, Wm. R. Coppock.

Butter and Cheese.—Ralph Courter, Hugh Webster, Leonard Wilson.

Farming Implements.—Warren Bryant; Hugh S. Long, Clarence; Robt. Persons, Aurora.

Grain and Roots.—Thomas Thurston, Aurora; H. A. Parsons; Wm. A. Bird, Black Rock.

Farm Products.—H. W. Rogers, Alonzo Rayner, Clarence; —— Raley Aurora.

Household Products—(1st column of printed handbill.)—Jas. D. Craig, Mrs. Millard Fillmore, Mrs. Henry Hamilton

Household Products—(2d column of printed handbill.)—Thos. G. Perkins, Mrs. B. D. Coe, Mrs. H. W. Rogers.

Farms.—Orlando Allen, Jason Sexton, Robt. Hadfield.

Vigilance Committee, to assist in preparations on the ground at the Fair.—Orange T. Brown, Aurora; James Woods, Concord; Wm. Mills, Newstead; D. Ewell, Alden; Wm. Hamilton, Hamburgh; Wm. T. Miller, A. M'Arthur, Wm. Shiels, L. F. Allen, Warren Granger, Robt. McPherson,

Members of Committees to report themselves at the office of the Secretary on the ground where the Fair will be held, by 12 o'clock, M., or their places will be considered vacant and filled by others.

The friends of this institution are anxious that every effort should be made to render this Fair equal or superior to any previous one. They have the fullest confidence that they will be able to pay the premiums as soon as they

are officially declared, and they will thank those who have any claims against the Society, to send in a written statement thereof on or before 22d Sept. inst., to Mr. Jason Sexton.

To those who are accustomed to attend the State exhibitions, our local Fairs necessarily appear to be on a small scale; but the amount of good effected by the agency of County Societies, is in the aggregate, much greater than that of the larger Society. It is desirable that the County Society should act with spirit at this anniversary—particularly in reference to a subject on which we have already spoken frequently—*the having the State Fair for* 1848 *held in Buffalo*. We would thank our brethren of the city press, if they would notice the fact that the first effective step to be taken in reference to this matter, is to furnish an approved guarantee that the sum of $2,500 shall be raised to defray the local expenses of that Exhibition.—The profits arising from so great an influx of visitors—fifty or sixty thousand in reasonable probability—will enable the proprietors of steamboats, railroads, hotels and livery stables, to contribute more than that sum—to say nothing of the benefit which storekeepers and others will derive from the same source. The public spirit also of individuals will prompt assistance, and there should be no doubt that Buffalo can accomplish that which Rochester, Poughkeepsie, Auburn, Utica, and Saratoga have already done. We are informed that if this sum is guaranteed, the Executive Committee will accord us what is now unequivocally our just right; but no positive determination can be come to, until the meeting of the Society next winter.

☞Raising of Pea-nuts.—When we are writing about agricultural productions let us state that the editor of the Batavia Advocate says "pea nuts *can* be raised here. The son of the editor of this paper raised a small quantity in the garden last year, which came to maturity previous to the middle of September. They were planted at the usual time of planting in the spring, and ripened before frost without being transplanted.—This spring he planted a more extensive quantity, which are doing well." We think this is one of those little experiments for boys and girls which would give them an interest in gardening, and might be attended with profitable results.

The return of Gen. Kearny and Col. Fremont from California has heretofore been announced by Telegraph, but the following particulars of their journey, copied from the St Louis *Republican*, will be read with interest:

Very late from California.

Arrival of Gen. Kearny and Suite—Col. Fremont arrested at Fort Leavenworth, and ordered to Washington — Situation of California—Col. Mason Governor and Commander-in-Chief—Position of the Emigrants to Oregon and of the Mormons.

Among the passengers on the steamer *Amelia*, from Fort Leavenworth, last night, were Gen. S. W. Kearny: Maj. P. St. Geo. Cooke, of the 2d dragoons; Capt. H. S. Turner, of the 1st dragoons; Maj. T. Swords, Quarter Master; Lieut. Radford, of the Navy; and Mr. Bryant, of Lexington, Ky.

This party reached Fort Leavenworth from California, on the 22d inst. In company as far as the Fort, were also Lieut. Col. J. C. Fremont, Assistant Surgeon Sanderson, and the Hon. W. P. Hall, member of Congress elect, from this State.

We are informed that Gen. Kearny left Monterey on the 31st of May last. Besides officers, servants, &c., there was an escort of thirteen of the Mormon Battalion.

Col. Fremont brought with him nineteen of the Topographical party taken from Missouri in 1845: a number of these were the Captains and other officers of the "California Battalion."

Col. Mason, 1st dragoons, was left at Monterey, Governor and Commander-in-Chief—there was every indication of peaceable submission; if there was any exception, it arose from the restlessness of the American population north of Monterey, under the military government, to which they necessarily were subject, equally with the citizens of the country of their adoption.

Gen. K. had returned to Monterey but a few days previous to his departure, from a visit to Los Angelos. He found there, that the reports of the approach of an army, under Gen. Bustamente, which had long kept the native population in excitement, were dying away. The time of the Mormon Battalion, stationed there and at San Diego, expired on the 16th of July; when the land forces in California would consist of Col. Stevenson's regiment, one company of dragoons, (at Angels) and one of light artillery, at Monterey. An expectation was entertained that about one hundred of the Mormon Battalion would re-enter the service.

One of the last acts of Gen. Kearny, was to order that Lieut. Col. Burton should proceed by sea to Lower California, and take possession of that territory: they would disembark at La Paz.

In the harbor of Monterey, were anchored the ships of war Columbus, Congress, Portsmouth, Warren and Erie, and storeships Lexington and Dale. Com. Biddle, Commander-in-Chief, on board the Columbus. Com. Shubrick, with the Independence and Cyane, were in the Gulf, blockading the ports of Guaymas and Mazatlan. It was understood that Com. S. would return to Monterey in July, and relieve Com. Biddle in the command of the Pacific squadron, when the latter would sail for home in the Columbus.

There was colder weather in March, in California, than had been experienced there for twenty years. Before reaching Sutter's, the party were forced to swim four or five mountain torrents, swollen by melting snow to the breadth of rivers—the baggage and provisions were crossed in skin boats made upon the spot. Their progress was slow and most laborious and hazardous: and one of the officers, Major Cook, lost by an upset, save saddle and blankets, his entire outfit, even to papers and specie.

The last ranche was left on the 18th of June. On the 21st, they crossed the main ridge of the Sierra Nevada, riding thirty-five miles, chiefly over snow from five to twenty-five feet deep, under which water was running, and at many places in deep torrents. On this side, they buried the remains of those who lost their lives in the horrible disasters which there befel a party of last year's emigrants.

On the eastern slope, they were forced to pass trackless mountains of black rock, by the Trucky —or Salmon trout—river. In the narrow pass (the road made in autumn) very frequently crosses it; some of its small branches presented, beside a swimming deep torrent, hundreds of yards of dangerous bog and mire. On this river they were visited by the "Digger Indians."

The party were nearly out of provisions of all sorts when they met the first emigrants at the falls of Snake river—Lewis' Fork—25 miles beyond Fort Hall. They passed by that trading post on the 15th of July. On Bear river, they obtained a recruit of horses and mules from the Snake Indians.

The party came the new road—about fifty miles without water, from Green river to Big Sandy.—Besides some companies who went round by Bridger's Fort, they met about 940 wagons of emigrants, all, or nearly all, bound to Oregon. The

last were met between the North Fork of Platte and Sweet Water on the 28th of July; they were believed to be, and considered themselves too late to reach Oregon, and spoke of passing the winter at Fort Bridger. They left St. Joseph about the 6th of June.

At Fort Laramie, the party found many lodges of Sioux, who were quite friendly. They left that fort on the 3d instant. Next day they met six hundred and eighty-five wagons of Mormons, who were advancing very slowly in parties of fifty—they had come all the way by the north bank of the Platte. They expected to winter on the Great Salt Lake, and this, they assert, is to be the final resting place of their people. Incredible numbers of buffaloes were passed through for several days, near the junction of the two Plattes. No Indians were encountered after this time.

The party was only sixty-six days from the settlements of California to Fort Leavenworth, and made not a day's stop—averaging for the last fifty-seven days, thirty-one miles: whole distance near 2,200 miles.

We also learn, that on their arrival at Fort Leavenworth, Col. Fremont was arrested by General Kearny and ordered to Washington.

☞ WORTH TRYING—WATERY POTATOES.—We every day hear complaints about watery potatoes. Put into the pot a piece of lime as large as a hen's egg; and how watery soever the potatoes may have been, when the water is poured off the potatoes will be perfectly dry and mealy.—*Agriculturist.*

MARRIED.

On the 1st inst., by Rev. S. R. Smith, Rev. JOHN H. CAMPBELL, pastor of the Universalist Society, Cleveland, O., and Miss MARY D. SMITH, daughter of Rev. S. R. Smith.

On the 5th inst., by Rev. F. W. Graves, Mr. GEORGE WHITEHEAD, and Mrs. JANE McKENZIE, all of this city.

DIED.

On the 2d inst., JOHN SPENCER, son of John S. and Mary E. Fosdick, aged 1 year and 19 days.

This morning, 7th inst., at the residence of his father, LATHAM A. BURROWS, Jr., Esq., after a short illness, aged 24 years.

At Wales, on the 23th ult., LUCINDA, daughter of Nathan and Nancy Adams, in the fourth year of her age.

At Wales, on the 1st inst., ELIZABETH, widow of the late Ebenezer Holmes, Esq., in the 80th year of her age. She came into that town with her family in the year 1808.

At East Hamburgh, on the 30th ultimo, Mr. JOSEPH WEBSTER, in the 88th year of his age.

In Rochester, on the 24th instant, Mrs. MARY REYNOLDS, mother of A. Reynolds, Esq., aged 90 years and 3 months.

STATE OF NEW YORK, } ALBANY, August 3
SECRETARY'S OFFICE, } 1847.

To the Sheriff of the County of Erie:

SIR: Notice is hereby given, that at the next general election to be held on the Tuesday succeeding the first Monday of November next, the following officers are to be elected, to wit:

STATE.

A Secretary of State, Comptroller, State Treasurer, Attorney-General, State Engineer and Surveyor, Three Canal Commissioners, and Three Inspectors of State Prisons.

DISTRICT.

One Senator for the Thirty-First Senate District, consisting of the county of Erie.

COUNTY.

Also, the following officers for the said county, to wit: Four Members of Assembly, one to be elected in each Assembly District.

Yours, respectfully,
N. S. BENTON, Secretary of State.

ERIE COUNTY SHERIFF'S OFFICE, }
Buffalo, August 6, 1847. }

A general election is to be held in the County of Erie, on the second day of November next, at which which will be chosen the officers mentioned in the notice from the Secretary of State, of which a copy is annexed.

BUFFALO MUSICAL INSTITUTE FOR YOUNG LADIES.

At the residence of Prof. W. R. Coppock—Composer and Teacher of the Piano Forte, Organ, Singing and Composition.

An institute devoted exclusively to Musical Education is not yet common in this country; but in Europe the test of experience fully shows its great advantages over the too general superficial manner in which this important part of polite education is acquired. The advantages this institution offers to those desirous of completing their studies as Organists or practical players of the Piano Forte, together with a thorough system of imparting the same to others is fully established by the many precedents of the past fifteen years. The pupils are constantly guarded in their practice against all bad habits, and from the various stages of progress they may be in, are continually stimulated to effort and industry, by association with each other. The family too, are all players, and the theory is amusingly discussed, impressing its rules in a more pleasing manner, and more lasting upon the understanding, than by the mere dry study of an elaborate book. Music is composed and arranged from time to time, showing the various styles and harmonies analytically, and adapted for performance on several Pianos at the same time. This teaches a thorough knowledge of counting, and dividing passages to their given time. Vocal music is particularly attended to, and when the pupil has a moderate share of talent, we hesitate not to say, a correct and pleasing singer can be made. The Piano Fortes used are all new, and of the finest quality, and every inducement will be given to render the true spirit with as profitable. The building is commodious, and has a fine garden attached, with Green houses, Bathing rooms, &c., and is pleasantly situated in Seventh street, between Niagara Street, and the Falls rail road, and about midway to Prospect hill

Terms made known upon application at the Institute, or by mail, post paid, directed Prof Coppock, Buffalo

Prof Coppock, keeps constantly a choice selection of Piano Fortes for sale,

Buffalo, August 3, 1847.

PRINTERS' FURNISHING WAREHOUSE.

WESTERN LITERARY MESSENGER.

VOLUME IX. BUFFALO, SATURDAY, SEPTEMBER 18, 1847. NUMBER VII.

For the Western Literary Messenger.

The Royal Pine.

BY W. H. C. HOSMER.

Three cheers for the Pine, the Royal Pine,
Throned high on the hill's green brow;
While ranks of trees, in the rushing breeze,
Below like vassals bow;
When the hue of wine, at day's decline
Repaints the solemn West,
A golden crown on his brow falls down,
Though the vale in gloom is drest.

With a heated brow, beneath his bough
The red man oft hath lain,
Worn out with toil, while his antler'd spoil
On the velvet moss lay slain:
And beneath his shade the Seneca maid
Hath warbled her woodland lay,
While braiding flowers, and counting the hours
That kept her chief away.

When Winter reigns, and the river chains
With fetters chill and white,
In the cold, thin air, with branches bare,
The tall oak pains the sight:
But, on the hill, thy banner still
Flings out defiance high,
Though no tint of green in the glen is seen,
And the blast comes growling by.

Long life to the Pine, the voiceful Pine,
Who mourneth for the Past,
When the morning breeze sweeps his emerald keys,
Or the fitful, midnight blast;
My thoughts, when I hear, in moonlight clear
His surge-like anthem rise,
Are of peers of Eld who, on hill-tops, held
Communion with the skies.

Three cheers for the Pine—the Royal Pine!
Though lord of a region grim
The tempest loud, and the eagle proud
Are friends who talk with him.
May he lift his head, by well-springs fed,
In sunshine and in shower,
And his plumage green by the bard be seen
While the gray, old hills up-tower.

From the Baltimore Western Continent.

The Crystal Basket; or the way Mr. Hickson cum to be a Bachellor.

BY MAJOR JOS. JONES.

Mr. Shakspeare ses ther's a tide in the affairs of men, which when it is taken at flood, leads on to glorious fortin, but which if it ketches a feller in the ebb, plays the mischief with him. Well, Mr. Shakspeare was a filosifer, and knowd a heap about human natur, and I wouldn't be afraid to ventur something, if I was a betting man, on the fact that there aint a real hopeless, confirmed old bachellor in the world that haint esperienced the truth of this remark. There aint one of 'em but what can look back and pint out the very time he missed the figger, and can tell you the very circumstance that nocked all his fut in the fire.—The catastrofy of Bill Hickson's love affair was a very remarkable one, and I must tell my readers about it.

Ther was a great excitement in Pineville.—The ladys was gwine to have a fair to raise money to help to bild a new church. It was the fust thing of the kind that ever tuck place in Pineville, and of course it produced a great sensation. For more'n a month, all the galls in town had been bizzy with their needles, and the niggers was to be seen runnin from house to house with patterns and little bundles of things, and all the remnants of silks and little pieces of ribbons had been bought out of the stores to make fineries for the cummin fare. The whole bizness was under the management of old Mrs. Rogers, who made it a pint to keep evry thing as secret as possible, till the night when the fair was to be open to the public. Some of the boys wos mightily put too to make out what the fair meant, but it was generally understood that it was to be a very splendid affair, and evry body was to pay a quarter of a dollar to see it, and no gentleman wasn't expected to cum to it thout bringin a lady and a pocket full of money.

At length the auspicious night arriv, and the fair, with all its brilliant array of fancy fixins, bust upon the bewildered senses of the astonished Pinevillians. The old church was in a blaze of taller candles. The walls were all hung round with green bushes and flowers, and on little tables all around the room was displayed all sorts of fineries and gigamarees, more'n any body knowd what to do with. At evry table was a young lady dressed as killin as she could be, so that nobody could refuse to buy anything she offered 'em without ever thing of the price.—Evry body in town was thar, and the prettyest galls had jest as much as they could do to wait on the gentlemen, sellin 'em every thing, from a pair of baby stockins to a cup of coffee sweetened with ther own fingers, or a love letter from ther sweethearts, what they had in a little post office in one corner of the room.

Bill Hickson was thar of course, splurgin round with Tobitha Turner, buyin everything for her that she tuck a fancy to. Bill was one of the stingyest fellers in the world, and was jest the man to sell his hart and soul for a plantation and niggers, and as old Mrs. Turner was rich as cream, and he was dead after her daughter Tobitha. All the galls in town knowd how Bill had courted all the rich galls in the county, and they hadn't much mercy on him in the price whenever Tobitha wanted anything at ther tables. It was like pullin the feller's teeth evry time they made him shell out a dollar, but that was the only revenge they could have.

Tobitha had a good deal more dollars than she had sense, and she was jest silly enuff to make Bill buy all the baby toys ther was in the room, and by the time the fair was near over she had bled him pretty freely. It went monstrous hard with him, and he cussed the fair in his heart; but ther was no such thing as backin out if he expected to git her fortin, which was the main chance with him.

Bout two o'clock Bill proposed to go home, but Tobitha wanted to see it out. Bout this time old Mr. Montgomery went up into the pulpit and told the company that, on the part of the ledys

who had gin the fair, he thanked them very much for their liberal patronage, and as ther was a few things left, he would offer 'em at auction to close the con arn. He sed he hoped the gentlemen present would stay and bid for the articles.

All the plunder was gather up from the tables and carried to the old gentleman, who begun cryin 'em to the crowd who had all gathered round the pulpit, each gall on the arm of a gentleman.

Bill stuck monstrous close to Miss Tobitha, for fear some other chap mought get to buy something for her, or what would be worse, go home with her.

Mr. Mountgomery went on cryin off doll babies, and pin cushions, and work bags, and watch papers, and baby clothes, and all sorts of things, till bimeby he cum to a basket what tuck Miss Tobitha's fancy monstrous.

"Ah! ladys and gentlemen," ses Mr. Mountgomery, "*here's* a gem! How much for this buteful chryscial basket? Just look at it!" ses he, holdin it up to the light, what made it shine like dimonds in all the colors of the rainbow.

"Oh, my!" ses Miss Tobitha, "what a buteful thing! Now you must buy that for me, Mr. Hickson."

"Jest look at it, ladies and gentlemen," ses Mr. Mountgomery.

"Oh, dear!" ses Tobitha. "Wont you buy that for me, Mr. Hickson?"

"To be sure I will!" ses Bill.

"How much for this buteful chryscial basket?" ses Mr. Mountgomery.

Before any body had time to bid for it, Sally Dawson, the prettyest gall in the room, who had been standin with her mother near enuff to Tobitha to hear what she sed, run up to Tom Culpepper and tuck hold of his arm and sed something to him.

"One dollar!" ses Tom.

Tobitha pinched Bill's arm.

"One dollar. I'm offered for this buteful basket," ses Mountgomery. "One dollar—"

"A dollar and a quarter," ses Bill.

"One dollar and twenty-five cents, one dollar and—"

"Two dollars!" ses Tom.

"Two dollars, two—"

"Two twenty five," ses Bill.

"Three dollars!" ses Tom.

"Three, three—"

"Twenty five," ses Bill.

"Four dollars," ses Tom.

"Four dollars, four dollars," ses Mr. Mountgomery, holdin up the basket and lookin rite at Bill.

"Five dollars," ses he, in a husky sort of a voice.

"Six dollars!" ses Tom.

"Six dollars—six—six," ses Mr. Mountgomery.

Bill looked kind of imploringly at Tobitha.

"Oh!" ses she, "I wouldn't begrudge anything in the world for that basket. Do bid it off, Mr. Hickson."

"Six and a quarter," ses Bill, with jest breath enuff to make a noise.

"Seven dollars!" ses Tom, bold as a meet ax, with Sally hold of his arm, and her bright eyes lookin up in his face.

"Seven, seven, seven, seven—gwine at seven dollars," ses Mr. Mountgomery, lookin round to Bill, and holdin up his hand and his breth at the same time.

Bill gin Tobitha another look.

"Seven, seven, seven—gwine, at seven dollars——"

Tobitha gin Bill a nudge, with her eyes fixed on the basket.

"And a quarter," ses Bill.

"Seven and a quarter," ses Mr. Mountgomery.

"Eight dollars!" ses Tom.

By this time evry body was beginnin to laugh and buz to one another, bout the contest between Bill and Tom, so Mr. Mountgomery had to speak very loud.

"Eight dollars—eight, eight, jest a gwine at eight dollars," ses he, lookin right at Bill.

The sweat was beginnin to start out of Bill's face in a stream—his eyes was sot in his hed, and he chawed his tobacker like he didn't know what he was about. He was too far gone to speak—but Tobitha gin him a nudge, and he nodded his hed at Mr Mountgomery.

"And a quarter," ses the old man.

"Nine dollars!" ses Tom.

"Nine, nine, nine," ses Mr. Mountgomery, lookin at Bill—"gwine——"

Bill nodded agin.

"And a quarter——"

"Ten!" ses Tom.

"Ten—ten—ten dollars——"

Bill nodded agin.

"'Leven dollars!" ses Tom.

Bill nodded agin, while Tobitha supported him, to keep from droppin on the floor.

"Twelve dollars," ses his antagonist.

By this time Bill was so far gone that he jest kep noddin all the time, without knowin whose bid it was, or hearin a word that was sed.

"Thirteen!" ses Tom.

"Thirteen—thirteen——"

"Fourteen!"

"Fifteen!"

"Sixteen!"

By this time the laughin was so loud that nobody couldn't hear nothin, and Mr. Mountgomery knocked off the chryschial basket to Mr. William Hickson for sixteen dollars.

Then they all got round Bill congratulating him on his spunk, and Tom Culpepper sed he giv him joy with his bargain. Mr. Mountgomery sed the gentlemen could call in the mornin for ther purchases, when the ladies would have ther bills ready for 'em, and the fair broke up. Tobitha went home with her brother, tickled to deth with her triumph over Sally Dawson, and Bill went home cussin the fair and Tom Culpepper from the bottom of his heart.

When he got home he counted the damage, and when he found that he was in for mor'n thirty dollars, he wasn't able to sleep a wink all night.

He didn't have no appetite for his breckfast, and as soon as it was time he went to see Mrs. Rogers. He found his basket ready for him, with his bill for sixteen dollars in it. He looked at it a while and breathed monstrous hard.

"Don't you think that's a little too digin, Mrs. Rogers, to make me pay sixteen dollars for a basket what aint no bigger than my fist."

"Well," ses she, "bein as you was sush a liberal patron of the fair, Mr. Hickson, I think we *ought* to make a deduction. We'll receipt the bill for ten dollars."

"My conscience," ses Bill, "couldn't you take off more'n that, Mrs. Rogers? I'll give you five, and says quits."

"Very well," ses she, "if you insist on it, Mr. Hickson."

So the bill was receited, and the basket, with the bill for the full price sent home that afternoon "to Miss Tobitha Turner, with the compliments of her friend, William Hickson." But what was his mortification, when the nigger brung it back to him, with the following note from Miss Tobitha's mother:

To Mr. William Hickson:

Sir—This is to inform you, sir, that I dont 'low my darter to receive no presents from no

young gentleman whatsumever, bein as I think its highly unproper. And, furthermore, sir, I think it a very ridiculous shame for any body to be givin sixteen dollars for a basket made out of allum and cotton yarn, what aint worth a cent, no how, and didn't cost a thrip to make it. Sich kind of extravagance aint gwine to get no child of mine. So no more from

Your very respectful
NANCY TURNER.

Bill was terribly tuck aback. The very thing what he thought was gwine to make his fortin, had nocked the whole business in the hed. To explain how he only giv five dollars for the basket, if it made matters any better with the old woman, would only make 'em worse with the gall, who had been all over town braggin how he had giv sixteen dollars for it, jest for her. But when he found out that the whole matter was a trick played off on him by Tom Culpepper and Sally Dawson, who put Tobitha up to beg him to buy the basket for her, and how Sally made it herself, and didn't want it no how, and how all the galls was laughin at him for beggin off the price and then sendin the full bill home with it, he cum monstrous nigh hangin himself for shame. It completely cured him of courtin rich galls, and as he had always held his head above the pore ones, they now turned up their noses at him, and he couldn't find a white gall in a day's ride of Pineville, that would have any thing to do with him. Is it any wonder, then, that Mr. Hickson remains a bachelor to this day?

"HE IS SOMEBODY'S CHILD."—A young lad was driving a spirited horse through the streets of the city when the animal became frightened at some military music, and commenced running at a fearful rate, the arm of his driver being too feeble to restrain him. The excitement in the street was intense as the terrified creature kept increasing his speed, and dragged after him the frail vehicle and its frailer tenant, whose destruction seemed unavoidable. Presently the carriage struck a post and was dashed to pieces, and the boy was thrown on the pavement. At this moment all eyes were attracted to a lady who appeared in a state of distraction at what had happened. The people gathered around her to support her from sinking in the street, all supposing, from her suffering, that she was the mother, or at least a near relative of the boy who had been run away with. Some one inquired if the boy was her son. "My son!" said she, "No, not mine; but he is *somebody's son*." She was a stranger to the child, but she was a mother, and the thought that the poor boy was a son of somebody was enough to overwhelm her as she followed with her eye the mad flight that threatened his destruction. How often has that same thought, "he is somebody's son," touched our own heart. We have looked upon a group of condemned criminals in their prison, and marked the fierce eye, the lowering scowl, the hard features, and then in a moment each man's innocent infancy would seem to stand before us; each of these is somebody's son. Once a mother's fond eye fastened on the smiles that played over that face, and her heart leaped with hope as she thought of the future—That future is come, but it is blighted and frost-bound; and if the parents yet live to see their disappointments, and are not themselves hardened in sin, how severe the calamity, because entailed upon them by the sin of him who was once that fair and sweetly smiling infant. What a dreadful thing is sin, viewed in such relations and bearings, turning into a spectre, a demon, the object of all others the most dearly loved. This single thought, "I am a son," the best loved of all created things by the parents from whom I spring, ought to be enough to make me shudder whenever I am tempted to sin, lest by a course of sinning I should become that loathsome thing from which even a mother's love and a father's proud fondness may hereafter recoil. The thought that each individual, however steeped in guilt, is "somebody's child," has another use. It forbids me to despise or think lightly of any human kind. There is no being of the miserable many around us, who is not "somebody's child."—*June Porter.*

Contemplation.

BY N. P. WILLIS.

"They are all up—the innumerable stars—
And hold their place in heaven. My eyes have been
Searching the pearly depths through which they spring
Like beautiful creations, till I feel
As if it were a new and perfect world,
Waiting in silence for the word of God
To breathe it into motion. There there stand,
Shining in order, like a living hymn
Written in light, awaking at the breath
Of the celestial dawn, and praising Him
Who made them, with the harmony of spheres.
I would I had an eagle's ear to list
That melody. I would that I might float
Up in that boundless element and feel
Its ravishing vibrations, like the pulse
Beating in heaven! My spirit is athirst
For music—rarer music! I would bathe
My soul in a serener atmosphere
Than this; I long to mingle with the flock
Led by the 'living waters,' and to stray
In the 'green pastures' of the better land!
When wilt thou break, dull fetter! When shall I
Gather my wings, and like a rushing thought
Stretch onward, star by star, up into heaven!"
Thus mused Alethe. She was one to whom
Life had been like the witching of a dream,
Of an untroubled sweetness. She was born
Of a high race, and lay upon the knee,
With her soft eyes perusing listlessly
The fretted roof, or, on Mosaic floors,
Grasped at the tesselated squares inwrought
With metals curiously. Her childood passed
Like faery—amid fountains and green haunts—
Trying her little feet upon a lawn
Of velvet evenness, and hiding flowers
In her sweet breast, as if it were a fair
And pearly altar to crush incense on.
Her youth—oh! that was queenly! She was like
A dream of poetry that may not be
Written or told—exceeding beautiful!
And so came worshippers: and rank bowed down
And breathed upon her heart-strings with the breath
Of pride, and bound her forehead gorgeously
With dazzling scorn, and gave unto her step
A majesty—as if she trod the sea,
And the proud waves, unbidden, lifted her!
And so she grew to woman—her mere look
Strong as a monarch's signet, and her hand
The ambition of a kingdom. From all this
Turned her high heart away! She had a mind,
Deep, and immortal, and it would not feed
On pageantry. She thirsted for a spring
Of a serener element, and drank
Philosophy, and for a little while
She was allayed,—till presently, it trained
Bitter within her, and her spirit grew
Faint for undying water. Then she came
To the pure fount of God, and is athirst
No more—save when the fever of the world
Falleth upon her, she will go, sometimes,
Out in the star light quietness, and breathe
A holy aspiration after heaven.

A Trip to Chicago in the St. Louis.

NUMBER X.

I was fevered that night, and could find no rest even in my comfortable state room: and so I dressed, and went upon the hurricane deck, to enjoy the refreshing coolness of the breeze made by our motion. There I found John Smith, full of sad memories. We sat down together. The thinly scattered stars were growing dim, for it was near day-break; and the Lake, with a light mist upon it, looked like a large mirror just breathed upon. And then he told me, as he had promised, what he termed the sad story of

THE WRECK OF THE BOSTON.

She was a new steamer of the first class;—strong as wood and iron could make her; and her powerful engine was fitted to her build and mould most admirably. Her principal owner was a boiler maker, and so the saying was that she had been hammered out of iron, for he had invested in her the savings of many years of toilsome industry. The Captain was as thorough a sailor as ever commanded on our Lakes, and acquainted with all the dangers of their navigation.

The *Boston* was the last steamer that left Buffalo for the Upper Lakes in the autumn of 1846. She was bound for Chicago, and took her departure in the evening of the 16th of November, with a large freight, principally for Milwaukee, and having on board a number of emigrants from England, Ireland, and Germany. The cabin passengers, of whom I was one, were few, for people do not like to trust themselves upon the Upper Lakes at a season when our raging Northern tempests may be looked for.

From the very outset delays beset and ill omens clustered around us. We departed some hours after the set time, and a cloud seemed to overhang all on board at starting. The owner, who went with us, was evidently anxious and uneasy: the passengers was nervous and ill at ease: the officers and crew, though they always did their whole duty manfully, did it not like men bound on a hopeful enterprize. And so we lingered in our leave-taking of Buffalo, and somehow loitered at every port we anchored at: so that afterwards, when she was a wreck, the old sailors said the *Boston* had a presentiment of her doom, and went to meet it unwillingly. Fate, too, would not forego her victim, and interposed delays which made her destruction sure.

At Erie we took on fifty tons of coal,—the owner said as a nest-egg, to be used, in case of need, in lieu of wood. The greater part of it is yet in her wave-worn hull. The deceitful skies smiled on the commencement of the voyage; but we wasted ten hours at Cleveland, and reached Detroit in the night instead of the morning of the eighteenth;—and were of course compelled to wait for daylight to cross the Flats of Lake St. Clair; and then we waited five or six hours more for a number of Canadians, who wished for a passage to Port Sarnia on the St. Clair River. Little did we know how precious were these wasted hours, how fatal the loss of them. Had we left Detroit on the morning before, we would have gained part of a day at least, and I would not now be relating to you the sad fate of that gallant vessel.

We grounded on the Flats, and lay there all night, and part of the morning of the 20th, and then were lightened by the little Steamer *Fairport*, and pursued our voyage, after the loss of a full day. We crossed Saginaw in the night in a strong gale, with a heavy sea, but the *Boston* laughed at the wind, and gamboled o'er the waves. We passed the Bois Blanc light in the evening of the 21st, and approached Mackinac in a serene starlit night. The lights in the little bay seemed close at hand, when suddenly a vivid flash of lightning disclosed the whole scene—the wharves, with a propeller by one of them, the village nestling under the cliff, and the picturesque, snow-white barracks on its brow, appeared for a second and vanished, and a clap of thunder, instantly succeeding, shook heaven and earth, and all was dark as Egypt. The wind howled like a Fury and dashed the but then placid water in staggering waves upon us, and the rain fell in torrents, but soon changed into cutting sleet and hail, and we were driven, no one knew whither. But the storm abated in a few minutes, a dark cloud rolled off to the Southward, and the uncovered stars shone down upon us, and we barely avoided a dangerous reef, and made Mackinac in safety. There we found the Beacon Ship. She had been withdrawn, that very day, from her station off Cape Waguochince, and, so we were compelled to wait for morning ere we could thread the unsafe channel of the Straits. The morning came, and with it a gale which, after we had made an essay to pass the Straits, drove us back, and kept us at Mackinac the whole day.

At last, on the morning of the 23d, we entered Lake Michigan, and in the afternoon took on fifty cords of wood at the North Manitou. We left that island sometime of the night, or early in the morning of the 24th, and laid our course for Milwaukee. The good boat never went more merrily than when she bowled over that rolling sea, chased by a breeze that loved to linger about her. The sun was just down when we came to at Higby's wharf, which is a mere dock run from the land several hundred feet into the Lake, closed by a gate and connected with a warehouse at its landward end. The crew commenced discharging the freight, and I and others walked up into the city of Milwaukee, some three-quarters of a mile. The evening was very pleasant, though a rather strong wind was blowing. I spent an hour or two with some old friends, and then walked back to the boat, as she was to proceed to Chicago that night, so soon as she unloaded the articles she carried for this port: and then I noted the great change which had occurred in the weather. The wind had veered to the Northeast, and was constantly increasing.

When I reached the *Boston*, the dock was incumbered with all kinds of freight, and she preparing to put out to sea. It was evident she could not lie there, for the wind and waves bent her over and rubbed her against the piles with a strength that threatened ruin to her or the wharf. I had heard of the North Point, some three miles below, as affording a partial lee in these northeast storms, and under which old BLAKE, in the *Illinois*, had ridden out some of them, by dropping both anchors and keeping the engine going. And, though I did not dream of danger to the noble boat, I thought it would be uncomfortable to lie in a tossing sea all night—and so, when, having made my way on board, I was told that she would either make the harbor, or anchor off all night, and be back in the morning, I and several other passengers concluded to sleep ashore, and left her. Then for the first time I became sensible of the fury of the storm. In walking along the wharf, we were compelled to brace ourselves and keep to the windward side, and, when the gusts came, we clung to each other, and some of us even lay down till their violence was spent.—As we approached the gate I was fairly lifted from the wharf and carried some rods by the wind. Snow squalls too whirled through and darkened the air. As we hurried into the town, I looked and saw the sparks from the *Boston's* pipes driven in flaming, horizontal streams towards land, but naught else was visible, and naught audible save the howling winds.

In an hour or two after we had reached the hotel, a report came that the *Boston* was ashore. But it was contradicted in a few minutes, by the glad intelligence that her lights had been seen, in the glimpses of the storm, at such a point as to indicate, that she had a good offing, and was driving for Chicago. There indeed she would be in imminent peril, but she had at least escaped the immediate danger, and all hoped for the best, and so we were relieved.

I retired late, and dreamed evil dreams,—but still I slept: But there were many who did not sleep that night.

When it was settled that the Boston must back off from the dock, the owner and the keeper of the saloon got lanterns, and went up the beach a mile or so to the harbor, to hold them on the pier, it being supposed she would attempt the entrance. They reached the pier, but the barkeeper fell, or was blown from it, into the water, and was rescued by his comrade. Half frozen he was immediately conducted back to a small house on the beach — And thereabouts the owner stayed all night. He tried to pierce the darkness that hangs upon the Lakes—but vainly, for many minutes, which seem hours.—and then he sees,—the little knot around him see, the Boston's lights—she's making for the river,—no, she bears away, and now is lost to view—no, no! her lights flame up again in the distance,—she's far from shore, will weather the rocky point above, and can keep her course to Chicago:—she's safe says the owner,—I know she's safe. But yet I doubt. me whether sleep sealed up his eyes that night. Certainly "nature's sweet restorer, balmy sleep" did not visit the exhausted mariners, nor the affrighted passengers of the poor Boston, as she lay helplessly that night in the rude surf, but half a mile above. But she did visit, and shed her poppies on the innocent lids of childhood, and took some little helpless ones to her bosom, and gave them peacefel slumber and beautiful dreams the live-long night, though the wrecked steamer, in which they were, was in the breakers, beating the bottom, and quivering on the verge of destruction, F.

THE WRECK OF THE BOSTON.

NUMBER XI.

So fierce was the wind, that it was with the utmost difficulty the *Boston* was forced backward from the wharf. Darkness had gathered o'er land and sea, when, slowly turning, she struggled into the lake, and made towards the harbor. In withdrawing the freight—an operation not completed when the hurricane commenced—it had been taken principally from one side, and she lay not on an even keel. Still she buffeted her way towards the river, or where it was supposed to be, but the pitchy gloom hiding it and all things else forbade the attempt to enter—and she turned to make an offing. The sea began to rise, the cold wind with its tremendous voice drowned all others, and an order could be communicated on the upper deck from man to man, only when in contact, and no man unsupported could stand there, as the *Boston* strove to face the tempest, and was dashed from wave to wave. Borne down on one side as she was by the unbalanced freight, she could not be brought up in the wind and held there steadily. Between decks the swinging glihts scarce shone in the palpable darkness, and the noise of the machinery was unheard in the continued roar of the storm forcing itself in at every point, and shaking the bulwarks But the order to ship freight was passed, and every arm was in an instant busy in the hold and on the main deck—or rather all but one. For then it was, that a gentleman from Chicago, when hastening forward to aid, was beaten down by the falling of a pile of wood. He was extricated, and arose with a broken arm, and was supported to the cabin—but not a groan escaped him then, nor during the whole of that long night, did he once murmur. Soon after, the vessel was caught sidling on a tremendous wave, and by it and the wind hurled from its top, down on the next before, and struck as though upon a rock, so that she shook in every part, and with the blow both her smoke-pipes parted at once close to the upper deck—one tumbled into the lake, and one hung o'er her side. And with that earthquake shock, terror seized every bosom, save that of the Captain, and his indomitable crew. Strong men were for the moment paralyzed, and women shrieked and rushed to the gangways, and would have plunged into the sea, with infants in their

arms, had they not been restrained by force.—When her pipes fell, the sparks shot up for an instant, visibly as though from volcanoes—and then it was, that the owner, as he shivered on the shore, saw them, and took them for her lights, and deemed her safe. The forerunner of her sure destruction was received as a certain proof of her salvation. Their loss forbade the keeping her furnaces in full flame, and left her but one weak chance of escape, and that was tried. Naught was left unattempted to ward off her now inevitable fate. Both anchors were loosened from the bow, and with them all of her long chain cables were dropped into the deep.—All knew what was being done—all knew it was the last effort that could be made, and all watched the result. As the billows dash her back towards land, the chains are jerked through the hause-holes. But now she stops with a sudden shock that staggers all things. She is stayed by the anchors, and we are safe! Alas! it is not so. The bottom is sand. The Captain knew it was useless, but, like a man who would do all things to save his charge, he tried this too. And now, as the rude billows, with quick, succeeding blows, throw themselves upon her bow, and break o'er her once buoyant crest, the flukes of her reluctant anchors plough up the sand, and she drifts slowly towards the shore. What shore?—Heaven only knows! She must be somewhere off the mouth of the river, and the wind is almost directly on the land. But, there is a rocky point scarcely a mile above the river, and, if she strike there—whey then, if one of the many lives in the *Boston* is spared till morning, it will be by miracle.

How like eternity was that decisive little interval of time—it was one hour, or perchance two—which intervened between the sad discovery that she drifted, and her touching land. Snow fell, and ice was formed between decks, and the wind chilled one's very marrow. The upper cabin shook as though it would part from the deck, and fall into the waves, that leaped upon, as though to claim it. The men were sullen and despairing—the women, their first frenzy over, resumed their proper functions, and became ministers of mercy. A fire was made in the ladies' cabin; and the men among the emigrants huddled selfishly around it, and would not leave, even to replenish it, save when pulled away by force, and driven from the cabin with kicks, and so made to give place to the poor shivering females,—their wives and mothers. But the women, bore their sufferings patiently, and talked hopefully, and brought aid and consolation, and strengthened manhood where'r they could. And so they drifted for a space, when suddenly with a blow that made her quiver in every timber, and opened every seam, she struck. And then she struck again, and waves dashed mountain high upon her; and the solid planking of her starboard guard was broken and forced upwards, as though it were but paper. Then her bow worked slowly round until she lay with her broadside to the shore; and, though she pounded the bottom as though she'd burst, many hearts in her were most truly thankful, for they knew she had escaped the rocks, and stranded on a sandy or pebbly beach. She was rolled from side to side in the strong surf, and, as she rolled, her as yet unbroken keel wore for her a bed in the soft bottom. Truly that was a sad night. Heaven sent its icy showers, the cold wind blew fierce and pitiless, Stygian darkness forbade all knowledge of where they were, and the timbers cracked, and the poor *Boston* groaned all night like a giant in the pangs of dissolution, and misery reigned every where within her, save in one narrow spot. In the steerage cabin, in a rude berth, two little sisters slept in each other's arms, as peacefully and smilingly as though their spirits knew that angels were watching their slumbers.

F.

THE WRECK OF THE BOSTON.

NUMBER XII.

Strange as it may seem, it was not known in Milwaukee until seven o'clock the following morning, that the *Boston* was beached just above the harbor, in plain sight from the city. Soon as it was known, however, large parties of the inhabitants started to render what aid they could;—wagons and carriages were sent to the beach,—and every measure that humanity could devise, was at once resorted to, to insure the safety of the wrecked property, and the comfort of the human sufferers.

We crossed the river in the town, and followed the road on the hill side till we struck the shore some half mile above the wreck, and then walked down the beach. It was a mournful spectacle. The wind, though it blew with abated violence, was still a strong gale. The day was cloudless, but cold; and the strand, strewed with broken planks and stanchions, was frozen where it had been wet by the now receding lake, and icicles were pendant from the low willows skirting the shore. The land was desolate, and the eye, wandering eastward, saw naught but a limitless expanse of angry billows. Here and there a broken box, or chest, washed by the surf, had sunk into the sand,—and, as we advanced, wagons were carrying to a place of safety goods of all kinds that had been hauled upon the land. There lay the *Boston*,—a sad contrast to the noble picture she presented the day before. There she was as strong to baffle the tempest, and rode as proudly over the subject waves, as any craft that ever floated. But her seeming vassals had rebelled, and now rode over her insultingly, as she lay prostrate in the surge, broken, battered, and impotent. Truly she was reft of all her glory,—a thing to be wondered at and pitied. She lay but five or six rods from the dry beach, and having sunk somewhat in the sand, was still erect; but the eye, following her water line, could see a bend that indicated that her strong back was broken. A rough, eddying pool, was in her lee, and the billows, three abreast, rushed in upon her, and struck her; and

with every blow, she groaned most piteously. One of her pipes was gone;—the other lay upon the hurricane deck, and bent shoreward over her starboard side. Her upper works were broken, her stanchions gone,—and within her, all was wreck and desolation. Huge fires of drift wood, and of fragments of the wreck, flamed on the beach, around which clustered half-frozen men, women and children, all aghast, and many trembling, and half frantic—sometimes rejoicing and thankful for their lives preserved, and sometimes almost despairing when they thought of the perhaps utter loss of all their worldly wealth.

But the wreck had not yet restored all of her living freight to land. There were yet in her many precious lives to be rescued from suffering, if not from peril, and to be transferred to the shore in the same way as had been those who hung over the fires.

The gallant officers and crew of that fated steamer had not been idle, but, at early dawn, had launched one of the life-boats, and she was now plying between the wreck and shore. A rope from her bow was run into the after gangway, while another from the stern was carried far up upon the beach. And when we first saw her, she was tossing on the bubbling sea by the ship's side, and receiving the passengers, who were put in slings and let down, one by one, nearly to her level, before her bow, and then, when a favorable moment came, seized and drawn into her. When she had her complement, at a given signal, the rope was let out from the wreck, and a long line of men pulled the stern rope with a run and dragged her upon the beach. And then it was pleasant, as she rushed towards land, to see kind-hearted people dash into the water to steady her, and to receive her living cargo. O, how tenderly rough looking men hugged little children to their bosoms, and supported the sick, or carried them wrapt in blankets, to the fires, and there tended them! And, so soon as one load was discharged, the life-boat was drawn back to the steamer for another. And so she passed between the ship and shore till all were landed—the Captain last of all.

Beshrew me, F., though I was not far from weeping at many sights I witnessed upon that stormy shore, I do confess I was near laughing too at others. It is generally admitted now that Shakspeare knew somewhat of our nature. He has written deep tragedies, but scarce one unmixed with farce. We cannot moan always: and so I laughed a little.

While we were all busied in watching or aiding the life-boat, an old woman moved from one of the fires to the water's marge, and with a voice that rose above the gale, lamented for her pigs. It seems she had three in the wreck, and I doubt not her grief was genuine. They were probably a large portion of her little world'y store. But while she wailed, some one lifted a struggling porker from the forward gangway, and dropped it in the water. And, when its fate was ascertained he plunged another in; and then the third. It is wonderful, the perversity of piggish nature. The first one would not swim to land, not it—though it was but a stone's throw off, and the waves impelled it thither. But, with a strong effort, rounded the bow, and strove with all its might to put out to sea; but the great billows conquered, and after a long contest drove it ashore. The second tried the stern, and, though often beaten back, still tried most perseveringly to force itself through the raging surf, and would have been drowned in the effort, had not some men seized it. The third was washed to land at once, and lay on the wet sand stupefied, when a big dog took it by the ear and pulled it shoreward. Then suddenly it started up, and squealed, and with a spring that naught but a pig could make, frisked awkwardly into the group of men and boys gathered to welcome it.

Towards noon a sail gleamed afar off upon the lake, and we watched and gazed upon it anxiously, as it appeared and disappered upon the distant swell. It bore down rapidly, and we soon made it out to be a schooner, striving to make the harbor. Small chance had she, or any craft, to ride safely through the rough surges into the jaws of those broken and ragged piers. It is the Savannah. There she darts at the entrance, and misses it, but is checked and turned in time, and bears away. But there is no alternative. The worn and feeble crew are all benumbed with cold, and can work her no longer; and so she's headed directly for the beach, and, in an instant, is tossed ashore, as though she were an egg-shell. No life is lost, no limb is broken, thank Heaven!

But all were safe ashore, and so I bade the Boston farewell, and left her to her fate. In a few hours the receding waves will leave her on dry ground, and then they will begin to strip her of her engine, furniture and freight, and she will soon be a naked hull upon the sands. In a few years her planking will drop off and vanish, and her strong ribs, all blackened by sun and storm, and scarcely pearing above the shifting beach, will be her only monument.

I crossed the river's mouth and walked sadly down the shore. An old schooner, the Solomon Juneau, wrecked long ago, high and dry before the storm, now rocked in the surge. One of her shroudless masts stood stiff and firm, but the other wavered to and fro as though her frame was broken. The winds blew, and the surf lashed the land. Huge spears of ice hung from the wharves. The sky, though clear, looked lurid and threatening. All was desolate and dreary.

The next day I left Milwaukee, and journeyed homeward. But, wherever I was—whether crossing the lake—or jolted amid the woods of Michigan—or moving in a sunny calm upon Lake Erie—or wind bound off Presque Isle in Misery Bay—the wreck of the poor Boston was often present to me. I sometimes see it now, in reverie—and often in my dreams. I pray that I may never truly witness such a spectacle again. F.

The Mystic River.

BY R. H. TAYLOR.

There's a brightly lucent river
Flowing gently, beauty-drest,
And a thousand leaflets quive:
In the breeze that courts its breast.
Far on a hill its fountains leap,
The grovelling world above;
The hill is Faith, (sublimest steep,)
And the river's source is Love.

And charming banks, all verdure-clad,
On either hand are seen,
Which render every bosom glad,
With their lovely, fadeless green.
These banks that bound the mystic stream,
Gladdening the Sage and Youth,
And pleasing like a happy dream,
Are types of Friendship and of Truth.

Innumerable flowers give
Their perfume to the gale,—
Which the mild voyagers receive,
As they travel down the vale.
They serve to mark the calm delights
That friendship can impart;
While Memory their impress writes
On the tablet of their heart.

On the river's bosom, ever
There rests a peaceful shade,
And its tranquil rest, oh! never
Can the giddy world invade!
There's no gloom in all its quiet,
'Tis with cheerful objects fraught—
(It no man's been known to buy yet,)
'Tis the shade of chastened Thought.

The limpid ripples as they play
Forever there in glee,
A likeness to the mind convey,
Of the good man's Purity;
No darkened thoughts obscure the gleam
Of sunshine in this heart,
But like the ripple on the stream,
He gaily bears his part.

There white-sailed barques in safety glide,
And reck nor shrouds nor rope;
Borne by the breeze, how calm they ride—
Those little barques of Hope.
The breeze is always; though we feel
Affliction's heavy rod,
Its balmy touch our pain shall heal;
The breeze is the breath of God!

Oh! trace that river to its source;
With meek inquiry go,—
See whence its glowing waters course,
And witherward they flow;
You'll find its springs are wells eterne,
Its beauties never cease;
And, gliding down the stream, you'll learn,
Its name is the River of Peace.

Rural Cemeteries.

Reader! you and I must die; and our friends and kindred must die. A common fate awaits everything mortal—death and decay. The old and young, rich and poor, beauty and deformity, must sooner or later come to that narrow home, where "the weary are at rest, and the wicked cease from troubling."

But have you never stood in a grave yard, near the noisy dusty streets or highways, indifferently fenced, if fenced at all, the cattle grazing among the broken grave-stones, or quietly resting upon some nameless grave—no trees or shrubs visible, or if perchance some affectionate hand had placed them at the head of a departed friend, they were browsed down or destroyed by the animals?—What were your sensations at such a time?—Could you help shuddering at the thought of death? and did you not think that the people who could permit rude desecrations of the dead must be a barberous and a heartless people?

There is in our nature a desire to make the offices of affection reach beyond the grave. Instinctively we wish to decorate the small spot of earth that has covered forever from our sight the loved form of a dear friend. And yet why is it that throughout this whole country there are so very few burying-grounds that are not a disgrace and a reproach to us, as a christian and civilized people?

It is not for the want of suitable grounds; for there is not a single town in this section of our State, where at least a dozen parcels of fine hard land might not be found, where with little trouble and less expense, a most beautiful rural cemetery might be laid out. It wants but few acres—some 8 or 10—or perhaps near populous villages, twenty or thirty might be enclosed. Once strongly fenced and tastefully laid out, and it would soon become the favorite resort of the whole community. How different would be the sensations of the spirit as it contemplated the final resting place of its companion, the body. There, in the old forest, amid the undying trees and shrubs, the sweet songs of birds, and the solemn stillness that would ever reign over us, could we not feel that our final sleep, the "sleep that knows no waking," would be more tranquil, and peaceful, than in the naked, decaying, and neglected grave-yards, that meet our view along the public highways?

And there too, how soon would we view springing up the beautiful rose, and other flowers among the graves, giving beauty to the scene, and speaking in touching language, the undying tokens of earnest and sincere affection.

Oh! gentle reader! look about you, and do not let the subject sleep until you have found a better place for your dead, than the naked road-side lot.

By a law passed last winter, associations can be formed, with all the powers of a regular corporation, for the purpose of forming rural cemeteries. Let me not hope in vain that they will be formed in every town, and either the present sites enlarged, or more appropriate chosen.

T. C. P.

☞ To Cook Tomatoes.—He that does not love tomatoes is an object of pity. Every art of cooking should be employed to inveigle the appetite of every man to love a vegetable so wholesome.

Peel a dozen ripe tomatoes and fry them in a little sweet butter, together with two or three sliced green peppers, sprinkle on a little salt; and finally slice up an onion or two, and let the whole cook thoroughly. This is the Spanish method of preparing them.

Another method which from long experience we know will wear well, is as follows: The directions are for a mess of tomatoes, amounting to about three pints when cooked. Begin by parboiling two onions. While this is doing, peel a dozen tomatoes, which is easily done after hot water has been poured over them, cut them up and add the onions, also a teacupful and a half of bread crumbled fine, a tablespoonful of salt, a heaping teaspoonful of black pepper, a lump of butter of the size of a turkey's egg, or about four tablespoonfuls. Beat these thoroughly together and set them over a slow fire, gradually to stew. They should cook slowly and for a long time; never less than three hours, but the longer the better. About fifteen minutes before they are to be used, beat up six eggs and stir them in, and put them on fresh coals, and give them one grand boil up, stirring them all the time. When so cooked no directions will be needed how to eat them.

The art of cooking the tomatoes lies mostly in cooking them enough. They should be put to work the first thing after the breakfast things are out of the way; even if you do not dine till three.—*Indiana Farmer & Gardner.*

The Youth of Linnaeus.

TRANSLATED FROM THE FRENCH BY M. E. C.

In the early part of the eighteenth century there was a poor but honest family living in an obscure village, in the province of Smoland, Sweden.—Their little income was, even by the strictest economy, barely sufficient to supply them with the necessaries, and a few of the comforts, of life; nevertheless the birth of a son in seventeen hundred and seven was an occasion of great joy.—Charles was the name given him at his baptism, and till the age of seven years, he was a child of ordinary strength and capacity, though possessed of uncommon gaiety, full of life, and prefering the pleasure of a chase after butterflies, or plucking the flowers of the field, to study. His father, who had himself a taste for the cultivation of plants, saw, with great delight, this development in his son, and encouraged it by permitting him to plant one corner of the garden with cowslips, daisies, and other wild flowers.

One day the father and mother of Charles left their humble home to visit their parents, and placed their child under the care of an old servant who had been with them at his birth, and who, consequently, indulged him as though she had been his mother: and we shall soon see what was the result!

After four days' absence the parents returned home, and embracing their son, he conducted them into their little garden to see in full bloom the magnificent tulip, the superb ranunculum, the hyacinth, and twenty other kinds or rare and beautiful flowers, the munificent gift of Dr. Rothman of London. The face of Charles, meanwhile, beamed with triumphant smiles. "See, father," cried he, his eyes sparkling with delight, "your beautiful garden now, and I have done it all!" The finely cultivated garden, filled with choicest flowers, the joy of the young couple, and their resort after the day's labor, was entirely destroyed. The flower of the forest, the mountain and the field, without fragrance and without brilliancy, had modessly supplanted the more magnificent varieties, which the gardner had obtained by great diligence and labor. The place of the brilliant tulip of Harlem, was occupied by the yellow one of the wood; that of the hyacinth of Holland, by the squill of the meadow, and that of the anemone of a thousand varying dyes, by the simple golden button; these, with the clumsy bugle, the prickly nettle, and the crawing ivy, occupied the ground which had been prepared with so much care, for the most precious flowers of China, India, and Japan: in a word, all the plants which they left blossoming in beauty, were pitilessly destroyed by their own child. It is impossible to paint the anger of the parents and the penitence of the boy. Vainly did he prostrate himself on his knees before them and implore their pardon; vainly did he tell them that his flowers were far more beautiful, and that he had chosen as nature directed him; they were unrelenting, and the boy was delivered over to master Patridge, of the village school. Then were prohibited the walks in the forest, the chase after butterflies, and the listening at the still hour of twilight, to the songs of the nightengale and the linnet as they rose, blending in the richest harmony, from the cool groves; and the young enthusiast soon grew as stupid as his teacher.

Six months after, Patridge declared to the parents that they must take their child from school, as he would no longer degrade his class by the presence of a dunce, who could never be made to know anything; and he very charitably advised them to put him to some trade, and mentioned that of a shoemaker as the one best suited to the poverty of his mind. The parents, persuaded by this man, "bound him out" to Ludger, a shoemaker, and forbade him their roof.

But Charles had no better capacity for fashioning a sole, than for scholastic philosophy; consequently, in a few years his master gave him a sound beating and turned him out of doors. He dare not return to his father, who had disowned him, therefore, without money, without hope, and prepared for the worst, he directed his steps towards London, and offered his services to Dr. Rothman as a servant.

The Doctor ardently loved botany, and in his numerous botanical excursions he was always accompanied by Charles, who carried strings of insects, the medicinal herbs, a volume of Tournefort's botany, and a knapsack of provisions.

One day after an unusually long jaunt, the Doctor sat down in the shade on the border of a fountain, to make an inventory of the specimens he had gathered during his journey. In the meantime Charles was intently occupied in studying, with a magnifying glass, a small flower which had arrested his attention. Behold a botanist indeed! That little glass has made a man. The flower which he holds in his hand, so small and unattractive, and in the study of which he is so absorbed, would, without the glass, have been useless, but now is heaven-inspired. That little flower pointed up to God, and revealed a world of marvellous and mysterious beauty. Rothman had no longer a servant—he would soon have a master. The old man raised his head; in an instant he comprehended what he saw, and introduced a genius to the world.

He then recommended him, not as a servant, but as the son of his love, to the learned Stobeus, and together they procured him the means of instruction. After sufficient preparation, he went to Upsal, where he spent his time most unhappily; and having quarreled with a physician of that place, he was imprisoned and then banished.—For a long time he wandered about in various parts of Europe, poor and miserable, till at length in Holland he encountered Boerhaeve, who at once appreciated his genius and recommended him to several distinguished naturalists.

During these long years of wandering and destitution, the parents of Charles had almost forgotten their idiot-boy. * * * * * *

There was at Stockholm a rich lord, whose great scientific reputation spread throughout Europe. He was knight of the polar star, favorite of the king and queen, founder and first president of a university at Stockholm, and professor of the academy at Upsal, member of all the academies of the capitals of Europe, and author and reformer of many branches of Natural History. The father of Charles solicited an audience with this great lord, though not without trembling, for he knew from what he had heard that his rooms were thronged with the rich and the learned, and that to gain admittance to such a man of genius, was an almost hopeless task for one in his station.—Nevertheless his request was granted, and he was admitted to a particular audience. As he walked the gilded apartments of the knight of the polar star, his heart bent with a strange uncontrollable emotion. Finally the door-keepers announced him; he advanced, and in a moment was in the arms of his idiot-boy—his abandoned child—the immortal CHARLES LINNAEUS.

BUFFALO.

Man must first govern himself ere he be fit to govern a family; and his family ere he be fit to bear the goverament of the commonwealth.

INTERESTING DISCOVERIES.—Some months ago Dr. M. D. Dickinson, of the Academy of Science, was sent from Philadelphia for the purpose of investigating the geology of the Valley of the Mississippi. Dr. Dickinson, who is now in this city, is one of the most industrious and distinguished explorers of the wide field of geology in this country. His discoveries have opened new paths for the rumination of the student in this all important science, and reflected well-earned honors on himself. Very lately Dr. Dickinson made a tour of inspection through that part of Alabama in which abounds the rotten limestone formation.—This is particularly the case in the vicinities of Clark, Washington and Clairborne counties, in that State. Heretofore this formation has been considered by geologists as a detritus from shells, etc., but by the power of glasses it has been proved to be entirely different. Dr. Dickinson informs us that it is a huge coral reef, where gigantic branches shoot up several feet into a beautiful arborescent form in its original bed of the primeval ocean At its base are the fossil remains of the huge zuglodon, shark, fishes, &c., many of the former from forty to one hundred feet long, winding in serpentine form among the coral—Below this he found the remains of an extensive sea, the bottom of which was lined with a bed of shells, varying from twenty to thirty feet, in fine state of preservation. These beds yielded a great variety of shells, many of which may be still found in our present seas, and hence must have been of comparatively recent formation. Below this was found a huge oyster bed, imbeded in a blue marl of clay, in their original position. Some of these oysters measured fifteen inches in length, and weighed from ten to fifteen pounds. Succeeding this stratum was found the bottoms of several ancient seas, lakes and rivers. all yielding numerous fine fossils. Many of these fossils Dr. Dickinson has forwarded to the Academy of Natural Sciences in Philadelphia.

Dr. Dickinson starts to morrow for the parish of Concordia, to investigate the geological formation of that section of our State.—*N. O. Delta.*

"IN STATU QUO."—There is in this city a petty newsmonger (well known on 'Change,) who loves to retail intelligence, (and especially "war news") *a la Mrs. Tuttle*, who is an eyesore to every body he comes in contact with. His plan is to get up early of a morning, run round to such newspaper offices as will tolerate him, gather every thing he can learn, and to bore his neighbors with the "news," when he has not calibre enough to remember, or relate, in any shape come-at-able. He is "sold" almost every day in the week, of late—but he has rarely had news like that he carried "down town" with him yesterday! The late despatches from the army" were announced on Sunday, and true to his word, M—— entered one of his favorite haunts yesterday morning, with his customary interrogatory. He was met by a wag near the door. "Any news?" inquired M——. "Not much." "What is it?" "From the seat of war." "Where's the Army?" "Oh, *in statu quo.*"— "The devil it is?" "Yes," "How long has it been there?" "Since the 27th." "Thunder!" exclaimed M; and away he rushed down State street, with the intelligence. M—— met a friend on the corner of the street, to whom he imparted the information that "*our Army had reached* Statu quo"—whereupon the stranger opened his eyes, and advised him to call on S——. He did so, and long before early 'change hour, it was pretty well known that "our army was in statu quo!" Our witty friend was congratulating himself on having circulated this delectable piece of information long "before any other journal had the news," and was boasting of the fact to a friend, who asked him if he know where "statu quo" was *located.* Well; M—— didn't exactly know what department of Mexico it was situated in, but he had the news right from the office, and it must be so.—"You're a fool," said the neighbor. "Why?" "*Why!*—Don't you know that 'statu quo' means *in the same state or condition*, and that it is a very common Latin phrase?" M—— offered to bet a hat he was right, and at the last accounts he was poring over Disturnell's Map of Mexico, endeavoring most assiduously, to discover the location of "*Statu quo!*"—*N. Y. Spirit of the Times.*

JOSEPHINE'S INTRODUCTION TO NAPOLEON.—One day, as I sat at Madame de Chat—Ren—'s window, looking at some violets, the famous Bonaparte was on a sudden announced. The sound of his name gave me a thrill for which I could not account, and I trembled when I saw him approach me. At length I ventured to gaze on the man who had just gained so easy a victory over the Parisians. All present looked at him in silence. I was the first to accost him. "Citizen-General," I said, "it seems to me that you must have felt very loath to create such consternation in the capital. Had you reflected for a moment upon the fearful task you have just achieved, you might well shudder at the consequences it involves." "Possibly," he replied, "but what would you have, madame? Soldiers are automatons that move at the beck of the government; they know but to obey. I spared the sections; my cannon were mostly loaded with powder only. I had a mind to give the Parisians a slight lesson; and besides, *c'est mon cachet que j'ai mis sur la France.*" A few days after their interview, the Director Barras thus addressed Josephine: "I have got an advantageous match in view for you. I intend you to marry little Bonaparte, to whom I am about to give the command-in-chief of the army, and entrust the conquest of Italy." Remonstrances and difficulties were opposed to this abrupt proposition by the lady, but at that epoch, courtships, like all other measures, were carried by a *coup de main*, and Josephine became the wife of Napoleon upon the eve of his departure for the campaign of Italy. He felt that to her influence he was mainly indebted for his appointment to a post which opened to his aspiring hopes so vast and noble a field of conquest and distinction, and took leave of her with every manifestation of gratitude. "I owe you much, Josephine," he exclaimed, "but I shall either forfeit my head, or return a greater man than they dream of."—*Dolman's Magazine.*

We understand that the official ratification of the acts of the late Provincial Council of the Bishops of U. S. has been received by the Rt. Rev. Archbishop. The cities of Albany and Buffalo, in this State, have been erected into Episcopal Sees, by his Holiness, Pius IX. The Rt. Rev. Dr. McCloskey, coadj. of N. Y., has been appointed to that of Albany, and the Very Rev. Mr. Timon, Superior of the Lazarists, to that of Buffalo. No appointments could have been more satisfactory to the Catholics of the present diocese of New York, and all will hail with joy events so advantageous to the interests of their holy religion.

Galveston has likewise been erected into a See, and the Rt. Rev. John Odin, hitherto Vicar Apostolic of Texas, has been appointed Bishop. The Rev. A. Rappe has been made Bishop of Cleveland; we have already noticed the appointment of M. Bazin to the See of Vincennes.—*Freeman's Journal.*

Editorial Department.

J. CLEMENT, EDITOR.

The American Board of Commissioners of Foreign Missions.

The Annual Meeting of the Board was held in this city last week, commencing on Wednesday the 8th and closing on Friday the 10th. The attendance was respectable, though not so large as at many of its former sessions. Several returned missionaries were present, among whom were the Rev. J. L. Wilson, from West Africa, Rev. Mr. Lauric and Rev. Mr Calhoun, from Syria; the Rev. Mr. Pomeroy, formerly connected with the Armenian Mission, and the Rev. Mr. Bushnell, from Africa. A most excellent spirit pervaded all the sessions, and everything, as one minister observed, was conducted with perfect harmony of sentiment and feeling.

It appears that there are twenty-six missions under the care of the Board, embracing ninety-six stations. In connection with these stations are 140 ordained missionaries, (nine of whom are also physicians,) four licensed preachers, six physicians not ordained, six teachers, six printers and bne-binders, making in all 370 American missionary laborers; associated with whom are 22 native preachers, and 135 other native helpers, making the whole number of persons laboring under the direction of the board, 526. This number is twenty-two more than was reported last year. These missionaries have gathered and are watching over, seventy-three churches, to which 1,075 converts have been received since the last annual report. These, added to the number reported last year and deducting the removals by death and misconduct, make the present number of hopeful converts, 25,441.

With this last statement before the mind, and taking into consideration the fact that in connection with these missions are eleven seminaries for training native preachers, twenty-two other boarding schools, 337 free schools, eleven printing presses, and six type and stcrotype founderies, and bearing in mind the beneficent results of such agents for the dissemination of knowledge, who can estimate the good which these missions are doing! Slow though the progress of this great and glorious enterprise be, it *is* onward, and this Board will toil on with renewed confidence in the final complete success of their efforts, combined with that of other Boards, in aiming to send the Gospel to every nation on the globe.

It gives us sincere pleasure to hear that Mr. JAMES GIBSON, late Clerk of the Steamboat Empire, has become commander of the Wisconsin. He has been on the lakes for the last ten years, and no man of more gentlemanly demeanor ever trod the deck of a steamboat. The Wisconsin, under his command, must be a great favorite with the travelling public.

GENESEO.—The village of Geneseo, Livingston County, is among the liveliest in this part of the Empire State. It is situated on a high ridge of land, thirty miles south of Rochester, and one mile east of the Genesee River. Overlooking the great valley through which that famous stream runs, it presents, especially from the grounds immediately east of it, a commanding and truly splendid view of the surrounding country. It is a glorious spot to enjoy a sunset scene, and we almost envy the people of the place the luxury of which the eye and the soul must often partake.

The village contains between ten and twelve hundred inhabitants, a class possessing much refinement of taste and the strictest habits of industry. The flowers and trees which are flourishing in abundance around most of the dwelling houses speak largely in praise of the character of the occupants. The common on the south side of the village has lately been fenced in and decorated with shrubbery, and adds new charms to the already attractive place. As the village possesses no water-power, it will never attain a large growth, yet, being the county seat, it will not be likely to decrease in size or lose its importance. Geneseo is the residence of Governor Young.

The most *venerable* personage in the vicinity, is the well-known GREAT OAK of Geneseo, whose "Country Seat" is one mile west of the village. He has *long* held a *high* stand in society, is in possession of many "leaves" of remote history, and sometimes, for amusement, *branches* off into the *twigs* of poetry. A few years since, through the assistance of Mr. Hosmer—as amanuensis, we suppose, as his own limbs must be too stiff to use the pen—he wrote a rhyming epistle to the Charter Oak of Hartford. It was quite lengthy and is full of the acorns of historical fact. We will, as a conclusion, give the reader a small handful of them:

"Much have I seen—beneath my boughs
Tall elks have grazed with antlered brows;
Crouching for prey on mossy limb,
My leaves have screened the panther grim,
And I have heard the mammoth's roar,
Shake far and wide the forest floor.
Since rose, by light and rain-drops fed,
From forest mould my branching head,
Like flowers have flourished and declined
The wasting tribes of human kind.
Above their unrecorded graves,
Primeval wood no longer waves,
But flinty implements of chase,
That tell of a forgotten race,
While furrow broad the ploughshare turns,
Oft the brown husbandman discerns."

PEARLS OF AMERICAN POETRY.—Such is the name, of a unique and truly eloquent work, strictly American, illuminated by T. W. Gwilt Mapleson, Esq., and superbly and curiously illustrated, to be issued in one quarter volume by Wiley & Putnam, in the month of November. From samples shown us, we judge that the work will appear in the most perfect style of illuminated illustrations. Subscriptions received at Peck's Book Store.

THE AMERICAN REVIEW for this month is embellished with a finished likeness of Hon. THOMAS CORWIN, engraving by T. Doney; and contains no less than nineteen original articles, mostly papers of the first class in literary merit. Among the prose articles, an assay on Shakspeare's Sonnets, will attract the attention of the admirers of "Earth's Laureate Bard." It contains some interesting facts in regard to the heart-history of the great dramatist, and is written in a rich style.—What can exceed in beauty the conclusion?

"The lot of genius is loneliness and sorrow.—The beautiful drapery which the poet hangs over all the apartments of our life, is woven from the bitterest of human experiences, and dyed from the blood of his own heart—wrung out with anguish!"

The course of the Review is upward: and the spirit of enterprize manifested by the Editor, G. H. COTTON, Esq., is truly commendable. T. S. Cutting of this city, is agent for Buffalo and the vicinity.

TO CORRESPONDENTS.—We are greatly obliged to our Avon friend and correspondent for the favor on the first page.

"*The Old Bible Picture*," by Mrs. EAMES, is on file and will receive an early admission.

The lines on "*My Heart*," cannot appear till we have had an interview with the author.

There will be a corner for "*An Evening Reverie*" anon.

The letter received from Sardinia is mostly unread and at the author's disposal.

The correspondence from Bellville, Ohio, is necessarily deferred till next week.

TEACHER'S INSTITUTE.—We learn by a Circular from Mr. W. D. HUNTLEY, County Superintendent, that the Teacher's Institute of this County will hold a session at Lancaster, commencing next Monday. The importance of this meeting will, we hope, secure a large attendance of the teachers in Erie County.

THE MASSILLON NEWS.—Our bachelor friend, GEO. MILLER, Esq., has finally wedded—the press. The Massillon News, a new and good looking weekly, has all his affections. May he find many a *stick* full of comfort in his new connection.

SPRINGVILLE ACADEMY.—The Fall Term of this highly reputable School, situated in the southern part of Erie County, commenced last week, under very favorable auspices. Prof. J. W. Earl, remains the principal.

THE NORTHERN LITERARY MESSENGER, printed at New Haven, Conn., is a very neat and a well-conducted quarto, edited by an association of gentlemen, and published weekly by O. G. Wilson. Two dollars per annum.

THE IRIS OF NIAGARA FALLS, is the name of a newspaper, published by HACKSTAFF & HOAG, at two dollars a year. It looks well.

Death of Charles Townsend.

A profound and mournful sensation was produced this morning by the announcement of the death of the Hon. CHARLES TOWNSEND, one of the oldest and most estimable residents of our city. Yesterday he was about town, as usual, attending to business, with as fair a prospect, apparently, of enjoying for many years to come a serene old age, in the full possession of his intellectual and physical powers, as any man among us. He spent the evening in pleasant converse with his family, and retired at the usual hour. This morning early, a servant on going into the sitting room to light a fire, found him seated in a chair, his head leaning on his hand over a table, dead.

No resident of Buffalo was more thoroughly identified with its growth and history than CHARLES TOWNSEND. He came here at a very early date, a year or two before the last war with Great Britain, when our now fair city was but a small village, and all beyond was but little else than a wilderness. But with the great sagacity, and calm resolute enterprise that were such striking traits in his character, he appreciated the great natural advantages of this point, foresaw the greatness of the slumbering country, that needed but intelligent enterprise to be quickened into life and activity, and with well directed efforts engaged in those pursuits which have aided to make our Western wilds the seat of empire.—To no living man does the commerce of our lakes owe more, and especially do the citizens of Buffalo, who now rejoice in its present and prospective greatness, owe a debt of lasting gratitude to the memory of CHARLES TOWNSEND, who, in conjunction with a few others yet spared among us, nobly risked his own means in an enterprise calculated to promote the prosperity of all, and which the government refused to undertake until private, well directed effort had led the way and shown it practicable.

A careful, methodical business man, uniformly courteous and polished in his manners, a gentleman of the old school, a model of high mercantile honor, of highly cultivated mind and a christian, he has ceased from his labors, and will descend to the grave followed by the regrets and veneration of all who knew him. His age was about sixty-one.—*Com. Adv.*

From the Buffalo Commercial Advertiser.

Assault with Intent to Kill.

On Saturday last we published a paragraph commenting upon an affray between an officer of the Navy and a servant at the American Hotel. This forenoon, about 11 o'clock, the officer referred to, who is passed Midshipman *William W. Pollock*, attached to the U. S. Steamer *Michigan*, called at the counting room of this paper, in the back part of Messrs. PECKS' Bookstore, and said to Mr. JEWETT, who was at the desk, "I wish to see you." Mr. JEWETT stepped forward into the body of the store, when Pollock said, "I wish to

make inquiry in relation to an article in Saturday's paper." In answer to what inquiry he wished to make, he said, "I wish to know if you hold yourself responsible for that article." Mr. JEWETT replied that he did so. Upon which Pollock said, "very well, I hold you responsible," and immediately drew a pistol from beneath his cloak and fired. The pistol was loaded with three balls, two of which lodged in the wallet which Mr. JEWETT fortunately happened to have in his pocket, and which beyond all doubt saved his life. Pollock was immediately arrested, and, after a brief examination before Police Justice CHILD, was committed to jail, where he now is. That the public may see what provocation there was for so murderous an assault, we republish the article below:

☞ We understand that a young Middy, attached to the naval service on the lakes, so far forgot what was due to his own character as a gentleman, and the uniform he wears, as to make a personal assault upon a servant at the American Hotel in this city a few days ago. The interposition of friends saved him from much damage in the encounter. Some young gentlemen attached to the naval service are not particularly renowned for their staid demeanor, and so long as they work off their exuberant animal spirits in harmless frolics, the public is rather disposed to look with a lenient, if not approving, eye upon their escapades. But a vulgar sort of rowdyism is as little becoming an officer, as it is a gentleman in civil life. There are better modes of displaying a character for high spirit and frank, chivalrous gallantry, than assaulting a servant. More than this, conduct such as we are remarking upon, besides being reprehensible in itself, is injurious to others. Every officer in the National service should feel that he represents a class on which he is bound to bring no discredit by any act of his. It is a just subject of national pride that the officers of the army and navy, are, for the most part, distinguished not less for high, gentlemanly bearing, than for that gallantry which has made our country respected on land and sea, and they have just cause to complain when one of their number, whether in actual service, or released from duty to enjoy the relaxation of social life, is forgetful or regardless of the proprieties becoming his station.

As the matter is to undergo an immediate investigation by the Grand Jury, now in session, we forbear any farther comment.

$200 Reward—Four Prisoners Escaped from Jail.

On Monday night last four prisoners confined in the Jail in this city, made their escape therefrom about 9 o'clock. The first, named Henry S. Elliott, is about 5 feet 10 or 11 inches high, 35 or 36 years old, dark brown hair and dark complexion, quick spoken and active, dark keen eyes and full round face.

The second, Thomas Early, is a boatman. He is thick set, rough looking, 26 or 28 years of age, and about 5 feet 7 or 8 inches high.

Henry Paddock, the third, was sent here for confinement, from Oswego, for robbing the mail. He is about 5 feet 7 or 8 inches high, tolerably thick set, dark complexion, keen eyes, and is between 25 and 28 years of age. He has formerly lived in Jefferson county.

The fourth, James Ladd, a mulatto, about 21 years of age, was under a charge of rape. He is some 5 feet 7 inches high, hair rather long and bushy, and tolerably stout built.

The manner of their escape was as follows: About 9 o'clock Mr. Moody, the turnkey, went into the hall to see that all was safe, and as he opened the door he met Elliot with a candle, who inquired of him if he had any more customers, or if there was any thing new. Just at that moment, and before Mr. Moody had closed the door behind him, one of the others who had remained concealed, made a rush at and forced open the door, dragging the turnkey with him. Before they could be secured the four then made their way out of the building, and although the officers were immediately aroused and started in pursuit, nothing has yet been seen of them. The Sheriff has offered a reward of $200 for the arrest of the whole, or $50 for each of them.—*Rochester Daily Advertiser.*

Important.

The Telegraphic despatch published by the Utica *Gazette* of yesterday, P. M., differs from the one sent us in some important particulars, which we give below:

These engagements brought the Mexicans to terms, and they sued for peace.

The Mexican Congress was convoked, and the propositions which Mr. Trist, the American Commissioner, was authorised by the United States Government to make, were laid before that body.

Gen. Scott, it is stated, to save the pride of the Mexicans, refrained from entering the city.

An armistice was granted.

This would indicate that the preliminaries of a peace, if not an actual treaty may be looked for by the next arrival from Vera Cruz.

NEW YORK, Sept. 10—3 P. M.

Vera Cruz dates to August 27th have been received at New Orleans.

The *Picayune* has a letter from Orizba of the 25th August, which says that two brigades of Mexicans under VALENCIA, and one under SANTA ANNA, attacked the Americans at different times, at San Anget, very near the city of Mexico, but were completely defeated, and fell back in disorder into the city.

A suspension of hostilities was then asked for, to hear Mr. TRIST's proposals.

The next day Congress was called together.—Our army were encamped around the city of Mexico, but had not an entrance on the 21st.

Major LALLY arrived safely at Puebla, after some skirmishes.

Lieut. DAVID HENDERSON and his party of Fairchild's company of Dragoons, were all shot by guerillas.

The guerillas attacked Alvarado and killed a sergeant and two marines.

The steamers Petrita and Scorpion were forthwith despatched to reinforce the place.

VERMONT.—Returns meagre, and so far shew some Loco Foco gains—probably not enough to make any material change.

NEW YORK, Sept. 9, 7 o'clock P. M.

Wall street was this morning greatly agitated by the announcement that the extensive and heavy House of Prime, Ward & Co. had stopped payment—an act of prudency rather than necessity. Their liabilities are between 1 and 2 millions, a large part of which is probably held by the Barings. Messrs. Prime, Ward & Co. are large creditors to some London houses which have recently failed, but which it is hoped will be able to pay 20s on the pound, in which case P., W. & Co. will lose comparatively little, and at any rate their assets are very large. The following is a circular issued by them this morning:

New York, Sept. 9, 1847.

We regret to inform you that owing to recent failures of some of our correspondents in Europe on whom we have a large amount of bills running, we feel it incumbent upon us both from a sense of duty and as an act of prudence to suspend payments. Very respectfully yours,

PRIME, WARD & Co.

Major Lally with 12 dragoons, reported cut off, reached Jalapa safely. Capt. Wells lost 40 men.

Brazos dates 24th, state that some skirmishing had taken place between Urrea's troops and our trains—30 Americans killed in all. It was supposed that Taylor would move towards San Luis Potosi on the 1st inst.

Deaths in New Orleans by Yellow Fever, 104 in 48 hours.

A Mr. Campbell and son were drowned at Patterson, N. J. The father tried to kill the son, who waded into the river followed by the old man.

Vermont.—Pownall elects Whig representatives by 60 majority. Whig majority on Governor 26.

The Magnetic Telegraph.—The services of this wonderful agent have at length been called into requisition for the purposes of the press. The second edition of the Manchester Times of Saturday last contains a report of a public meeting supplied by the above means r and this, we are informed by the proprietors, is the *first time* that electic telegraph has been made available for such a purpose.—*London Athenæum. Aug.* 14.

In this country, says the *Conrier & Enquirer*, the Telegraph has been used for more than *two* years, as a means of communicating intelligence for the Press. Every steamer has taken to England American newspapers contsining reports from almost every section of the country, made *"by Telegraph"*; and Americans in England must have made the fact universally known that in the United States the Telegraph was extending with wonderful rapidity over the whole country. Yet until within a few weeks past no use whatever has been made of it by the English Press or People!

The fact shows how slowly novel inventions, of the most striking character and utility, if they come from abroad, and especially from America, make their way in England. It is almost impossible to convince England that there c n be any thing better than their own inventions.—*Com.*

On the Stonington Railroad, they carry a "Sprinkler," for the purpose of watering the track and road bed, thereby diminishing the friction of the cars upon the track, preventing the boxes and journals from being heated, by keeping away the dust, preserving the paint and varnish by not having to clean the cars so often, relieving the passengers from great annoyance, and taking from the brakemen a large share of their labors at the through stations. This improvement has been fully tested for the past two months upon the road, and found to be very popular with travelers. It requires about two thousand gallons of water for the Stonington Road, (forty-seven and a half miles) The machine is attached to the train, behind the usual water tank, and is under the control of the engineman by a rope attached to a valve, which he shuts and opens at pleasure. When it is in operation, not a particle of dust appears inside or outside of the cars. In warm and dry weather, the car windows can be left open without objection.—*Providence Journal.*

Horrible Tragedy—A Woman Murdered and afterwards Burned to Ashes, by her Step-Daughter.

From the Pittsburgh Dispatch of Monday.

An aged lady named Mary Morrison, wife of Samuel Morrison, residing in Mifflin township, in Allegany County, about three miles from McKeesport, was murdered on Friday last, and afterwards burned to ashes, by her step daughter. The facts, as far as we have been able to learn, are these:

On Friday morning Mr. Morrison started to the city with produce for the market, leaving his wife and daughter at home. The daughter is a woman about 35 years of age, rather a simple creature, and considered by the neighbors as insane. Mrs. Morrison has from her childhood been subject to spasmodic spells. On the afternoon in question she was taken with one of these spells, and being on the floor, under the influence of the fit, her step-daughter, Sarah Morrison, beat her on the head with a fire shovel, until, it is supposed, she killed her, and then threw her into the fire, and kept piling on the fuel until she burned her almost to ashes, there not being bones enough left of the body to fill a quart measure.

The step-daughter, after consummating the horrible and tragic act of burning the mother, carefully scrubbed the floor to obliterate the traces of blood, and made her escape to the woods.

Mr. Whitaker, a brother of Mrs. Morrison, visited the house on Saturday morning and found it deserted, bu there being a very disagreeable stench he suspected that all was not right, and immediately commenced a search of the premises. On examining the fire place, whence the smell proceeded, he discovered a number of small bones, and the jam spotted over with blood. Several of the neighbors were called in and started in pursuit of the step-daughter, who was arrested a few miles from the scene of the tragedy. She confessed the atrocious murder, and assigned as her reasons for doing so, that "her father, stepmother and herself could not agree, and she tho't the best thing she could do was to burn her up." She also confessed the manner in which she consummated the act.

Coroner Richardson was sent to hold an inquest on the remains, and the Jury, after hearing the testimony of a number of witnesses, returned for verdict that "deceas d came to her death from violence at the hands of her step-daughter, Sarah Morrison," and authorized the Coroner to take the murderess in custody. He brought her to this city and lodged her in jail on Sunday morning.

Mrs. Morrison, the deceased, was a sister of Dr. Whitaker of Allegany city, and is said to have been a woman of mild and gentle disposition, when not under the influence of the spasmodic spells to which she was subject. Her untimely and tragical death is regretted and mourned by a large circle of relatives and friends.

The law suit brought by the owners of the steamer Rochester for recovering damages of the owners of the steamer Illinois, has been through another hearing in Cuyahoga county. It will be recollected that in the Spring of 1839, a collision occured between the two boats in Detroit River by which a considerable injury was sustained by the Rochester. It was tried twice in the court of Common Pleas in this county, the first time the jury returned a verdict in favor of plaintif of $5,000, and at the second trial $1,500. The venue was then changed to Cuyahoga county, and it was again tried at the last session of the Supreme Court, the jury brought in a verdict of $2,000.—*Churdon (O.) Republican.*

MURDER MOST SHOCKING.—A most foul murder was committed in this city on Saturday night. There is, at the corner of John and Elizabeth sts., a low doggery—kept by a German named Horn. At this place a difficulty arose on Friday night, in which an Irishman, named Gaffney, was concerned. No damage was done, however, when the parties separated. We understand that the enemies of Gaffney swore vengeance against him, and in pursuance of their fiendish design, called him into the doggery, as he was passing by, on Saturday night.

Immediately after he entered the room the door was closed, and the attack was commenced.—The shouts of the assailants and the screams of the poor victim aroused the whole neighborhood—among the rest the wife of Gaffney, who, in a state of dreadful agony, rushed into the room, and attempted to save her husband. She saw him struggling with his enemies, but her arm was too feeble to save. The fatal blow, it is supposed, was struck while he was leaning in her arms.—In the struggle with the assailants, the wife was struck and severely injured; and a friend of Gaffney, who accompanied his wife, was so much mangled that it is feared he cannot recover.

We visited the scene of blood, yesterday morning, and we hope never to witness such a sight again. There lay the corpse of the murdered man, covered with blood, presenting a spectacle too shocking to look upon. But by his side, sobbing and mourning, sat his wounded wife, clinging to the cold clay, as if by weeping she could reinstate the spark of life, so suddenly put out.—It was a sight! this fond, loving woman, half distracted by the terrible calamity that had fallen on her house, sitting by the side of her lost protector, to move the heart o the coldest nature.

Gaffney was an industrious, worthy, and honest man; a kind husband and an affectionate parent. We sincerely hope that justice will be meted out to the guilty.—*Cincinnati Gazette.*

DISASTROUS FIRE—HUTCHINSON'S CITY MILLS MUCH DAMAGED.—About 6 o'clock last evening, the roof of S. R. Hutchinson's extensive Stone Flouring Mills was found to be on fire, which was not subdued until the roof was nearly destroyed. Every part of the mill was thoroughly wet, and the damage to machinery, grain, flour, &c. is great. Some 3000 bushels of what and 200 or 300 barrels of flour were wet. Mill insured for $15,000, and stock for $4000, which we hope will cover the loss.

The fire originated from friction in the smut machine room.

The mills had just been put in thorough repair, and provided with new bolts, screens, &c.—*Cleve. Herald.*

MUNIFFICENT BEQUESTS.—Julien Poydras, Esq., late of the parish of Pointe Coupee, in Louisiana, bequeathed to several parishes in the State, individuals, orphan asylum and other charitable associations property of immense value and a large amount of funds. Among the institutions thus aided are the Poydras Orphan Asylum of N.O. and the Charity Hopital in that city. To the parish of Pointe Coupee the deceased gave $30,000—the interest of this sum to be employed in giving a dowry to all the girls of said parish who may get married: the unfortunate to be always preferred. Also $20,000—the interest to be employed towards contributing to an academy or college, to be especially established in the parish.

He also bequeathed to West Baton Rouge $30,000—the interest to be employed in giving a dowry to the girls of the parish when they marry.

The *Platte Argus*, is noticing the return of General Kearny and Col. Fremont, from California, says:

"Col. Fremont is under arrest. He was permitted to bring twenty men in his escort, *and march in the rear of the General.* It is said that Col. Fremont had his choice, either to be sent home *in irons*, or to come the way he did. The Colonel is very popular in the United States, and his present situation will excite a lively interest in the minds of the people."

We undertake to say, that these statements, so far as they go to reflect upon Gen. Kearny, are gratuitous, and without any justification. Col. Fremont was not arrested until his arrival in the United States, and we understand that his return home was entirely voluntary—most probably with a knowledge, that he would be arrested on his arrival in the United States.

The two parties, we believe, did not travel together, but they were within a mile or two of each other on the whole route. Whether this arose from the establishment of a personal non-intercourse between them, or from mere convenience, is a matter about which we know nothing.

The same paper alludes to a contemplated duel between Col. Mason of the Dragoons, now Governor of California, and Col. Fremont. Such a meeting was, at one time, feared—a challenge having passed between the parties—but it was checked by General Kearny. Of the causes which let to it, if of a public character, the country will, perhaps, be informed at a proper time.—*St. Louis Republican.*

MOURNFUL—A YOUNG MAN SHOT.—On the afternoon of Wednesday last, two young men of this town, Ransom Tubbs and James M. Wait, went into the woods in the vicinity of Westville, in quest of game. They had but one gun between them, which belonged to Mr. Wait. He had just put it into the hands of his comrade, and while they were preparing to secure some game from a flock of quails, the gun accidentally went off—lodging it fatal contents in the abdomen of Mr. Wait. The loss of blood was so rapid, that he was soon reduced to extreme weakness, and although medical aid was soon obtained, yet it was evident that his wound was incurable. He survived the shock about thirty-four hours.—*Conneaut Reporter, 9th inst.*

SUICIDE BY TAKING LAUDANUM.—Coroner Walters was called last evening to view the body of Thomas McCutcheon, a popular comedian, who has been for a short time past been engaged at the Chatham Theatre, and who was found dead at his room at the New England House, in Rosevelt street, at about 6 o'clock yesterday afternoon. The deceased not having been seen about his house, as usual, during the day, his room door was forced open, when the facts of the case were made apparent. A phial labelled laudanum, poison, and a tumbler from which he had swallowed the fatal draught, were found on the table near his bed side. No cause assigned for committing the rash act. The deceased was a single man, about 35 years old.—*N. Y. Herald.*

DEATH BY VIOLENCE.—We learn a seaman attached to the brig Iroquois, was killed at the Polk House, a small groggery on the North side of the river. The keeper of the house, Pete Hogan, had an altercation with him and kicked him violently on the temple, rendering him insensible.—He was placed in a room and this morning found dead from the injury received. We learn that Hogan has been arrested to await his trial for murder.—*Chicago Jour.*

For the Western Literary Messenger.

Lines.

WRITTEN IN THE ALBUM OF A FRIEND.

What change hath passed o'er all, since first we met!
What scenes of joy, alas! of grief, what scenes,
Have marked the fleeting years—too quickly fled!
Youth, beauty, manhood, hoary age, have felt
The palsying touch of unrelenting Time.

O, what a world is this! To-day we bind,
In ecstasy, earth's dear ones to our hearts;
To-morrow they are not! Death, tyrant dread,
On them his fascinating gaze hath fixed—
And marked them for his own; or Fate, perchance,
Scarce less austere, hath to some distant clime,
Transfer'd the chosen objects of our love.

Yet life hath gleams of sunshine. Sighs and tears
Are not alone our heritage below.
The voice of Friendship, like a soothing balm,
Falls on the strick spirit—heals the wound,
And beckons on to future years of bliss.
Nay more, the Christian's never-fading hope—
Which taketh hold "of that within the vail"—
Shall smoth his passage to the shoreless tomb,
And lead his soul to glory and to God.

JUNIUS.

Mount Morris, September, 1847.

An Eagle Caught.—A very large eagle was caught at Hadley, Mass., on the 1st inst., in a bear trap. The powerful bird was taken alive without the fracture of a bone. His wings distended measured 7 feet. Mr. Nash had lost a sheep the day previous and supposing that some dog was the murderer, set a trap for him.

STATE OF NEW YORK, } Albany, August 3
SECRETARY'S OFFICE, } 1847.

To the Sheriff of the County of Erie:

Sir: Notice is hereby given, that at the next general election to be held on the Tuesday succeeding the first Monday of November next, the following officers are to be elected, to wit:

STATE.

A Secretary of State, Comptroller, State Treasurer, Attorney-General, State Engineer and Surveyor, Three Canal Commissioners, and Three Inspectors of State Prisons.

DISTRICT.

One Senator for the Thirty-First Senate District, consisting of the county of Erie.

COUNTY.

Also, the following officers for the said county, to wit Four Members of Assembly, one to be elected in each Assembly District.

Yours, respectfully,
N. S. BENTON, Secretary of State.

Erie County Sheriff's Office, }
Buffalo, August 6, 1847. }

A general election is to be held in the County of Erie, on the second day of November next, at which which will be chosen the officers mentioned in the notice from the Secretary of State, of which a copy is annexed.

au6aawtno2 TIMOTHY A. HOPKINS, Sherif.

MARRIED.

On the 7th instant, by the Rev. S. R. Smith, Mr. B. M. REED, and Miss CAROLINE WAKELEE, both of this city.

At Benton, on the 1st inst., Mr. BLEEKER L. WEBB of Fairport, Monroe Co., and Miss CAROLINE M. HAVENS, of this city.

At Harris Hill, on the 6th inst., by J. W. Stevens, Esq., Mr. WILLIAM STICKNEY, of Tonawanda, and Miss MARY TOOL, of Amherst, Niagara Co.

At Aurora, on the 7th inst., by the Rev. A. C. Barrell, of Fredonia, Mr. GEORGE C. FERRIS, and Miss HARRIET S. PALMER, both of the former place.

DIED.

On the 9th inst., JEREMIAH, son of J. G. and Elizabeth Brainerd, aged 1 year, 4 months and 15 days.

This morning, 11th inst., Mrs. ABIGAIL COLEMAN, aged 53 years, wife of Chas. H. Coleman.

On the 12th inst., EDWARD, son of Jas. B. and Agnes Dubois, aged 11 months.

On the 11th instant, GEORGE BROWNE, youngest child of Andrew A. and Susan M. Hall, aged 1 year and 11 months.

On the 10th inst., FRANCIS M., son of Paul Coburn, aged 11 months

On the 12th inst., THOMAS LAYTON, son of Thos. S. and Hester A. Hawks, aged 24 years.

On the 12th inst., after a lingering illness of 17 months of severe suffering, Mrs. TEMPERANCE PIERSON, aged 71 years.

In Troy, on the 5th inst., Mrs. MARY ANN, wife of Jonathan Keith, of Silver Creek, and daughter of the late Manning Case of this city, aged 42 years and 1 months.

At Williamstown, Mass., Mrs. JOANNA, wife of A. Shattuck, Esq., and mother of Charles T. Shattuck, of this city, aged 59 years.

In Boston, Mass., on the 28th ult., DAVID TILDEN, Esq., aged 75 years, uncle of N. T. Otis, of this city.

NEW PUBLISHING HOUSE AND WHOLESALE BOOKSTORE.

The subscribers, beg to inform Booksellers buyers and dealers in Books, and all interested in education and literary advancement, that they have recently opened an extensive Book and Stationary Establishment. Their assortment of Books in the various departments of literature is complete and well selected: comprising a full assortment of School and Classical Books in general use, Law, Medical and Theological Books, in great varieties. Their facilities as Publishers ena le them to offer Books on as favorable terms as most of the Eastern Houses Orders from the country, solicited and promptly answered.

Citizens and the public generally are invited to call and examine Books and Prices, where will be found the one progressive principle "Small Profits on numerous Transactions."

BUFFALO MUSICAL INSTITUTE FOR YOUNG LADIES.

At the residence of Prof. W. R. Coppock—Composer and Teacher of the Piano Forte, Organ, Singing and Composition.

An institute devoted exclusively to Musical Education is not yet common in this country: but in Europe the test of experience fully shows its great advantage over the too general superficial manner in which this important part of polite education is acquired. The advantages this institution offers to those desirous of completing their studies as Organists—or practical players of the Piano Forte, together with a thorough system of imparting the same to others is fully established by the many precedents of the past 12 years. The pupils are constantly guarded in their practice, against all bad habits, and from the various stages of progress they may be in, are continually stimulated to effort and industry, by association with each other. The family too, are all players, and the theory is amusingly discussed, impressing its rules in a more pleasing manner, and more lasting upon the understanding, than by the mere dry study of an elaborate book. Music is composed and arranged from time to time, showing the various styles and harmonies analytically, and adapted for performance on several Pianos at the same time. This teaches a thorough knowledge of counting, and dividing passages into their given time. Vocal music is particularly studied to, and when the pupil has a moderate share of talent, we hesitate not to say, a correct and pleasing singer can be made. The Piano Fortes used are all new, and of the finest quality, and every endeavor will be given to render the true spirit with its portitable. The building is commodious, and has a fine garden attached, with Green houses, Bathing rooms, &c, and is pleasantly situated in Seventh street, between Niagara Street, and the Falls rail road, and about midway to Prospect hill

Terms made known upon application at the Institute, or by mail, post paid, directed Prof. Coppock, Buffalo

Prof. Coppock, keeps constantly a choice selection of Piano Fortes for sale.

Buffalo, August 3, 1847.

VOLUME IX. BUFFALO, SATURDAY, SEPTEMBER 25, 1847. NUMBER VIII.

For the Western Literary Messenger.

The Old Bible-Picture.

BY E. J. EAMES.

I.

Softly, and sweetly the clear lamp-light
Is shed o'er my table this lovely night—
A dreamy quiet my chamber filleth,
Whose influence each wild heart-pulse stilleth—
While I, as though drawn by a beautiful spell
Pause on this old Bible-plate to dwell.

II.

"Cana of Galilee!" oft as now
Mine eye has followed those words below:
And gazed on the picture above engraven,
But the beauty and truth to the grouping given—
The painter's coloring—the limner's art—
Fill'd the tasteful fancy, but not the heart.

III.

'Tis a graceful cluster of low-roof'd homes
Round which the Tam-rina and fig-tree blooms:
In the distance sleepeth an olive mountain,
And gather'd about this welling fountain
Is a group of figures in costumes strange
Filling the jars that around it range.

IV.

Now the old plate hath a holier power
Over my spirit's musing hour.
Before mine eye methinks the real
Bendeth in beauty with the ideal,
While the scene arises distinct, and still
Of that first, and most beautiful miracle.

"Mary the Mother of Jesus" is there,
Bound with a wave of her golden hair
Is the pure pure brow, and a world of feeling
On the lip is writ' in sweet revealing,
And a fountain of meekness and piety lies
In the calm clear depths of those lovely eyes.

VI.

In blushing beauty the dark-eyed bride
Bendeth a glorious form beside:
But the bridegroom's noble brow is shaded—
And the happy smile from his lip has faded.
In the empty goblet doth he feel and see
A sense of his scant hospitality.

VII.

Who seemeth a God in that shamefelt hold?
Lo! beneath his gaze of tranquil power
The limpid waters are redly blushing,
The empty wine-cups are fill'd and flushing—
While He the Lord of Heaven and Earth,
In meekness moves 'mid their guileless mirth.

VIII.

Old Bible-picture! the vision 's past—
Yet may the thoughts thou 'st wakened last:
Sweet thoughts of His goodness and charity,
Of His gentle affectionate sympathy,—
May my deeds thus flow from a fount of love,
And mingle with all that is pure above.

It appears that men cling to life in proportion to the slight tenure by which they hold it, and prepare for a long residence on earth, in proportion as the period of human life grows short

All for the Best.

I do not think there could be found in the three kingdoms a blither little old maid than Miss Mellicent Orme, otherwise Aunt Milly, for so she was universally called by her nephews and neices, first, second, and third cousins—nay, even by many who could not boast the smallest tie of consanguinity But this sort of universal auntheod to the whole neighborhood was by no means disagreeable to Miss Milly, for in a very little body she had a large heart, of a most India-rubber nature: not indeed as the simile is used in speaking of female hearts, that 'never break—but always stretch.' But Miss Milly's heart possessed this elastic nature in the best sense—namely, that it ever found room for new occupants; and, moreover, it was remarkable for its quality of effacing all unkindness or injuries as easily as India-rubber removes pencil marks from paper.

Aunt Milly—I have some right to call her so, being her very nephew, Godfrey Estcourt—was an extremely little woman. She had pretty little features, pretty little hands and feet, a pretty little finger, and always carried with her a pretty little worked bag, in whose mysterious recesses all the children of the neighborhood loved to dive, seldom returning to the surface without some pearl of price, in the shape of a lozenge or a sugar plum. Her dress was always neat, rather old fashioned, perhaps, but invariably becoming: her soft brown hair—it really was brown still—lay smoothly braided under a tiny cap; her white collar was ever smooth; indeed, Aunt Milly's whole attire seemed to have the amazing quality of never looking worn, soiled, or dusty, but always fresh and new. Yet she was far from rich as every one knew; but her little income was just enough for her little self. She lived in a nutshell of a house, with the smallest of small handmaidens; indeed, everything about Aunt Milly was on the diminutive scale. She did not live much at home, for she was every where in request—at weddings, christenings, and, to her credit be it spoken, Aunt Milly did not turn her feet from the house of mourning. She could weep with the sorrowful, yet somehow or other she contrived to infuse hope amidst despair. And in general her blithe nature converted all life's minor evils into things not worth lamenting about.

Every one felt that Aunt Milly's entrance into their doors brought sunshine. She was a sunbeam in herself: there were cheerfulness in her light step, her merry laugh; the jingling of the keys in her pocket, dear little soul! was musical. She had a word of encouragement for all, and an inclination to look on the sunny side of every thing and every body. No one was more welcome in mirthful days, no one more sought for in adversity, for she had the quality of making even trouble seem lighter; and her unfailing motto was, 'All happens for the best.'

All my schoolboy disasters had been deposited in Aunt Milly's sympathising ear; and when I grew up, I still kept to the old habit. I came to her one day with what I considered my first real sorrow: it was the loss, by the sudden failure of a country bank, of nearly all the hundreds my poor father had laid up for me. My sad news

had travelled before me, and I was not surprised to see Aunt Milly's cheerful face really grave as she met with, 'My dear boy, I am very sorry for you.'

'It is the greatest misfortune I could have,' I cried. 'I wish that wretch Sharples——'

'Don't wish him anything worse than he has to bear already, poor man, with his large family,' said Aunt Milly gently.

'But you do not know all I have lost. That —that Laura——,' and I stopped, looking, I doubt not, very silly.

'You mean to say, Godfrey, that since, instead of having a little fortune to begin the world with, you have hardly anything at all, Miss Laura Ashton will not consider that her engagement holds. I expected it.'

'Oh, Aunt Milly, she is not so mean as that; but we were to have been married in two years, and I could have got a share in Mortlake's office, and we should have been so happy! All is over now. Her father says we must wait, and Laura is to be considered free. Life is nothing to me now. I will go to America—or shoot myself.'

'How old are you, Godfrey?' asked Aunt Milly, with a quiet smile that rather annoyed me.

'I shall be twenty next June,' I said. Young people always put their age in the future tense, it sounds better.

'It is now July, so that I may call you nineteen and a month. My dear boy, the world must be a horrible place indeed for you to get tired of it so soon. I would advise you to wait a little while before you get so very desperate.'

'Aunt Milly,' said I, turning away, 'it is easy for you to talk—you were never in love.'

A shadow passed over her bright face, and her eye glanced sadly at a mourning ring on the little hand; but Aunt Milly did not answer my allusion.

'I do not think any boy of nineteen is doomed to be a victim to a loss of fortune or hopeless love,' she said, after a pause. 'My dear Godfrey, this will be a trial of poor Laura's constancy, and your own patience and industry. Depend upon it all will turn out for the best.'

'Oh!' I sighed, 'you talk very well, Aunt Milly; but what can I do?'

'I will tell you. You are young, clever, and have been for two years in a good profession.—It will be your own fault if you do not rise in the world. Every man is in a great measure the architect of his own fortunes; and where, as in your case, the foundation of a good education is laid, so much the easier is it to raise the superstructure. You may be a rich man yet by your own exertions, and money earned is ten times sweeter than money received by gift or legacy.'

This was the longest and gravest speech I had ever heard from Aunt Milly's lips. Its truth struck me forcibly, and I felt rather ashamed of having so soon succumbed to ill-fortune; it seemed cowardly, and unworthy the manly dignity of nearly twenty years. Aunt Milly, with true feminine tact, saw her advantage and followed it up.

'Now, as to your heart-troubles, my dear nephew. To tell the truth, I hardly believe in boyish love; there is generally more of fancy and romance than real affection. Do not be vexed, Godfrey, but I should not be surprised if, five years hence, you tell me how fortunate it was that this trial came to prove the steadiness of Miss Ashton's regard, or your own, before you married her. Men rarely see with the same eyes at nineteen and twenty-five.'

'I began with good old Will Shakspeare's declaration:

'Doubt that the stars are fire,
Doubt that the sun doth move,
Doubt truth to be a liar,
But never doubt my love.'

Aunt Milly smiled. 'As both these astronomical facts are rather questionable, you must excuse my doubting a little still. But time will show.—Meanwhile do not despair; be diligent, and be careful of the little you have left. Matters might have been worse with you.'

'Ah, Aunt Milly, what a cheerful heart you have! But trouble never comes to you as it does to other people.'

'You are a little mistaken, Godfrey. At this moment I am in greater distress than you. By Sharple's failure I have lost every farthing I had in the world.'

I was struck dumb with surprise and regret.—Poor dear Aunt Milly! when she was listening to my lamentations, and consoling me, how little did I know that she was more unfortunate than myself! And yet she neither complained nor desponded, but only smiled—a little sadly perhaps—and said she knew even this disaster was 'all for the best,' though she could not see it at the time.—She calmly made preparations for quitting her pretty home, confided her little handmaid to one cousin, in whose kitchen Rachel was gladly admitted, gave her few household pets to another, and prepared to brave the wide world as best she could. Some unfeeling people forgot Aunt Milly in her trouble; but the greater part of her friendly circle proved how much they esteemed her by inviting her to visit them for a month, three months, a year: indeed, had she chosen, Aunt Milly might have spent her life as a passing guest among her friends; but she was too proud to do so.

At last a third or fourth cousin—a widower of a large fortune—invited Miss Milly to reside at his house, as chaperon to his two daughters, young girls just growing up into womanhood.—This proposal, kindly meant, was warmly accepted: and Aunt Milly set forward on her long journey, for Elphinstone Hall was some hundred miles off—a formidable distance to one who had never been a day's journey from her home; now, alas! hers no more! Still, neither despondency nor fear troubled her blithe spirit, as little Miss Milly set out with her valorous nephew; for I had pleaded so earnestly my right to be her squire to Mr. Elpinstone's door, that the concession was yielded at last.

Of all the gloomy-looking old avenues that ever led to baronial hall, the one we passed through was the gloomiest. It might have been pretty in May, but on a wet day in October it was most melancholy. Poor Aunt Milly shivered as the wind rustled in the trees, and dead leaves fell in clouds on the top of the post-chaise. We alighted, and entered a hall equally lugubrious, and not much warmer than the avenue. The solemn old porter was warming his chilled hands at the tiny fire: he and the house were in perfect keeping—dreary, dull, and melancholy. The master was much in the same style; a tall, black, figure, with a long face and a white neckcloth, was the personified idea left of Mr. Elphinstone. When he was gone, I earnestly entreated Aunt Milly to return with me. and not to stay in this desolate place; but she refused.

'My cousin seems kind,' said she: 'he looked and spoke as though he were glad to see me.'—(I was too cold to hear or see much, certainly, but I did not notice this very friendly reception.) 'My dear Godfrey,' Aunt Milly continued, 'I will stay and try to make a home here: the two girls may be amiable, and then I shall soon love them: at all events, let us hope for the best.'

My hopes for poor Aunt Milly all vanished into thin air when, at the frigid dinner-table, where the very eatables seemed made of stone, I saw two young ladies of fifteen or thereabouts: one of them the wildest and rudest hoyden that ever disgraced feminine habiliments; the other a pale stooping girl, with sleepy blue eyes, and lank fair hair, who never uttered a word nor once lifted her eyes from the tablecloth.

'What will become of poor Aunt Milly?' I thought internally. Yet there she was, as cheerful as ever, talking to that solemn old icicle Mr. Elphinstone; listening patiently to that lava-flood of Miss Louisa's tongue; and now and then speaking to Miss Euphemia, whose only answer was a nod of the head, or a stare from her immense blue eyes. 'Well!' I mentally ejaculated, 'Aunt Milly's talent for making the best of everything will be called into full requisition here, I suspect.'

Nevertheless, when we parted, she assured me that she was quite content: that she would no doubt be very comfortable at the Hall.

'But those two dreadful girls, how will you manage them, Aunt Milly?' and a faint vision of the tall stout Louisa knocking my poor little aunt off her chair, in anger, came across my mind's eye.

'Poor things! they have no mother to teach them better. I am sorry for them: I was a motherless child myself,' said Aunt Milly softly.—'They will improve by and by: depend upon it, Godfrey, all will turn out well for both you and me.'

'Amen!' said I in my heart; for I thought of my own Laura, how different she was from Miss Elphinstone! And the image of my beloved eclipsed that of desolate Aunt Milly, I fear, before I had travelled many miles from the Hall.

Aunt Milly's epistles were not very frequent; for, like many excellent people, she disliked letter-writing, and only indulged her very particular friends with a few lines now and then, in which she fully acted up to the golden rule, 'Say what you have to say in as few words as you can, and then say no more.' Thus my information as to how matters were going on at Elphinstone Hall was of a very slender nature. However, when a few months had rolled by, chance led me into the neighborhood, and I surprised Aunt Milly with a visit from her loving nephew.

It was early spring, and a few peeping primroses brightened the old avenue. Underneath the dining-room windows, too, was a gay bed of yellow crocuses, which I thought bore tokens of Aunt Milly's care, she was always so fond of flowers. I fancied the Hall did not look so cheerless as before; the bright March sunbeams enlivened, though they could not warm it. In a few moments appeared Aunt Milly herself, not in the least altered, but as lively and active as ever.

She took me into her little sitting-room and told me how the winter had passed with her. It had been rather a gloomy one, she acknowledged: the girls were accustomed to run wild; Louisa would have her own way; but then she was easily guided by love, and her nature was frank and warm. Phemie, the pale girl, who had been delicate from her cradle, was rather indolent, but—(Oh what a blessing these charitable *buts* are sometimes!)—but then she was so sweet and gentle.—I own when I again saw the young damsels, thus described by Aunt Milly, I did not perceive quite such a marvelous change: Louisa seemed nearly as talkative and her sister nearly as insipid as ever; still there was a slight improvement even to my eyes, and I gladly allowed Aunt Milly the full benefit of that loving glamour which was cast by her hopeful creed and sweet disposition.

'But now, Godfrey, how fares it with you?' said my good aunt. 'How is Laura? and how are you getting on in the world?'

I could give but a melancholy answer to this question; for I had to work hard, and law was a very dry study. Besides many people looked coldly on me after they knew I was poorer than I had been; and even Laura herself was not so frank and kind. Vague jealousies were springing up in my heart for every smile she bestowed elsewhere; and these were not few. I was, in truth, far from happy: and so I told Aunt Milly, adding, 'If Laura does not love, I don't care what becomes of me.'

'Aunt Milly smiled, and then looked grave.—'My dear Godfrey, if Laura married to-morrow, you would recover in time from her loss.'

'No, never! To lose the girl I love, is to lose everything.'

'You do not yet know what real love is, my dear boy. I never believed that Laura Ashton was capable of exciting the lasting affection of a true heart, or worthy to retain it. But we shall see. Once more have a good courage; work hard at your profession, and think as little of Laura as you can. If she ever did love you, she does so still, and will so long as you keep constant to her. Alas for the one whose love survives his who first awakened it! If Laura's affection be not of this firm nature, it is not worth the winning, and its loss will be no pain at all.'

I did not agree with Aunt Milly's theory; but I said no more; my heart was too sore. She took me over the house and ground; both looked cheerful under the influence of the soft spring; and then she told me how kind Mr. Elphinstone was, and how he had been gradually weaned from his solitary life to take pleasure in the society of his daughters.

'And I hope he is grateful to you, who have made them at all endurable?' I said.

Aunt Milly smiled. 'Yes, I believe he is: but I have done only what I ought: the girls both love me so much; and it is sufficient reward to see them improved.'

I did not see Mr. Elphinstone, but I earnestly hoped the solemn, coldly polite, middleaged gentleman had shared in the general amelioration and reform effected by the cheerful-hearted Miss Milly.

Months had glided into years ere I again saw Milly. Everything had changed with me: from a boy, I had grown a man, struggling with the world. I had followed Aunt Milly's advise, and had begun to reap the fruit of it, in the good opinion of those whose opinion was worth having.—I had proved also the truth of the old saying, 'How sweet is the bread of one's own labor!'—Another of her prophecies, alas! had come but too true. Laura Ashton was lost to me: she had married an officer of dragoons, and had left the country. But I will not speak of this, for I did love her very much *once;* and in spite of Aunt Milly's sage speeches, no one can quite forget his boyish fancy. However, the cares of life left me no time to ponder mournfully over my first love.

When I next visited Elphinstone Hall, it was in the golden days of midsummer. I thought I had never beheld a more lovely place. The old trees were so shady and full of leaves; the grassy lawn so very green; the flowery garden so bright with blossoms. Age and youth were not more different than the old cheerless Hall of former times and the beautiful spot I looked upon. Even Aunt Milly seemed to share in the general rejuvenescence. The two years which had changed me so much, had not made her look a day older. She had the same clear, fresh, cheerful face, and

neat little figure; both perhaps a little rounder, the result of a happy life and few cares. Her dress was a tasteful as ever, but not quite so precise, and it was of richer materials. She wore, too, various handsome articles of jewelry; a remarkable circumstance for unpretending Aunt Milly. I thought her pupils must be at least kind and generous in presents.

We had not sat talking long, when a very graceful girl crossed the lawn to the French window of Aunt Milly's room.

'I will come soon; go and take your walk, Phemie, dear,' said Aunt Milly.

Wonder of wonders! Could that beautiful fair face and golden ringlets which I saw through the open window belong to the lackadaisical Miss Euphemia of old? I absolutely started from my chair.

'You don't mean to say, Aunt Milly, that that lovely girl is Miss Elphinstone?'

'Most certainly,' said Aunt Milly, laughing heartily—her own musical laugh.

'Well, if ever I saw such a transformation!—You are as much of a fairy as Cinderella's godmother.'

'Not at all; I only did as a gardener does with uncultivated ground, I pulled up the weeds and planted flowers. As for Phemie's beauty, I never thought her ugly, though you were too much occupied with your disgust at the place to perceive that she really had a fair skin and pretty features. I have only made the best of what I found.'

'And how has Miss Louisa turned on your hands?' I asked, smiling.

'Look at her; she is coming up the avenue on horseback.'

And a very graceful fearless horsewoman the quondom hoyden seemed: the wildness was subdued into gay, but not unlady-like, manners; in short, Louisa had become what many men would admire as a fine lively girl.

'Why, Aunt Milly,' I said, 'you must have grown quite attached to these girls; it will really be painful for you to leave them.'

'I do not think of leaving them very soon,' said Aunt Milly, casting down her eyes, and playing with her gold watch-chain, while a very faint deepening of her still fair cheek, and a scarcely perceptible smile hovering round her mouth, were distinctly visible.

'Indeed!' said I, inquiringly.

'Yes; Mr. Elphinstone is very kind; he does not wish me to go; the girls love me; and my cousin ——'

'Loves you quite as much, dear Aunt Milly!' I cried, at last arriving at the truth. 'I don't see how he could possibly help it, and so I wish you much joy.'

Aunt Milly muttered something in return, blushed as prettily as a girl of fifteen, and at last fairly run out of the room.

'After all, everything *was* for the best!' thought I, as I attended the quiet wedding of Mr. Elphinstone and his second wife. He did not look half so grave and austere as I fancied, and really was a fine looking man, in spite of his fifty years; and if his winning little wife trod only ten years behind him in the road of life, why, I have seen many older looking brides who were not thirty by the church register; and, after all, what matters years when the heart is still young? Mr. Elphinstone did right to give his daughters a second mother in her who had already been such to them; and Aunt Milly, too, what was there ridiculous in her having found a worthy husband, and a happy home against her old age?

I have nothing more to add, except that I have been for these two years a married man myself; and therefore fully sympathised with Aunt Milly's keeping of her seventh wedding anniversary last week. I may just mention, *en passant*, that I do not call her Aunt Milly now, happening to be her son-in-law as well as a nephew. Perhaps, to clear all mysteries, I had better confess that my wife has fair hair, sweet blue eyes, and that her name is Euphemia.—*Chamber's Journal*

The Gentlemanly Man.—This is a man who is held in great consideration amongst the lower or middle ranks. His dress, his air, his conversation, are all objects of imitation. He lives on an annuity of five hundred pounds—does nothing at all useful—and despises all who do. His wife is the sixteenth cousin of a lord, which fact he took great care to communicate to the world in the newspapers at the time of the marriage. He may consequently be said to belong to the aristocracy, and this accounts for his knowledge of the marriages and intermarriages of the great ones of the land. He speaks learnedly of the opera, and knows to a day when the fashionable season begins and when it ends. He alludes frequently to circumstances which occurred when he was "on the Continent," and pities much people who have not travelled. He speaks French with the veritable London accent. He dislikes port, and has ideas about being helped twice to soup. He has a place taken in the front row of the dress circle when he visits the theatre, which he often does, being, he says, very fond of "public places." He goes to Boulogne, or Ramsgate, in September, because nobody of the least consideration can remain in town. Margate he thinks vulgar. He is partial to astonishing waistcoats, and revels in eternal white kid gloves. Morning, noon, and night he is gloved the same—in defiance and utter disregard of all wholesome love of contract. He wears a blue coat with embossed gilt buttons. He knows all the leading men in politics at first sight. He once met Theodore Hook at dinner. He has often seen Grisi off the stage. He has shaken hands before now with a baronet. In fact, he is a very superior, well-informed person, and is universally considered, by his friends, a most "gentlemanly man."

Non-committal.—An old woman who was asked what she thought of one of her neighbors by the name of Jones, and with a very knowing look she replied: "Why I don't like to say any thing about my neighbors, but as to Mr. Jones, sometimes I think, and then I don't know; but after all, I guess he'll turn out to be a good deal of such a man as I take him to be."

For the Western Literary Messenger.

To my Sister on her leaving Home.

Farwell, dear sister, fare thee well;
I breathe the words with swelling heart,
With feelings that few tongues can tell,
With tears, that still unbidden start:

For sister many a change may come,
And we, perchance may meet no more,
No more may sit in fond embrace,
And tell our joys and sorrows o'er.

Be thine the *choicest* gifts of Heaven,
Friends ever faithful, ever kind;
Friends that will love thee for thyself,
Nor *seek* in thee a fault to find.

And he, to whom thy hand is given,
Oh! sister may he ever prove
All worthy of thy changeless trust,
All worthy of thy deathless love.

Danville, N. Y. Aza.

John Critchley Prince.

John Critchley Prince was born in Wigan, a manufacturing town of Lancashire, June 21, 1808. His father was a reed-maker for weavers, an extremely ill-paid employment, and having a large family, and being much given to dissipation, was unable, as well as indisposed, to give our subject the advantages even of the most ordinary education. But, fortunately, he had a good and prudent mother,—one who possessed a little learning herself, and wished to impart it to her children, and by dint of her assistance and the instruction he received a short time at a Baptist Sunday School, he learned to read, though imperfectly. He could now, however, collect the sense conveyed in printed characters, and every book and every scrap of paper that came within his reach he pursued eagerly.

At nine years of age he was taken by his father to work at reed-making, in which, from this time, he was usually employed from fourteen to sixteen hours a day. It may be well supposed that under these circumstances he would have little time to improve his mind, especially as his father sought every opportunity to repress his bookish inclinations, lest they should interfere with work; yet in spite of all difficulties he would steal a few moments, whenever he could, to gratify his thirst for knowledge. Often at night, after the rest of the family had gone to sleep, he would slip slily out of bed, and, raking the dim fire, pore over some borrowed volume, till nature completely exhausted, compelled him to retire to repose. Thus he dragged on the days of his boyhood, neglected and discouraged, his imprisoned genius struggling for more enlarged life and liberty.

In 1821, when he had reached his thirteenth year, pecuniary difficulties induced his father to leave Wigan and move to Manchester, thence he soon removed to Stockport, a neighboring town, shortly after back again to Manchester, and finally to Hyde, about eight miles from the latter.—While in Manchester young Prince obtained a copy of Byron, the perusal of which gave him so much delight that he became from that time forth a devotee of the Muses. While here, also, he became acquainted with an old German soldier, who had been wounded at Waterloo, who often entertained him with glowing, and doubtless exaggerated descriptions of the countries on the Continent, particularly of Germany. This planted in the breast of the future poet a desire to see foreign lands—a desire which was subsequently gratified under painful circumstances.

In Hyde, our subject lived a wretched life, owing to his father's habits and the wretched return for reed-making. Thinking to make for himself a better home than that of his father's house, he married, when only nineteen years old a young female of his own condition of life.—This only served to increase his difficulties; for, though his wife was industrious and continued to work at weaving, to which she had been accustomed, as his family grew around him, his trade still being very bad, he was often sadly pinched.

In 1830, hearing that reed-makers were much demanded and well paid in France, he determined to try his fortune in that country. Leaving, therefore, his wife to support herself and three children till he could get employment and send for them, with what little money he could gather together, he started. On reaching London he learned that France was in a state of revolution: but not considering that this would inevitably destroy all trade, for a time at least, and goaded on doubtless by a desire to break up the dull monotony of his life and gratify an ardent curiosity to visit scenes on which his imagination had long dwelt, he still persevered in proceeding.—Reaching Calais, he remained there till Louis Phillippe was made king, and then went on to St. Quentin in Picardy, where he expected to find employment. But he was doomed to be sadly disappointed, not being able to get anything to do. Yet unwilling now to turn back, he resolved to go to Mulhausen on the upper Rhine, a great seat of manufactures. On his way there he showed the bent of his mind by stopping eight days at Paris, visiting all the places of interest and amusement, thereby nearly emptying his purse, which at first was scantily supplied.

At Mulhausen he had no better success. His condition, therefore, became very far from enviable. In the heart of a strange country, totally ignorant of the language, nothing to do and his money all gone—whichever way he turned, starvation stared him in the face. His thoughts also reverted to his family, whom he had left with very precarious means of support; and this added a deeper pang to his sufferings. To return immediately to England was his first thought; but, hoping that trade might shortly revive, he lingered about the city five months in the most miserable condition, subsisting on private charity. At the end of that time, there being no better prospect of employment, his clothes becoming literally rags, sorely haunted likewise by fears for his family, he determined to beg his way back to his own country.

In his return he followed the banks of the Rhine, and, though his body subsisted on scanty morsels from the hand of charity, his poetic spirit enjoyed many an ambrosial feast. The scenes of historic and romantic interest that consecrate the borders of the beautiful Rhine, found, in the ragged English wanderer, a most enthusiastic admirer. Often, without a sou in his pocket, hungry and uncertain whether he would find a bed for the night, he would sit down among the ruins of some ancient castle, his imagination reveling in the rich association of the Past, till the gathering, chilling shades of night called him from his bright reveries to the bleak realities by which he was surrounded. He would then hobble away, shivering from cold, (for it was Winter when he began the journey,) and thought himself fortunate if admitted to spend the night beneath the humblest roof. Passing through Strasbourg, Nancy, Verdun, Luneville, Chalons and Rheims, he at length reached Calais, where he obtained a passage across the Channel from the British Consul

The first night after landing in England, he applied for food and lodging at a work-house in Kent, and was put into a garret in which were already twelve persons—eight men and four women—some of whom were dangerously ill. He lay at the back of an old woman, whose continued groans, mingled with those of others around, kept him awake and in agony all night. Glad he was when the morning came to release him from this wretched lazar-house. He had noticed, towards day-light, that the groaning of his bed-fellow gradually ceased, and on rising to leave, as the keeper opened the door, he beheld with horror that she was dead! She was a temporary inmate, like himself, and had been left to die without any of the attention requisite to alleviate the pains of dissolution.

Glad to escape from this painful scene, he immediately left taking the direct road to London. When he reached the metropolis, he had been all day without food. The thought now suddenly struck him that he might perhaps turn his poetical predilections to some account—for already he had been accustomed to solace his woes by wooing the Muses, though he had published nothing except a few pieces in some obscure provincial pub-

lications. Big with hope, he sold his waistcoat at "Rag Fair" for eightpence, and having first partially appeased the cravings of hunger with a penny-roll of bread, he laid out fourpence for paper. With this he entered a tavern, and calling for a pint of porter and pen and ink, sat down there amid the uproar of a drunken company of coal-heavers, and began to write poetry. Having finished his verses, he wandered about the great city, trying to dispose of them to the booksellers for a few shillings; but no one would patronize our ragged, hungry poet. He was forced to pocket his productions in despair.

He remained in London three days, during which, though the weather was severe, he slept by night in the open air, the cold door step of some lordly mansion being his bed. But finding himself unable to get employment of any kind, and feeling uneasy about his wife and children, whom he had left more than six months previously, with a sad and anxious heart he turned his face homeward, a distance of about two hundred miles. On the way, he subsisted by the most precarious means; sometimes singing in public houses for a few pence, sometimes calling for aid at the work-houses of the parishes through which he passed, and sometimes driven by dire necessity to beg by the road-side. His lodgings at night were equally at the beck of chance. One night in a vagrant office, another in a barn or stable, and the next perhaps beneath a stack of hay or corn in the fields.

With a yearning heart he approached the town Hyde, where he expected to find at least some of the comforts and endearments of home; but again he was doomed to sad disappointment. Misfortunes seemed to gather and fall more thickly upon his head. Where he had left a home, he found no one to welcome him. His family was in the work-house of the Parish of Wigan, twenty or thirty miles distant. His wife having found herself unable to support herself and children, had applied to the Parish of Hyde for some assistance, and was sent in consequence to the work-house of Wigan, the latter being the parish to which her husband properly belonged.

In a state bordering on frenzy, Prince hurried to his wife and children, took them from the work-house, and brought them to Manchester, where he rented a garret. Here with no bed but a bundle of straw, with nothing deserving the name of furniture, and with clothes scarcely sufficient to cover their nakedness, they lived several months in great destitution. Prince himself could obtain very little to do at reed making, and it was only the labour of his wife at weaving that enabled them to eke out their existence.

It might be supposed that so much misery would chill and blast the most ardent spirit. Not so with Prince. His heart continued fresh and true, full of humanity and good will to all men. Nothing harsh or misanthropical ever proceeded from his pen. Under all difficulties, and in all circumstances, Poetry was his refuge and his solace, and some of the most touching and purest lines that he has ever written, were penned during the darkest hours of his life, before he became known to the public as a poet. About the time of which we have just been speaking, when he first settled in Manchester after his return from the Continent, he lost a child, and his grief on that event was expressed in a poem full of beauty and deep feeling. The following is an extract:

"Yes, thou art gone, my beautiful, my boy!
Thy father's solace, and thy mother's joy!
Gone to a far, far world, where sin and strife
Can never stain thy purity of life;
A young, bright worshipper at Mercy's throne,
While I am here unblessed and alone,—
Lone as a shattered bark upon the deep,
When unrelenting storms around her sweep;
Lone as a tree beneath an angry heaven,
Its foliage scattered and its branches riven;
Lone as a broken harp, whose wonted strain
Can never wake to melody again."

Such is the striking language of a man, who, at the time he penned it, was, in condition, little above the beggar in the street.

He was first brought into public notice and repute by a volume entitled "*Hours with the Muses*," which he published chiefly through the assistance of John Bolton Rogerson, a poet and editor of Manchester. This work gave him immediately a high rank among English poets. His necessities became known also, and many handsome presents were made him by men of rank and wealth. He cannot complain of ill usage from his countrymen since his genius came to light. He resides at present in the town of Ashton-under-Lyne, near Manchester, living in an humble manner, working occasionally at his old trade of reed making, but supporting himself chiefly by his pen. In outward appearance he bears no indication of his genius. The sufferings he has endured have made him seem much older than he is. He is about the middle size, with a stoop in his shoulders, a retreating forehead, and a pale, melancholy countenance. He is very modest and unassuming in his manners, and possesses very little conversational power.

Such is a hasty glance at the history of this extraordinary man. He is certainly the most remarkable, if not the best, poet who has appeared since the time of Burns.—*N. Y. Tribune.*

From the Buffalo Commercial Advertiser.

A Trip to Chicago in the St. Louis.

NUMBER XIII.

When John finished his story, we were in plain sight of the landing at Milwaukee, and came to at a long wharf quite early in the morning. It is a very pretty place, but far more prosperous than pretty. It does not show to advantage from the Lake, for, being built in the hollow scooped in an elevated plain by the action of the River, it is mainly hidden from approaching vessels. A very large proportion of its citizens were New Yorkers, and they have lost nothing of their energy or enterprize by their removal. At least every tenth man I met was an old acquaintance, and all were rising with their new country. They were proud of old New York, prouder of young Wisconsin, and superlatively proud of the rising city of Milwaukee.

It certainly seems wonderful, this sudden, solid growth. Ten years ago Wisconsin was somewhere in the far West—an unknown, undesired country. Chicago was a petty village, that might be a place of note some day or other. Milwaukee—why, there was a river of that name on some of the maps, and it was known to a few persons, as far east as Buffalo, that one SOLOMON JUNEAU had a clearing near its mouth. Lake Michigan was bordered by a wilderness save on the South. Michigan itself, was indeed growing populous in its eastern and central sections, but did not produce provisions enough for its own consumption, and vessels from Buffalo, Erie and Cleveland, carried pork and flour to it, and returned in ballast. A steamer or two made

a trip or so a year to the Upper Lakes,—but they were pleasure trips, and the boats transported thither curious and idle, rather than business, passengers, with very little freight, and seldom brought back anything except a few barrels of fish from Mackinac, or some trifling Indian curiosities. And now how immense the exports of the countries on this Lake! A friend told me that three hundred thousand barrels of flour were stored last winter at Detroit, and that was a scant third of the surplus of Michigan of the preceding season. And here's a thriving city of some twelve or fourteen thousand souls, and every day at least two noble, fully freighted steamboats, in their transit between Chicago and Buffalo, touch at its wharves.

Milwaukee certainly enjoys every advantage that can conduce to make her rise sudden and permanent. She is the commercial centre of a large territory of unsurpassed fertility, occupied by an active, intelligent and moral people, and blessed with a salubrious climate. But a few miles above there are numerous sites for factories and mills, which are or can be abundantly supplied with water by perennial streams. She has a harbor, such as it is, and must and will have a most spacious, safe, and commodious one. She cannot but become a very large and prosperous city.

There are made the best bricks I ever met with. They are very hard and durable, and stand fire and the weather better than any I ever saw, unless it be those little yellow bricks which were imported from Holland, by the Dutch of Fort Orange, to build their houses with. Their color is yellow,—not that glaring, glossy yellow, which is so odious in my sight,—but a pale and modest color, assorting well with those sober shades Nature assumes in our cool, Northern clime. The saying is, I believe, that Rome was not built in a day, but slowly, by adding brick to brick:—If she were built of such ones, she would well deserve to be the "eternal city." But I am growing warm, and may be mistaken for a brickmaker, a house-builder, or a man of fortune, if I give way to my enthusiasm.

Time pressed, and so we bade Milwaukee adieu, after a most brief visit, and sped southerly towards Chicago. We touched that day at Racine, Southport, and Little Fort, all pretty and fast rising towns, and entered Chicago, as the sun went down, on Saturday, the third day of July. F.

NUMBER XIV.

That short sojourn in Chicago was very pleasant. We left it on the evening of the 8th of July. It is very difficult, such was the whirl in which we lived, to state anything from memory with perfect accuracy, and so you must be content with generalities, for they are all I can safely deal in.

What of the Convention? Why, for all about doings of that most respectable body, permit me to refer you to the papers. Have they not given its proceedings minutely, described the tent in which it met, and every personage who figured in it, and some who did not? You know as well as I, that it was a very large assemblage, comprising many truly great men of the age, and that its action was calm and impressive, and well calculated to subserve the momentous interests it was convened to settle on a sure foundation.—There were indeed some very pretty small lights there, but they soon burnt out or were extinguished, and did no mischief.

How did we live? Why, most delightfully.—The Convention pleased Chicago, and Chicago pleased the Convention. There were no bounds to the hospitality of the citizens and city. Its population was probably quadrupled by its visitors, and yet all were somehow taken care of, had sleeping places, and feasted on fat things.—The hotels did indeed overflow a little, but then private houses were open, and every Chicagoan was a friend of any and every one who came to the Convention. Besides, in the Creek—the River, I beg its pardon—were several first rate steamboats, converted for the time into floating boarding houses, and doing credit to their new vocation. How did I get along? I stayed in the *St. Louis*, and that answer must satisfy you, that, for bed, and board, and parlor comforts, I fared most sumptuously every day.

What did we do apart from the Convention? Why we frolicked and enjoyed ourselves a thousand ways. We interchanged visits, with each other and the townfolks, rode through the city and out upon the prairies, called in at Rice's theatre and heard Dan Marble crow in the Gamecock of the Wilderness, went to church on Sunday, and on weekdays to parties, and heard music—would that you had heard some that ravished me, and made me think Saint Cecilia had revisited to charm the earth.

Indeed it was a very pleasant time. True it was very warm weather—warmer far than we ever have at Buffalo—but immersed in pleasure and business as we were, we hardly heeded it.—Every body was pleased, and looked happy, except here and there a roguish politician, and good old John Smith. He is a queer fellow.—The day after we arrived, I asked him what he thought of Chicago, and he gave me a very pettish answer, which I'll put down to shame him.

Perhaps F. you'll set me down as wayward, when I tell you I am, and am not pleased with this confounded place. I have been here before when it was comparatively a quiet, douce town. But now it is uncomfortable as a pillow, stuffed until it is hard as a brickbat. There are always too many people in it for its capacity; and, just at this present time, it is all hurry-scurry and confusion. You can't eat a meal in comfort, nor stir about without being jostled. But, take it in its best of times, and it is not the place to suit me. Its climate is in extremes. In winter, the cold winds, sweeping from the north o'er inter-

minable plains of land or water, sink the thermometer thirty degrees below zero; while in summer, the mercury rises, the Lord only knows how high, but, I am confident to a point not much below that of boiling water. Look at the place!—It is level as a pancake. Water won't run any where in it. There is not a cellar in Chicago.—And when a rain comes, or a thaw, it is all mud, unfathomable and most adhesive mud. Walk the length of a street, and then dry yourself, and an expert artist can take off a cast of your entire person. The river is a dirty little bayou, and I don't wonder that the Indians called it Chicago—that is Skunk River. It has an abominable odor. As for the scenery—why, I've just come from the belvidere, on the top of the Sherman House—the most tolerable spot I've found yet—I turned round and looked at all points of the compass, and what did I see? Nothing but a tame level! On one side, far as the eye could reach, was a greenish, sickly prairie, in which lay the muddy branches of the river, bounded, near the horizon, by a blackish line of woods—and, on the other side, the lake was sending its yellow looking wavelets towards the parched land. The whole scene was stupid, and, in gazing on it, I almost felt, limitless as the view was, that the world, after all, as some of the ancients supposed it to be, was in fact flat as a trencher. Thank God, there are hills, and mountains too, and I wish I was back among them. Here John uttered a deep sigh, and took himself off, and I did not see him again until he came on board the *St. Louis* just as she was casting off her lines and leaving for Buffalo.

That there is much truth in John's remarks cannot be gainsaid. But after all, although its site is low and even, and its climate intensely cold in winter, and very warm in summer, Chicago is a very pleasant town, and has much to commend it. And first of all, its inhabitants are hearty and unpretending socially, and energetic and honorable in business. Their provision for common schools is highly creditable to them. I like the place much, but the people more.

Chicago flourishes and must flourish with the expansion of Lake Commerce. She has increased wondrously in a few years, and will receive a new impetus in her career, from the completion of the canal which will connect her with the Illinois River. That will give her good stone in abundance for building and paving, and a profusion of mineral coal for fuel and factories.

The prairies furnish not only game in all its varieties, from the "stag of ten" to the golden plover, but the most sapid, tender and nutritious beef in the world. Mackinac sends her trout and whitefish. Commerce contributes all the transportable luxuries of the known globe. Were I an epicure, and could I command the services of a first rate chef de cuisine, I'd live at Chicago. Though I am not one, I left it with reluctance.

John related to me his adventures after we had departed. I will however repeat them here, rather than interrupt the narrative of our return to Buffalo. F.

John Smith's visit to the Calumet River.

NUMBER XV.

I could not abide the crowd, so, when I left you rather abruptly F., the other day, I busied myself in making up a party to visit the Calumet. I succeeded, and we started in the evening—a friend, myself, and an old angler of Chicago,—in a tall wagon, for the Calumet, and, after travelling some sixteen miles, put up at Osterhunt's, near the toll-bridge. It was a wild ride. It seems there are two roads—one called the sand, the other, the prairie road. We took the former, which led through a long grove of timber, and frequently so near its edge as to disclose the prairie, until it entered it within a few miles of the Calumet.

It became dark, quite dark, before we were out of the woods, and it was wonderful, the sagacity with which the horses kept the track, unguided as they were, and trotted fearlessly ahead. We passed several camps in the grove:—that is, we saw several fires in the woods, near which were wagons, and around which emigrants, or folks going to the city, were huddled, or busied in cooking, while the hoppled horses grazed around wherever they found pasture. We stopped to water twice, at roadside inns, and found them thronged with travellers.

I noticed little in the woods that was new to me, but the woods themselves seemed strange. The grove was on a wide sandy ridge, elevated above the level of the sweeping prairies. The trees were oak, but rose not to any considerable height. They sent not out those lateral roots, which, rising above the ground, make our forests so rough for wheels, but, as our old angler said, had a good tap-root, like a carrot. The horses often grazed their boles, and we could go any where between their stems where there was width enough to let the wagon through. The wood of these oaks is not durable, but decays and falls to pieces in a few years, when exposed to the weather.

By the bye, that old angler was an odd genius. He was given to misunderstanding the sounds we heard, and was not of a very hopeful complexion, but ever anticipating ill-success. Perchance he meant to scare us. We heard a cry in the woods, after nightfall, and he declared it was the howl of the prairie wolf—a sneaking animal by the bye—and it turned out to be the squalling of a child. On the Calumet we were listening to a strange noise in the distance—he pronounced it the wailing of a panther—it was the far-off clamor of the sand-hill crane. He was an oddity—but, on the whole, an amusing and agreeable companion.

We left the grove, and jolted in the dark, over one of those execrable causeys for which this land is famous. We could not see ten feet on either hand. But, in the meadows, the fireflies were flashing in all directions, in myriads, and

with a splendor I never saw in them before. Then succeeded a long line of smoother road, and night abated somewhat of its darkness, when the path was suddenly terminated by a barn which crossed it. There are few fences, however, in that country, and descrying, some four rods off, a house, we turned up to it through the rank grass, and found we were at Osterhunt's. We woke the landlord, put up the horses, retired to bed, and, after battling an hour or so with a detachment of musquitoes from the river, surrendered at discretion, and went to sleep.

Early in the morning I left the house to stroll, and the mystery of the barn in the road was solved at once. The house and barn had been removed to their present station, from the river side, but a few days before. I am always pleased to observe a taste for flowers, and formed a favorable opinion of the landlady from the fact that the little cultivated spot in the rear of the humble inn, was not wholly given up to potatoes, corn and cabbages. She tended, with her own hands, a few precious exotics, and beautiful wild plants: and proved to be an intelligent, kind, and polished woman of the wilderness.

I know you do not care for angling; but I have you now, dear F., and you must go with me to the Calumet. I'll spare you all I can.

They fish here mainly for pike, and troll with rods. The hook of course is tied to metal, for the pike's teeth are very sharp, and his jaws are strong. The bait was the sheet of white, tough tendon from a calf's fore shoulder, cut into long strips, one end of which was pierced by the hook, and the other split in two, so as to flare in the water, with the motion of the rod; and, when this was exhausted, pieces of the whitest portions of our scaly victims were used with capital success. And here let me tell you two things, important enough to justify the devotion to them of a separate paragraph.

In fishing for pike with a rod, use a steel chain next to your hook. It is far preferable to the short linked rods of twisted brass wire, in common use. They are stiff and play awkwardly. The chain is flexible, and communicates to the bait, a tortuous, fluttering motion, which will entice to action and pursuit the sleepiest and most suspicious fishes in all pikedom. And then for bait: When you have taken a good pike, use the skin of its tongue, as the vulgar call it--that is, the external skin of the lower jaw. It makes as captivating a lure as was ever used.

The country was wild enough. The unfenced road ran through a broad prairie to the river, and crossed it on an uncovered bridge. Not a dwelling was in sight, save one some miles away on the road, and another on a distant sheet of water, called Calumet Lake, and neither had aught attractive in their looks. The prairie was covered with coarse grass and weeds, and exhibited, even on close inspection, but few flowers. In the distance was seen the blue line of the grove we traversed the night before, and the river's winding course was every where betrayed by timber topping its banks. Here they talk of the prairies as though they were water, and call the groves, islands. The scene was not inspiring, though the glorious morning sun shone upon it through a pure atmosphere, from a serene and cloudless sky. It was dull and lifeless. No villages, with their pretty church spires pointing to heaven—no cultivation—no herds of cattle upon the lea—not even a crow in the air,—even that element was void of animation. I hoped the waters at least were populous. I would have despaired of the country, had it not been for the children of the house, who were well-favored girls, and had kept off the ague, and retained rosy complexions, by taking once a day a dose of vile elixir pro.

Speaking of water, let me tell you, their prairie land has very little that's fit for a Christian's use. Their streams are full of ague. Their wells yield scantily an ill-tasted and unwholesome fluid. Here and there springs of palatable water bubble feebly up; but they are few and far between, and are esteemed, and justly, pearls of great price. Man is an omnivorous animal, and somehow thrives on any kind of food, but, for water, he can find no succedaneum. He may tickle his palate, or inflame his brain with strong drinks, but he must have water, or cease to be a man and die. Good water makes good men.—Liberty dwells among the mountains not because she loves to perch, like an eagle, on their sky-piercing, barren peaks, but because their transparent fountains and icy rivers, quaffed by a hardy people, fill their souls with patriotism, and nerve their arms with vigor. These tenants of Flatland are well enough, but what a noble race they'd be, with their fat soil, if they only drank from gurgling brooks, of which the spotted trout, that hater of impurity, was a born denizen.

F.

NUMBER XVI.

I was the first of "the three jolly anglers" on the toll-bridge of the Calumet, and trolled faithfully, without a rise, for many minutes before my companions joined me. Here the stream is perhaps a hundred yards in width, and some eight or ten feet deep in the channel, and has a barely perceptible current. Its waters have a brown tinge, and the fogs it sends up are brown too.—The banks are marshy, and the water weeds on the sides occupy a full third of the stream. Not a breath of air was stirring, the thin mist lay upon the water, and naught disturbed the death like repose of nature but the plash of my bait, and the harsh, grating voice of the "corn-cracker," a small frog that emits a sound like that of a watchman's rattle, only a deal more ear-piercing and discordant. In the marsh, not four rods off, was a gray bittern, graceful in its utter gracelessness, for it was acting its allotted part in life, in a scene it was designed for. There it stood erect, on its long shanks, in a shallow water, among the weeds, intent on prey, with neck erect, and head scarce moving, a very handsome bird so placed, for it harmonized with every thing about it: Audubon would have given a great deal for its piet-

ure, with all the accessaries But it sees its wished-for prey, a little frog, and instantly it leans forward till its body is horizontal, and with three or four long, quick, firm strides, and a lightning-like thrust of its rapier-formed bill secures it. I hope it is a corn-cracker. I was grateful to the long legged marauder for his company, and pleased when my companion's shot, having splattered around it, it arose unhurt, much to his mortification.

We angled all that day, and with tolerable success. The fish are apt to haunt where the slues or natural drains of the prairies empty into the stream. The first one we came to promised sport, for, at our approach, a rush of fish into the river fairly made it boil. We angled at the mouth, and caught some large rock bass, a tolerable pike or two, but were so bothered with dog fish that we soon left it.

Our boat was a heavy, clumsy skiff, somewhat leaky withal, but in keeping with the stream, which, in the main, was dull and dreary as Styx. One of the oars was cracked and required judicious handling. Our Charon was a clever lad, about sixteen years old, a son of our host. Supposing we were not bound upon a long voyage, he came to us bootless, and suffered much in consequence from the gray-striped fly, one of the pests of the prairie—a middle-sized gad-fly. They bit his feet and ancles until he delared his sufferings intolerable, and, under advice, thrust his extremities into a mass of water weed; but, even then, these flies, not to be baulked of blood, contrived to reach them with their lancets. And so we floated many miles, now impelled only by the lazy current, now rowing easily, and now with energy to keep our tub in forward progress, when a head wind swept round a point and baffled us. There was very little worthy of observation in our course.—We explored the Calumet lake, and the Grand Calumet. The latter branches from the Calumet river and empties into the Lake. We descended it half a mile, and ate a frugal luncheon on its banks, and then returned to the river. There is a tradition that it once was the only channel to the lake, and that the river below is an artificial cut, made by the Indian traders at an early day.

Below the Grand Calumet—at whose exit from the river, I caught a seven pound pike—the river becomes more rapid, and its banks are more contracted for several miles, and are bordered by immense meadows of wild rice, making excellent pasturage for wild hogs, and a capital feeding place for ducks. Nature has no waste. Like a thrifty workman she uses all her odds and ends, and makes them productive. Scarce aught of her territory is untenanted, nor are those of her children which are most handsomely provided for, therefore the best cared for. Of all animals, ducks ought to be the happiest. In their element of water, they are most graceful, and some of them at least, in their costumes, are most singular and splendid; and, being omnivorous, all of this numerous family are every where presented with food adapted to their tastes. Besides, while they have varied powers of escape and artifices of elusion, they are guarded by the keenest senses of sight and hearing, and influenced by a most timid disposition. And yet these graceful, gorgeous, sensible, and most sportful creatures, how does Nature serve them? Why, as some would say, like a jealous stepdame, she puts them in the most unpleasant and ugly corners of creation. Is there a gloomy rice-swamp, or a miserable marsh, or slough, why its good for naught else indeed, but then "it is a good place for ducks." But the truth is, ducks are fitted for such places, and such place are just the thing to make them as safe as Nature can permit, and as happy as ducks can be in this changeful world.

The Calumet Lake is merely a big pond lying in the centre of the rice swamps It is very shallow, and weedy, and, were there no such things as wild ducks, frogs, and bull-heads, one might perchance doubt its being of any use whatever.

At the outset we were bothered by a dog, a half-blooded Setter, that would follow the boat, hunting on the shore, and now and then flushing a woodcock. He was not a favorite at starting, for my companions thought that, as he crossed and recrossed the stream, or came towards the boat, he spoiled the fishing, and so made noises to drive him off which did most certainly impair it. But "every dog has his day," and Rollo became a favorite at last—and that too for acts which ought to have sealed his death-warrant.—He caught, and murdered, but delived to young Master Osterhout, two of a brood of young gray ducks. My comrade, who to his many good qualities and pleasant accomplishments, superadded some skill as a cook, presented them at table as a dish fit for an epicure. But although I brought to them plenty of "the best sauce" in the world, even hunger could not communicate flavor to such poor, unformed young things.—But nevertheless, the dog was praised and petted for their capture.

The fishing, after all, was very dull. We caught a large number of fishes indeed, but no very large ones. The old angler was soon worn out, and became desponding. The labor of the return up stream fell principally upon me and my companion, and I felt most happy, and I think he did too, when after a most toilsome day, we at last passed slowly under the toll-bridge and landed on the upper side. But a good cup of tea, a right pleasant chat, a sleep that was sound and refreshing, despite the mosquitoes, and above all hope, that "springs eternal in the human breat," promising better things for the morrow, sent us again a fishing the next day. F.

NUMBER XVII.

It was an odd equipage! The horses were attached to a common farm wagon, on which was placed the old skiff, and in the skiff were seated mine host and wife, and children three, and the three anglers. And, in this fashion, after an early meal, we passed the bridge, followed the road

a mile or so, and then turned off to the right into an oak grove, where mine hostess and the girls alighted to gather the low whortleberries: but we entered the trackless prairie and made across it, perhaps two miles, for the line of wood marking the bank of the River.

We learned something by this voyage, and saw at least some plants that were new to us. The beautifully blue and evanescent spiderwort is a common flower of the prairie. The rattlesnake weed, not yet in flower, is abundant. It is a tall and graceful plant, and the bruised leaves are a certain remedy for the bite of the venomous reptile whose name it bears. Heaven preserve us from all occasion for testing its virtues! The tall, red-top grass marks water, and, by avoiding it, we escaped the sloughs in which prairie travellers are so often hopelessly bemired. The two species of rosin-weed, with their large leaves, indicate dry land, and form a favorite cover for the grouse; but the dry land is often full of ant hills, which betray the feet of unwary horses, and bring them to the ground. The wild pea,—*Lathyrus palustris*—is a common ingredient of the prairie hay, and adds to its value. It is probably the same plant which Irving and other South-Western travellers make honorable mention of, as the most nutritious food their horses could obtain in the wilderness. But flowers were not abundant, and we crossed the prairie without adventure.—Not a snake shook its rattles at us, not a grouse whirred away before us. Naught enlivened the prairie but blue and red devil's darning needles, and big biting horse-flies. We were glad to reach the river and launch the skiff, which being done, young Master Osterhout drove back the wagon.

We floated down some five or six miles, to a grove about half a mile above the house, and then went back afoot with a large string of fish, slung to a pole, and had a chowder—such an one as even our good friend B***** might acknowledge as his own cookery, without detriment to his well earned reputation. Our captives, however, were principally the spurious black bass of these western waters, the rock, and the silver bass, or calico fish.

The River above is famous for its rapids; I dont know but that in this land of sluggish streams they are styled the Grand Rapids. We floated gently down them. They are where the stream for a mile or two actually flows, and that too over a limestone bed, with here and there a large pebble, through dense masses of waving water weeds. The Calumet, as though fatigued by the great pace it had achieved in passing them, comes to a dead stop at their foot, and then sleepily winds onward to the Lake. And, truth to say, I was infected with the soporific atmosphere that overhung the scene, and might have slept, but for the occasional necessity of playing a fish, and the frequent adjuration of the old angler, hopeful of pike, to cross to the other side, where he espied the "pickerel grass," (so he called the *potamogeton*, or pond-weed,) every tuft of which he fondly fancied covered a twelve-pound pike.

But, ere we reached our landing place the scene was changed by one of those sublime phenomena which no words can describe. It was a thunderstorm. Who can paint the array of the parti-colored clouds, manœuvreing as though in battle,—now black and solemn as despair, now gorgeous in the golden sunlight? or the waving flickering of the cloud-hidden lightning, or its arrowy flash as it strikes the tall oak, and leaves it riven and flaming? or give aught like utterance to the majestic, rolling voice of the distant thunder, or its sharp, quick, ear-bursting rattle as it instantly succeeds the whizzing fire-bolt, and the rain, as though suddenly released, beats the earth with its big drops? That thunderstorm was frightfully splendid. It surrounded and yet spared us, and slowly pursued us until we landed, and then withdrew as though we were too mean to be overwhelmed by it, and rolled away in majesty to do God's bidding elsewhere.

We left Osterhout's towards evening, and returned without mishap, or adventure, unless it be adventure to roam an hour or two in thick darkness, uncertain where we are. The grove branches, and is tracked by roads about as numerous as the projects of improvement brought to the Convention by its disinterested and sapient members. It is a singular feeling evoked by such a situation. The wheels now grate through sand, now rush through water, and now shake the bushes, or move noiselessly over the thin sward. What little indication of your whereabouts you have, comes only through the ear. The damp night air is palpable as a wet blanket. Not a sound, save the slow tramp of the horses, and the noises of the slow moving vehicle, breaks the deep silence. Conversation is unthought of. It is a time for sad musings, and mournful anticipations. With the best efforts to maintain one's spirits, one cannot help remembering the narrow bridge, the rough causey, the deep slough, and the innumerable stumps that beset the road, and doubting whether the horses can carry us safely and truly out of the woods. The horses too are all invisible to the straining sight, save as a formless mass of thicker darkness, where all is dark. How can they see, where all is as blank to us as though we were reft of vision! And yet they somehow brought us unerringly through the grove, and then gladly striking into a round trot, whirled us gaily into Chicago. I honor them therefor, and thank them. But never again, if I can help it, will I intrust myself to them, or any horses, in the thick forest, in so dark a night. Ay, more! Never again, dear F., will I be guilty of so mean a thing, as angling in the turbid, sluggish, unwholesome rivers of the West. I long for the clear lake as much as ever did sea-born sailor for blue water. So up with your steam, *St. Louis*, and be off into it! F.

QUEER NAMES.—The following names occur in the Rochester city directory: Schmæernhocks C. Ymnutgzsch'œffenhœffler, Bauenrouqff Czasrki Zoplocksteinski.

From the American Review for September.

The Mariner.

In Nieve's Bay the winds are high,
The yeasty waters lash the shoals,
The lightnings seam the ebon sky,
Around the broken thunder rolls,
And to and fro beneath its shocks
The green earth like a cradle rocks.

The startled eagle seeks his nest,
The trembling flocks troop to their fold,
For some serener place of rest
The fawn forsakes the dangerous wold,
And through the air a voice of fear
Shrieks "Wo to the helpless Mariner!"

The reaper rises from his work,
And upward casts a pallid look
Upon the low heavens, grim and mirk;
The shepherd leans upon his crook.
And from his simple heart a prayer
Sends up for the helpless Mariner.

The hoary sailor looks aloft,
And for his brethren heaves a sigh;
The maiden turns her blue eye soft
Along the storm-enshrouded sky—
Trembles from her young heart the prayer—
"God save the helpless Mariner!"

The anxious mother walks the floor,
Thinking upon her sun-burnt child,
Whose pathway lies amid the roar
Of India's waters dark and wild,
And from her pale lips bursts the prayer—
"God save the helpless Mariner!"

* * * * * * * *

They start at the boom of the minute-gun—
They see by the lightning's livid flash
The cutter leap the billow dun,
Like a fiery steed beneath the lash—
Her pale crew clinging to the mast,
Are driven like spirits before the blast.—

All night they hear the signal peal—
All night, by the blazing cannon's breath,
They see the bark like a drunkard reel
Above the yawning gulf of death—
Hoarse utterance whispers forth the prayer—
"God save the helpless Mariner!"

The morning breaks on Nieve's wave
That calmly sleeps as airs of June,
And all that drifts above the grave
Of the cutter in the deep lagoon
Is a maiden fair, with long black hair,
In the death clasp of the Mariner.

A Phenomenon.—An extract of a letter from Vivonohoux, in one of the Departments of France, which is published in a Paris journal, says:

A singular, not to say marvellous phenomenon has attracted considerable attention in our community. A female about thirty years of age, some time ago, attacked with epilepsy, suddenly fell into a state of insensibility resembling a constant lethargy. It is now three years since this took place, and during all this time she has not made a motion or manifested a single desire. Sitting upon her bed with her mouth and eyes half open, and with a livid countenance she presents the appearance of a corpse to those who see her, yet her respiration is continued. This singular state of existence which has put a default on all the secrets of art, is sustained by a taste of syrup and water hourly.

Ashore.—The Sloop Tom Corwin, Capt. Haze, was driven ashore above the west pier at Fairport, on Monday morning last. She was loaded with oats.—*Clev. P. Dealer.*

Editorial Department.

J. CLEMENT, EDITOR.

A Small Draft on a Great Poet.

Shakspeare towers so high as a dramatist that his contemporaries and those who rose immediately after his day, are almost lost in his dense and lengthy shadow. He is *the* Alp of the Dramatic world; yet around him are lesser mountains whose summits embrace the skies and whose sublimity, were they standing alone, would be oftener and more powerfully felt. Such writers as Massinger and Ford are among the lofty landmarks of early English dramatic poetry, and viewing them with a careful eye, they are found to possess the true sublimity of intellectual character. True, in their day, "play writing was scarcely thought a creditable employ" (and the calling has since degenerated) yet as in a toad's head, so in the casket of these vulgar dramatists, a "precious jewell" is any thing but a rarity.

John Ford, with whom we have lately spent a few hours stolen from the middle chambers of Night, was the morning-star of the seventeenth century. He made his appearance as a poetic luminary as early as 1606, when he published an elegy called "Fame's Memorial:" he did not however begin to shine with striking splendor till 1629, at which time his famous drama, the "Lover's Melancholy," made its appearance. This "piece" he has himself declared, "was the first that ever *courted* reader." He was conscious of its claims to the attention of the literary world; and, what is not always the case with an author, he rightly estimated its merits. As a *poem* it is richly inlaid with the gems of thought—Hundreds of such as the following:

"Flattery
Is monstrous in a true friend."

"She who derives her blood from princes, ought
To glorify her greatness by humility."

"Thy sister, my Erocles, was so gentle,
That turtles in their down do feed more gall
Than her spleen mixed with—yet when winds and storm
Drive dirt and dust on banks of spotless snow,
The purest whiteness is no such defence
Against the sullying foulness of that fury."

"Ye work and work like blind moles, in the paths
That are bored through the crannies of the earth,
To charge your hungry souls with such full surfeits,
As, being gorged once, make you lean with plenty:
And when you've skimmed the vomit of your riots
You're fat in no felicity but folly."

"When I am dead
Save charge; let me be buried in a nook;
No guns, no pompous whining: these are fooleries.
If, while we live, we stalk about the streets
Jostled by carmen, foot-posts and fine apes
In silken coats, unminded and scarce thought on,
It is not comely to be haled to the earth,*
Like high-fed jades upon a tilting day,
In antic trappings."

**Haled to the earth*, l. e. drawn to the grave.—Gifford.

"An age of pleasures reveled out, comes home
At last, and ends in sorrow; but the life
Weary of riot, numbers every sand,
Wailing in sighs until the last drop down."

"Wounds may be mortal which are wounds indeed,
But no wound 's deadly till our honors bleed."

"There is no faith in lust, but baits of arts:
'Tis virtuous love keeps clear contracted hearts."

"The Broken Heart" is another of Ford's beautiful dramas. The ease, elegance and harmony so characteristic of his style, have here a remarkable prominence. He evidently threw his whole soul into the work, and used his utmost skill in polishing it. Indeed, according to his own acknowledgment, he "wrought the piece with the best of his art." The story itself is of the most thrilling character, yet, as a writer has remarked, "it derives its main claim on our affections from the poetic powers of the author himself." Such pearls as these bear the impress of *genius*:

"Ambition! 'tis of viper's breed; it gnaws
A passage through the womb that gave it motion,
Ambition like a sealed dove, mounts upwards,
Higher, and higher still to perch on clouds,
But tumbles headlong down with heavier ruin."

"The joys of marriage on the heaven or earth,
Life's paradise, great princess, the soul's quiet,
Sinews of concord, earthly immortality!"

"Be well advised; let not a resolution
Of giddy rashness choke the breath of reason."

"Glories
Of human greatness are but passing dreams
And shadows soon decaying; on the stage
Of my mortality, my youth hath acted
Some scenes of variety, drawn out at length
By varied pleasure, sweetened in the mixture,
But tragical in issue. Beauty, pomp,
With every sensuality our giddiness
Doth frame an idol, are inconstant friends,
When any troubled passion makes assault,
On the unguarded castle of the mind."

Thus might we go on noticing the dramatic poems of this author and transferring the jewels of each into our little casket, but we designed, in the outset, to make only a *small* draft—and do it.

An Educational Address, delivered before an educational meeting at Batavia, by the Rev. James A. Bolles of that place, has been laid on our table. It is beautifully written, and too many copies of it cannot be circulated. We make the following extract on the importance of a high moral character being given to our Common Schools:

"Our Common Schools belong to the christian institutions of the country and claim our support as such; and if we would make them what they were intended to be we must give them at least a high moral character. The teachers must understand their position and feel the responsibilities of their charge. They must be men of elevated minds and unimpeachable morals. They must remember that it is as much their duty to cultivate the affections of the heart as it is to instruct the faculties of the mind. They must themselves believe the truths and teach the great principles of eternal rectitude which have come down to us from Heaven, which are embodied in the Holy Scriptures, and which alone constitute the only sure foundation of public virtue. Let this be done. Let the moral character of our schools be raised; let the fact be seen and known that our children there are safe from the contagion of evil examples and the corruption of vicious habits and that the great business of education is there conducted with divine wisdom, and then our Common Schools will flourish, and will become emphatically what they ought to be, the pride and honor and glory of the State."

The Democratic Review for this month makes its appearance rather late on our table; but we are well compensated for the delay by the richness and variety of its papers. We have not seen a better number for two years. It opens with a fine portrait of W. W. Woodworth, Representative from this State. The papers are the "Chicago Convention," "Sectional Rights under the Constitution," "Cosmogony," "The Music of Home," "The Eclipse," a singular article "On the Resurrection of the Body," a chapter on "Idiots," containing the observations of Mr. George Summer, a recent tourist in Europe; "Sketches of Mary's Life" (concluded) which are thrillingly interesting; "The Border Settlement," "The Existence of the Deity" (concluded), "On visiting my Mother's Grave," by the late Solomon Southwick; "Financial and Commercial Review," and the "Gossip for the Month."

For the Western Literary Messenger.

Correspondence.

Bellville, Richland, Co., O.—Sept. 14, 1847.

Friend Clement:—

You might imagine, from the name of this town, that it is the *belle ville* or beautiful village of Ohio, but it is only Tom Bell's village—he being the founder thereof. Yet for an inland town of some six or seven hundred inhabitants, it is a very respectable place, having, withal, an ancient and venerable look about it. It can boast of its several flouring mills, one of which I visited, which, when the water is plenty, will turn out between six and seven hundred barrels of flour per week. It abounds in mechanics, most of them workers in wool, and has *no* regular lawyer, which would commend it some people's liking.

There are *some hills* in this country, and from the top of Prospect Hill Bellville appears at best advantage.

There is some excitement here, just now, as to the route of the rail road from Mansfield to Newark, which will come to this place or near it.—This, they think, will *do things* for them best,—they must first do something for themselves. They have already taken some $10,400 stock. For a country whose only access to market is by teams, the roads are in a miserable condition in many places, but this they say is caused by the great amount of rain.

I have just returned from a flying trip to Mt. Vernon, the county seat of Knox co., 18 miles

south of this place. This too, has a *gone to seed* air about it, though it is a place of much more pretension than Bellville. It contains about 3,200 inhabitants, eight or ten churches, two newspapers, and many stores, and mechanic shops of all descriptions.

One thing I like about Knox co.—its abundance of water, pure and unfailing streams flowing through it in all directions, and believe Richland and the adjacent counties have the same advantage.

The wheat crop here was light, but corn and oats yield immense quantities. Fruit is scarce this season, except peaches, and these are small.

J. H. B.

☞ STATE AGRICULTURAL FAIR.—In the list of premiums awarded at this meeting, we notice the following names of persons who are either from this county or well known to this neighborhood. J. S. Wadsworth took the first premium for the best 10 yoke of oxen. Mr. Wadsworth has by the oxen he has exhibited at the State Show, given to it one of its chief attractions, for several years past. Mr. Rathbone, of this county, took the premium on long wooled ewes. C. R. Nicholls, of Genesee, received a premium for the "best carpet coverlet," and another for some vegetables. The name of E. C. Frost of Fredonia, occurs first under the head of premiums for fruits. Our townsman, Mr. N. S. Smith, took, as last year, an honorable premium for potatoes.

It appears to be unanimously conceded that the exhibition was by no means equal to that of last year. Our readers know very well one of the chief reasons which produced the deficiency.

Mr. King having proposed that the address of Silas Wright should be printed and that the President should ask the permission of Mrs. Wright to place the original in the archives of the Society, his motion was seconded by L. F. Allen, who presented the following additional resolutions:

Resolved, That in the death of Silas Wright, late Governor of this State, the New York State Agricultural Society have lost a friend, benefactor, an honored and useful member, and the community an illustrious example of republican simplicity in private, as well as of inflexible honesty and great capacity in public life.

Resolved, That a committee of this society be appointed by the President thereof, to prepare a brief memoir illustrative of his character, and his eminent public services, for publication with the Address delivered on this occasion, in their Transactions for the year 1847—a duty the more gratefully performed, as the last public act of his life was one of beneficence to the farmers of his country.

It is deeply gratifying to observe with how great readiness the testimonial of respect is paid to the virtues of this excellent man by those who were politically his opponents; and that awakened by the reality of the sad event, pausing awhile from strife, men recognize the truth that there are those engaged in each section of the two great parties constituting the political divisions of our country, who differ only in the best method of promoting the same end—the good of their common country.

Considerable attention was attracted by a Mexican plow. It was of hard wood; the share was formed of what may have been the body of a tree 15 or 18 inches through. The handle was simply a limb running from out the body. The plow was sharpened at the point, and rudely rounded at one side. It would be difficult to conceive of a more rude implement, and still more difficult to believe that such an article would be used by any people, emerged from barbarism, in the 19th century.

☞ HOW TO MAKE A LIVING.—Scarcely a day passes when the close observer may not in our city remark some pursuit of an industrious nature, in which newly arrived foreigners engage, and which they are sure to relinquish when a better acquaintance with the country has shown them more profitable ways of employing their labor. Of this class are two boys whom we noticed scraping up the flour that sometimes drops from the barrels on the docks, as they are rolled about. The small quantity of flour that the inspector leaves outside each barrel, is duly gathered by such little fellows. They carry a bag, a small scoop and a brush—all seemingly made on purpose. We tried to ascertain what were the profits of the business, but they seemed suspicious of our intentions, and gave us to understand that they were of the "nicht forstay" school.

Arrival of the Britannia.

The Steamship Britannia arrived at Boston on the 20th inst.

The Continental news is of no great interest, except from Italy, which continued to be agitated by the interference of Austria, and the Pope is reported even to have said, that if not otherwise to be resisted, he would himself mount his horse and lead his people against the Austrian interlopers.

The violent occupation of Ferrara, by the Austrian troops, appears to have excited considerable sensation in France. What course will France take, is now the question of the Paris press.

The Journal des Debats replies that she will array the "virtue of the Pope against the bayonets of the Austrians." When the Pope heard of the invasion, he is reported to have said: "I will issue a new protest. If that does not suffice, I will excommunicate the Austrians: If that does not answer, I will mount a horse and put myself at the head of my people, and two millions of Christians will respond to my appeal."

Charles Albert, the King of Sardinia, (says Le Siecle, of August 30th,) has written to Pope Pius IX., to assure him of his readiness in any and every event to offer him his army, his artillery, and his ships-of-war. This letter was prompted by indignation at the threatening demonstrations of the Austrians, and a determination to resist the occupation of Ferrara.

A rumor that the Austrians, recoiling before the firm attitude of the pontifical government, (says Le Siecle, of the 30th,) had shut themselves up in the citadel of Ferrara, is neither absolutely true nor absolutely false.

A letter from Rome, dated August 17th, states in substance, that the pontifical government was bent on defending the independence of the country with energy. The Romans seem to rely, at need, on the aid of England, but not wholly on that of France.

From Spain it is reported that Gen. O'Donnel is to be removed from the Captaincy-General of the Havanna, and to be presented with a passport *permitting* him to travel in foreign countries for the next two years. Count Mirasol, Captain-General of Puerto Rico, is looked upon as a likely successor.

Of the double crime in Paris—a brief allusion to which was published Saturday—the *Courier & Enquirer* has this account:

The Duke de Praslin, a peer of France—one of the historical names too of France—entered his wife's bedroom at night and assassinated her.—The cause assigned is, that he had criminal relations with a M'lle. Deluzy, the governess of his children, and that his wife had reproached him with his infidelity.

After the assassination was discovered, and the Duke was arrested, he destroyed himself with poison, which the London papers insinuate was permitted by the ministry to reach him, in order that the scandal of the trial and execution of such a man might be avoided.

The Duchess was the daughter of Marshal Sebastiani and was the mother of nine children, and beloved by all for her bounties and her excellence of character and conduct.

In the Journal des Tribuneaux, which we have received, is a harrowing account of the murder effected by a heavy sword or poinard with which fourteen or fifteen gaping wounds were inflicted by the hand of the husband upon all parts of the body of his wife.

The first blows aroused the sleeping woman—who sprang from her bed, and, as the appearance in the apartment testified, maintained a long and fierce struggle for life with her assassin—seeking particularly to reach the bell and thus bring relief—but in vain. She fell under the repeated blows.

The Duke de Praslin was a member of the Household of the Queen of the French.

The murder was committed in the house of the victim's father—the old Marshal Sebastiani.

Queen Victoria is hunting in the Highlands of Scotland with Prince Albert and a lot of fine Lords and finer Ladies. A hundred years since, it would not have been so safe for the members of the Brunswick family to hunt there.

Forest on Fire.—The fire in the forest of Donner, Prussia, which commenced on the 29th July, still continued on the 21st of August, i. e. 23 days, in spite of the immense efforts to extinguish it. More than 500 men have been employed for this purpose many days. The forest of Donner belongs to the State. The value of the trees which it contained when the fire broke out, was estimated at 25,000,000 francs, or about $5,000,000.

Oregon and California.—Felix Scott, Esq., a citizen of this State, who has examined both of these territories, declares a decided preference for the former country. He states that the scarcity of timber, the dryness of summer, the absence of springs of water, the necessity of irrigation, and even with this, the uncertainty of the crops, will cause California to settle slowly with emigrants. On the Sacramento he found it sickly. The fever and ague and typhus fever attacked the emigrants. The rains commenced on the 19th of December, and continued until March. The grass, through heat, began to die about the 10th of May. Crossing the Shaste, Cisque, Umpqua and Callapooia Mountains, Mr. Scott, with twenty-seven others, penetrated the Wallamette Valley. He declares the country in this more northern latitude as very healthy, and remarks that last winter was the first season for years that his family has been able to pass without calling upon medical aid. The rains commenced in Oregon on the 1st of November, and it rained or snowed almost incessantly until the 1st of March. For two weeks snow fell without ceasing. Every kind of grain and vegetable grows luxuriantly—the wheat is pronounced the finest in the world. The diseases of this climate are principally rheumatism and consumption.—*St. Louis Revoille.*

Temperance State Convention.—A State Convention of the friends of Temperance has been in session two days, and adjourned last evening. We had not leisure to attend all the sittings of the Convention, but were present during the discussion upon the more important resolutions.—The attendance was respectable, but not as large as it should have been, under the present crisis in the history of this great moral enterprise. We recognized, however, many of the early and untiring friends of the cause, whose sacrifices have proved their devotion, however they may have erred in regard to the mode of regenerating a reeling world.

As has been the case for several years past, much of the time of the Convention was occupied in the discussion of the comparative merits of legal and political or moral and persuasive action. There were few of those heart-appeals, which, in other days, were wont to woo the listener into the ranks of Temperance—none of those gushing bursts of plaintive eloquence, which used to impregnate the very atmosphere with the spirit of benevolence and brotherly regard for the unfortunate inebriate. Harshness and strife and bitterness predominated. The spirit of vengeance instead of kindness, seemed to have entered the hearts of the majority of the speakers. But this spirit was not, we were happy to observe, universal. Those who have been most conspicuously identified with the cause, from its earliest infancy—who have watched its growth, and been cheered by its triumphs—endeavored to awaken the kindlier emotions of the Convention, and to secure its approval of a course of action which would heal up the dissensions of the past, and again enlist the whole public heart in behalf of a cause so truly philanthropic.

These efforts were partially successful. A series of resolutions, declaratory of a determination to continue that course of action which has done so much to check the onward progress of the cause, were laid on the table, and one passed recommending the presentation of memorials asking for a law repealing all statutes in relation to excise, and leaving the manufacturers and venders of intoxicating drinks liable for the consequences of their traffic under the common law. This resolution was passed by a vote of 61 to 22; and its passage afforded perceptible satisfaction. It was looked upon as the morning dawn of a new and brighter day.—And such it will prove. If carried out, in its spirit, it will place the responsibility of the traffic where it belongs, and secure a union of all who believe that temperance is a virtue worthy universal acquiescence.

It is proper however, to remark, that after many delegates had left the room, a resolution, the antagonist in some particulars of that passed, was adopted by a small vote. But the previous action of the Convention was so emphatic, that we cannot but believe that the happiest results will flow from it, and that the temporary check which the cause has received will be succeeded by sublime triumphs.—*Albany Eve. Jour.*

The Third annual Conference of the Methodist Episcopal Church, which has been in session in this city for eight days past, adjourned this morning, at about 8 o'clock. Much business of general interest, and of especial interest to that communion, was transacted.

The Conference adjourned to meet in Newark, at such time in the coming year as shall be designated by the General Conference, which will convene in the meanwhile.—*Columbus Jour.*

For the Western Literary Messenger.

A Charade.

My *first* and *second* form a word
To females sometimes given;
And though it leads to hell, my third
Is oftner sought than heaven.

My fourth is our primeval earth,
To which we all repair;
Bank-notes my *fifth* were lately worth,
But now no longer are.

My *sixth* is *of* what Jacob had,
A host—my *whole* combines
That which to gain would greatly glad
His heart who writes these lines.

Yet if kind fate thus bless the youth,
My *fifth* and *sixth* are gone;
And then, though strange, it is the truth.
That youth and I were one.

And if his lot to fully bless
Is Heaven's benign decree,
Not wards alone would soon express
My *sixth* restored to me.

Then too for him my *fifth* would sound
(Though its last letter fade)
Through lips that ne'er had being found
But for this poor Charade.

A. W. S.

STATE OF NEW YORK, } ALBANY, August 3
SECRETARY'S OFFICE, } 1847.

To the Sheriff of the County of Erie:

SIR: Notice is hereby given, that at the next general election to be held on the Tuesday succeeding the first Monday of November next, the following officers are to be elected, to wit:

STATE.

A Secretary of State, Comptroller, State Treasurer, Attorney-General, State Engineer and Surveyor, Three Canal Commissioners, and Three Inspectors of State Prisons.

DISTRICT.

One Senator for the Thirty-First Senate District, consisting of the county of Erie.

COUNTY.

Also, the following officers for the said county, to wit: Four Members of Assembly, one to be elected in each Assembly District.

Yours, respectfully,
N. S. BENTON, Secretary of State.

ERIE COUNTY SHERIF'S OFFICE, }
Buffalo, August 8, 1847. }

A general election is to be held in the County of Erie, on the second day of November next, at which which will be chosen the officers mentioned in the notice from the Secretary of State, of which a copy is annexed.

aug8awtno2 TIMOTHY A. HOPKINS, Sherif.

Price Current—September 22, 1847.

There is rather more demand for money this week, and some of the paper that has been carried along by bankers has fallen into the hands of brokers. Uncurrent funds continue about the same as last week, and Western which is scarce is taken at ¼ to 1 ℘ cent.

BUFFALO MUSICAL INSTITUTE FOR YOUNG LADIES.

At the residence of Prof. W. R. Coppock—Composer and Teacher of the Piano Forte, Organ, Singing and Composition.

An institute devoted exclusively to Musical Education is not yet common in this country; but in Europe the test of experience fully shows its great advantages over the too general superficial manner in which this important part of polite education is acquired. The advantages this institution offers to those desirous of completing their studies as Organists—or practical players of the Piano Forte, together with a thorough system of imparting the same to others is fully established by the many precedents of the past 15 years. The pupils are constantly guarded in their practice, against all bad habits, and from the various stages of progress they may be in, are continually stimulated to effort and industry, by association with each other. The family too, are all pleasure, and the theory is amusingly discussed, impressing its rules in a more pleasing manner, and more lasting upon the understanding, than by the mere dry study of an elaborate book. Music is composed and arranged from time to time, showing the various styles and harmonies analytically, and adapted for performance on several Pianos at the same time. This teaches a thorough knowledge of counting, and dividing passages into their given time. Vocal music is particularly attended to, and when the pupil has a moderate share of talent, we hesitate not to say, a correct and pleasing singer can be made. The Piano Fortes used are all new, and of the finest quality, and every endeavour will be given to render the time spent with us profitable. The building is commodious, and has a fine garden attached, with Green Houses, Bathing rooms, &c, and is pleasantly situatuated in Seventh street, between Niagara Street, and the Falls rail road, and about mid way to Prospect hill

Terms made known upon application at the Institute, or by mail, post paid, directed Prof. Coppock, Buffalo.

Prof. Coppock, keeps constantly a choice selection of Piano Fortes for sale.

Buffalo, August 5, 1847.

PRINTERS' FURNISHING WAREHOUSE.

WILLIAM PRESCOTT, Manufacturer of Printing Inks, No. 6, United States Hotel Block, Pearl St., Buffalo. Printing Presses, Metal and Wood Type, Cards, and every other description of Printers' materials constantly on hand at New York prices, adding transportation. Also, sole Agent for the sale of C J. Gaylor's Patent Double, and Improved Single Salamander Book Safes n18 3m.

For the Western Literary Messenger.

To an Absent Sister.

BY J. CLEMENT.

Dear Sister, since the bitter hours
When parting sighs in tears were sown,
The faded years like autumn flowers
Along the track of Time are strewn.

We little thought how far apart
Our devious paths in life would lead;
We little dreamed how long the heart
Must o'er the pangs of absence bleed.

Nor knew *I* then how close entwined,—
How much of self,—thou wert to me,
But love fraternal, once enshrined,
Grows bright with growing memory.

Though years have faded, Love has not—
The plant I water oft with tears;
And all thy smiles are unforgot
That woke to joy my early years.

O, thou wert all good angels are,
Who tame of man the passions rude,—
My childhood's sacred morning star
Whose lustre soft my heart subdued.

I may not e'er forget thy worth
However far apart we be.
And should we meet no more on earth
My dying thoughts will cling to thee.

Partial Deafness.

A HUMOROUS SKETCH.

There is one degree in deafness, of which I have not yet spoken, that has to me a great attraction. It is that which, shutting out from its victim all those petty street and household noises which are the greatest disturbers of thought, still leaves him a limited power of hearing. I have known several persons thus afflicted, and have always found them desirable acquaintances. They have, for the most part, obliging dispositions, and cheerful hearts, just enough tinged with melancholy to add a charm to their manners.

It was my fortune, not long since, to board in company with one of the last named class, who was rather a striking instance of the effect that this calamity has upon individual and national character. G—— (the friend to whom I allude) was a Scotchman, who, when I first knew him, had been in this country some eight years, and for about an equal length of time had been troubled with a deafness, which kept gradually increasing, and seemed incurable. After becoming somewhat intimate with him, I was often struck with the entire absence in his character of certain national peculiarities which seem to be the common birthright of his countrymen, and the presence of other qualities which too few among any people possess. Hardly any Scotch disagreeables were mingled in his disposition. He had none of their inveterate obstinacy. With a substantial personal opinion on most subjects, he never barred the door of his reason against all argument. On the other hand he had, what his nation almost proverbially lack, a nice appreciation of the humorous. He had the keenest relish for a good joke. He did not bolt them hastily, as many do, who, in their eagerness to display a quick understanding of wit, hurry off successive jokes with a speed which is anything but conducive to the enjoyment of them; but the taste of a happy turn or witty expression would linger long upon his tongue, lighting up his face with a fine animation. This, of course, was chiefly observable in his reading, where his choice of books was alone sufficient to establish the fact of his humorous propensity. His conversation was tinged with a strong accent, which time did not appear to diminish. This doubtless arose from the fact that he could hear so little of the new dialect spoken by those around him. He had a wild fondness for flowers, and every thing connected with natural scenery, which sometimes displayed itself in an almost childish glee. A fine vein of poetic feeling was combined with the rest. He loved Burns with real Caledonian ardor, and better yet, appreciated him with a true poet's enthusiasm.

Another trait worthy of notice in my friend's character was his civility. True politeness was a prominent feature in his mind. I used sometimes to think him too obsequious; but when I recall, one by one, the thousand little kindnesses which this mental tendency led him to do for all his associates, I reproach myself for my own lack of the quality, and wish it were far more common in society. One instance will serve as an illustration. Whenever a friend called to see him, at his departure, no matter what the weather was, G—— would always insist upon accompanying him home, and, indeed, his whole manner towards visitors was marked with so much respect and good breeding that no one could be rude in his presence. Here, too, it seems to me, that his physical defect came in aid of his better nature. He paid great deference to his fellow boarders; more, oftentimes, than their want of self-respect entitled them to. Almost every person, when young, has high hopes for the improvement of mankind; and I used to think that in his case these hopes might have partly realized themselves. Our boarding-house conversation (if I remember rightly) was apt to be any thing but instructive. Nonsense is usually pitched on a moderate key; and such talk, of course, G—— could not hear. No one thinks of shouting twaddle to a deaf man. It is painful enough to utter sensible tones at such an altitude. Our communication with him, being direct and to the point, might well give him a favorable idea of the race from which such random specimens were gathered. When he retired from society it was not so plain spoken. True, he could see the effect of our foolish sallies in the convulsive laughter that such trifles were sure to produce, and occasionally, perhaps, catch a stray note bursting through the confines of his silence; but for aught he knew, the joke might be as witty as it *was* wretched.

I took some pains to ascertain the truth of my conjectures in regard to the change which misfortune had wrought in G——'s character, and found that they were not altogether incorrect. As his youth had been passed in a foreign land, I could

not learn much of his life, except for a few years previous to our acquaintance; but one or two friends who had known him during this period, mentioned with surprise the fact that age, which brings serious thoughts to most men, seemed to bestow on him more cheerfulness and hearty feeling. I speak of age in this connection, only comparatively; for my friend was not *old*. He was unmarried, however; and this leads me to suspect that he may still be the gentle bachelor patron of some fortunate boarding-house. He has slipped from my path rather unaccountably; for we never broke friendship, and something tells me that I shall yet cross his track. Success attend him! Wherever he goes, he will bear a light heart, and a kind "GOD bless ye!" to all.

Nor must my old friend Mr. M—— pass unmentioned. He has also gone from me; but the eye of faith can trace his upward progress through a brighter world, where heart and ear and voice are all attuned to harmonies which thrilled, with sweet vibrations, through his life's silence.

He was a New-Hampshire farmer, who, by hard work and economy, had acquired, while yet a young man, considerable property. He married early, and lived a quiet farmer's life till the commencement of the American Revolution. He then engaged heartily in the cause of liberty, and gave money freely to assist in raising troops. His liberality was so great, that insinuations were thrown out respecting the purity of the motive which led him to this course. Some prying neighbours hinted that he might hope for office or pecuniary recompense. Endowed by nature with a large share of sensitiveness, it pained him to discover that some former friends, even, began to suspect his patriotism. Incensed at such unjust suspicions, he adopted a singular course to prove his sincerity. Going before a magistrate, he took, and had recorded, a solemn oath that he would never, under any circumstances, accept a pension or other reward from his country.

After this Mr. M—— continued his exertions as before, leaving the oath to have its silent effect upon his calumniators. He served as a volunteer during part of the war; and was at all times ready, with money or influence, to aid the cause he loved. When the contest ended he returned to his farm. A few years after this his wife died, leaving a family of three or four children. In due time he was married again, and, for about ten years, lived in prosperity, respected by every one. Then came the reverse. A friend, for whom he had become surety to a large amount, failed, sweeping off at one blow the greater part of his hard earnings. Other ill-luck followed, which soon reduced him to absolute poverty. The fine farm, on which he had hoped to spend the remainer of a happy life, was seized upon and sold. Still he struggled manfully against the opposing tide. But it was of no avail. Misfortune's heavy hand was upon him. He still labored in poverty, aided by his wife; and, while health continued, they managed to get a living. But sickness came at length. He was attacked by the rheumatism so severely as to almost completely disable him. Finding that he could no longer support his family by daily labour, he was forced to apply for relief to the friends of his prosperity. Charity, grudging and cold, doled out its icicles to him, and on them he fed. Such food would have frozen a less generous nature; but his warm heart's sunshine turned them all to drops of pity. It was about this time that his hearing began to fail.

The memory of old Mr. and Mrs. M—— forms one of the earliest landmarks in my existence. How well I remember them!—still pictured before my mind's eye as in that childish landscape o, which they were so prominent a part. *She* with gossiping face and inquiring, spectacled eye; venting her sorrows in deep-drawn sighs and pitiful "oh!-la's!—*he*, stooping beneath the weight of years and cares, uncomplaining, poor, yet holding with firm grasp the germ of all manliness in that unbroken vow. They dwelt in the suburbs of life; but a true heroism still kept the citadel of his soul, and swayed it to its own high purpose.

At that time the aged couple had removed from their native village, and lived in a small cottage about a mile distant from my father's residence. Two or three of their children were dead, and the two who remained lived in some other part of New England. Mr. M—— was unable to do any work except the little that was needed to keep their cottage in order, and the small plot, dignified by the name of garden, which supplied them with a few vegetables. He did contrive, however, with the aid of three or four rusty carpenter's tools, to manufacture some very neat kitchen utensils, which he took much pleasure in sending as presents to the few friends who took an interest in his welfare. Most of his wife's time was occupied in knitting. The law entitled him to a liberal pension; but the oath, inscribed a half century before on the leaves of some worm-eaten record book, was as sacred in his eyes as on the day when a half-romantic, half-heroic pride led him to the act. Nothing could induce him to break it. I verily believe that he would have suffered martyrdom sooner than accept a farthing from the government. For had he not endured the martyrdom of poverty; and, still worse, that dreadful agony of a husband and father's heart, as he saw his family suffering from want, with only a mere *word* between it and relief! Yet that word was a key to unlock his soul's most precious treasures; a talisman under whose magic spell all the virtue of the ancient heroism revived within his breast. He had guarded it through toilsome days and long, weary nights, and it was to him a holy faith. Well-meaning friends would sometimes try to persuade him that an oath, made under such circumstances, and at such a distance of time, should not be regarded; but he heeded them not. His wife was incredulous; for she had little of his high moral principle; but she had long since learned the folly of attempting to combat his iron will. He made no boast of firmness. He seemed rather to regard the keeping his vow as a duty, which, while it withheld one means of support, gave him less than the ordinary claim upon human sympathy.

How far my old friend's deafness operated towards strengthening his resolution it would be difficult to say. But it seems to me that in those social solitudes, the noble purposes of his mind were matured by a more thorough process than belongs to the common lot. I remember with great satisfaction my early visits to their cottage. I am confident that but little of a feeling of superiority mingled in my interest for them, although they lived in a one-story house, while I could go up stairs to bed; for I was always taught to respect them; and the eye of that good old man looked not as looks an inferior. There was something rather exciting in my run "across lots" to their dwelling. A "smart chance" for a big dog, and the distant glimpse of a bull reputed to be ill-tempered, furnished just enough of boyhood's delicious terrors to heighten the pleasure. The old folks were always glad to see me, for they had few visitors, and I brought a fresh stock of news. This was unladen into the "auld wife's" ear, with frequent interruptions, when she would stop me to repeat, at an octave some important item to

her husband. It was interesting to see how eagerly she would cull out the choice bits of gossip for his entertainment. Then came my turn. By a little management I could draw either of them into a recital of some story connected with the Revolution, or the old Indian times. This was better than history to me. I never had much fancy for dry historical narrations, but a story fresh from the lips of an enthusiastic old chronicler has a charm which books lack.

It is now almost six years since Mr. M—— died, having passed the boundaries of four score-and-ten. He retained all his sensitiveness to the last. This was so great, that nothing but the most urgent necessity could induce him to ask for aid. I need not add that his oath was never broken. The death of Mrs. M—— occurred two or three years later. She, too, had many estimable points of character; and, in them, I felt that I had lost two *real* friends.

But a truce to these ramblings. I have ventured to mention thus imperfectly one portion of mankind, whose weakness is their strength; whose infirmity places them in a more enviable station than earth's babblers can occupy. Wrapped up in their brooding silence is somewhat of the great primal thought of the universe, starting at their birth on its pilgrimage through life, and never deserting them, nor becoming contaminated by contact with the world. We would fain search deeper into the mystery of their being, and learn from them, if possible, the clue to that life-path from which we have so far strayed. We would dive into the under-current of their thought, and seek what pearls are hidden there. But no idle hand may withdraw the veil which separates us. They are oracles, revealing only to the elect.—*Knickerbocker.*

The Holy Land.

BY HARRIET MARTINEAU.

It was on Sunday, March 28th, that we were to enter the Holy Land. I had been too much engrossed by the objects which interested us at every step in Egypt and Arabia to think much of this beforehand; but when I came forth from our tent in the dawn of that morning, there was enough of novelty in the scene around me to make me feel that we were about to enter upon a new country, and a new set of interests; and I became eager to know at what hour we were to pass the boundary which separated the desert from the Holy Land—the home of the old faith from that of the new. We had followed the track of Moses from the spot where his mother placed his bulrush cradle to that on which he died; for to the east we should this morning see the mountains overhanging the Dead sea; and among them the summit of Nebo, whence he looked abroad over the Land of Promise; and now we were to enter upon the country of Jesus—certain to walk in his very footsteps, and see what he saw—perhaps this very day. I never remember feeling such an interest in every wild flower, in the outlines of all the hills, and the track of all the water-courses.

We had left the stony desert behind us, and were encamped in a nook of the hills where the ground was green, and weeds grew thick. There was grass under my bed in the tent; and when I came out this morning, the dew was heavy on the daisies, and buttercups, and flowering mallows which grow so abundantly on the turf. After breakfast, while the camels were loading, I walked in the early sunshine on a strip of sand overlooking the valley, impressing on my memory every feature of the landscape, and impatient of the rising ground to the north, which prevented my seeing where we were going. It was about ten o'clock when we passed the boundary. It was impossible to tell the exact moment; but within a mile or two we felt that we were indeed in the native land of Christ, and probably on his very track. He might have been here. His relations lived at Hebron; and during the first thirty years of his life he had probably visited them, after meeting them at the feasts of Jerusalem. He might have passed over the hills which swelled higher and higher as we advanced, and rested beside some of the wells which yawned beside our track. At any rate, the trees and flowers which we saw must be familiar to his eyes; the thorny accacia which began here to rise and spread from the stunted shrub of the desert to the dimensions of a tree; the scarlet anemone—with us a precious garden flower—which here strewed the ground for acres round; the cyclamen, which pushed forth its tufts of white and lilac blossoms from under many a stone and bush; and the poppy, mallow, hemlock, and wild oats, which grew as thickly as in any English hedge. I did not know before that these weeds were as common here as with us; and never before did the sight of them give me so much pleasure. It would have been pleasant any where to meet these familiar weeds so far from home: but the delight to-day was to think that He and his disciples were as much accustomed to them as ourselves, and that a walk in the early spring was, in the pure country, much the same thing to them as to us.

But we soon came upon traces which showed that the expanse of pure country here was small in those days, compared with what it is now. The towns must have been more thickly set here than in an country I ever was in. Patches and masses of ruins showed themselves on every hand, so near each other as to indicate that the land must have been peopled to a degree now nowhere known. The first ploughing we had seen for many weeks was a striking sight to us; a mere scratching of the soil at the foot of the hills: but close by lay a heap of building stones, the remains of a town or village. Presently we saw a rude plough, with a single camel at work; and at hand was a long foundation wall, laid in a far distant century. On a height further on, were the remains of a large ancient building, with two broken pillars standing, marking the site of the Aroer of scripture. Then though there were water courses about every hill, wells began to abound; substantial, deep wells, built with a rim with holes in it, to receive the covering stone; such wells as tell of a settlement beside them. We stopped early this day—partly because it was Sunday, and partly because our Arab guards, who know nothing of our Sunday, found a convenient place among the hills, somewhat sheltered from the cold wind; and here, a very few miles from the boundary, the gentlemen of the party discovered that we had sat down in the midst of what was once a large town, though the place appeared a mere stony tract, like many that we had passed. In the morning early, I went out to see for myself, and was astonished at the extent of the ruins which I should not have observed while merely riding by. I could trace the lines of foundation walls for half a mile; and building stones, overgrown with grass, lay in hillocks for a considerable distance round. The many caverns in the limestone rocks, now used as beds for the goats, were found to be the vaults of large buildings now gone to ruin. In a few minutes we traced three temples, or other such buildings, by their overthrown pillars. Our eyes being now opened, we this day saw more and more remains, till we were convinced that all the way from the boundary to Hebron, the land was thickset with

towns, and swarming with inhabitants in the days of its glory—the days when the teacher went up and down in it, meditating the changes which must make it what I have seen it now. Its hills and streams, its skies and flowers, are to day what they were before his eyes; but where he saw towns on every height, and villages in every nook, there is now hardly left one stone upon another. A group of black Bedouin tents on a hill side, a camel or two browsing here, and a flock of goats there, are all that relieve the utter solitude where there was then an innumerable throng of men.

As we advanced, on the Monday, the soil became richer, and field was joined to field, so that we began to look for the landmarks which are here used, instead of fences, to bound field property. We entered upon thickets and shrubberies, where white roses, the cyclamen, convolvulus, and fragrant herbs abounded. Soon after noon a new scene opened upon us. On our left hand lay a wide, deep basin among the hills, full of vineyards and olive grounds, where the stones from the soil were built up into fences, and in almost every plot rose a garden house. This was a sure sign that we were near a town; and as we rounded the hill on our right, we came in sight of the two eminences on which Hebron is built. There stood the town where John the Baptist was born; and here were the scenes which he must many a time have talked of with his cousin in their boyish meetings at Jerusalem for the feasts. Hebron, too, is only twenty miles from Bethlehem; only twenty six from Jerusalem; and in those days, when a large amount of yearly travelling was a solemn religious duty incumbent upon every family, it is scarcely possible but that relatives must have often visited each other, and that Jesus and his parents must have come to Hebron.

The cave of Machpelah is there; and the burial place of Abraham and his family was a sacred locality, and an object of pilgrimage to Jews of all ages. As we inquired for it, and walked round the inclosure, which the Mohammedans now permit no Christian to enter, I could not but think who might have been before in the same quest.

D'Israeli, Peel and Macauley.

[A correspondent of the N. Y. Mirror, who was present at the recent opening of Parliament, gives the following description of the above distinguished individuals:—]

Another buzz runs through the lobby, and you behold a form and face which, once seen, are never forgotten—the younger D'Israeli. At the close of last session he was fat, almost florid, and forty-two, on tip-top good terms with himself, and fully inclined to indulge his snip in a Mosaic dispensation of motly colored garments. He has changed all that. He is again the pale, student-like Asiatic featured man he was before. He has donned a suit of black, unapproachably perfect in every stitch, and he appears to have doffed the vanity of the coxcomb with the plumage of the peacock. There are other symptoms, too, that Ben has turned over a new leaf—the speech he made on the Spanish alliance displayed an off-hand familiarity with the *rationale* of continental politics, far beyond what all the cramming in the world could accomplish; and the temper and style he adopted prompts the hope that he will be often a speaker, even on subjects into which the alchemy of his genius cannot infuse the corrosive sublimate of his sarcasm. A more polished master of irony never lived, but he must be seen and heard to be appreciated, with his statuesque visage, passionless and unruffled as monumental marble, but the lucid Hebraic eye all a-blaze with its rattlesnake venom.

Again a buzz, and up strides the elderly-looking individual, whom you at first suspect to be a commercial "gent" in his Sunday clothes, but which have not been brushed. He used to appear more at his ease than he does now. Formerly he was Peck-sniff in full blow, oily complacent, and thoroughly up to snuff. Now he is a sort of half-seedy Peck-sniff. His "shocking bad" hat is slouched over his forehead. His watch-seals are a trouble to him and that last fit of the gout still bedevils his big toe. The air of the place revives him as he proceeds. The salute of the little bandy porter, who dozes away life in the great arm chair, is grateful to his red tape nostrils. The cringe of all the salaried jackals of the house revives him considerably; so that by the time he has vanished into the House, you are forced to admit that "mediocrity" will never lack "sublimity" so long as he lives, for Peel is still Peel, just as much as he was in the days of old Cobbett, who knew him well.

All this while a little square, squat, stumpy man, with a head as large as if he had water on the brain, pepper-and-salt pants, and shoes thick enough to pulverise brickbats in one course of the polka, keeps running in and out of the House, up stairs, down stairs, and nobody knows into what sort of places besides. One moment he has his hat on his head, another in his hand, and a third time it gets jammed in the door-way, and he leaves it behind him. You think he is some perplexed hanger on about the passages of the House, and if any one told you he was a fool, you would believe it at once. That is the Right Honorable Thomas Babington Macauley, once Secretary of War, now Paymaster General of the Forces, Member for Edinburgh, and in all respects as wide awake a gentleman as any between this city and that.

THE LION'S LEAP.—Once as I was travelling in Namqua Land, I observed a spot which was imprinted with at least twenty spoors, or marks of the lion's paw; and as I pointed them out, a Namaqua chief told me that a lion had been practising his leap. On asking an explanation, he said that if a lion sprang at an animal, and missed it by leaping short, he would always go back to where he sprang from, and practise the leap so as to be successful on another occasion, and he then related to me the following anecdote, stating that he was an eye-witness:

"I was passing near the end of a craggy hill, from which jutted out a smooth rock, of from ten to twelve feet high, when I perceived a number of zebras galloping round to it; which they were obliged to do, as the rock behind was quite steep. A lion was just creeping towards the rock, to catch the male zebra, which brought up the rear of the herd. The lion sprang and missed his mark; he fell short, with his head over the ridge of the rock, and the zebra galloped away, switching his tail in the air. Although the object of pursuit was gone, the lion tried the leap on the rock a second and a third time, till he succeeded. During this, two more lions came up and joined the first lion. They seemed to be talking, for they roared a great deal to each other; and then the first lion led them round the rock again and again. He then made another grand leap, to show them what he and they must do another time." The chief added, "They were evidently talking to each other, but I could not understand a word of what they said, although they talked loud enough; but I thought it was well to be off, or they might have some talk with me."—*Moffat's Scenes in Africa.*

An Indian was asked "What is original sin?" He replied "*Laziness.*"

From the Knickerbocker

Lauralie.

Lighter than the sunbeam's ray.
Dawning on the sea,
Graceful as a moonlight fay
Was she who won all hearts away—
Lauralie!

Tresses bright of golden hair
Flowing wild and free,
Down her cheek beyond compare,
Nestling in her bosom fair—
Lauralie!

By the heaven within her eyes,
Plainly might you see,
She had stolen their glorious dyes
From the laughing summer skies—
Lauralie!

Less beautiful than good and kind,
Pure as snow was she,
All gentle thoughts dwelt in her mind,
By innocence and truth refined—
Lauralie!

A tall knight came, with bearing bold,
And tender vows breathed he;
Alas! a tale too often told,
He won her heart, his love waned cold—
Lauralie!

He brought a fair and haughty bride
From o'er the sea,
And as he feasted at her side,
A maiden sought his feet and died—
Lauralie!

Now doth the broken-hearted sleep
Beneath the linden tree;
Above the sod the wild vines creep,
And maidens seek the spot to weep:
Lauralie!

But *he*, the false one! knows not rest,
Dishonor'd now is he:
His faithless bride has left his breast;
Oh! well are all thy wrongs redressed,
Lauralie!

A maniac wild, he smiles no more,
But wanders by the sea,
And mutters 'mid the tempest's roar
The name he traces on the shore—
Lauralie!

SUSAN PINDAR.

THE HOUSE OF RUSSELL.—The head of this house is the Duke of Bedford. A younger son is John, by courtesy styled Lord Russell, and now Prime Minister of England. The family is reckoned among the richest and proudest of England's nobility, and the names of some of its members are emblazoned on some of the most illustrious pages of English history. The following is given in a paper of that country as the origin of this famous house:

John Russell, a plain gentleman residing near Bridgeport, county of Dorset, obtained a favorable introduction to court by a piece of good fortune. The Archduke, Philip of Austria, having encountered a violent hurricane in his passage from Flanders to Spain, was driven into Weymouth, where he landed, and was hospitably received by Sir Thomas Trenchard, a gentleman of the neighborhood. Sir Thomas Trenchard apprised the court of the circumstance, and in the interim, while waiting for instructions what course to follow, he invited his cousin, Mr. Russell to wait upon the prince. Mr. Russel proved so agreeable a companion that the Arch Duke desired him to accompany him to Windsor. He was there presented to the King, Henry VII, who likewise was so well pleased with Mr. Russell that he retained him as one of the gentlemen of the privy chamber.

Being subsequently a companion of the Prince, he so so far ingratiated himself into young Tudor's favor that he got elevated to the peerage, under the title of Baron Russell, of Cheyneys. In the next year, 1540, when the church lands were seized, Henry gave his favorite the Abbey of Tavistock, with the extensive possessions belonging thereto. In the next reign, Russell's star being still in the ascendant, young Edward, not sixteen, gave him the monastery of Woburn. In Charles the Second's time, William, the Fifth Earl, was made Duke of Bedford.

Such is the history of this powerful family; most of the aristocracy may be traced to origins not greatly dissimilar. They have obtained their wealth by continuous appropriations of the land, and thrown the taxes on the industrious classes by the various fiscal machineries of customs, excise, and stamps, none of which would ever have been required had the sovereign retained the crown lands and had the feudal dues been levied.

This historical sketch forms part of a notice of a pamphlet urging that the land is national property, and consequently that none have the right to its exclusive appropriation. Title by sword or by parchment is wholly repudiated. A radical change is recommended, still preserving the usufruct of estates to those now living and in possession, but decreeing that, on the deaths of the present holders, the estates shall revert back to the crown, and that the rents in future payable by the crown tenants should be carried to the account of the public treasury. By this process no person would have more than a life interest in the soil, which would cease to descend hereditary in families.

The prohibition of the right to sell implied in the above, the writer says is "recognized and admitted in the law by which the aristocracy is perpetuated in England. By that law every nobleman has only a *life interest* in his estates, and, in consequence, cannot *sell* them, because the descendants are in like manner entitled to their life interest therein, which of course cannot be preserved if any gambling scoundrel, that may for the time be the head of the house, may in a night's play stake and lose his own interest in the inheritance and that of his descendants, to all generations. I contend that this principle is sound, and if good for the aristocracy it is good for all men, as every true principle must be."

We make these extracts to show what is boldly thought and uttered by some men in England, and appearances indicate that the number of those entertaining similar sentiments is rapidly and largely increasing.

OBEYING INSTRUCTIONS.—A novel case of obeying orders literally, recently occurred in a neighboring county. A gentleman who carries on a pretty extensive farm, purchased a fanning mill, at a cost of some $30. One of his men came to him shortly after the purchase, and complained that the mill did not work well. "Try it again," said the owner, "and if it still prove bad, take it into the road, fill it with straw, and burn it." On the second trial, it did not work, and accordingly he burned it as directed. A few days after, the gentleman asked his man how the fanning mill operated. "I tried it again," he replied, "and had no better success than before, and so I set fire to it." "That was right," replied the owner with an emphasis. "You are the first man I ever had who would mind me; you shall hereafter have an increase of wages."—*Roch. Daily Adv.*

O'Connell's Obsequies—Oration of Gov. Seward.

The New York papers describe the celebration of the obsequies of DANIEL O'CONNELL in that city, last Wednesday, as a very grand and imposing ceremony. The procession was immense, even for so great a city, and the pageantry—tho' all was not pageantry, for, among a people of such ardent and impulsive feeling as the Irish, with all the recollections of their beloved country, its glory and its shame, its centuries of suffering, its heroic spirits, all forced upon them at such a time made a most profound impression—was all that the occasion should have commanded. It is estimated that not less than 15,000 persons united in the procession, under the banners of their respective associations and societies—and bearing their distinguishing insignia. Those not in the procession, who lined the streets and followed in the wake of the pageant, were innumerable—estimates ranging as high as 100,000. The adopted citizens of New Haven, Ct., and of Patterson and Newark in New Jersey, contributed to swell the funeral train of the illustrious dead. The *Evening Journal* says, "in numbers and splendor, it was a pageant of which the survivors of a monarch might have been proud. In the homage of the heart, it was what monarchs rarely deserve or receive."

The oration of Ex-Gov. SEWARD, delivered to the assembled thousands in Castle Garden, would fill some eight columns of this paper. It is conceived in that gentleman's highest style of impassioned eloquence, and strongly marked by his characteristic grace and ornate felicity of language. The opening is very beautiful:

There is sad news from Genoa. An aged and weary pilgrim, who can travel no farther, passes beneath the gate of one of her ancient palaces, saying with pious resignation, as he enters its silent chambers, "Well! It is God's will that I shall never see Rome. I am disappointed. But I am ready to die. It is all right!"

"The superb," though fading Queen of the Mediterranean holds anxious watch, through ten long days, over that majestic stranger's wasting frame. And now Death is there—the Liberator of Ireland has sunk to rest in the Cradle of Columbus.

Coincidence beautiful and most sublime! It was the very day set apart by the elder daughter of the Church for prayer and sacrifice throughout the world for the children of the sacred Island, perishing by famine and pestilence in their homes and in their native fields, and on their crowded paths of exile, on the sea and in the havens, and on the lakes, and along the rivers of this far-distant land. The chimes rung out by pity for his countrymen were O'Connell's fitting knell; his soul went forth on clouds of incense that rose from altars of Christian Charity; and the sorrowful anthems which recited the faith, and the virtue, and the endurance of Ireland, were his becoming requiem.

Nothing can exceed in artistic effect this happy blending of the names of COLUMBUS and O'CONNELL, linking them together in association by the accident that the birth place of the discoverer of America was the death place of the "Liberator of Ireland," and shedding over this coincidence the hallowing influence of the holiest rites of religion. The oration proceeds with a rapid, clear, and boldly sketched narration of the history of Ireland, her oppressions and wrongs for more than six hundred years, down to the extinction of her nationality by the act of union, and concludes with a magnificent biographical sketch, of O'CONNELL, and a eulogy upon his character and services.—We copy the concluding paragraphs:

Who has ever accomplished so much for Human Freedom, with means so feeble? Who but he has ever given Liberty to a People, by the mere utterance of his voice, without an army, navy or revenues—without a sword, spear, or even a shield?

Who but he ever subverted Tyranny, saved the lives of the oppressed, and yet spared the oppressor?

Who but he ever detached from a venerable constitution a column of Aristocracy, dashed it to the earth, and yet left the ancient fabric stronger and more beautiful than before?

Who but he has ever lifted up Seven Millions of People from the debasement of ages to the dignity of Freedom, without exacting an ounce of gold or wasting the blood of one human heart?

Whose voice yet lingers like O'Connell's in the ear of tyrants, making them sink with fear of change, and in the ear of the most degraded slaves on earth, awaking hopes of freedom?

Who before him has brought the schismatics of two centuries together, conciliating them at the altar of Universal Liberty? Who but he ever brought Papal Rome and Protestant America to burn incense together?

It was O'Connell's mission to teach mankind that Liberty was not estranged from Christianity, as was proclaimed by Revolutionary France—that she was not divorced from Law and Public Order—that she was not a demon like Moloch, requiring to be propitiated with the blood of human sacrifice—that Democracy is the daughter of Peace, and, like true Religion, worketh by Love.

I see in Catholic Emancipation, and in the Repeal of the Act of Union between Great Britain and Ireland only incidents of an all pervading phenomenon—a phenomenon of mighty interest, but not portentous of evil. It is the universal dissolution of Monarchical and Aristocratical Governments, and the establishment of pure Democracies in their place.

I know this change must come, for even the menaced governments feel and confess it. I know that it will be resisted, for it is not in the nature of Power to relax. It is a fearful inquiry—How shall that change be passed?—Shall there never be an end to Devastation and Carnage? Is every step of Human Progress in the future, as in the past, to be marked by blood? Must the nations of the earth, after groaning for ages under vicious Institutions established without their consent, wade through deeper seas to reach that condition of more perfect Liberty to which they are so rapidly, so irresistibly impelled? Or shall they be able notwithstanding involuntary ingorance and debasement contracted without their fault, and notwitstanding the blind resistance of Despotism, to change their forms of Government by slow and measured degrees, without entirely or all at once subverting them, and from time to time to repair their ancient constitutions so as to adapt them peacefully to the progress of the age, the diffusion of knowledge, the cultivation of virtue, and the promotion of happiness?

When that crisis shall come, the colossal fabric of the British Empire will have given way under its always accumulating weight. I see England then, in solitude and in declining greatness as Rome was when her provinces were torn away; as Spain now is since the loss of the Indies. I see Ireland, invigorated by the severe experience of a long, though peaceful, Revolution, extending her arms east and west in fraternal embrace toward new rising States; her resources restored and improved; her people prosperous and happy, and her institutions again shedding the lights of Piety, Art and Freedom over the world. Then I see among the perplexed and disturbed nations the now proud and all-conquering Anglo-Saxons looking up to the regenerated Celtic People for guidance and protection.

Come forward, then, ye nations who are trembling between the dangers of Anarchy and the pressure of Despotism, and hear a voice that addresses the Liberator of Ireland from the caverns of Silence where Prophecy is born:

"To Thee, now sainted Spirit,
Patriarch of a wide-spreading family,
Remotest lands and unborn times shall turn
Whether they would restore or build. To Thee!
As one who rightly taught how Zeal should burn:
As one who drew from out Faith's holiest urn,
The purest stream of *Patient Energy*."

A FEUDAL TYRANT.—The New Orleans *Orleanian* gives an account of a Mexican named Franco, which shows how completely demoralized and disorganized is the unhappy country where such men can flourish:

There is residing, (says this account,) about seventeen leagues from Tuspan, behind the lake Tampico El Alto, on the road from Tamiaqua to

Tampico, a monster in human form called Ignacio Franco. This wretch is descended from a negress and an old Spaniard. He is the owner of the large hacienda well known by the name of San Sebastian. This hacienda contains a population of about two thousand souls, over whom this miscreant lords with the most despotic sway, obliging them to pay him complete homage, and to labor upon his plantations without pay or consideration. He is judge and arbiter; if some assassin kills his neighbor, he flies to the house of this monster, who takes the responsibility of punishing the guilty culprit by condemning him to perpetual labor on his own farms. This vile being has taken three sisters as wives, keeping them in separate dwellings. To show how completely he rules, it need only be told that two years since the Mexican Government sent an armed force to prevent him from growing tobacco, and with instructions to pluck it out, upon whose appearance, Franco assembled a large force of his slaves and vassals and took them prisoners—since remaining an independent and undisturbed ruler.

It is also known that he has white men upon his hacienda, whom he has reduced to slavery, and in part citizens of the United States, whom one vicissitude or another has thrown into his hands; some of these latter are the crew of an American schooner that was taken by the war steamer *Vixen*, as she was running the blockade, laden with ammunition, powder, &c., for the Mexican government, and taken on board to be court martialed, but who afterwards escaped at the moment of the attack on Tuspan, under fictitious names, and in an endeavor to reach Tampico fell into the hands of this task-master, who reduced them to slavery as already stated. And this villain has purchased from Santa Anna the commission of Colonel for the sum of $15,000, which gives him in some measure the color of authority of a Mexican tyrant.

He has lately purchased a hacienda on the Panuco river called Capadero. On this hacienda are sixteen or seventeen old Spaniards—traders, who alone since the occupation of Tampico by the Americans, are suffered by Mexicans on the Panuco to come to trade to Tampico, where they ferret out every movement of the Americans, and purchase, and take him in return powder, lead, and other munitions of war. Col. Franco is also a dexterous and desperate "blackleg;" should any chance-comer have the appearance of having money, he will invite him to his mansion, use him most hospitably, introduce gambling, and if his unfortunate opponent should have the misfortune to win of him, if he does not get killed and robbed before he leaves his house, he will certainly be met by some of his vassal assasins and be robbed and killed before he can possibly leave the hacienda. On the contrary, if his opponent should lose, he may depart in peace and without molestation.

The colonel is also a very successful contrabandist, and there remains but very little doubt on the minds of those who know him best, that the Mexican army and the different predatory Mexican chiefs, are now supplied by his influence and agency. Franco smuggled cotton to a large extent in partnership with Santa Anna; the latter made the prohibition cotton law, while he used a commercial house to order the cotton, while Franco smuggled it through his independent colony; but Santa Anna, on account of a way of dealing that he has, cheated him in the last account—such is a specimen of how unfortunate Mexico is ruled. This Franco is a dangerous character, and should be looked after by the American authorities.

Volcanic Eruption in the Pacific.—A new volcanic eruption has occurred upon a small uninhabited island belonging to the Vavan group, of which an account has been published at Samoa by J. C. Williams, Esq. U. S. Consul, and Capt. Sampson of New Bedford. The island is named *Toku*, and lies 60 miles north-west from Tavan. On the 9th of June, severe shocks of an earthquake were felt at intervals, at Tavan, on the night of the 11th, a very bright light was seen in the direction of Toku. The next morning everything was covered with dust and the air had the smell of sulphur. On the 13th Mr. Williams left Tavan and approached Toku. Immense volumes of smoke and dust were perceived, and on the morning of the 12th, Capt. Sampson of the *C. W. Morgan*, whaler, on his way from one of the Tonga islands, entered the shower of ashes.

Before they entered, it appeared like a squall, so soon as they got into it, the eyes of the men on watch were filled, and the deck began to be covered with the fine dust. Capt. Sampson put the ship about, but being persuaded that there was no land near, he continued his course. So soon as the sun arose, the dust appeared of a dark red color, rolling over like great volumes of smoke, presenting an awful appearance; at eight o'clock it was so dark that candles had to be lighted in the cabin; at 11 A. M. it began to clear a little, the sun appeared occasionally. By noon they got out of it, being then in 171°. 45. W. and 11° 2 S., having sailed across the shower at least 40 miles. Capt Cash of the ship *Massachusetts*, got into the shower about the same time, though at least sixty miles east of Capt. Sampson, and not far from Savage Island.

The ashes penetrated every crevice of the ship, and fell in such quantities, that Capt. Sampson believes tons fell on the deck, which had to be cleared from time to time.

The dust is of a dark gray slaty color, Of specific gravity 1 076, containing a large proportion of sulphur and so much of free sulpuric acid as to give it a sharp taste; it also contains a small proportion of iron. No doubt a minute analysis would give the usual combinations of silica and several of the sulphates usually found in volcanic dust.

The *Courrier des Etats Unis* contradicts, upon the authority of the latest Paris papers, as well as of its own correspondent, the statement copied into several of our American papers, that the eldest son of the Duke de Praslin, aged 17 years, had committed suicide on account of the horrors of the death of his parents.

The eldest son is only 11 or 12 years old and was alive and well.

In like manner that paper contradicts the alleged suicide of M. Chavilier de Montesquieu, and the assassination of his mistress by the Prince Eckmuhl, son of Marshal Davoust. There seems not the slightest foundation for these atrocious and gratuitous calumnies, which first appeared, nevertheless, in the Paris journals and were then copied into those of England and America.—*Cour. & Enq.*

Rev. Dr. King.—A letter of August 17th, from Constantinople, published in the Evening Post, states that Dr. King, the American Missionary, at Athens, has been virtually expelled from the Kingdom by the Government. The Boston Traveller announces his safe arrival at Geneva, Switzerland.

Rural Department.

☞ County Agricultural Society.—An instructive and able address was delivered before this Society on the chief day of the Fair, by Geo. W. Clinton, Esq., and a resolution was unanimously passed, tendering to him the thanks of the meeting and requesting a copy of the address for publication. We trust that care will be taken to circulate it extensively among our farmers.

The following resolutions relating to the State Fair for 1842 were then unanimously agreed upon:

Resolved, That we have seen with regret the appointment of the Exhibition of the State Agricultural Society, every year of its existence, at so great a distance from Buffalo, as to preclude the general attendance of those who live in this and the neighboring counties; and that we would call the attention of the officers of the State Society to the fact that the greater number of persons who attend at its show, reside within 50 or 60 miles of the place where it is held. Thus it is computed that at Saratoga 40,000 persons were present, of whom only 8,000 came by railroad—the only public method of travel to that place.

That we consider this course has tended to the undue discouragement of this and many other Societies.

That the Committee appointed to report a list of officers for next year, shall also frame a list or lists of names for one or more committees, for the object of securing the next annual Exhibition of the Society at Buffalo, and that a quorum so appointed shall have full power to merge the exhibition of this institution in that of the larger Society

That the funds of this Society shall, in the event of such success, be applied to the objects of the State Society, in such manner as said Committee shall choose.

That we desire, in the spirit of fraternal union and friendly competition, to throw open at this place the benefits of the State Society for 1842, to the inhabitants of other States and of Canada. Carried.

At the meeting held 23d inst.. at M'Arthur's Hall, the following officers were elected for the ensuing year:

President—AUGUSTUS RAYNOR, Clarence.

VICE PRESIDENTS:

John W. Hamlin, Aurora; Henry Atwood, Lancaster; John Webster, Hamburgh; John B. Carter, Eden; Henry Ransom, Clarence; John Besse, Wales; Apollos Hitchcock, Cheektawaga; Benj. W. Pratt, Collins.

Robert Hadfield, Secretary; Arthur M'Arthur, Treasurer.

EXECUTIVE COMMITTEE:

Grant Ladd, Amherst; Robert Persons, Aurora; Sam'l Johnson, Alden; Geo. W. Tifft, Buffalo, 1st Ward; Orlando Allen, 2d do; W. R. Coppock, 3d do; H. A. Parsons, 4th do; Peter Curtiss, 5th do; Truman Cary, Boston; Ansel Smith, Brandt; L. F. Allen, Black Rock; Ira Osborn, Clarence; N. G. Stebbins, Cheektawaga; Wm. Calkins, Colden; J. N. Vaughan, Concord; John Arnold, Collins; Geo. Parson, Eden; W. S. Rees, Evans; D. P. White, Hamburgh; Moses M'Arthur, Holland; T. N. Peckham, Lancaster; Wm. Mills, Newstead; W. H. Sotham, Tonawanda; Alonzo Havens, Wales; Jerome Hopkins, Sardinia.

The following gentlemen were appointed a Committee to devise and adopt the best plans to procure for Buffalo the next annual exibition of the State Agricultural Society:

Lewis F. Allen, Wm. A. Bird, Lewis Eaton, Benjamin Hodge, Augustus Raynor, Robert Hadfield, E. C. Spaulding, H. K. Smith, Geo. P. Barker, H. W. Rogers, Millard Fillmore, Jos. G. Masten, Robt, McPherson, Wm. Hamilton.

And the following were appointed as a Financial Committee for the same purpose:

H. B. Potter, W. R. Coppock, Abner Bryant, Orlando Allen, H. B. Ransom, Thos. Thurston, Arthur M'Arthur, H. A. Parsons, Warren Granger, Jason Sexton, Benoni Thompson, Samuel Hamilton, Geo. W. Tifft, Jos. Dart, Amos Chilcott, Warren Bryant.

The premiums as already published by us were officially declared, and after various discussion as to the best means of promoting the objects of the Society, and passresolutions tending chiefly to the circulation of Agricultural papers and books, the meeting adjourned.

☞ The following premiums were awarded at the County Agricultural Exhibition, September 22 and 23, 1841:

HORSES.

Best stallion, Mr. Gardeneer, Concord,	$5 00
2d do Mr. Rice, Boston,	3 00
Best broom mare. Mr. Noyes, Collins,	4 00
2d do Mr. Blackman, Lancaster,	2 00
Best colt, Mr. Blackman,	2 00
2d do Mr. Walker, Aurora,	vol. trans.
Best single horse in harness, bred in this county, Mr. Huff, Buffalo,	3 00
Best gelding, wherever bred. Wm. Williams,	3 00

The Committee on Horses report that the exhibition of horses was unusually good, and that they had some difficulty in discriminating so as to award the above premiums.

DURHAM CATTLE.

Best bull, Samuel Hecox, Black Rock,	$5 00

DEVON CATTLE.

Best yearling bull, J. W. Hamlin, Aurora,	$5 00
Best heifer, do do	3 00
Best bull calf, do do	vol. trans.

GRADE AND NATIVE CATTLE.

Mr. Peckham, Lancaster—best bull,	4 00
E. Wheelock, Sardinia—2d do	3 00
E. Jones, Aurora—best cow,	5 00
Wm. Hamilton, Hamburgh, 2d do	3 00
Orlando Allen, Buffalo—best heifer,	3 00
H. W. Rogers, Black Rock—2d do	2 00
E. Wheelock, Sardinia—best bull calf,	2 00
Samuel Searls, Wales—2d do	vol. trans.

Orlando Allen withdrew a very fine cow. J. W. Hamlin withdrew a very fine heifer calf, he being one of the committee on Grade and Native Cattle.

WORKING CATTLE.

Best yoke working cattle, 5 years old and over, Robt. Persons, Aurora,	$5 00
2d do O. P. Buffum, Colden,	3 00
Best 4 years old oxen, Sam'l Johnson, Alden,	5 00
do 3 do H. Beck, Lancaster,	4 00
2d do J. Yourran, do	2 00
Best 2 years do H. Atwood, Lancaster,	3 00

MILCH COWS.

Best, E. N. Bennett, Cheektawaga,	$5 00
2d do do	4 00

Some of this class were excluded on account of the non-production of the proper certificates.

SHEEP.

Best 3 long wooled ewes, N. A. Turner, Aurora,	$3 00
do lambs, do	3 00
Best fat wether, do	2 00
Best fine wool buck, Judge Payne, Aurora,	4 00
2d do Amos Chilcott, Hamburgh,	3 00
Best do ewes, Mr. Pratt, Aurora,	4 00
2d do Amos Chilcott,	3 00
Best middle wool buck, offered, E. N. Bennett,	[illegible]00

SWINE.

Best sow, Sam'l Turner, Cheektawaga,	$1 00
do pen of 4 pigs, S. L. Bostee, Williamsville,	3 00
2d do E. N. Bennett, Cheektawaga,	2 00

POULTRY.

Best barn fowls, (dorking) Benoni Thompson,	$1 00
Best coop of ducks. N. S. Smith,	vol. trans.
best coop muscovy ducks,	1 00

BUTTER AND CHEESE.

Best cheeses, Erastus Colvin, Hamburgh,	3 00
do butter, Wm. Hamilton, do	3 00
2d do Alonzo Havens, Wales,	2 00

FARM IMPLEMENTS.

For a revolving hay-rake, with wire teeth, and which appears to be the best they have ever seen, they award a diploma, in addition to the ordinary premium, to John Burland, Evans, of	$1 00
For Dinsmore's patent Straw Cutter, to Jeremiah Avery, of Randall, Orleans co.	diploma.
Best cooking and boiling apparatus for preparing food for stock—T. J. Dudley,	vol. trans.
For "Grannis'" patent Niagara hot air cooking stove—Messrs. Wilkeson & Co.	diploma.

We may hereafter publish the report in reference to stoves, at greater length.

GRAIN, &c.

For the best sample barley, Samuel Hambleton, East Hamburgh,	$3 00
Best sample flax seed, do	1 00
Do timothy seed, do	1 00
Do wheat—S. Heacox, Black Rock,	3 00
Do corn—Geo. Paxon, Eden.	3 00
Variety seedling potatoes—N. S. Smith, Buff.	5 00
2d best do —Philip Lawrence, do	1 00
Best field carrots—W. Hodge, Block Rock, diploma and	3 00

The committee call public attention to Mr. Smith's potatoes. We have frequently spoken of them already, and shall watch this experiment with interest.

OTHER FARM PRODUCTS.

Best 6 winter squashes—R. M'Pherson, $1 00
Best jar of pickled nasturtions, diploma.
Best 6 cabbages—Lewis Eaton, 1 00
Best half bushel quinces, do 1 00
2d do—L. F. Allen, diploma.
Best dozen beets—Lewis Eaton, vol. trans.
Very fine specimens of brocoli and egg-plant—L. Eaton. diploma.
¼ acre kidney beans, 3 00
Best 6 bunches celery—A. Bryant & Son, 1 00
Best bushel onions, do 1 00
Best peaches (Crawford melacatoon) do 1 00
Greatest variety and fine grapes, do diploma.
Best bbl winter apples (seek no farther) vol. trans.
Best 12 clusters Isabella grapes—Philip Lawrence, 1 00
Best dozen garden beets, do vol. trans.
Best Virgalieu peas—Wm. Hodge, 1 00
2d best Detroit red apples, do vol. trans.
Best bbl fall apples—Amos Chilcott, 1 00
2d do do —W. Webster, vol. trans.
2d do peaches (rare ripe) Josh. Hampton, vol. trans.
Pyramidal bouquet of most beautiful dahlias, B. Hodge, 1 00
Bouquets, verbenas, roses, &c.—A. Bryant & Sons, vol. trans.

H. W. Rogers offered a variety of choice vegetables, which were not on the ground in time for competition.

Best hive of working bees (Reynold's patent hive)—Joseph Hoag, Black Rock, $1 and diploma.

A discretionary premium of a diploma was awarded to C. Bishop, for a barrel of flour for pastry, and of unsurpassed quality.

HOUSEHOLD PRODUCTS.

For best 10 yards fulled cloth—John Johnson, Alden, 2 00
Best 13 yards carpeting—Mrs. Alonzo Havens, Wales, 3 00
2d best do —Miss Martha Smith, Buffalo, 2 00
Best 10 yds flannel—Mrs Alonzo Havens, 3 00
2d do —Mrs. John Johnson, 2 00
Best woolen shawl—Mrs. G. Paxson, Eden, 3 00
2d do —Mrs. S. G. Havens, 2 00
3d do —Mrs. Johnson, 1 00
Best 10 yds table linen—Mrs. Sam'l Hambleton, 3 00
2d do do do 1 00
Best 10 yds towelling, do 2 00
Best coverlet—Mrs. Burt, Buffalo, 3 00
2d do do —Mrs. S. G. Havens, 2 00
3d do do —Miss Thurston, Aurora, 1 00
Best straw bonnet—Miss Sowden, Wales, 1 00
Best bed quilt—Mrs. S. Hambleton, 2 00
Best linen stockings—Miss Thurston, 1 00
Best 2 pair woolen do do 1 00
2d do do do—Miss Johnson, vol. trans.
Best stocking yarn—Miss Thurston, 1 00
2d do do do vol. trans.
Best silk cocoons—Mrs. Staats, Buffalo, 2 00
Best 50 skeins sewing silk, 2 00
Best ½ lb reeled silk, 1 00

The Committee also recommend that diplomas be given to Mrs. E. R. Smith, Miss Mary E. Pack and Miss Matilda Baker, for specimens of fancy needle-work, exhibited by them.

FARMS.

There being only one entered, the Committee recommended that the money premium of $12, or in lieu thereof, a handsome, tasteful book, (containing Washington's correspondence, fac similes, &c.) together with a diploma, should be given to Samuel Hambleton.

Of all the incidents which go to illustrate the horrors of war, we have seen none which presents them to the mind in a more striking and powerful manner than the present condition of the South Carolina regiment of volunteers The left their homes six months ago about 800 strong; of this number 140 died at Vera Cruz or on the march to Puebla, and 360 were left sick in the various hospitals. About 272 were in a condition to fight in the late battle, and of that number 137 (including their gallant Colonel, Pierce M. Butler) were killed or wounded, leaving a meagre remnant of 135, a majority of whom may yet perhaps fall in battle or perish by disease before the war shall terminate! What a constrast will the return home of this shattered corps present to the "pride pomp, and circumstance" which attended their enlistment and departure for the seat of war.—*Richmond Whig.*

For the Western Literary Messenger.

Farewell.

Addressed to Rev. I. J. Stoddard and wife, Missionaries to Asram.

Go, Brother, Sister, to your task;
Ye may not linger here;
'Tis not the joys of home you ask,
In friendship's sweetest smile to bask;
Then spare the parting tear.

Ye go, but not for wreaths of fame,
Nor paths with pleasure rife.
Ye seek no martyr's glorious name,
Nor honors won in battle flame,
But point the way of Life.

'Tis not with heavy heart ye go,
Though long farewell is given;
O 'twill be sweet in death to know
For others' good, ye toiled below,
And led the way to Heaven.

Go, then, for you we will not weep
E'en though that destined spot
You never reach, but in the deep,
Or by that turbid stream, ye sleep,
And share a brother's lot.*

Think not 'tis vain, if thus ye die
In life's bright, golden prime,
The dying prayer and ling'ring sigh,
On ocean wind and wave shall fly,
And speak to every clime.

Take, take our prayers, and wishes kind
To give that "Orphan Band;"
O, haste to cheer their darkened mind,
Console the weeping,—lead the blind,
Point to a better land.

And when the storms of life draw nigh,
And strong hearts bend to fear,
Turn not to us your streaming eye,
But to the pitying Savior fly,
He will be watching near.

Through storm or calm, led by His hand,
Our toils will soon be o'er;
Then at our home,—a happy band,
Together in yon "Spirit Land,"
We'll meet, to part no more.

A. H. M,

* The lamented Thomas, who was killed on his passage up the Burampooter.

☞ Gen. Scott, who has proved his lion-hearted courage on scores of battle fields, is remarkable not less for the far reaching sagacity and cool deliberate circumspection with which he forms his plan of battle, than the impetuous valor with which, when formed, he carries such plan into triumphant effect. Those who are incapable of appreciating the force of the intellect that reduces war to almost the certainty of an exact science, sometimes sneer at him as a precisian.—We commend to such a perusal of the following which we copy from a letter from an officer of the Army, published in the *Union:*

After each of the battles, when the troops saw the complete success of Gen. Scott's plans, he was received with the most vociferous cheers throughout the whole army. The shouts must have reached Mexico. Even the captive Mexican officers seemed cheered in their distress, to witness their enthusiasm. The army have the greatest confidence in him and justly. They know his care of them. They know his worth. He weighs his plans well, calculates the cost of every mea-

sure, and attempts nothing without a reasonable prospect of success.

A letter in the *Journal of Commerce*, from a field officer of the army, expresses the very confident belief that peace would result from the pending negotiations, and relates the following incidents at the close of the decisive battle of Churubusco:

The place was defended by at least 27,000 Mexican troops. Their whole force in the morning amounted to 32,000 men, of whom 5,000 may have been killed, taken or dispersed, in the affairs of Contreras and San Antonio, in the earlier part of the day. The remainder were posted behind two strong field works—one of them enclosing a large stone church. *Our troops making the attack did not exceed one-fourth the number of the enemy.* The conflict lasted two hours and three-quarters, during the whole of which time the deafening roar or artillery and small arms was continuous and tremendous, such as no man present ever before witnessed. It was a time of awful suspense, but the issue was not for a moment doubtful. When it was over, the General-in-Chief (Scott) rode in among the troops. It would have done your heart good to hear the shout with which they made the welkin ring.—Several old soldiers seized the General's hands with expressions of enthusiasm. Suddenly, at a motion from his hand, silence ensued, when in the fulness of his heart, he poured forth a few most eloquent and patriotic words, in commendation of their gallant conduct. When he ceased, there arose another shout that might have been heard in the grand plaza of Mexico. Daring this thrilling scene, I looked up to a balcony of the Church that had been so bravely defended. It was filled by Mexican prisoners. Among them Gen. Rincon, a venerable old soldier, was leaning forward, his countenance glowing, and his eyes sparkling with every manifestation of delight. I verily believe that the old veteran, with the spirit of a true soldier, upon beholding a victorious General so greeted by the brave men he had just led to victory, forgot, for moment, his own position—that he was defeated and a prisoner—and saw and thought only of the enthusiasm by which he was surrounded.

The Britannia.—This steamer was raised on the sectional dock yesterday. Her injuries appear to be both extensive and severe. A considerable portion of her keel is torn off, and several of her timbers are fractured. A large crowd were present to ser her placed on the dock,

It is most earnestly to be desired that the British Government will direct the immediate erection of a light house at the point of Cape Race; and the addition of a "fog bell" will greatly promote the safety of vessels which pass that dangerous point. The difficulty heretofore has been a question between the local and home authorities as to which of the two should be at the expense of erecting the building. It strikes us that there cannot be a reasonable doubt on this question.—The island of Newfoundland is a part of the British dominions, and Cape Race is not near the mouth of any harbor. The vicinity of that point is the line for all the British steamers to Halifax, and on the track of the immense fleet that navigates the St. Lawrence, &c.

We believe the Admiralty have come to the conclusion to erect a light house on the point, as we know they have corresponded with Captain Harrison with reference to the most eligible point at which to place it.

Since the above was in type we learn that one of the crew of the *Britannia* was accidentally killed between twelve and one o'clock this morning, He was returning on board and his foot slipped as he was passing up the side. He fell back upon the dock and received such injury that he died before he could be conveyed to the hospital. It is said that his neck was dislocated.

One o'Clock.—Our marine news collector has just returned from the *Britannia*. He reports that as many ship carpenters are at work as can conveniently be employed, and it is expected the necessary repairs will be completed on Wednesday next.

It has been found that the false keel is carried away, from the stern to abaft the paddle box and that the keel is so much damaged as to require the removal of about fifty feet of it. The sheathing, which is very thick, is broken off about twenty-five feet. The copper in some places is rubbed up.—*N. Y. Com. Adv.*

General Manufacturing Bill.—There is a probability that this bill, which failed at the last session of the Legislature by reason of a disagreement between the two Houses, and which some members have contended at the present session had vanished into the region of nowhere, beyond rescue, is yet in legal existence and can be acted upon. The bill was the subject of some conversation in the Assembly last Friday. The *Argus* in a notice of it says:

It will be seen, and with gratification by all who regard the bill in its true light, as one of the highest importance and value—that in the opinion of the two Houses, the bill is still alive, and is still properly before the Committee of Conference appointed at the last session. In a word, that the Committee not having united in a joint report, nor submitted such an one to either House, they have still the matter in charge, and may renew their conferences and efforts to come to an agreement, at this session, although the Committee on the part of the House had announced the fact of a disagreement, at the close of the last session.

That there might be no technical difficulty in the way, the House yesterday virtually reversed its former action, and the armistice being still open, the committee will no doubt forthwith resume their conference—and if still unable to agree, it will be competent for either house to propose a new committee, and make a second effort to bring about a compromise.

It is to be hoped that a renewal of negotiations will result in the settlement of the vexed question of personal liability, in a way at once reasonable and safe to the public, and calculated to invite rather than discourage investments in the manufacturing enterprises now on foot in different sections of the State, and awaiting the action of the Legislature. The bill is no doubt of as great if not greater importance than any of the general laws now pending, and we trust may soon become a law.

Kentucky Convention.—The good people of Kentucky have given, as it appears from the Frankfort *Commonwealth*, about 92,000 votes for a Convention, to revise their Constitution. The total number of voters, in the State, is about 137,000. The majority, therefore, for the Convention, is about 47,000! Another vote has to be taken on the subject; but, with this strong current of feeling in that way, there can be little doubt the Convention will assemble, and revise the political institutions of Kentucky. The State is a noble one, and a noble hearted people have inhabited it. We trust, that in revising their fundamental laws, it may be done in a way to ensure their prosperity and happiness.—*Cincin. Chron.*

Editorial Department.

J. CLEMENT, EDITOR.

A Week in Canada, with a Supplemen of Three Days.

PART ONE.

Which contains a few things in general, and some in particular, and more, perhaps, than will be read.

September Sixteenth.—Port Hope—evening. A delightful trip to day on the steamers Chief Justice Robinson, and Sovereign; the former from Lewiston to Toronto; the latter from T. to this place. How prodigal of diamonds is old Ontario when the sun shines and the surface of the lake is *gently* ruffled by a healthy breeze. And how gracefully the white gulls perform their antic gyrations, rising and falling with the genuine poetry of motion, now dipping their gilded wings in the crystal waters, and now soaring upwards like a music-note on its way back again to its native heaven. What a glorious life the plumaged aquatics must lead! There's nothing like

> "A life on the ocean wave,
> A home on the rolling deep."

That body of ministers, bound for Montreal and elsewhere, who came down from Toronto on the boat this afternoon, and who were all in the best spirit, have not ridden themselves of every habit to which "the world's people" are more or less addicted, especially where the temperance reformation has not had "its perfect work." Their vinous propensities are decidedly strong. How lovingly, at the dinner table, did the sacred sleeves of their outer garment embrace their divinely white neckerchiefs, as the blood-red and overflowing glass parted those inspired lips whence issue so often and with such a holy unction, the oracles of God! How affectionately and how frequently the great and good Dr. ——, who sat immediately on our right, drank to the health of the no-doubt-somewhere noted D. D. on *his* right and the three brethren in the ministry on the opposite side of the table. We never felt so small in the company of white neckerchief before. So much brotherly love and sacred sociality—such an intoxicating exhibition of

> "The feast of reason and the flow of"—bowl—

completely overcame us, and we were glad as a ransomed prisoner when the time came that, without the appearance of rudeness and incivilty, we could retreat from the angelic presence of the wine and *brandy* bottles!

Port Hope, though not so lively just now as we have seen it, still possesses the spirit of enterprise in the hearts of its business men. An effort is being made to get a railroad charter from this place to Peterborough, thirty miles north. An estimate of the cost of such a road—smaller, we fear, than the actual expense would be—has been made, and a table of the probable amount of business which it would command drawn up; and if strenuous exertions on the part of a few individuals will consummate the work, we or somebody else may see a Railroad Depot in the village of Port Hope—sometime.

Seventeenth—At Cobourg. The present leading topic of canversation here, is the unusual amount of sickness in the community. The disentery actually *rages* in the village. Crape is much worn on the hat and in the button hole of the coat; a look of sobriety pervades most faces, and the voice of mirth is seldom heard. The frosty nights have come, and there is a slight abatement of the reigning diseases.

Eighteenth—Back to Port Hope, in a hopeful port, at the private residence of an old New England friend, and joyfully awaiting the advent of another day of rest.

Nineteenth—Sunday. Cold and rainy, but cannot deny ourself the privileges of the sanctuary. Wicked as we are, the disposition to break the Sabbath is easily overcame. Peacefully repose the ashes of that sainted mother whose spirit has been in the realms of glory these twenty years, and who taught us in infancy to "remember the Sabbath to keep it holy."

No preaching in the morning at the (Scotch) Presbyterian church where we attended. A learned and very amiable man is the pastor, Mr. CASSA, whom we have heard on former occasions, and we are disappointed in not hearing him to day. A few prayers were offered, a few hymns sung, and the meeting broke up. Cannot say that we were strikingly pleased with the singing. Fear the congregation—they have no choir—do not make the *science* of music a very close study. And then the hymns themselves—the words, we mean, were not very poetically constructed. Thus the following scrap, a part of the fourth Psalm, which was sung on the occasion, may be a litéral, but it is not a graceful and finished, version; and the singing of such hymns, at this age, is deadly to refinement of poetical taste and reflects unfavorably on the judgment of the people who suffer so obsolete a version of the Psalms to remain in use:

> "Fear and sin not; talk with your heart
> on bed, and silent be.
> Offrings present of righteousness,
> and in the Lord trust ye.
>
> "O who will show us any good?
> is that which many say:
> But of thy countenance the light,
> Lord, lift on us alway.
>
> "Upon my heart, bestowed by thee,
> more goodness I have found
> Than they e'en then, when corn and wine
> did most with them abound.
>
> "I will both lay me down in peace,
> and quiet sleep will take;
> Because thou only me to dwell
> in safety, Lord, dost make."

We copy these lines word for word from a Glasgow edition found in our pew, and have retained the manner of printing in said edition. We have

no intention of making light of any thing sacred —we deprecate the idea—but we must say that hymns constructed like the above fragment, which is a fair sample of the whole book from which it is taken, are a burlesque on the sweet minstrelsy of the inspired son of Jesse.

This evening attended divine worship at a school house in the village. Heard a sensible and practical discourse by the Rev. Mr. Baird of the Baptist denomination. Thus closeth the holy day.

Hon. Richard Henry Wilde, formerly a member of Congress from Georgia, author of a work on Tasso, and a somewhat distinguished poet, died of the yellow fever at his residence in New Orleans, on the 11th ult. He was one of the leading members of the Louisiana bar, and a short time since received the appointment of Professor in the new Law College of that State.—His poetry is characterized by sweetness and classical elegance, and some of it may be found amongst the choicest American lyrics.

Life of Silas Wright.—It will be gratifying to many of our readers to learn that J. S. Jenkins, Esq., author of the New Assistant's Clerk, Life of Gen. Jackson, etc., is preparing a work on the Life and Character of Silas Wright, to be published by Derby and Hewson of this city. It will appear in the early part of November,

---

Political Matters.—Tweedy, the Whig candidate for delegate from Wisconsin, has been chosen by a large majority.

Rhode Island, contrary to her usual course, has chosen a Democratic Representative to Congress.

Dana, the Democratic Candidate for Governor of Maine, has a handsome majority over the Whig and Liberty candidates,

The Whigs of Michigan have nominated Jas. M. Edwards of Washtenaw Co., for Governor, and, H. L. Miller of Saginaw Co., for Lt. Governor.

Gen. Caleb Cushing is the Democratic candidate for Governor of Mass,, and Henry W. Cushman, for Lt. Governor.

The result of the election in Vermont shows very close work, though the Whigs will probably have a small majority in both houses.

The Columbian Magazine for October, was received the early part of this week. It contains an unusal and choice variety of literary matter, and is richly embellished. "The Little Rogues in Trouble" is very well conceived and finely executed.

Library of Select Novels.—Numbers 103 and 104 of this series of romances, called "Norman's Bride, or, The Modern Midas," and "Margaret Graham, or The Reverses of Fortune," by G. P. R. James, have just been received by Hawks in the Post Office. This "Library," thus far, is much above the ordinary run of novels in point of interest and excellence.

To Correspondents.—We regret exceedingly that "The Sunflower and Myrtle," and "Mary" must be declined. True they are better than the workmanship of multitudes of verse-wrights who receive favor at the hands of brethren in the "Chair;" but the first mentioned is not original in conception; the latter has no originality of thought; and both are faulty in construction. The author succeeds best in prose.

We know not who sent us "The Blind Minstrel" and "Jephthah's Vow," though we have heard of the author herself. One of them will be published, and perhaps both, if we can be assured, on the authority of a responsible name, that they have never appeared in print.

The lines by "S. D." will not answer. Why a person "not used to writing," will send us articles for publication, is strange, "passing strange."

We like the "Ballad" by our Scotch friend, and have marked it for insertion.

The two poems just received from "P. S." will also appear.

Story of the Battle of Waterloo. By the Rev. G. R. Gleig, M. A. Complete in two parts, New-York: Harper and Brothers. 1847.

Mr. Gleig is known to many as the author of "The History of the Bible;" he is a man of varacity; has had his "Story" of the great contest in which the Corsican Lion was captured, revised by the Duke of Wellington, and its correctness may be relied upon. The work contains no inconsiderable amount of historical information touching the state of Europe previous to the famous military operations of 1815, and may be read with profit as well as pleasure. The two Parts may be had for 37 cents each. For sale by Hawks.

Pictorial History of England. To be completed in about forty numbers at twenty-five cents each. New-York: Harper and Brothers; No. 29.

This number is rich and profuse in embellishments and brings the history down to the period of Charles the First, The Commonwealth, etc. The whole series of numbers will probably be issued before the close of this year, and when the work is completed, it will be unsurpassed in beauty of execution, we believe, by any thing of a historical character which has yet been published in the country.

Louis the Fourteenth, and the Court of France in the seventeenth century. By Miss Pardoe. No. 6, New-York: Harper and Brothers. 1847.

This work is now completed, and although we have, as yet, read but a small portion, we know it to be exciting in many parts and are satisfied, from the numerous critical notices of it, that it is highly valuable as a whole. We are purposing to refer to it again anon, and to make some extracts. The six parts may be had at the Literary Depot in the Post Office.

THE LAND FOR THE LABORER.—The Liverpool Journal, after speaking of the miseries and privations of the poorer class in that country, says:

We laugh at the agonies of love; we weep for the victims of starvation. Luxuries few can have, the laboring population must be content with humble fare, and they call for no particular sympathy while they have a sufficiency of that. To the many it is unhappily denied in this country, notwithstanding all our wealth and greatness. *Every one can enjoy it in the United States of America:* The state of society in that country has provoked adverse opinions; some travellers like, some dislike, the modes, manners, and habits of the people; in the estimation of many they want refinement, but all are agreed that the people have plenty to eat, and those who have never sat down day after day to scanty meals, are utterly incapable of estimating the vast happiness implied in that one fact. The man who has plenty of food may—ought to be—happy: he who has not cannot be otherwise than miserable.

To America, therefore, all who dread hunger ought to repair. It is a land of plenty—will be the greatest country the world ever saw. The descendant of an Irish emigrant is now its temporary but legal sovereign; the son of the poorest man who leaves our quays tomorrow, may occupy the same proud place. They will never die of hunger there, and a security against want is a guarantee for modern happiness.

Is not every word of this true? We do not enough prize the pre-eminent blessings we enjoy. In no other country that the sun shines upon, are the necessaries and most of the comforts of life so easily obtained by all classes of people as in this. In many of our large towns there is, unhappily, much privation and positive distress; but cases of that character are comparatively rare even there, and would be vastly less but for the strong gregarious feeling that prompts people to cluster together in crowds, even with the certainty of absolute suffering. But take our country as a whole, positive want, such privations as are indicated by that term in other countries, is wholly unknown. So high is the general standard of comfort among our people that they will reject as paupers the food and accommodations which thousands upon thousands of immigrants, with considerable means at command, look upon as extravagant living.

All may not be rich, but in this country every man in good health and willing to work can live comfortably, and, if he nourishes other aspirations, every office, even the highest, is open to his ambition, if he be a native, and all, with very few exceptions, to the adopted citizen. The actual condition of things in this country, the political privileges enjoyed, the freedom of conscience, the protection of each man's rights of person and property, the educational advantages, the ease with which land can be obtained, without money and without price beyond what can be earned by one year's labor, the cheapness and profusion of all the necessaries of life, would by the mass of the people in all other civilized countries be regarded as the acme of all their hopes, the utmost realization of all they hope for on earth. But here these things are considered as only our point of departure for higher and better things, a more perfect organization of our social and political state.

Every thing that really tends to improvement, that affords a reasonable promise of making our people happier and better we would gladly welcome. But what shall be said of those who can only see wretchedness and misery in the fair prospect presented on every side, who raise a whine here in imitation of the real cry for relief that is borne across the Atlantic, who affect to discover the same social and political abuses, the same dire oppression here that exist in Europe, and who pander to every visionary, absurd or mischievous scheme of pretended reform, and by their teachings provoke discontent, envying and hatred, vague, indefinite longings for some impossible political millennium, inconsistent alike with reason and revelation, and showing as the fruits of such teaching, incendiarism and murder?—What can be said of those except that, inflated by preposterous vanity, they persevere in this course for the notoriety, and cheap sort of influence it gives, or that, with higher ambition and greater wickedness, they care not what seeds of mischief they sow broad-cast, under the guise of philanthropy, so that they can attain political power by the aid of their dupes?—*Commercial.*

WESTERN VIRGINIA LAND COMPANY.—An association under this title has recently been formed in England, with a capital of £150,000. The object of the association, as we learn from a notice of it in the N. Y. *Commercial Advertiser*, is the purchase of large tracts of land in Western Virginia, which land is to be sold to immigrants in lots of eighty acres and upwards, at low prices. A deposit of sixpence per acre will be required for any quantity purchased, but the purchaser will not be required to make his selection of the quantity secured by deposit until his arrival on the land. The residue in instalments, within a period of five years from the date of the purchase.

One of the articles of the association says: "When the number of any religious denomination of Christians settled on the lands will require a minister of their faith, the company will grant not less than fifty acres to aid in compensation for his services." The association is registered under an act of the British Parliament. There is a vast quantity of unimproved lands at present in Western Virginia, and this appears a good opening for the proprietors to sell on advantageous terms to all parties.—*Commercial.*

STAGE ACCIDENT—LOSS OF LIFE.—On Saturday last the horses attached to one of the Cumberland stages became frightened at a locomotive engine, which was passing them just at the bridge about half a mile this side of Cumberland, and ran over the bank to the flat beside the stream.

Mr. Vincent, of Erie Co., Pa., was killed.—Mr. Markoe, of Indianapolis, and three others, dangerously wounded and all the rest of the passengers, (the stage having been full,) more or less injured. Passengers state the bank to have been about fifteen feet almost perpendicular, and seem astonished that any should escape being killed. Two of the horses were much injured. Twenty coaches left Cumberland on that evening loaded with passengers for the west.—*Pitts. Gaz.*

THE FOX AND HARE CASE.—The grand jury of New York have found a true bill against Hare on the charge of bigamy.

From Gen. Taylor's Army.—The steamer *E. A. Ogden* arrived at New Orleans on the 11th. She left Brazos on the 7th. Her news is of little importance.

Gen. Lane's brigade was at the mouth of the river expecting to embark about the 8th inst.

Gen. Cushing arrived at Matamoros on the 3d inst., accompanied by Lieut. Col. Abbott.

Deas's battery, which was to have accompanied Gen. Cushing, has been ordered to remain with Gen. Wool.

Dispatches have passed through Matamoros for Gen. Marshall, at Monterey, to proceed to Vera Cruz without delay.

Col. R. E. Temple arrived at Matamoros on the 1st inst., with four companies of his regiment, the 10th infantry.

Col. Tibbatts, who was proceeding from Mier to Monterey with six companies of the 16th infantry, escorting a train, was attacked by a large party of Mexicans near Ramos, and succeeded in driving them off, with a loss of two wounded.

Mr. E. B. Laudy and Mons. Montilly, who were taken prisoners some four weeks since by Carvajal, have been set at liberty, and arrived at Matamoros on the 3d inst. Col. Carvajal was in the vicinity of Soto la Marina with a small force.

Urrea has published a plausible letter to encourage desertion on the part of our troops.

The orders from the War Department keeping Gen. Taylor in inactivity gave great dissatisfaction. Many officers of the volunteer regiments declared their intention of resigning.

The disturbance in the North Carolina regiment has been completely quelled. On the morning after it broke out a number of the officers of the regiment signed a petition to the Colonel to resign, which he very properly refused to listen to, but laid it before Generals Cushing and Wool. It was considered by the commanding General as a participation in the mutiny, and two of the signers were dishonorably discharged from the service. As soon as this was known about 17 officers tendered their resignation, but after 24 hours had elapsed they thought better of it, and begged leave to withdraw their resignations, expressing all due contrition, and leave was granted. The soldier who was wounded by Col. Paine at the time he shot at the mutineers was a Virginian and has been dishonorably discharged from the service.

The Rationale of the Ten Hour System.—Recently a bill prescribing ten hours as the maximum of a day's work in factories was passed by the New Hampshire Legislature. A paper in that State gives a curious motive for favoring the law. It says:

"One reason which induces us to support the ten hour bill is, that the factory girls will then have time to garter their stockings in the morning, instead of having so frequently to draw them up in the public streets."

☞ Here is a paragraph eminently American, and which could hardly be written in any other country. A *Judge* leaving the Bench to become the superintendent of a railroad, seems to be a mixing up of professions, and a change in pursuits, to which Americans alone are prone or are equal:

"The Concord (N. H.) Statesman, learns that Judge Gove of Nashua, has been appointed Superintendent of the Nashua Railroad, and will shortly leave the bench, to enter upon the duties pertaining to that office."

Shocking Accident.—A most shocking and fatal accident occurred at the railroad depot in this city yesterday afternoon about 2 o'clock.—The circumstances are as follows: Mrs. Stead, an English lady, from Yorkshire, in company with her son-in-law, two daughters, two grandchildren and a servant, came in upon the eastern emigrant train which arrived a few minutes before two o'clock. The son-in-law left the females in the car and went to the depot to make some enquiries about going west. While he was absent, the person who sweeps the cars went into the one occupied by Mrs. Stead and her daughters, and told them to hurry and get upon the other cars. The daughters stepped out, and while Mrs. S. was stepping from the platform, the engineer started the cars backward, the sudden motion of which threw her across the track between the cars, and before she could rise two wheels passed over her, crushing her body and left arm in a most shocking manner, and causing her death almost instantly. Her husband, Mr. Samuel Stead, has been in Milwaukee or its vicinity some three months, and had written for his family, who were on their way to join him when arrested by this sad calamity. The anguish of the daughters at their sudden bereavement was too deep for human sympathy to afford relief, although it was freely and generously offered. The appearance of the family denoted intelligence, respectability and worldly comfort.

The remains of Mrs. Stead were removed to Bannard's Hotel to be enclosed in a leaden coffin, her daughters wishing to bury her where they expect to settle at the west. We understand her age to be 48 years.

We understand that no blame is attributed to the engineer. The train was a long one, and the deceased was in a passenger car behind all the others. The train having been in some minutes, the engineer supposed the passengers were all out. The calamity, however, should lead to the adoption of measures by all the railroad companies, to secure more strict regulations in the starting of cars. Thousands who travel are ignorant of the danger to lives and limbs about a train of cars, and too much care cannot be observed to prevent the occurrence of such calamities.—*Rochester Democrat.*

A Fugitive Slave.—A slave named Brown, was killed in Summerville, Md., some time since, by his master, as is alleged. Soon after, the master was murdered. The brother of the murdered slave was arrested on suspicion, but fully acquitted. He was subsequently sold to a far south planter, but escaped to Philadelphia, where he was arrested as a fugitive, but escaped from the clutches of the law on account of some informality in the warrant. From New York he proceeded to Montreal, in company with a clergyman, and had an interview with Governor General Lord Elgin, who was informed of the exact facts in the case, and promised the fugitive protection. The next day, two pursuers reached Montreal, and applied to Lord Elgin to surrender Brown, on a charge of murder; but as the Governor had previously had the proofs of Brown's innocence exhibited, he refused, and the fugitive triumphed.—*Albany Eve. Jour.*

Statistics of Crime, &c.—One of the Reports made at the present session of the Legislature developes some curious facts concerning the occupation of the individuals who have fallen under the grasp of the law for petty offences at the special sessions of the various cities. It cannot be uninstructive to select some of the curious results evidenced by this report of Secretary Ben-

ton—from whose office during the year proceed some documents of exceeding interest to the whole people. I find here that among the erring or the unfortunate were of artists, only 1; of l orers, 529; of lawyers, notwithstanding all the gauntlet of opprobrium which they run from clerkship to judgeship, only 1; of those who are classed as of "no occupation," 222; of merchants 1; of soldiers 4; of tailors 35; physicians 2; school teachers 2; servants 151; sailors 123: *printers* 7; butchers 30; cab-drivers 3; musicians 4. Indeed the whole list, did not space forbid, is a curious chapter in human history.

There were in the year *thirty-seven* convictions for *offences against the currency*; for forgery with Bank paper 21; with individual paper 15; with coin 1.—*Albany correspondence of Cour. & Enq.*

Important from South America—Dissolution of the Anglo French Alliance.—By the ship Star Republic from Montevideo, we have our files of the *Argentine News* and the *Gaceta* to the 7th ult.

The most important news by this arrival is the withdrawal of England from the monarchical alliance, of which we had rumors by previous arrivals. Lord Howden issued orders from Montevideo on the 15th of July, for the immediate withdrawal of the British forces from the waters of the Agentine and Oriental Republics His orders were at once carried out; the blockade of Buenos Ayres was raised, and the union of the English and French fleets in those waters, formally dissolved. This act of justice, so honorable to the British government, was accompanied by expressions of good feeling between the Executives of the republics on the one side and Lord Howden, as the representative of the British government, on the other. The French Ambassador at once renewed the blockade and proceeded to carry out that infamous policy by which his government, in connection with the Brazillian monarchy, had rendered itself odious to the free governments of South America. The Argentine government took measures to repel the French invasion. President Rosas called on the militia to assemble for exercise, and President Oribe was pressing the siege of Montevideo.—The French monarchists in Montevideo are reduced to the last extremity. Lord Howden says they are "without money, without credit and without native troops."—*N. Y. Sun.*

More Outrages.—We regret to be compelled to announce that on Thursday night last the barn and shed of Hiram Lapham in Taghkanic, were set on fire and totally destroyed, together with their contents, valued at some $1,800—insured for $700.

On same night, the hay barracks of Wm. H. Barringer in the same town, were also fired and burnt and it was with some difficulty that his barn was saved. On the same night an attempt was also made to fire the barn of Stephen Ham, in said town, about two miles from Lapham's, by fixing a paper lantern with a lighted candle in it, the bottom of the lantern being filled with tow, so that when the candle burns down a short distance, it will set the tow on fire, and it is so placed that the blaze will reach the pay or other combustible and set it on fire.

This mode of revenge is the most dangerous and cowardly of any that has yet been resorted to and calls loudly for prompt and energetic action on the part of the people. We trust that these midnight incendiaries will soon run their race, and that a just punishment will ere long overtake them.—*Hudson Gazette.*

Marriage of a Roman Catholic Priest.—The Cork Constitution says:—We need not say that the following comes to us from a creditable source, for such a letter we could not insert on any but the most satisfactory authority. A second letter has reached us on the same subject, but it enters into particulars which we prefer not publishing:

Extraordinary Marriage.—The neighborhood of Fermoy has been favored with an extraordinary marriage between a reverend Roman Catholic clergyman, and the accomplished daughter of an M. D. The determination of the reverend gentleman seems praiseworthy, and all impartial, unprejudiced persons will wish him and his fair bride "God speed." "Marriage is honoruble in all men," and as the late Mr. D. O'Connell broke through an act of Parliament in becoming M. P. for Clare county, and carried emancipation, the Rev. Mr. Aherne has broken the ice, and henceforth celibacy will be no longer the scandal and snare of the Romish priesthood. Mr. Ahene's fortitude is, therefore, to be much applauded. The fact of the marriage is notorious, and you can publish this or not, as you wish.

Beaver Island.—We understand that the Northwest Fishing Company is in negociation with a body of Mormons for the sale of a portion of lands on Beaver Island belonging to that company. The Mormons, it is said, design to build a city there.

Beaver Island is situated in Lake Michigan, about fifty miles south westerly from Mackinac. It is said to possess a good climate. The soil is sandy. The fisheries about it are exceedingly valuable. It is understood that the Mormons desire a location where they will not be troubled by neighbors —*Rochester American.*

Important arrest of Counterfeiters.—We learn from a friend, recently returned from a visit to New Hampshire, that on Tuesday of last week, two persons were arrested in the vicinity of Lancaster, N. H., for having in their possession with intent to pass as genuine, a large amount of counte feit bank-notes. Their names are *Charles Young*, of Portland, Me., and *Daniel Moulton*, of Dracutt, in this State. There were found upon them $4700, a portion of the notes being untrimmed and not signed. The bills consisted of *tens* of Adams Bank, North Adams, Mass.: *threes* of Marblehead Bank, Marblehead, Mass.: *twos* of Eastern Bank, Bangor, Me.; *twos* of Worcester Bank, Worcester, Mass.: *twos* of Gardner Bank, Gardner, Me.; and *ones* of Atlantic Bank Boston, Mass. *Young* is about sixty years of age, and is undoubtedly a veteran in the business of counterfeiting. *Moulton* is about thirty years of age, 5 feet 10 inches in height, black hair and dark complexion. These two individuals, have probably been connected with a gang of counterfeiters, forming a link between the Canadas and the States, and their arrest may be looked upon as second in importance only to that of Selden Brainard and others, in New York.—*—Boston Jour.*

Another Steam Mill.—We understand that the ground has been leased, and other preliminary arrangements made, for the construction of another Steam Flouring Mill in this city. It is to be built on the vacant lot, between the warehouses of Putman & Co. and Miller & Cushman, on the west side of the river. It is designed for 3 run of stone and will be ready for service by spring.—*Milwaukee Sentinel.*

NEW YORK, Sept. 23—7 P. M.

Advices from Petersburgh, says the southern mail had arrived, bringing New Orleans papers of the 16th, as late as due at this point.

La Patria, the Spanish paper at New Orleans, publishes a letter from Mexico. Nothing later, however, received by the way of Tampico, whence there has been an arrival to the 8th.

This letter reports the prevailing impression as favorable to peace, and also gives the provisions of the Treaty now making, by which, it says, the Americans are to renounce California and all the forts, and retain Texas, up to the left bank of the Rio Grande, comprising Matamoras, with the privilege of constructing a canal over the Isthmus.

Gen. Valencia, the officer on whom Santa Anna casts the blame of the recent defeat, is said to be a prisoner at Guadaloupe.

Santa Anna is also said to have ordered Parades to quit the country; but the latter intends to march to the capital for the purpose of giving battle.

Salas declares the battle lost by the cowardice of Torrejon, and the unskillfulness of General Valencia.

STATE OF NEW YORK, { ALBANY, August 3
SECRETARY'S OFFICE. { 1847.

To the Sheriff of the County of Erie:

SIR: Notice is hereby given, that at the next general election to be held on the Tuesday succeeding the first Monday of November next, the following officers are to be elected, to wit:

STATE.

A Secretary of State, Comptroller, State Treasurer, Attorney-General, State Engineer and Surveyor, Three Canal Commissioners, and Three Inspectors of State Prisons.

DISTRICT.

One Senator for the Thirty-First Senate District, consisting of the county of Erie.

COUNTY.

Also, the following officers for the said county, to wit: Four Members of Assembly, one to be elected in each Assembly District.

Yours, respectfully,
N. S. BENTON, Secretary of State.

ERIE COUNTY SHERIF'S OFFICE, }
Buffalo, August 6, 1847. }

A general election is to be held in the County of Erie, on the second day of November next, at which which will be chosen the officers mentioned in the notice from the Secretary of State, of which a copy is annexed.

BUFFALO MUSICAL INSTITUTE FOR YOUNG LADIES.

At the residence of Prof. W. R. Coppock—Composer and Teacher of the Piano Forte, Organ, Singing and Composition.

An institute devoted exclusively to Musical Education is not yet common in this country; but in Europe the test of experience fully shows its great advantages over the too general superficial manner in which this important part of polite education is acquired. The advantages this institution offers to those desirous of completing their studies as Organists—or practical players of the Piano Forte, together with a thorough system of imparting the same to others is fully established by the many precedents of the past 15 years. The pupils are constantly guarded in their practice against all bad habits, and from the various stages of progress they may be in, are continually stimulated to effort and industry, by association with each other. The family too, are all players, and the theory is amusingly discussed, impressing its rules in a more pleasing manner, and more lasting upon the understanding, than by the mere dry study of an elaborate book. Music is composed and arranged from time to time, showing the various styles and harmonies analytically, and adapted for performance on several Pianos at the same time. This teaches a thorough knowledge of counting, and dividing passages into their given time. Vocal music is particularly attended to, and when the pupil has a moderate share of talent, we hesitate not to say, a correct and pleasing singer can be made. The Piano Fortes used are all new, and of the finest quality, and every inducement will be given to render the true spirit with us profitable. The building is commodious, and has a fine garden attached, with Green houses, Bathing rooms, &c., and is pleasantly situatuated in Seventh street, between Niagara Street, and the Falls rail road, and about midway to Prospect hill

Terms made known upon application at the Institute, or by mail, post paid, directed Prof. Coppock, Buffalo.

Prof. Coppock, keeps constantly a choice selection of Piano Fortes for sale,

Buffalo, August 3, 1847.

PRINTERS' FURNISHING WAREHOUSE.

WILLIAM PRESCOTT, Manufacturer of Printing Inks, No. 6, United States Hotel Block, Pearl St., Buffalo. WESTERN LITERARY MESSENGER.

VOLUME IX. BUFFALO, SATURDAY, OCTOBER 9, 1847. NUMBER X.

For the Western Literary Messenger.

To the Merrimac.

BY J. CLEMENT.

Real poetry is this—to tame the rivers and compel their wild falls to produce wealth and comfort.—Miss Bremer.

Auld burnie o' my youth an' heart,
Sae lang renowned for shad an' eels,
The scythe o' Time, ilk age, removes
Some rubbish which your worth conceals.

When acorns, like the dragon's teeth,
To armies grew alang your banks,
An' fields o' maize, like banners waved
Far i' the rear, ayont the flanks,

Your thowless waters moped alang,
An' had nae noble wark to do;
They sang themsel asleep at night,
An' bore by day the bark canoe.

An' when the whitemen gathered here,
An' dwelt at first alang your shores,
You did naething but saw-mills feed,
The bleth'rin things, a dizen scores.

But now your waters, turned aside,
I' drumlie ditches tho' they rin,
Can sarks o'lasses, blithe an' braw,
Frae cotton-wool, i' legions spin.

O' a' the wark that Lowell does
You surely hae a glorious share,
For that maun be the height o' fame,
To be a "runner" for the *fair*.

Auld burnie o' my youth an' heart,
Sae lang renowned for shad an' eels,
The scythe o' Time, ilk age, removes
Some rubbish which your worth conceals.

The Reclaimed.

BY MISS C. M. SIGSON.

"Who hath made us to differ?"

I had passed a day very delightfully with my brother and his family, and was just preparing to take my leave in the early evening, when he remembered a trifling errand he had promised to do for our mother, and desiring me to await his return, hastened out to attend to it. After waiting an hour I began to grow impatient; but when another and another hour elapsed without his coming, impatience and anxiety amounted to agony, and I think my sister and I would have gone out in search of him, the servent we had sent long before having returned with no tidings, had we not heard his hurried steps on the side-walk, and the hasty shutting of the door as he entered the hall. We turned eagerly toward him, but the questions we would have asked died on our lips, for his pale and troubled face alarmed us. After a moment's hesitation he threw himself on a sofa, and desiring his wife and myself to seat ourselves beside him, he took a hand of each, and folding them in his, said, with a solemn earnestness which awed us, "Thank God you are what you are, and not like her I have seen to-night. I am going to tell you a sad story, and then ask you to—but no, I need not ask, for when you have heard my story your own hearts will prompt you to do all I ask or wish. I had scarcely turned the corner into the next street, when a hand grasped my arm and a woman invited me to accompany her. With an expression of contempt and impatience I shook her off, and was hurrying on, when the despairing tone in which she again besought me to attend, made me pause, and in an instant her long bony fingers again rested on my arm, and her voice, one of the sweetest I ever heard, again filled my ear—'Oh! go with me for the love of Heaven!'"

"'Do not ask me to sin in the name of Heaven. Go, woman,' and I spurned her from me; 'go, and let me return to my wife and children.'

"'Your wife,' she almost shrieked; 'what do men care for their wives? Children, did you say? children! poor little ones! I have children, too, and they are starving,' and the poor creature burst into tears. Feeling that she could be no common character and evidently desiring to serve her if I could, I bent over her and spoke gently and soothingly, urging her to go home; to leave her present course of life, and try in some honest way to earn her subsistence. I then gave her my address and bade her come to me for any aid she might need, whenever she could come, assuring me of her reform. I then offered her money, for she seemed destitute.'

"'No, no! I cannot take the money. Your words are as the words of angels, and I will obey them, but no, I cannot; who would trust me, fallen, degraded, as I am? besides are *we* not dying starving? I tell you they have cried all day, and yesterday, and day before that, for bread, and I had none to give them; and *he* lay there in his drunken sleep, hour after hour, or woke only to curse and strike us!'

"'He—who? Of whom are you speaking?'

"'Of my husband! did you think I did not know, when I said men do not care for their wives?' and she laughed with an almost fiendish mockery. Her strange manner interested me deeply, for I thought it very evident see was not intoxicated, or intoxicated only with misery and famine. Her voice had risen to such a high key, and being somewhat annoyed by seeing a crowd collecting round us, I bade her go on to her home and I would follow. A few minutes' walk bro't us to the mouth of a dark lane, or alley, down which we groped for some distance before we reached a door that admitted us into the most desolate apartment I ever saw tenanted by human beings. The fire had apparently been long out on the hearth, near which, a heap of rags, that once, probably, were bed covering, lay asleep a fair little girl, whose soiled and ragged clothing, and tangled hair, showed too plainly the utter neglect of her mother; while in a sort of rude cradle another child was moaning and murmuring in its troubled sleep, and on a heap of straw in the corner lay a man in a deep sleep or stupor, near whom, on the only chair (and that a broken one) the room contained, stood in a bottle a tallow candle which had dripped down upon a dirty newspaper and broken pipe that lay beneath it, leaving the long black snuff bending over the little greasy heap itself, had made, seeming the very image of

want and misery. More than ever wondering I turned to the women and asked—

"'Is this your home? how long have you lived here, and who are these?"

"'We have not been here long. He who lies there is my husband. He beguiled me from my good mother who lives in a little town in the western part of the state, and for a year after our marriage, was faithful and kind to me, but finding at length that my family would not forgive the rash step I had taken, and receive him among them with the attention he desired, in a fit of anger at some taunt on his inability to support a wife and family, he suddenly determined to come to New-York, where he assured me he had plenty of friends. Alas! fatal friends have they proved to him, hurrying him on to ruin with railroad speed; for three years only have sufficed to make him who *was* an honest, industrious mechanic what you see—and me, have they not made me worse than he? He introduced his profligate companions to me, *he sold me to them*, and mocked at my resistance, threatening to deprive me of my children if in that I opposed his will. I had learned to dread his violence, and do you wonder that when one of his associates, more gentle than the others, spake kindly to me and the little ones, ministering to our necessities, (for my husband made no provision for us and we often nearly starved,) will you wonder that I fell? but oh! it took much to make me thing I am. I have never before been in the street as I was to-night, but we have had no food for three days, not a morsel of bread has passed my lips since day before yesterday, and I have given to the children all, and little enough it has been, that I could beg.'

"Here the child in the cradle gave a fearful scream, and springing toward him the mother raised him in her arms and sought to soothe him His little limbs were convulsed, his eyes rolled back, and I thought directly that he was dying. Finding the mother too feeble, too exhausted by hunger and overcome by fear to hold the child, I took him in my own arms and when he grew quiet, I threw the woman a piece of money, bidding her buy bread for herself and children and to ask Dr. Perkins, who I knew lived near, to come immediately. It seemed an age while she was absent, yet she went in an almost incredibly short time, and while I sat in that wretched room by the dim flickering light, alone with the sleepers the child on my lap suddenly stretched itself for a moment, raised its little emaciated arms as if trying to clasp some dear and accustomed support, then sank again into a sleep so tranquil I almost envied it. By and bye I began to long for the return of the mother and to feel a strange kind of loneliness and awe stealing over me. I dared not move lest I should disturb the little sufferer, yet would have given a world to be assured he really breathed. Suspense became dreadful, yet I would not, I *could* not relieve it by a movement which might wake him, so I remained motionless, until the returning steps of the mother seemed to give me courage and I bent my face down till it touched the little cheek cradled on my arm, which chilled me with its icy coldness. I then *knew*, that in that slight convulsive movement the spirit had passed out and what I had held so carefully was but its deserted tenement. Perhaps my exclamation of dismay was sufficient, or perhaps her maternal instinct told the truth to the woman, who came eargly towards us on her entrance and snatching the child from my lap, clasped it to her bosom, pressing kiss after kiss upon its cold face. She uttered no word of sorrow, shed no tear, but the convulsive movement of her arms tightened each moment around the little body and the look of intense agony with which she regarded it were far more expressive of her feelings than the tears and words of a life-time. Presently, with a hurried motion, as if the idea had suddenly struck her that her husband ought to share her sorrow, or it may be with only a woman's longing for loving sympathy and entire forgetfulness of the blunted sensibilities and hardened heart of him to whom she appealed, she drew near the straw in the corner and bending down, laid the dead child on its father's breast, and stroking caressingly his coarse matted hair seemed desirous yet fearful of waking him. After a few moments he opened his heavy, bloodshot eyes and gazed vacantly on his wife's face, then made an effort to throw off the unwonted weigut from his chest with an exclamation of drunken anger. The woman laid her hand on the child, holding him firmly in his place, and murmured, 'Tis the baby, Henry; 'tis our boy,' you know, don't shake him off.'

"'The baby,' he replied, with a furious oath. 'and what is he doing here? Take him off or I'll dash him against the wall.'

"'He is dead.' said the mother, in a tone so heart-broken, so as if her very life of life went out of her with the words, that even the degraded being to whom she spoke, half sleeping, half drunken as he was, was moved by them, and rising he held the child toward the light as if to ascertain the truth, and then laid it softly, almost reverently, upon the straw. As he raised himself, he caught sight of Dr Perkins and myself, and with a scowl of defiance advanced towards us."

"'Have you come here to exult over us in our misery? Or have you come to see *her*!' and he pointed with a sneer to the woman cowering and chattering in the corner. 'Take her in the fiend's name and begone,' and he again poured forth a volley of oaths and curses too fearful to remember, and seizing the woman by an arm dragged her from the floor, and had already given her several severe blows before the doctor and I, who sprang forth immediately, could prevent it. Exerting all our strength, however, we at length secured him, and calling a watchman, we handed him over, sure he would be taken care of for the night at least, and then turned all our attention to the suffering woman. While Dr. Perkins collected the bits of wood that lay scattered about, and putting them with the brands on the hearth coaxed them into a blaze, I aroused a woman who lived in the next room and induced her to place the little sleeping girl in the bed with her children; then putting the dead boy on the other side of the room, we arranged the straw, covering it with the remains of bedding, and placing the woman on it endeavored to restore her to consciousness. I must own I hoped he would not succeed, I had no wish to recall her to a life of misery and sin, and thought not at the moment how needful to her was *time* for repentance. It were useless to dwell longer on the scene. We left her at length in charge of her neighbor, and with the early dawn to-morrow I am to attend to the decent burial of the child, while Dr. Perkins has the mother conveyed to the hospital. We had no time to decide on an asylum for the little girl, and I think it will not be left for *us*, for your looks my wife and sister, show me the interest you take in my story, and I know you will not withhold all the aid in your power to grant."

We had indeed listened to my brother with the most absorbed attention, and when he ended it was with no pharisaical spirit we thanked God in our hearts for making our lot so much more blessed than hers of whom he had spoken, and almost

in a breath we promised every assistance in our power. I of course continued at my brother's the remainder of the night, and in the morning accompanied him and my sister to the abode of misery. Tears rolled down the cheeks of the kind-hearted watcher as she told us of the ravings of the poor invalid; how she mourned for her child, having even in delirium a sense of her bereavement; how she talked of the mother she had left, and implored forgiveness for the shame and sorrow she had caused her; how she entreated her husband to let her go home to that mother and forsake her wretched course of sin. We almost wept as we heard the recital, but it was time to act, not to weep, and in less than an hour we had the satisfaction of seeing our patient comfortably laid in a neat warm apartment prepared for her, with a faithful and kind nurse and the good Dr. Perkins in attendance. For many weeks recovery seemed doubtful, but at length youth, natural strength of constitution, and kind, judicious care triumphed over disease, brought on by want, sorrow and degradation, and the light of health once more beamed in the eyes we had sometimes almost wished closed forever. With recovered health came renewed desire to return to her mother, who, after several letters from my sister, urging her to forgive her penitent child, consented to receive her and came down to the city to take her home. We of course would not intrude on their meeting, but heard from the nurse that it was affectionate, yet to both mother and daughter painful in the extreme. In a few days the little party set off on their return home, the invalid scarcely yet able to travel, but too impatient to leave a place where she had so sinned and suffered to bear to be detained; her little girl bright and gladsome as a summer bird, and the grandmother with an expression of thankfulness on her withered face which made it almost beautiful.

We hear from them frequently, and are assured that Ellen, the *reclaimed* one, is leading a most exemplary life. The memory of the past haunts her at times, making her sad and almost despairing, but her mother's encouraging words or her child,s caresses are an unfailing balm, and could she but hear that the husband she loved even in their deepest degradation had turned from the error of his way, I think she would have no earthly wish ungratified. Would I could speak that comforting word to her; but alas! it is long since we heard of him, and our last accounts were anything but favorable, yet we do not despair. As bad men as he, nay worse, *have* been reclaimed, and we bear in our hearts the cheering motto, "Hope on, hope ever," and in judging our fellows try to remember, with deep humility, that circumstances alone and the restraining grace of our Heavenly Father have preserved us from the gulf into which others have fallen.—*Columbian for October* 1847.

How to Promote Health.—Do not, expect, sir, some wonderful announcement, some fascinating mystery! No. It is simply the plain little practice of leaving your bedroom window a little open at the top while sleeping, both in winter and summer. I do not come before you as a theorist or an experienced teacher, in thus calling loudly upon every family to adopt this healthful practice. I am the father of ten children, all in pure health, and have (thank God) never lost one, although their natural constitution were not robust. But in addition to the salutary effect of the practice in my own family, wherever I have advised others to try its effects, it has invariably been found to be both pleasant and beneficial.—*Correspondent of he London Sun.*

From the National Era.

The Old Homestead.

BY MISS ALICE CAREY.

When first the skies grow warm and bright,
And flash with gold the hours,
And, in her pale, faint robes, the Spring
Is calling up the flowers;
When children, with unslippered feet,
Go forth with hearts of glee,
To the straight and even furrows
Where the yellow corn must be:
What a beautiful embodiment
Of ease, devoid of pride,
Is the good old-fashined homestead,
With doors still open wide!

But when the happiest time is come,
That to the year belongs,
Of uplands bright with harvest gold,
And meadows full of songs;
When fields of yet unripened corn,
And daily garnering stores,
Remind the thrifty husbandman
Of ampler threshing-floors—
How pleasant, from the din and dust
Of the thoroughfare aloof,
Seems the old-fashioned homestead,
With steep and mossy roof!

When home the woodman plods, with axe
Upon his shoulder swung,
And in the knotted apple tree
Are scythe and sickle hung;
When light the swallows twitter
'Neath the rafters of the shed,
And the table on the ivied porch
With decent care is spread—
The hearts are lighter and freer
Than beat in the populous town,
In the old-fashioned homestead,
With gables sharp and brown!

When the flowers of summer perish
In the cold and bitter rain,
And the little birds with weary wings
Have gone across the main;
When curls the blue smoke upward
Towards the bluer sky,
And cold along the naked hills
And white the snow-drifts lie—
In legends of love and glory
They forgot the cloud and storm,
In the old-fashioned homestead,
With hearth-stone ample and warm!

Walnuts.—It has been ascertained that the shag-bark walnut may be successfully engrafted, and that the engrafted trees are much the surest bearers. It is probable the hickory or shag-bark would do well engrafted on the pig-nut. If it should, the quantity raised might be greatly improved.

The Madeira nut; which is usually sold at the shops under the name of the English walnut, at twelve and a half to sixteen cts. per pound, may be cultivated here without difficulty, and is very productive. In the vicinity of Boston there is a tree which has produced, in a single year, as many as sold in the market for $200. We have no doubt that it might be engrafted on the walnut with perfect success.

A gentleman meeting one of his friends who was insolvent, expressed great concern for his embarrassment. "You are mistaken, my dear sir," was the reply, "'tis not I, 'tis my creditors who are embarrassed."

For the Western Literary Messenger.

Psychology.—The Human Will.

PART FIRST.

The will is that class of the soul,s Powers, from which volitions are evolved, or (to vary the language with the same meaning) it is that class of Psychical faculties, whose specific functions are, when certain conditions and occasions, shall be fulfilled by other faculties, to *cause* action. The number of faculties included in this class is eight, viz:—1st. Strength of will, or Thoroughness. 2d. Activity of Will, or Strenuousness, Promptness. 3d. Mental Fixedness or *Attention*. 4th. Expressiveness. 5th. Communicativeness or Utterance. 6th. Creativeness. 7th. Repressiveness. 8th. Decisiveness.

1st. Thoroughness—This faculty of the Will stands in direct relation to the whole muscular apparatus—it needs as a condition for its spontaneous excitement, the soul's consciousness of the well-being or health of the organization, and is manifested, when thus conditioned, in the most simple manner in the form of that love of exertion, delight in expanding muscular power so often seen in childish plays, frolics, pranks, and gambols of animals, &c. It is the spirit of industry as opposed to indolence. It gives *efficiency* of *character* and *power* of *endurance*. Its function creates force, energy, love of toil, hardwork, and labor. It is possessed by different men in various degrees of strength, hereditarily. Those in whom it is most feeble are mild, frail, powerless and inefficient. They can accomplish *no* great and ennobling purposes, and are unable to *drive* through important understandings.

The first step towards improving this power, is, to secure health, increase the *tone* and vigor of the whole orginization. The 2d, is. to place ourselves in situations where we shall be obliged to labor, obliged to test fully the amount of our strength, never, however, allowing ourselves to be overcome, obliged to rely and wait on ourselves, to provide for ourselves, to push our own way, and to increase our tasks as much as our increasing strength will admit.

2d. Strenuousness, Promptness—The functions of this faculty, creates zeal in accomplishing the gratification of desire, *courage* in meeting and removing obstacles thereto, adds spirit to industry, activity to force and intrepidity to power of endurance, in *amount* as occasion may demand. It stands in direct relation to the 1st, 4th, 6th and 8th powers of the Will, or in other words, is most frequently seen united with the function of those faculties, although it may be united with that of all the other faculties of the Will.

When this power is feeble, its possessor will be mild, inoffensive, passive, cowardly, unenterprising, unable to withstand opposition, will dislike noise and bustle, will not contend or oppose, and will lack passion and fervour of feeliag, and presence of mind in time of danger. Such men should sieze upon understandings, and follow them up with the spirit and assurance necessary to their complete accomplishment, and never allow themselves, in view of such, to say, "I can't" but always, "I'll try," they should accustom themselves to *trying*, to engaging in daring enterprises; they should ever keep themselves in preparation for defending and maintaining most fearlessly their rights and opinions, and effectually warding off all imposition; should acquire the habit and relish for braving dangers, meeting difficulties, overcoming obstacles, conquering in conflict, and engaging in the noise and bustle of business and contests, which are *just*, *honorable* and profitable.

3d. Mental Fixedness, or Attention—This faculty of the Will is in direct relation to the senses and intellectual faculties. Consciousness is the condition for its action, which is the condition for *memory*, of all kinds. The function of this faculty creates the ability to hold before the faculties of preception, the objects of consciousness for any required length of time for the purposes of examination, investigation, the ability to continue any existing train of thought, or feeling, subject of study or piece of labor until the soul is satisfied therewith and dismisses it, to make intellectual acquisements and accomplish intellectual feats.

Those in whom this voluntary power is feeble are never profound thinkers and scholars. get easily wearied in studying, investigating, examining, pursuing an avocation, transacting a business, reading and thinking and obtain only a superficial and general knowledge of things. They are generally, men of many avocations of impulse brilliant perhaps, but exclusively fond of variety.

In order to cultivate the vigor and activity of this faculty, such men should fix the mind on a single preception and keep it thereon, until it is fully imprinted, fix it on a subject until it is fully investigated, should settle on some avocation, which requires for its successful pursuit, *the mind fixed*, from hour to hour, and from day to day, and even from year to year, on one or a similar class of manifestations, and the accomplishment of similar difficult things. In acquiring knowledge, they should never take up a second study, until they have finished the first. They should accustom themselves to fasten the mind on one thing until the effort of keeping it fixed, has become unpleasant by palpable fatigue of the faculty, and this kind of exercise should be daily continued, until consciousness assures them of entire ability of attention for the successful prosecution of any amount of mental acquirements, of any enterprize or any avocation.

Destructive Fire in Lowell.—We learn from the Lowell *Courier* that the Machine shop at the corner of Adams and Cross streets, in that city, was entirely destroyed by fire on Tuesday morning. The building was owned by John R. Adams, Esq., was rented by several young and enterprising mechanics, upon whom the loss falls very severely. The whole loss is about $17,000, the insurance on which is only $5,800.

From the Buffalo Commercial Advertiser.

A Trip to Buffalo in the St. Louis.

NUMBER XVIII.

The *St. Louis* left Chicago at 8 o'clock in the evening of Wednesday, the 7th July, on her return, having unnecessarily given notice that it would be a pleasure trip, as though a trip in her could be aught but one of pleasure. Still it is not to be denied, that the understanding that she would enter Green Bay, pause at Mackinac a day or two, and visit the Sault, had its influence in bringing together that crowd of "fair women and brave men" that thronged her. Never was any steamer on our lakes, or any vessel on any waters, honored by such a list of passengers. There were gentlemen of deserved celebrity, drawn from all parts of the Union. Statesmen and politicians of all parties. Persons of literary taste, and elegant accomplishments. One Reverend Clergyman at least, and a horde of editors. There were, apart from the celebrities, a host of well-informed, right-pleasant gentlemen on board. And then, as "Heaven's last, best gift" to the *St. Louis*, we had ladies who were ladies in the true sense of the term.

The gliding motion of our good *St. Louis* over a smooth sea, the calm night heavens, the brisk, enlivening, summer air, and the sweet harmony of all things, at once dispelled sour melancholy. Gaiety pervaded the atmosphere, and invalids, as though by miracle, threw aside their ailments, contracted at Chicago, and shared the general joy. There never was a happier company. All fell naturally into their appropriate places, and played their several parts, and the whole were fused into a joyous unity of fellowship, by a pervading good-nature and contentment, that failed not during the voyage.

We arrived again at Milwaukee on the morning of the 8th, stayed there two hours, and then coasted Wisconsin, northward, towards Sheboygan. The original programme of the voyage, which was to enter Green Bay, so as to enjoy the singular scenery at its junction with the lake, and then to cross to the Manitous, was submitted by the captain to a general meeting of the passengers, discussed, and approved by a large majority, before we reached Sheboygan in the afternoon.

Sheboygan is a place of great capabilities, as we Yankees say. It is situated on a high and healthy bluff, parted by a large river sufficient in volume to make a noble harbor for this part of the world. Six miles back in the country, it flows rapidly, and may be made useful to the miller, and manufacturer. Great forests too, of excellent pine timber are conveniently accessible. As yet the city is in the future, for attention has but begun to be directed to the advantages of the location. The rising village however has a promising appearance; and its President, of thorough good stock, who was brought up at Utica, is the very Cato, who will "give his little Senate laws" to make it prosper.

The morning was yet young and rosy, when the news that we were approaching Green Bay, brought all of us on deck. We had been compelled to keep well from the land to avoid a dangerous shoal, and were now standing in towards the most southern of the several entrances, or channels, between three or four islands which lie in the jaws of the Bay. The lake was smooth and bright, in the almost horizontal sun-light, as plates of planished silver, save near the shore, where it was darkened by a gentle breeze from the water; and, in the east, the edges of a few high and snowy clouds shone like burnished gold. The land, in the distance, seemed low and wooded. It was beautiful! Everything around us was so calm, so bright, so peaceful.—Perchance the sweet repose of nature tended to restore tranquility, and produce the applause with which our Captain's explanation, then given, of the course he was pursuing, in regard to which there had been some discussion the night before, was received: for who could be displeased at any cause that brought him there! Just as our commander ceased his speech, a bird well worthy to be sweet Peace's chosen emblem, with an arrow's speed, flew over us, and alighted, not in a lovely lady's bosom, but on one of the iron rods extended between the smoke-pipes, above the hurricane deck, to strengthen them. Was it a snow-white dove? That is but a poet's phrase for a tame pigeon—a lumpish, ungraceful bird, that is much given to domestic bickerings, despite its reputation. It was something far prettier—a blue, free, fleet wild pigeon—a thing like Cora, untameable, and given to wild flights, but of a truly gentle disposition. It had somehow been separated from its fellows, and in crossing the lake since sunrise, even its strong pinions began to flag, and so it stopped to rest. John Smith tells me, that birds are frequently found dead far out upon this lake—and that even the passenger pigeon, whose speed exceeds thirty miles the hour, and which often flies a hundred miles to breakfast, sometimes falls exhausted into it, and perishes upon its bosom, and so becomes a prey for the gigantic trout. This does not often happen—and only when this strong-winged bird is baffled by opposing winds, beaten down by tempests, or lost in murky fogs.

Our pigeon was warmly welcomed. We hailed its coming as a good omen: and then, the place it occupied between the pipes was very hot, as was proved by its drooping wings and open bill; but still, so fatigued was the poor wanderer, it would not stir, although an editor, pitying its sufferings, would have knocked it off with a fishing rod had not Smith interposed. John said the effort was a natural impulse of editorial ignorance, and in keeping with editorial benevolence. We had no doubt that the individual was impelled by the humanity of a tender nature to serve the poor bird so, though any one but the conductor of a leading journal would have known that it would not stop there if it were in danger of being roasted, and its abiding in so uncomfor-

table a situation proved only that it was very tired—and that our politicians were always striving to save the dear people from fancied perdition, by knocking them about, denying them all quiet, and keeping them a-moving. But our visitor remained admired and unscathed for half an hour, until we neared the shore, and then launched into the air and sought the pleasant green-wood shade.

There is nothing in the appearance of the entrance to Green Bay to warrant its doleful name. On the contrary, the islands, and promontory on the left, though wild and wooded, are neither majestic nor savage, but simply charming. I asked my friend how it came to be called Death's Door. He told me that a large war party of Indians, in their bark canoes, were here whelmed by a tempest, centuries ago, and perished to a man: and then he offered to tell me the tradition. I inquired if he heard it in the Porcupine Mountains, and he left me in a huff.

This Bay is named on the old maps Puant, after the Winnebago Indians, who once owned the adjacent country, and of whom a miserable remnant still remains in the vicinity. These Indians were called by the French the Puant, or stinking tribe; and their descendants are said to give countenance, by their want of cleanliness, to the assertion of the old explorers, that their fathers were the filthiest and most unsavory people of the whole continent.

On the cape, upon the left in entering, are the only works of human hands in this part of the country,—two stations for observation, erected by the United States Engineers, in making their trigonometrical survey of this part of the Lake. One looks like a strong feudal tower upon the point,—the other is within the bay, and peers above the thinned forest like a spire of some Gothic edifice. They were built by the direction of the brave and able Captain WILLIAMS, so well known to our citizens, who fell so gallantly in Monterey, while fighting his country's battles as a volunteer.

Having voyaged up the bay far enough to enable us to realize its beauty, and observe its great expanse, the *St. Louis*, turning, bore us out again through another passage, and headed for the Manitous, and put in to the North one to wood, early in the afternoon. The approach to these islands was superb. They were visible at a great distance, and their precipitous sides and towering knolls, of pure white sand, loomed up into the sky, and looked like masses of broken clouds: but gradually, as we neared them, the long patches of evergreens stood out in verdant stripes upon the seeming vapor, and clustered into groves, and woods, and forests.

On the Manitous we gathered two species of the honeysuckle, and a variety of pretty and fragrant flowers, wherewith to gratify our botanists, and deck the ladies. In the evening we left this romantic spot; and on the morning of the 10th had passed the lightship, and were abreast of the Island of St. Helena in the Straits. It was very early when we moored at Mackinac;—and here it was determined to divide our forces—that, while the *St. Louis* bore to Cape River, on the northern main, a number of inveterate anglers, to fish for trout, the great body of our company, and the ladies, should have a pic-nic on the Island, to be got up under the direction of our Steward, the unequalled Bloomer. While all are so full of preparation for the *fete* or river, I'll jot down some notes descriptive of this far-famed Island. F.

Return in the St. Louis.

NUMBER XIX.

A petty circumference of nine miles comprises Mackinac, which lies on the water like a sleeping tortoise, and hence the name which was given it by the Indians. It was always, and is yet, a favorite resort of the Indian tribes of the adjacent country, and was probably hallowed, in their estimation, by traditions, which may yet subsist, but which I know not where to seek for. But it needs no such tales to recommend it to true lovers of the beautiful in Nature.

It is one of a little groupe of islands lying in the Straits. The first towards the east is Bois-Blanc, or whitewood island. At its western extremity is the uninhabited Round Island, similar to, but lower, and less lovely than Mackinac, which lies directly north of it. The North Channel runs between these two islands—the South Channel is between Bois-Blanc and Round Islands and the Main, or lower Peninsula of Michigan. The Upper Peninsula is some ten or twelve miles north of Mackinac, and trends from St. Mary's River westwardly, until it bends to the south, to form the Western coast of Lake Michigan.

All these islands are, or are based on, limestone, which easily breaks, or separate, into small, rough, cuboidal fragments. The trees are principally birch, small oak, balsam, tamarack, and the white cedar. The beaches are usually of white, or yellow sand, though often composed of, or encumbered by, shingle from the cliffs.

I do not remember the latitude or longitude of Mackinac.—The maps will disclose these particulars to the lovers of accuracy:—But I can say generally, that it is too far north to be productive of the finer grains. Its potatoes are celebrated in this whole region for their size and mealiness, and have as yet escaped the rot. Orchards here are naught; and gardens yield not abundantly nor well. Indeed the island is not fertile, and the two or three farms upon it smile but faintly. Their fresh provisions—excepting always fish—are almost all imported, and the Collector says that the only cheap things here are trout, white-fish, and smuggled goods.

There are few wild animals on the island:—indeed, the only quadruped I heard mentioned, was the rabbit. There are no marshes to invite waterfowl, and the sportsman finds no snipe, nor

woodcock. Pigeons are often abundant. John Smith, after we separated, as I will mention in its place, returned here, and and wrote me, that, in a few hours, he shot in the woods twenty-one pounds of pigeons, picking them off the low trees one by one. On inquiring when we met what he meant by pounds of pigeons, he confessed he was too lazy to count them, and so had his game weighed.

Fish are, as every one knows, the staple article of the trade of Mackinac. Land at a wharf here, at any season, and you are sure to see two or three large boxes on wheels, hauled on the deck by tough-looking fishermen of the genuine French breed, and full of magnificent trout and superb whitefish, fresh from the water. John has promised me a number or two upon the fishes and fisheries, and so I'll forego this theme: but I must first impart an epicurean lesson as to whitefish. They are delicious any way, but are superlative when broiled. They disdain the aid of any sauce whatever, and are most exquisite in their primitive simplicity. Still, a little acid, squeezed from the fragrant lemon, will not injure the native flavor of this fish, for which Apicius, if he were truly a gentleman of taste, would have thrown aside for ever his far-fetched mullets, and slave-fed lampreys. But to the lesson! The peculiar richness of a fish in every case, as some folks fondly think, resides near the head, and the prime cut is at the shoulder, including the pectoral fin and belly beneath it, and the flavor and sapidity decrease in proportion as you descend towards the tail. It is not so with the whitefish. On the contrary, the *bonne bonche* is next the caudal fin, and, if you wish to enjoy a prime one in the way of a regular climax, you must commence at the head and eat down to the tail. An old gourmand once grumbled forth a wish that there were a breed of whitefish similar to the Cape sheep.

The Island was for many years a principal post, the center in fact of the operations of the American Fur Company. Many of its agents lived here, and they and their descendants are in fact the aristocracy of this wild region. They are very amiable and respectable people. The traders often took to their bosoms Indian wives, and there are several families at Mackinac, having in their veins a very large infusion of native blood. John Randolph was not prouder of his descent from Pocahontas, than are these good people of their Indian blood. I am perhaps prejudiced about such matters, but I cannot help it So far as I have read, the founders of noble families, with very rare exceptions, were great scoundrels; and the farther removed from them they are, the more kindly I regard their descendants, from the notion, that the taint of bad blood may be diminished by intermixture, and decrease with increasing distance from the original fountain of corruption, and so perchance I reason with reference to Indian blood. A true Indian is a noble animal indeed, but mixes not well with the white. A half breed is abominable. A quadroon considerably better; the next generation, by a white intermarriage, is a wondrous improvement; and so, finally, Indian blood, when it is so diluted as to become utterly imperceptible, may be most admirable and ennobling. And yet John says he once met a lady, who was not very far removed from the Chippewan stock, and whose slightly gutteral intonation had a silvery sound, with whom he was delighted, and who might perchance have warmed his old heart to love, had it not been won forever long before by a white maiden who now wears his name.

The permanent inhabitants of the island are the families I've alluded to—a worthy clergyman or two—two or three merchants, who usually take pay for their goods in fish, and head the fisheries—and a hundred families or so of fishermen, who talk more Indian-French than English. Then the barracks are usually garrisoned by one or two companies of Uncle Samuel's troops. The officers are almost invariably gentlemen, and the men are usually peaceable and orderly, or too perfectly restrained for any serious mischief. Such is the ordinary population.

In summer they are pretty busy. Visiters are continually arriving and roaming over the island. This too is one of the places where portions of the broken Indian tribes of the Northwest congregate once a year, to taste the bounty of the government—that is to receive their annuities secured by treaties. And, at the payment as 'tis termed, the place must present an interesting spectacle. Small traders flock hither to tempt the Indians with all manner of blankets, clothes, finery and gewgaws, and erect booths and shanties, and have in fact a fair. The island is thronged with them, and with the copper-colored natives tricked out in every variety of costume, from the Adamic to the best Broadway fashionable cut. An orderly disorder reigns for a time in Mackinac, during the payment, for liquor cannot be excluded, and plays its usual part. And then the Government Agent, having performed his part, leaves them to visit some other designated place, and is followed by a large portion of the traders, who pursue his course as faithfully as do the vultures that of a conquering hero—and the Indians, after lingering a day or two, launch their bark canoes; and cross the straits, singing and paddling, and disperse themselves amid the unbroken forests, and along the watercourses of Northern Michigan, and the Island is restored to its sweet quietude again. F.

Knowledge.—Young man, improve your idle moments! Don't sit doing nothing, and wishing you had something to do. Take a book and read, that your mind may be improved. You do society a great wrong to grow up in ignorance, a reproach to yourself and a discredit to your country. Come—take a book this instant—the effort may be irksome at first but you will find pleasure and profit and honor in it, in the long run. Then begin like a man, *now*, NOW, NOW. Do not procrastinate in a matter really vital.

For the Western Literary Messenger.

An Evening Reverie.

Now hath the golden summer-sun sunk to its evening rest;
The parent-bird hath gathered home her young unto her nest;
In the far blue sky the moon doth keep her state as queen of night,
And Hesperus, though sinking fast, still sheds a silvery light.

Hear now the lonely bird of night, pours out her plaintive song—
She hides her from the garish day, when sing a numerous throng
Of birds more brightly beautiful, who trill their cheerful lays
Of melody and thankfulness, in summer's noon-tide rays.

Who doth not love at evening's hour to rove and gaze on high—
To look upon the glorious stars that gem the azure sky;
To me it calls to mind again my childhood's rosy bowers
When seemed my life a verdant path, all strewn with fairest flowers.

Rural Department.

Buffalo Horticultural Society.

Horticultural Rooms, Sept. 30, 1847.

The Committee on Flowers and Flowering Plants, beg leave to offer the following report:—

The September Exhibition just closed, being the last of our Fairs, in *extenso*, for the season, it may not be amiss to take a retrospective glance of the floral season of labors, or rather pleasures, we are closing. And first, we would remark some peculiarities of the season, which may be admitted, has been rather an unusually short one.—April and May, and indeed much of June, was cold and ungenial, although the Tulip show on the 27th of May (our first Exhibition) was regarded as a rich and beautiful display. The sun's rays had not warmed into active life the Floral Kingdom generally—the beauteous Queen, when seen, had the tinge of palor upon her cheek, nor was the strong and healthy green and majesty of mien visible until the latter part of June, from whence our season has been fine. A clear unclouded sky, with an occasional refreshing rain, tarried with us through July and August, bringing rapidly into bloom a rich profusion of flowers.—The *Aphides*, generally so destructive to Roses at this period, have been less troublesome than is usual, and our Roses generally have had fine blooms.—This delightful class of plants have astonishingly multiplied with us. Ere this society became existant, three years since, the common garden or June Roses, with very rare exceptions, were the only Roses known here. The present season however, has demonstrated that we are not behind our suburban friends in this beautiful class of plants: all, or nearly all the leading *Perpetual*, *Tea*, *Bengal*, *Noisetta*, and *Bourbon* Roses that have attained celebrity either in this country or Europe have bloomed with us. The *Pelargoniums*, too, which at the same period were confined to some dozen of the old varieties, have been displaced by a magnificent collection of over fifty entire new ones, embracing every color and shade, forming as rich and gorgeous a display of intrinsic beauty during their blooming season (from May until August), as can be well imagined. The modest but ever charming, and ever blooming Verbena, has been generally cultivated amongst us, and has this season been multiplied to over fifty varieties, together with some new seedlings of acknowledged merit. The Fuchsia may also be regarded as a new plant with us.—Three years since, the "Ladies Ear Drop" Fuchsia *Onagrariæ*, bearing a pretty little pendant flower, of two or three varieties, were greatly admired, but these have now disappeared giving place to the more recent splendid hybrids, of which there are some fifty varieties among us. The flowers being increased four-fold in size, and of the most beautiful varieties and shades of color—*Paragon*, *Exoniensis*, *Majestica*, *Coccinea-rosea*, &c., &c., are truly magnificent. One of the most gorgeous of our Autumn flowers, "The Dahlia," has this season been more particularly introduced to our Society, and the magnificent collection of Mr. B. Hodge has drawn forth an universal admiration. There have been about sixty varieties bloomed; and would that most time honored sire, *Mr. John Frost*, with his linty locks, but delay his visits to us for a few weeks longer, we may yet anticipate a rare treat. The Dahlia might well be denominated the King of Garden flowers, and the Rose his lovely Queen, but what a progeny of little royalties are there in the rapidly accumulating splendors of the parterre. The Chrysanthemums are not yet in bloom, being October to December flowers; and from the truly rich varieties we have amongst us, all originating from the splendid collection of Mr. B. Coe, and the large stock of Camelias that have this season found their way hither, we have yet the material for another Exhibition, should our Executive Committee deem it wise.

In taking a summary of the five monthly Exhibitions of the season, we find enumerated as shown, some forty varieties of Tulips, fifty varieties of carnations, one hundred and fifty varieties of Roses, thirty varieties of Pansies, over thirty varieties of Fuschias, and over sixty varieties of Dahlias, with some several hundred green-house or pot plants, embracing all the choice specimens of Cactus, Achimenes, Calceolarias, Azaleas, Palargoniums, Nereum Splendens, Penstemons, Rhododendrons, Roses, Yuccas, Magnolias, &c. And of Annuals a most gorgeous display, embracing a great many that have never before bloomed in this part of the country. These results of the progress of our infant Society are truly gratifying to your committee, as evidencing a rapid, discriminating taste and skill in Floriculture, alike creditable to ourselves and to the city generally

and may be taken as an earnest of our future efforts for the propagation of this truly delightful and social refining, *rationale* of intelligent society. To our Monthly Committees of Arrangements, both senior and junior, embracing during the season some one hundred and twenty ladies, are we especially indebted for their assiduous and over tasteful labors, in the decorations of the Hall, in the arrangement of the boquets, and their ready and smiling acquiescence of the duties devolving upon them; and indeed it were but frank to acknowledge that to the Ladies of this Society belong largely the honors it has received, and the success that has accompanied it from its very existence.

At the close of the Fair, the President, Mr. L. F. ALLEN, delivered a highly instructive and valedictory address, giving a retrospective sketch of the progress and well being of the Society since its organization; he having been its only President, and declining a farther re-election. The address was attentively listened to and at the close was warmly and affectionately responded to. The Vice President being in the chair, the following resolutions were adopted:

Resolved, That the thanks of this Society be tendered to our President, Mr. L. F. Allen, for the highly instructive and spirited Address we have just heard, and that we still farther tender our most cordial thanks for the untiring and unabated zeal he has manifested for our welfare, and the sagacity displayed in leading us through the first three years of our existence, to what we trust, will be a firm guarantee of future usefulness. And, that a copy of the address be granted the Society for publication.

After some pertinent remarks relative to, and seconding the resolutions adopted by the Erie Co. Agricultural Society, urging the claims of this city to be the place for holding the State Agricultural Fair for 1848, it was *Resolved*,

That this Society appoint a Committee of eleven to confer with the citizens and other Committees, in relation to having the State Fair for 1848 held at the city of Buffalo.

The following gentleman were elected said Committee:

Lewis Eaton, Col. B. Hodge, Cha's Taintor, R. H. Haywood, Asa Hart, J. R. Lee, W. R. Coppock, J. H. Coleman, N. H. Gardner, T. R. Coulon, L. Hodges.

Col. B. Hodge nominated the following names for honorary membership of this Society:—

A. J. Downing, Esq, Newburgh, N. Y.; Nicholas Longworth, Esq., Cincinnati, Ohio; David Thomas, Esq., Aurora; Luther Tucker, Esq., Albany; Col. H. H. Coit, Euclid, Ohio; who were unanimously elected.

THE CONTRIBUTIONS WERE AS FOLLOWS:

Mrs. L. H Pratt—Cut flowers, Dahlias, beautiful Cockscomb, Sweet Pea, Globe Amaranthus, &c.,

Mrs. W. R. Coppock—two bouquets of green house flowers, &c., also, two baskets of cut flowers for decorations. &c., composed of Dahlias, seven var. (2d rate only) with double and quilled asters, &c., &c.

Miss Hariet J. Arms—A very pretty wreath of verbenas.

Mrs. R. McPherson—Cut flowers Phlox Drumoudii, Zinneas, &c.

Mrs. L. Eaton—Bouquet composed of Petunias very fine, Balsams, sweet Pea, Phlox, very good, Dahlias nine var., several of these were fine flowers.

Miss Caroline Putnam—A tasteful bouquet of Dahlias, French Marigold, and several varieties of prarie flowers, very pretty.

Miss Hannah Hart—A beautiful wreath of Dahlias, also a boquet of Dahlias fourteen var., the most of those were very fine.

Mrs. E. H. Easterbrooks—Bouquet of fine Dahlias, &c.

Mrs. Chas. Howland—Two bouquets composed of Dahlias eight var., very fine, Passion flower, Cerulia, Zinneas, Pelargoniums, Hemerocallis, &c., very tastefully made up.

Mrs. Chas. Taintor—Two baskets of miscellaneous cut flowers.

Mrs. H. W. Rogers—Two boquets of Dahlias, eight var., tastefully made up.

Mrs. H. Pratt—Two bouquets composed of choice Dahlias, Roses, Geraniums, 2 var. Althea Frutex, &c.

Gen. H. B. Potter—A pan of rich and fine Dahlias nine varieties.

Mr. W. Webb—Eight bouquets, tastefully made, composed of Roses in variety, Verbenas, Fuchsias, Penstemon, Passiflora elata, very beautiful, Carnations, Salvia patens and fulgens, Heliotrope, Calceolarias, Mignionette, Globe Amaranthus, also two baskets of Dahlias, and a large collection of very rich annuals. Mr. Webb's annuals are particularly beautiful.

Mr. R. H. Heywood exhibited the flower of the Hercules Club; this tree from some cause has not of late generally flowered with us.

Miss Mary Davis—Buffalo Nursery—Four *hand* boquets composed of rich and choice Dahlias in var., Roses, verbenas, several varieties of Phox, the Stapelia flower, Begonias, Helitropes, Zinneas, Fuchsias, &c. The bouquets were very tastefully made up.

Mr. B. Hodge—Buffalo Nursery—A case of splendid Dahlias, containing forty var., also a very tastefnl pyramid of Dahlias embracing in the whole, some 60 varieties, viz: Arethusa (Brown's) Antagonist, Beeswing (Drummond), Beauty of Chempsford (Wicks), Cleopatra (Atwell), Cinderella (Dubras), Caleb Cope (Schmitz), Dupetet Thouars (Milliez), Duke of York (Keynes), Evecque de Bayeux (Oudin), Essex Primrose (Wicks) Harlequin (Dodd), Hero of the West (Schmitz), Hero of Stonehedge, Henry Clay, Indispensable White (Fassort), Lady Sale (Smith's), Lady St. Maur, Lady Antrobus, Mrs. Shelley, Nihil, Novelty, Oddity (Keynes), Ophir (Edwords), Pontiac (Schmetz), Prince of Wales (Dodds), Queen of Trumps, Queen of Roses (Widnal), Standard of Perfection, Sir E. Antrobus (Keynes), Surprise (Oakley), Viscount Ressigneur (Dubras), Victory of Sussex (Sanfords), Ultimatum, Admiral Stafford, Alba Purpurea, Charles XII (Miller's) Grand Turk, La Tour d'Auvergue, Lucina, Mrs. Rushton, Orange Boven, Prince of Wales (Girlings), Unique (Ansel's).

These Dahlias we have before mentioned as being worthy of admiration, and did the constitution and by-laws of our society grant premiums, we should certainly award Col. Hodge the first one, we would, however, desire the Executive Committee to award Col. Hodge as a token of this societies' approbation for his enterprise in procuring and cultivating this stock of Dahlias, a Diploma.

Mrs. E. Tyler—A large floral ornament on a square frame, groundwork beautiful moss. In the centre a large heart well formed, and worked

with German Asters, Verbenas, White Phlox, Candy Tuft, Arbutilon Shiata, &c., the whole surmounted by a rich border of fine Dahlias. The design was deserving of high approbation.

Mr. E. Tyler—Fifteen choice and very tasteful boquets, composed of Roses var., Souvenir de Malmaison, Mad-Dospres, Ophir, Augustine Monchelet, Yellow Tea, Prince Albert, White Tea, Agrippina, Belle of Travasic, Transcript de Seexemburgh, Henri Plantier, Jaune Despres, also Abutilons, Fuchsias, Phlox Drumondi, Dahlias &c., &c.

Mr. Tyler also exhibited a large case of Dahlias, many of which were very fine, viz: Beeswing, Oddity, Indispensable White. Standard of Perfection, Nihil, Lady Sale, Friendship, Victory, &c., &c.

GREEN HOUSE PLANTS.

Miss Hannah Hart—Species of Cactus, name not knowu.

Mr. E. Tyler—North street—Six pots of fine Fuchsias, var. Exoniensis Paragon, Duke of Wellington, a fine specimen of Russelia Juncea, in flower Ficus Elasticus, Roses Mad Despres, Agrippina, White Cyclamen, a very fine, and remarkably thrifty orange tree, in full of bearing.

The show of green house plants was by far the fewest of the season, the day being very windy, and withall very cold, prevented those having blooms to risk them.

W. R. COPPOCK, *Chairman.*

[Report on Fruits will be given next week.]

Visit to a Nursery.

We clip the following account of a visit to a Nursery from the Lawrence, Mass., *Courier*. It will give the reader at the West some idea of the attention paid to the cultivation of Ornamental Shrubbery as an article for the market, at the East. The second Nursery referred to below, though but half a mile from the first, is in another town and another State, being in Dracut, Mass.

"On Wednesday last we visited the Nursery of B. F. CUTTER, Esq., on the Mammoth Road in Pelham, N. H., four miles from Lowell. It has seldom fallen to our lot to pass a day as pleasantly. It is the first nursery upon an extensive and systematic scale we had ever been in; and loving, next to nature's old adamantine hills and rocks, the trees and flowers that adorn them, it is no wonder that time passed pleasantly, when so completely surrounded by the trees, and flowers and fruit, as we were here. We undertook to estimate the number of trees by counting the rows and the number of trees in a row, but gave up before half the task was accomplished. Of the Elm, Larch, Beach, Sugar Maple, Horse Chestnut, Silver Leaf, Mountain Ash, Fir, Arbor Vitæ, Slippery Elm, Apple, Peach, and Cherry, of two and three years growth we counted 9700 trees. Besides these varieties the Apple, Pear, Peach, Currant, Grape, Gooseberry, &c., of younger growth, were very great, and in combination of numbers too extensive for estimate. Trees from the banks of the Saco, in Maine, from the notch of the White Mountains, and from the County of Coos, N. H., were here flourishing as vigorously as is their wont in the soil from which they were taken. Elms from the seed, of three years growth had attained in some instances a height of 15 or more feet. We paid special attention to the different varieties of grape.—They were numerous, and some just in bearing condition. Passing from this to some others, we came to the same conclusion that the fox did—that "grapes are sour," but a return to our favorite established the opinion that the fox, though reputed to be cunning, had never anticipated any but a sour variety of grapes.

We intended, when we left home, to pay a visit to the extensive nursery of Mr. ASA CLEMENT, half a mile below that of Mr. Cutter; but on arriving at his house he was just starting off with a load of fruit and vegetables to deposite in the Horticultural rooms at Lowell. We noticed that a couple of squashes occupied the entire front of his wagon. Mr. Clement has been longer in the nursery business than Mr. Cutter, and his fruits are more extensive in quantity and variety, though perhaps his nursery contains no variety of tree or shrub not embraced in that of Mr. Cutter.

A STRANGE FLOWER.—One day last week some men who were working upon our streets broke a stone in two in which was found a beautiful purple flower, with some green leaves, as fresh in appearance and as soft to the touch as though it had been grown in a green-house. How it came there is a mystery to us. The stone had been in our street for twelve years. But the flower was evidently in the stone when it was quarried. Perhaps it had been there from "time whereof the memory of man runneth not to the contrary,"—ay, for aught we know, it is an antediluvian flower. Mr. S. S. Younge says "the flower resembles the Hibiscus species; but the leaf is more nearly the rose, but is not exactly like any flower now a native of this country, nor indeed like any exotic cultivated here." He adds: "It most probably grew in the hole of the rock where it now is: but the rock must have been earth when it grew."—*Eaton (Ohio) Register.*

CHICAGO, Sept. 28.

DESTRUCTIVE FIRE.—This morning about three o'clock a fire broke out in one of the lumber yards near Madison Street Bridge, and although the alarm was quickly given and the Fire Department on the ground with their usual promptness, yet we regret to say that the flames were not subdued until they had caused a lamentable destruction of property. The enterprising firm of Foss & Brothers suffer the heaviest loss. Their steam planing factory, with all the machinery, tools, buildings and lumber was utterly destroyed, and as from the nature and risk of the property, an insurance could not be effected, in a few moments not less than $15,000, the slow accumulation of their economy and toil, were turned to ashes.—At least 2,000,000 feet of lumber were burned. The individual losses so far as we have been able to ascertain, were as follows: Throop, Wait & Co., $5,000; T. D. Smith, $5,000; Roberts & Son, $6,000. Four dwelling houses, belonging to Throop, Wait & Co., and occupied by Throop and Wait, Wm. Burgess and others whose names we have not learned, were much injured. On the dwellings there were $1,800 insurance.

The fire originated in a heap of shavings, and from its isolated position was unquestionably the work of an incendiary.—*Journal.*

CARPET PRESERVERS.—One of our Cincinnati citizens visiting London lately, was passing thro' Holborn, and observing the sign "American Carpet *Preservers*," stepped in to see what the Yankees would produce next. What do you think he was shown, reader? A regular built Corn Broom, which, familiar as we are with the article, was shown to John Bull as a novelty, and at the low price of four shillings—one dollar. Such an article, my informant adds, as could not be sold here along side of a Shaker corn broom!—*Cist's Adv.*

Editorial Department.

J. CLEMENT, EDITOR.

A Week in Canada, with a Supplement of Three Days.

PART SECOND.

Which contains what is not found in Part First, and some things which may be omitted.

September Twentieth. — From Port Hope to Newcastle, a village in the western part of the township of Clark, the distance is seventeen miles—far enough for a day's journey in an open carriage with rain overhead and mud beneath: so here we halt to-night.

Newcastle is only one mile and a half from an excellent harbor, called Bond Head, and having a good wheat country lying on the north, it is becoming an important market for this article of produce. The inhabitants appear to be industrious, and business always seems lively. The temperance cause has stronger friends here, and perhaps more of them, than are usually found in a village of its size, in Canada. We wish them success in their good work.

Twenty-first.—Spending a few hours at Darlington, five miles west of Newcastle, this afternoon, we saw played for the first time, the game of Cricket. It is an imported amusement, of British origin, we believe, and is very popular all over the Province. Cricket Clubs are organized in all the cities and most of the large villages, and the spirit of competition among them is very strong. The Toronto players *have* been considered the best in these parts, they having, till lately, beaten almost every Club with which they have contended for the mastery. Last year they went to New-York City and beat the Yankees. But luck has turned against them of late. The Club in this village visited their play-grounds a few weeks since, and beat them in one innings: and to-day the Darlingtonians are again successful. They will now stand in the front rank of Cricket players.

Cricket is an innocent and very pleasant game of ball, and affords healthy exercise for college students, clerks, etc.; but it may be carried too far and become unprofitable. It is a very foolish waste of time—not to mention other expenditures—to go a hundred miles, or two, or three, which is sometimes done, simply to play this game, however delightful and scientific it it may appear; and no person with true solidity of character would feel satisfied with himself in doing it. Let it be distinctly understood that we are saying nothing against Cricket as an amusement, for there is no game of ball more beautiful; but it is the *abuse* of it which we would discountenance.

Oshawa, where we are spending the night, is still growing, and what we have heretofore said in regard to its smartness might be repeated. The people are intelligent, energetic and enterprising, and the village being favorably located for trade with the back country and there being a good harbor near by, bright prospects are before it.

Twenty-Second.—Left Oshawa at four o'clock this afternoon, and having "made" seven full miles and reached a public house in good repute, we halt for the night. Edibles are well cooked here at Post's old and famous stage house, and we are sure of having a good cup of coffee—or rather three of them—to-morrow morning.

We are away from any village to-night, where all is quiet: and with the full moon just above the crown of yonder forest, kindly scattering her pure beams on the peaceful earth, how thought-provoking is rendered the hour! A fit season is this to give a loose rein to the steeds of Imagination and trip it off

"Far as the solar walk or milky way,"

and over the latter in particular, (which is the "Main-Street" of the astronomical city, beautifully paved with stars) enjoy a pleasant run-away match with Idle Fancy. Withdrawn from the earth, and whirling through the blue abyss profound of ether, like the planets themselves, whom we visit to-night, what an Elysian dizziness pervades the frontal regions of one's cranium!—Though conscious that he is a sentient and rational being, endowed with a sufficiency of corporeality, he feels, nevertheless, like an abstraction, "preserved" in honey; and—whew! that coachman's musical horn has burst our globe of reveries, like a puff-ball, and all has vanished in smoke.

Twenty Third.—Oakville. That was a pleasant stage ride this forenoon from Post's to Toronto, a distance of twenty-six miles. A sunny day in September has no rival in the calendar.

"Month of my heart!—September bland!
When radiant summer breathed her last,
She placed a sceptre in thy hand,
Her robe around thee cast."

We have felt to-day, more than ever, sweet month of Sabbath sacredness! that

"Thy transient reign is passing bright."

Would that thou couldst long tarry with us, but alas! the dowry which summer bequeathed thee,

"That *sceptre*, soon will broken be,
That bright *robe* cease to cover thee,
For God the wide Earth made
A scroll inscribed with this decree—
'Thy loveliest things must fade!'"

Reaching the once-capital of Canada West to-day only a short time before the steamer Despatch was to start for Hamilton, via. Oakville, we had no time to visit the College grounds and the other places of attraction in this beautiful city.

A large and pleasant number of passengers had the Despatch this afternoon, and that poor highlander played well on his bagpipe and was handsomely remunerated. We were not surprised to see the tears standing in the eyes of that noble callan who had just left "old Scotia," while he listened to the stirring airs which have so often swelled his young bosom on the "banks and braes" of his native land. But that was a laughable discussion of clairvoyance, held on the same

occasion; and we are not surprized that the unlettered son of Erin was prepared to believe in its wonders, after he had heard of a young lady, who, in this state, declared, with truth, as was afterwards ascertained, that a large stone which had been placed on a table in an adjoining room, and which she had never seen, contained, in the middle of it, a small *white round* stone with a *red* spot on the *end* of it.

Twenty-Fourth.—At Hamilton. Here at Weeks' spacious and well-ordered hotel, with its good reading room, one feels comfortable and contented. As usual, Hamilton is full of life, and is thriving nobly. Just now the good people are making great preparations for the Annual Show of the Provincial Association, which comes off here on the 6th and 7th of October. This is well: such exhibitions cannot be too highly valued. It is expected that the Governor General of the Province will be present, and should such be the case, it will add interest to the occasion as he will be a stranger guest. It is very sickly here; it was so at Toronto; it is so all along the northern and western shores of Lake Ontario.

Twenty-Fifth.—Lake Ontario—noon. A strong wind is in our teeth to-day, and the little *Telegraph* is not making her usual headway. But in such good company as Capt. Masson one never thinks of time; and had not our eye accidentally caught the stars and stripes that are flapping yonder from Fort Niagara, we should hardly be conscious that our week in Canada with its Supplement was ended.

The Teachers Institute, held at Lancaster last week and the week before, was, we learn, a very interesting session. Addresses were delivered by several gentlemen, mostly of this city, and things passed off very pleasantly and no doubt to the benefit of the hundred or more teachers who were in attendance.

Union Magazine.—This new three dollar monthly grows better and better. The issue for this month is exceedingly racy. The Editor and all her lady correspondents seem to have done their best. Simms, Dewey, and W. A. Jones, also contribute good articles. Success to the Union!

Temperance Music for the People.—Number one of a collection of solos, duetts, gloes, quartettes, catches, &c., from the press of the "New-York Organ" is well adapted to temperance meetings, parties of pleasure, and celebrations. We hope it will find a ready sale. Price 12½ cents.

Eureka, is the name of a new monthly octavo publication, designed as "the national journal of inventions, patents and science." It is a work of high merit, and is of great interest to multitudes. Published by Kingsley and Pirsson, No. 5 Wall-street, at one dollar a year.

Correspondents must exercise patience. A large number of communications are on hand and have been received for insertion during the Editor's absence, he being on his way to the West. Articles received the present week, and any coming to hand for two weeks to come, will be laid aside till his return.

The Promotion of Religion by the Developments of Science, a lecture, by Rev. Jason Lothrop, of Southport, W. T., lies before us. It is introductory to a series; is well written and very timely.

The Three Dialogues of Cicero, on the Orator, translated into English by W. Guthrill, revised and corrected, with notes, New-York: Harper and Brothers. 1847.

This interesting little volume forms No. 37 of "The Classical Library," an excellent series of publications, which do much credit to the famous house whence they are issued. These writings of the prince of Latin orators "on the character of an oration," commend themselves at once to the attention of the reader. Let them be read with care, particularly by young men, who are aspiring to be public speakers.

Chambers' Edinburgh Journal may be had regularly, by application to Hawks.

☞ The probability is that the harbor improvements will soon be commenced. The contracts to be given under the bill in consideration require completion within a year. The amount of the surplus revenue of the canal, which will be expended at this point is $150,000. This, of itself, is no trifling sum, and passing from to hand as it will do, must tend more than any thing that has occurred of late years, not only to give employment to laborers and furnish a market for agricultural produce, but also to increase the business of our storekeepers and the rest of our citizens.

☞ Another accident, caused by machinery in the same manner as several others lately mentioned by us, happened last Saturday at the White Lead Works on Niagara street. The hand of a young man who was adjusting some part of the machinery, was caught between the band and the drum. The drum was making about 190 revolutions per minute, and his arm was broken and nearly severed from his body before he could be released. His recovery is doubtful.

☞ The St. Louis *Republican* of the 25th ult. publishes a letter from the first detachment of the First Regiment of Illinois Volunteers, called out for service in New Mexico, from which we learn that the detachment left Fort Leavenworth on the 7th of July, and on the 20th of August had reached Semirone Springs. The march, for the most part, had been a very pleasant one, and, owing to the excellent precautions taken, no accident had occurred to the detachment. Some Indians were occasionally discovered hovering about, but they did not venture to make an attack.

☞ Mr. Hawkins of Alexander, a notice of whose death was inserted by some of our city papers some ten days ago and very extensively copied elsewhere, continues to recover.

Chautauque County Fair.

Correspondence of the Commercial Advertiser.

FREDONIA, Oct. 1, 1847.

Our annual Agricultural Show and Fair came off at Westfield yesterday and the day before, and knowing your desire to learn whether the farmers of Chautauque county are making advancement in their profession, inasmuch as Buffalo is the natural market for a great deal of their products, I drop you a line on the subject. And first, the weather was very unpropitious, raining most of the afternoon of the first day, and showery the the next, which undoubtedly had the effect of lessening the quantity and diversity of articles brought forward for exhibition, but had no apparent influence in lessening the presence of the farmers themselves and their wives and daughters, for rarely have we seen a better turn out.

The fullest exhibition was in the cattle line, there being nearly or quite one hundred head of horned cattle on the ground, representing all dimensions from WRIGHT's celebrated big ox, which measures six feet five inches at the shoulder in height, to the calf of six months; among which were many superb bulls and steers and a few very good cows. The exhibition of sheep and swine was very good, the latter in particular; among which grunters the mother and children owned by Hon. G. M. PATTERSON were real beauties. One lot of sheep was present the wool of which last year sold in Lowell at ninety five cents a pound. The show of horses was no more than ordinary.—The display of improved agricultural implements was quite meager, and the product of the dairies was nothing like what it might have been—some eight or ten samples of butter and five of cheese telling the whole story. A sample of maple sugar showed what could be done in that line, comparing well with the best St. Croix. Three barrels of flour manufactured by Gen. G. D. CAMP, and put up in elegant style, was thought to be good enough for Queen Victoria. There was a beautiful display of shovels, spades, forks and edge tools from WATERS celebrated factory at Westfield. L. FAY was there of course with a grand display of fruit with which nobody thought of competing. There was about the usual exhibit of domestic manufactures, needle work and fancy articles. An article labeled "the lady's friend," which is brought into requisition on that day—to the fair sex the most momentous, and to the lords of the creation the most dreaded of the six, namely, "Washing-day" attracted much attention, and appeared to be a decided improvement upon the multiplicity of those machines, not only from its general operation, but from its having a very simple appendage for thoroughly wringing the clothes.

On the whole I do not think, from the representations of the papers, that our exhibition was much ahead of the recent State Fair at Saratoga; and until many of our best and in other respects most intelligent farmers divest themselves of their groundless and foolish prejudices in regard to these societies, and instead of staying at home or only going to *see* what others more patriotic bring forward, put shoulder to the wheel and enter into honorable competition themselves, a consummation it is hoped time will ere long effect, no very great advancement in the agricultural profession can be expected. The next year's Fair is to be held at Fredonia. Yours &c.

Later from Santa Fe.

Arrival of Gen. Price, Dr. De Camp, U. S. A., and others, at Fort Leavenworth—Progress of the Troops marching to Santa Fe.

We learn from Fort Leavenworth, that Gen. Price, Dr. De Camp, U. S. A., and others, in advance of the volunteers whose term of service in New Mexico had expired, arrived at that post on the 17th from Santa Fe. They left Santa Fe on the 11th of August, proceeding by easy marches to Moro. When they took their departure, all was quiet in New Mexico, which was then held by three companies U. S. Dragoons, and three companies of volunteers, who had re-enlisted, under Major Walker. On the 15th of August they met Lieut. Allen, with Capt. McNair's company of mounted men, and they encamped together on the Moro. Next day, Col. Easton, with his battalion of infantry, reached the same point: he had with him a large train of government wagons and a large drove of beef cattle.

On the 17th the companies, commanded by Capts. Shepard and Jones, passed the camp at the Moro, where Dr. De Camp and others were waiting for the arrival of Col. Price and Mr. Rich, sutler to Price's regiment. They did not come up on this day. Mr. Rich had his team, wagon, and contents swept away, and every thing destroyed, by a sudden and terrible mountain storm, while on his way from Santa Fe. He was so fortunate, however, as to recover his trunk, which contained a large amount of gold dust, four miles down the mountain canon. On the 18th, the company moved the camp three miles, still waiting for the volunteers to arrive, and at night they were robbed of three animals. Next day, the volunteers having arrived, they all took up their march for the United States.

Col. Price, we may infer, was sick of the duties of military life, or else he, the highest officer in command in New Mexico, would not have ventured to leave the territory in so exposed a position—a battalion of men only left to protect the people from any outbreak which might be attempted. What he will do now—whether he will immediately return to New Mexico, where the presence of an officer of high rank must be much wanted, or remain loitering about Missouri—is yet to be made known.—*St. Louis Rep., Sept.* 22.

HEARTRENDING ACCIDENT.—Two children of Elbridge Tyrrell, of Tyringham, Mass., were instantly killed on Monday afternoon, by a sand-bank caving in upon them, while they were at play near it. The oldest, a girl, was about eleven years of age, the youngest, a boy, about eight.

FROM BRAZOS.—Col. Randall, of the army, came passenger in the Telegraph, from New Orleans, with $500,000 in specie, for the Paymaster's department. A considerable amount of this money will probably be disbursed at this port.—Col. Randall has proceeded on to Monterey, to replenish the purses of the paymasters along the line. Capt. Chase is expected by the next arrithe with between 100,000 and 200,000 dollars for val, Quartermaster's department.

Arrival of the Hibernia.

ADVANCE IN BREADSTUFFS!

The Steamer *Hibernia* arrived at Boston yesterday, 2 P. M.

After the departure of the last steamer breadstuffs receded some, but on the 13th wheat advanced 5s. per quarter, and flour, fine, 3a4s., with immense demand, and better at London than at Liverpool. Best wheat 62s. Flour at Liverppol, 18th, per quarter, 28 6a30s.; London 29s.

Corn—In demand, with better prices.

Considerable purchases of breadstuffs for Belgium and Holland. A moderate supply of U. S. strengthened the market.

Many large failures have occurred all over Europe. The liabilities of three are reported over £1,000,000 each. The Ohio Life and Trust Co. are probably creditors of Messrs. Goner of $50,000.

Great consternation exists in the money circles.

No change has taken place in rates of interest.

The bullion in the Bank of England decreased £300,000 in four weeks.

The failure of Messrs. Denney will probably be felt in the United States.

Three bank directors have failed in four weeks.

The Trust Company accepted drafts on Goners' taken up by Burnett, Howes & Co.

The Sardinian Ambassador will assist the Pope against Austria.

New York, October 1—3 P. M.

News from Vera Cruz to the 15th Sept., by the way of Pensacola, has been received.

Letters from the city of Mexico dated Sept. 9th state that the propositions made by Mr. Trist, or a portion of them, had been rejected, and that hostilities recommenced on the 8th. In the evening of that day a battle was fought between a few hundred men of Gen. Scott's army and four picked regiments of Mexicans, commanded by Gen. Leon. Enemy's forces badly used up.

Letters say that Trist's propositions were: that citizens of the United States would not claim from Mexico indemnity for the damages occasioned by the war; that the United States have the privilege of establishing two factories in Upper California, and the Mexican Government could, after that time, renew, if it choosed, this article of treaty. This was not accepted. Mr. Trist remarked to the Mexican Commissioners, that he thought it better to cede the whole of Upper California to the United States, for which that government would pay 15 or 20 millions of dollars, and this probably would have been agreed upon, had the following articles met with the assent of the Mexicans.—That the Texan boundary line should run along the Rio Grande from its mouth. This was rejected. The Mexicans would not yield once inch the other side of the Nueces.

Mr. Trist asked 48 days to consider, as he said he was not authorized to accept such proposals.—The Mexicans replied they would give Mr. T. 5 days, but no more. On the 5th day of the conference, Sept. 7th, a letter was written by Santa Anna to Gen. Scott, informing him of the breaking of the armistice, on some trifling pretext. Scott replied, making similar charges against Santa Anna. On the 8th, a few hundred Americans, sent to attack Chapultepec, encountered a large force of the enemy's best troops. A terrible fight ensued, in which the Mexicans were defeated. General Leon, who commanded the Mexicans, was wounded, and Gen. Balderis, of the National Guards, killed.—Americans retired to Tacubaya, leaving five wagons behind. Loss of the Americans said to be comparatively small.

A proclamation was issued by Gen Herrera, of the city of Mexico, recommending the citizens—men, women, and children—to collect stones, carry them to the roofs of the houses, and throw them at the Americans, if they entered the city.

Our loss, since leaving Puebla, is estimated at 3,000 men.

Paredes is on the road between Vera Cruz and Mexico with a large band of guerrillas.

Troops have been arriving in great numbers at Vera Cruz from Brazos. There will be from 2 to 3,000 men ready to march into the interior soon.

Verbal report says there had been a revolt at Puebla and the Americans at that place and Mexico had lost 2,000 men.

7 o'clock, P. M.

There is nothing farther in relation to the Mexican news than was sent this afternoon. The news is not generally believed—it is thought the parts do not hang together well.

New York, Oct. 2, 7 P. M.

The Washington Union has letters fully confirming the late news from Gen. Scott's army.—The confirmation is from Mexican sources.

The editor of the Union places full confidence in the statement.

The loss of the American forces in the contest since the breaking off of the armistice is said by the Mexicans to be 600.

Gen. Scott and Santa Anna had a very sharp correspondence on occasion of the first rupture.

The Mexican Generals then were summoned to a council of war, and there they determined to fight with "Conquer or die" for their motto.

There has since been a good deal of fighting, but Gen. Scott had not taken the capital, and he, with his army, are in a very perilous position.

The Mexican loss had been heavy.

Herera has come out violenty against Santa Anna. The principal charge that he makes against him is that he is a coward.

New York, Oct. 4—11 A. M.

The steamer *Day* has arrived at New Orleans bringing accounts which confirm the Mexican news.

The news appears to come all from Mexican sources. The Vera Cruz *Iris* has letters from Mexico as late as the 9th stating that the Mexican Commissioners had rejected Trist's proposals.

Santa Anna called a council appointing the 9th for the recommencement of hostilities.

Herrera issued a proclamation to the Priests to invite people to arms.

Gen. Scott attacked Mill Delrey and was repulsed according to *Diario del Gobierno* with the loss of 400 killed and 600 wounded. It is represented to be the most desperate battle of the war.

The Mexicans represent their loss 100 killed 150 wounded. Gen. Leon killed and several Colonels. Santa Anna commanded in person.

A Mexican account says a bomb shell fell among some American ammunition wagons, exploding four of them, and blowing up 300 of our men, including Gen. Worth. Another account says in the battle of the 8th, the Americans lost 37 officers—Pillow reported among them.

Action recommenced on the 12th and continued all day.

A letter from Oixaba, dated 19th, to Mr. DIMOND, says an express had arrived bringing intelligence that SCOTT was in Mexico. Gen. BRAVO was killed, and SANTA ANNA wounded, and returned to Guadaloupe.

Another account says the city was bombarded on the 14th and 15th, and entered on the 16th.

Hostilities continued from the 8th until the possession of the city.

Our loss is reported at 1700. Mexican letters state that Riley and 70 men, deserters, had been hung by orders of the Court Martial.

Another letter from Mexico to the *Iris* on the 10th says Gen. P. F. SMITH of Louisiana, expired. Government signed $300,000 sent by a commercial house to SCOTT's army.

[We can't make out the meaning of this last sentence, but give it as received.]

NEW YORK, Oct. 4—3½ P. M.

The *National Intelligencer* has a letter from Puebla dated Sept. 10 h, which says all Gen. SCOTT's expresses from the Capital have been cut off, except one. This one left Mexico on the 8th but was robbed of his despatches.

Major. LALLY, with one thousand men is at Jalapa, surrounded by Mexicans and cannot get out.

The whole country swarms with guerrillas. A messenger will leave Washington forthwith with despatches for SCOTT.

Capt. Phil. Kearney, who lost an arm at Churubusco, is a nephew of Gen. Kearney, and a native of New York. His private income is $30,000 per annum, and like Gen. Taylor he follows the wars for the love of the thing.—*N. Y. Globe.*

There are few officers in the army more highly esteemed than the gallant Captain whom the fate of war has thus curtailed. He was some years since one of a Commission to visit Europe, to report upon the Cavalry tactics of the several governments of the old world In the prosecution of this duty, a portion of the commission visited Algiers, where they were hospitably entertained by the French officers, among whom was one of the sons of Louis Philippe. Soon after the return of the commission to France, a number of the French officers who had thus entertained them, visited Paris, and as an expression of their appreciation of generous treatment which Capt. K. and his associates had met with, he resolved to proffer them a banquet. The invitation was promptly accepted. The Captain felt himself the representative of the American army, and determined that the feast should be worthy the American name He accordingly ordered a full set of silver plate prepared for the occasion, upon which his initials, as an officer of the army, were engraved, and when his guests arrived, they were astonished at the magic-like magnificence of the scene which presented itself. It was the most costly banquet ever spread by an American (with a single exception) in Paris; and well it might be, for it cost the Captain over $50,000. He is, in his whole deportment, quite unostentatious; but he "let out a link" upon this occasion, not to gain eclat for himself, but in honor of the American name. The motive was appreciated by his fellow officers, and secured their grateful thanks.—*Alb. Eve. Jour.*

A HARD JOKE.—The steamer *Chautauque* on one of her return trips from Detroit recently, as is usual, ascended the ship canal at Monroe for passengers and freight. While there, a steamboat, schooner and one or two scows entered the mouth of the canal, and so arranged their position as completely to prevent all ingress or egress.—Meanwhile the *Chautauque* having discharged and received cargo, was returning to the Lake.—On arriving at the mouth of the canal, and finding it block'd, Capt. Dustin thus addressed the capt. of the schooner:

"Will you allow some of my men to cast off your lines, and permit us to pass, we will make all *tort* again?"

"No *sir*," replied the Captain emphatically "we don't change our position for any such craft."

Capt. Dustin, thinking that perhaps the man was not in earnest sent some of his hands ashore with the friendly purpose of removing the schooner, intending as soon as his boat was through to replace her, without trouble to her crew. The captain of the schooner, discovering their object, sent his hands ashore armed with clubs and iron bars, and under instructions to resist any efforts to cast off the lines, by which the schooner was fastened, at the same time giving Capt. Dustin to understand that he did not intend to move an inch.

A few moments spent in ineffectual expostulation, convinced the Capt. that he must fight his way through, or lose his trip.

"Now," said he "it's not necessary to spend any further time in words, if you don't move your vessel out of my way, I'll run into her and knock her out."

"Ha! ha! my dear fellow," responded the captain of the schooner "you must be joking now. We 'aint afraid of any such threat. We've got too much timber here for any such old dug-out as yours."

"Hold on to your steam," said Dustin to his engineer "and back her, we'll show them what this old dug-out can do." The little boat was backed to a sufficient distance to give her full headway, and aimed directly for the schooner's bow. "Now let her go boys with a will, and be sure and hit her square."

The boat seemed to leap from the water with the first revolution of the paddles, and rushing on with the speed of thought, and under the full impulse of a powerful engine, struck the schooner, by the side of her stem and cut her to within a foot of the water.

"There," said Dustin "that's one of my *jokes*, and now if you dont get out of my way, I'll *crack* another just like it, and let daylight in upon your cargo."

The schooner *mizzled*, and the Chautauque came on.—*Toledo Blade.*

PITTSBURGH, Oct. 5, 1847.

The steamer *Sunbeam* was sunk by coming in contact with the *Motive*, near Portsmouth, on Saturday last. Eight German emigrants were drowned. Boat and cargo total loss.

Nothing of an official character has yet reached the War Department from Gen. SCOTT.

The Louisiana *Patriot* says that Gen. PAREDES refuses to take the command of any troops, alleging that he came home wholly to serve his country, and does not wish that SANTA ANNA should have any reason to believe him inclined to foment a revolution.

At the Warm Sulphur Springs, Va., a few days since, some daring robbers entered the hotel and carried off the iron safe. When three quarters of a mile from the house, they blew it open by means of gunpowder and rifled it of about $5000.

SPRINGVILLE EXPRESS.—Mr. G. J. R. LAWRENCE has become associated with Mr. E. HOUGH in the editorial management of this paper, and promises to make it in point of interest equal to any country paper in Western New York. The number for this week, by its variety and spirit, gives good assurance for the future.

STATE OF NEW YORK, } ALBANY, August 3
SECRETARY'S OFFICE, } 1847.

To the Sheriff of the County of Erie:

SIR: Notice is hereby given, that at the next general election to be held on the Tuesday succeeding the first Monday of November next, the following officers are to be elected, to wit:

STATE.

A Secretary of State, Comptroller, State Treasurer, Attorney-General, State Engineer and Surveyor, Three Canal Commissioners, and Three Inspectors of State Prisons.

DISTRICT.

One Senator for the Thirty-First Senate District, consisting of the county of Erie.

COUNTY.

Also, the following officers for the said county, to wit: Four Members of Assembly, one to be elected in each Assembly District.

Yours, respectfully,
N. S. BENTON, Secretary of State.

ERIE COUNTY SHERIF'S OFFICE, }
Buffalo, August 6, 1847. }

A general election is to be held in the County of Erie, on the second day of November next, at which which will be chosen the officers mentioned in the notice from the Secretary of State, of which a copy is annexed.

au6oawtno2 TIMOTHY A. HOPKINS, Sherif.

STATE OF NEW YORK, }
SECRETAY'S OFFICE. } ALBANY, Sept. 28, 1847.

BUFFALO MUSICAL INSTITUTE FOR YOUNG LADIES.

At the residence of Prof. W. R. Coppock—Composer and Teacher of the Piano Forte, Organ, Singing and Composition.

An institute devoted exclusively to Musical Education is not yet common in this country; but in Europe the test of experience fully shows its great advantages over the too general superficial manner in which this important part of polite education is acquired. The advantages this institution offers to those desirous of completing their studies as Organists—or practical players of the Piano Forte, together with a thorough system of imparting the same to others is fully established by the many precedents of the past 15 years. The pupils are constantly guarded in their practice, against all bad habits, and from the various stages of progress they may be in, are continually stimulated to effort and industry, by association with each other. The family too, are all players, and the theory is amusingly discussed, impressing its rules in a more pleasing manner, and more lasting upon the understanding, than by the mere dry study of an elaborate book. Music is composed and arranged from time to time, showing the various styles and harmonies analytically, and adapted for performance on several Pianos at the same time. This teaches a thorough knowledge of counting, and dividing passages into their given time. Vocal music is particularly attended to, and when the pupil has a moderate share of talent, we hesitate not to say, a correct and pleasing singer can be made. The Piano Fortes used are all new, and of the finest quality, and every endeavement will be given to render the true spirit with us profitable. The building is commodious, and has a fine garden attached, with Green houses, Bathing rooms, &c., and is pleasantly situatuated in Seventh street, between Niagara Street, and the Falls rail road, and about midway to Prospect hill

Terms made known upon application at the Institute, or by mail, post paid, directed Prof. Coppock, Buffalo.

Prof Coppock, keeps constantly a choice selection of Piano Fortes for sale.

Buffalo, August 3, 1847.

PRINTERS' FURNISHING WAREHOUSE.

WILLIAM PRESCOTT, Manufacturer of Printing Inks, No. 6, United States Hotel Block, Pearl St., Buffalo. Printing Presses, Metal and Wood Type, Cards, and every other description of Printers' materials constantly on hand at New York prices, adding transportation. Also, sole Agent for the sale of C. J. Gayler's Patent Double, and Improved Single Salamander Book Safes. n18 3m.

CHEAP CASH BOOK STORE.

The Alchemist.

FROM THE FRENCH OF BERANGER.

Thou wilt, thou say'st, Alchemist poor and old,
From baser metals draw forth golden ore;
And what, age-worn, I long for more than gold,
By secret agents wilt my youth restore.
My purse I open to thy magic skill,
My trusting heart believes thine art divine;
Yet each pursues his favorite objects still;
Take thou the gold, let youth's blest hours be mine.

Blow then in silence on yon clear bright flame,
Or from that mystic page its secrets wring;
Thine art is sure; Pactolus' golden stream
Blends in thy crucible with youth's warm spring.
Thine eye fix'd on this flame, what dream'st thou now?
Do the court's smiles already on thee shine?
For me I ask but roses round my brow;
Take thou the gold, let youth's blest hours be mine.

Drunken with hope, what phrenzy leads thee on!
"Monarchs," thou cry'st, "at my soil'd feet bow down;
Gold more than Cortez and Pizarro won
For Spain's proud Lords, my subtle arts shall crown."
Thou who from alms thy scanty meals hast made,
Now pride inflames each lofty word of thine,
Let crowns and sceptres for thy dross be weighed;
Take thou the gold; let youth's blest hours be mine.

Yes, the bright days, with all their wants, restore,
Give to my soul a hardier, healthful frame;
Take from my spirit life's too dear-bought lore,
Let a more generous blood my breast inflame.
When from thy marble halls in pomp convey'd,
On velvet cushions proud thou shalt recline,
Calm see me slumbering 'neath some tree's broad shade;
Take thou the gold, let youth's blest hours be mine.

Full well I know what joys on wealth attend,
Yet still I *love*, possess, and oft my fears
Wake lest I see my all too youthful friend
Count on her fingers mine and her own years.
'Tis the glad sun that warms her cheek so brown;
'Tis the bright summer round our loves should shine;
My lov'd one heeds not fortune's smile or frown;
Take thou the gold let youth's blest yours be mine.

Now from the vase bring forth its gold!—what, none?
Alas, thou'rt poorer grown, and older I.
No, no, thou say'st, to-morrow's the new moon;
To-morrow gives us immortality.
Thou liest, old man; yet still of lies so dear
So great my need, that still I trust to thine;
On my bald brow these wrinkles see appear;
Take thou the gold, le youth's blest hours be mine.

HAMILTON, N. Y. A. C. KENDRICK,

THE DAUGHTER.—There is nothing more desirable in a daughter than intelligence joined to a gentle spirit. The mind is fashioned and furnished in the main, at school. But the character is derived chiefly from home. How inestimable is the confidence of that mother in producing kind feelings in the bosoms of her children who never permits herself to speak to them with a loud voice, and in harsh, unkind tones.

From the Union Magazine for October.

The Unwilling Bride.

BY MRS. E. F. ELLET.

"Sister, let me take away this ring!"

The speaker was a young girl, that might have seen sixteen summers. Her companion appeared about three years older, and sat leaning her arm on the table near the window, in an attitude of dejection that ill accorded with her gay attire: Her dress was of white satin, and fell in graceful folds from her slender waist. Her beautiful arms were bare; and the pearls on her neck and in her hair, as well as the sprig of orange blossom that gleamed in its dark folds—the appropriate ornaments of a bride—showed that she "wore her bridal robe;" while the cheek that "rivalled its whiteness" as plainly betrayed that she was awaiting no joyous event. Her guitar and fan thrown carelessly aside, were in keeping with her air of sadness and abandonment, in which the younger sister appeared to sympathize.

"Let me take this!" again pleaded the soft low voice of the young girl.

"No, Juliet, I cannot part with *that!*" replied the other, in a voice full of melancholy tenderness.

"But, Margaret," persisted Juliet, "it is not right that you should wear the token—now!"

"I will not part with it."

"He is utterly unworthy of your remembrance,"

"I know that, Juliet; but I cannot help loving him; no—not him—but the image in my heart—such as I once thought him. The ring he gave me was a pledge of feelings I can never more cherish; and I will keep it. Oh, if he had not deceived me—deceived us all—I would have sooner died than given my hand to another."

Juliet kneeled down beside her sister, clasping one hand in hers, while the other arm encircled her waist. Her drooping face expressed the sympathy she felt.

"But it is all over now," pursued Margaret, with a sigh, and wiping away the tears that had gathered in her eyes. "I will try not to think so much of what is past. Indeed, I ought to be resigned; for Mr. Berneau is very kind, and my father has so earnestly wished the match! One person, at least, will be made happy."

"And more than one might be!" said a stern voice, as an elderly lady entered, having heard, apparently, the foregoing conversation. "Yes, we might all be happy. Is it possible you are still weak enough to be grieving after that———"

"Hush, mother!" implored Juliet, looking up anxiously.

"Margaret!" said the lady, regarding her daughter with asperity, "this sullen behaviour is more than unbecoming and foolish; it is wicked! Remember, you are to be married to-night."

"I do," responded the young girl, with a slight shudder.

"Mr. Berneau is your father's choice and mine. He is worthy of you. Meet him as a bride should—you have consented—it is too late to recede—your conduct will but lose you the affection and esteem of your husband, who must feel insulted by it."

The tone of extreme severity had its effect. The bride rose from her seat, and tried to smile as she received the little box containing her lover's bridal present. It was a superb necklace of diamonds. Juliet busied herself in arranging bouquets from the flowers that covered a table on one side of the apartment.

It is time to give the reader some clue to our little tale.

Margaret Leslie was the daughter of a planter in one of the districts of South Carolina. Beautiful and accomplished, as many young ladies are who pass nearly their whole lives in the country, she had numerous admirers; but her heart was given only to Edward Carlton. This young gentleman had just completed his law studies in New-York, and was on a tour through the Southern States, when he met Mr. Leslie and his family in Charleston. An invitation to spend some weeks at the country seat of the hospitable planter, was gladly accepted, and it was not long before his amiable manners, intelligence and entertaining qualities, won the favor of the master and mistress of the mansion, while the impression upon the heart of the fair Margaret was still deeper. How could it be otherwise, when she had never met one who in grace and refinement, as well as in varied acquirements, could compare with Mr. Carlton? He took an interest in all her studies, and enjoyed her amusements; drew with her, sang with her, and rode with her. That exhilirating exercise, in which southern country girls excel; how delightful it was, in the bright winter mornings, while Juliet with some chance beau in attendance, lingering a little behind—and they chatted gaily as they rode. Or the long lonely walks in the brown woods, or the sail on the river, or the quiet morning at home, or the evening enlivened by music and dancing, and social converse! It was not to be wondered at, that, the evening before the day on which Edward Carlton was to take his departure, he requested an interview with Mr. Leslie, and asked his daughter of him; nor that Margaret blushed and smiled when he joyfully announced that he had obtained her parents' consent.

Carlton resolved to return North immediately, and commence the practice of law, for which, from his position and family connections, he enjoyed unusual advantages. He hoped in a few months to be able to return and claim his bride. There was some sadness at the thought of parting with Margaret; but the visits of the family to the North every summer would bring them together; and Edward had promised that as often as possible, his young wife should spend her Christmas at 'Woodlawns.' Then the youthful pair were so happy in each other, and so well suited in tastes and dispositions! There seemed nothing to darken the prospect. The letters of Carlton were frequent, and filled with glowing accounts of success, even beyond his most sanguine anticipations.

Some time passed, and the family were beginning to talk of a visit from their cherished friend when his letters suddenly ceased. The Leslies had just returned from their annual excursion to Charleston during the season of the races, where Margaret had mingled much in fashionable society, and had received the attention due to a belle and a reputed heiress. Juliet, too, had made her first entrance into gay life. They had returned home weary—as they said—of dissipation. Margaret was enchanted to have her music and drawing again, and her long rides on horseback. But these soon lost their charm. Anxiety and disappointed hope, the "hope deferred" which "maketh the heart sick" banished the rose from her cheek and the smile from her lip, while two weary months passed on, bringing no tidings of Carlton.

Tidings at last came. A package was sent them by a friend, containing several newspapers, with the intelligence that a number of forgeries had been detected, committed by one Edward Carlton, who, having eluded the pursuit of justice, had escaped in a vessel bound for France. The description of his person, the locality and circumstances, left little doubt on their minds; and even this was removed by a letter from a person who was well acquainted with Edward Carlton, and knew of his engagement. Some of Margaret's letters, which he said were found in Carlton's lodgings after his hasty flight from justice, were enclosed to Mr. Leslie.

The blow sudden as it was, was a dreadful one to poor Margaret; but youth and a strong heart will resist much. Where the sting of disgrace, too, is felt, the struggles of the proud spirit terrible as they are, have a power to triumph over despair itself. Mrs. Leslie was a woman of haughty temper, and a quick sense of honor; she prided herself, moreover, on what she called the aristocratic blood of her family; and under her schooling the gentle Margaret soon learned to hide the anguish that was gnawing at her heart.—Carlton's name was mentioned no more, and a perpetual round of company and social amusements, devised by the sagacious mother, ere long restored the fire to her daughter's eyes, and the bloom to her cheek. It was not till after she had yielded to the earnest wishes of her parents, and plighted her troth to another, that she felt how irretrievable was the wreck of her happiness.

Mr. Berneau was a gentleman of French family, but had lived, as he said, in America since his childhood. He was supposed rich, and brought letters of recommendation to Mr. Leslie, whom he first met in the city.

* * * * * * *

The preparations for the wedding were completed; the guests were assembled in the spacious drawing-room, which was lighted up and decorated with garlands and wreaths of roses; the splendid supper table was laid, and shone with rich plate; and at the doors and windows might be seen rows of black faces glistening with interest and curiosity; while the piazza was crowded with negroes who had come up from the plantation to see their young mistress married. The bride had put on the snowy veil that floated like a cloud over her figure, and was seated in her room awaiting the arrival of the bridegroom. But he came not, though the great clock in the hall already pointed to the hour fixed. Another hour—and yet another—rolled away. The guests were gathered into groups, talking to each other in ominous whispers. The bride stood at the window of her apartment, through which the moonlight poured, gazing listlessly upon the shrubbery and flowers that looked so beautiful in the silvery light; while Juliet, pale with anxious apprehensions, was at her side,

The roll of a carriage was heard coming up the avenue. It stopped before the door. There was a bustle, and strange voices were audible in the hall. Juliet, trembling violently, clung to her sister, while the bride's maid ran to the top of the stairway to see what had happened. A few moments after, Mrs. Leslie entered, evidently highly excited, and ordered the doors to be closed. It was in vain; before the order could be obeyed they were forced open, and a stranger rushed in. A wild shriek burst from the lips of Margaret; she recognized in the pale and emaciated being the features of Edward Carlton. Starting forward at the first impulse to meet him, she recoiled suddenly, and fell fainting into the arms of her mother.

A brief explanation will be all the reader requires. The young man who had committed forgery and fled, though bearing the same name, and even some resemblance in personal appearance, was a very different person from the Edward Carlton who was betrothed to Miss Leslie. He had been long prostrated with one of those terrible typhoid fevers, which leave the body and mind for months so debilitated that the subject is incapable of action. Unable himself to write to Margaret, he had, as soon as consciousness was restored, entreated a friend to perform the duty for him. That friend was no other than Mr. Berneau! Edward had met him in different circles, where he was received as a gentleman; was pleased with his bearing, and hesitated not, when Mr. Berneau announced his intention of visiting the South, to invite him to accompany him, as soon as he should be able to travel.

Not a few will remember the sensation produced in certain polished circles, when it was discovered that the accomplished Mr. Berneau, the reputed possessor of wealth, had been in the habit of plundering those who admitted him to their houses on intimate terms, of large sums of money; Carlton had suffered with the rest; and the letters of Miss Leslie, of which such base use was afterwards made, were also purloined from the desk.

The moment he was able to bear the fatigue, Carlton set out on his journey southward. But it was not till his arrival in Charleston that he discovered the fearful extent of Berneau's villany: that he learned how his own name had been branded' and his affianced bride deceived into renouncing him, and won to pledge herself to the wretch whose deep-laid arts had imposed on Mr. Leslie as on others.

Edward's pursuit of the felon was in vain: he fled as soon as he became aware that his real character was exposed, and was never heard of afterwards. But it was ample consolation to the injured lover, to find that Margaret was still true to him in heart. Her parents when convinced of the truth, were anxious to repair their involuntary injustice; and it was not very long before a wedding was celebrated in the mansion of 'Woodlawns,' where the lovely Margaret did not figure as the *Unwilling Bride.*

Incidents among the Indians at the West.

BY THOMAS S. ELLS.

Six years of my life I have spent among the aborigines of the mighty West. My acquaintance with the red man commenced in the valley of the Mississippi. The poor degraded Indians this side of Detroit, I am acquainted with. They have become so deeply contaminated with the races of the pale face—so far steeped in dregs of infamy and degradation—that they (with some exceptions) are hardly worthy to be called by the name of Indians, and I claim no acquaintance with them, except the passing acquaintance of a traveller. The Chippewas and Pottawatomies of the upper lakes I know. The Menomonies, Stockbridges, and Brothertown Indians of Green Bay, I know. The amalgamated tribes of red men on and near the island of Mackinaw, I am fully acquainted with. Their traders, too, are ever to be remembered, for I have witnessed such sights among them there, that were I to live a thousand years, the recollection of their shameful acts could never be effaced from my memory. I have there seen the proud and haughty warriors robbed of their all, and made to crouch and bend their knees in humble submission to the avaricious and grasping trader. I have seen the aged warrior, whose locks were whitened by the frosts of four score and ten winters, traffic the last remnant of clothing that he possessed, to the trader for *fire water.* I have seen a band of Indians come in from a long fishing and hunting excursion, with their boats loaded down with furs and fish and game, with their countenances beaming with the joy and pleasure that indicate the lucky hunters; I have seen the crafty traders gather around them with demoniacal expressions of joy! joy! that they were about to cheat them out of their all. Perhaps for five gallons of whiskey, the traders would buy their whole boat load, worth fifty dollars. The fire-water was plentifully passed round until nine tenths of them were squibbs (drunk,) and ere a week had passed the traders would kick them from their doors, naked and destitute of everything save stabs and wounds, and with an insulting and derisive laugh, would tell them to go and bring more furs.

Mackinaw has been the depot and the market place from the immemorial. There generations have passed away in utter ignorance of the existence of the busy world east of them. Their knowledge does not extend beyond their own vicinity. They annually visited the falls of Lake Superior, and caught fish in the rapids of Sue St. Mary's and sometimes crossed the rough and boisterous lakes in their bark canoes, without one thought of danger. They fished in the passes of Thunder Bay and Manitou Islands, sometimes venturing to skirt the shores of the Michigan and Hudson lakes in pursuit of game, thence returning to Mackinaw and disposing of their boat loads to the traders. Thus have lived and died thousands of Indians; but they have nearly all decayed. A few yet linger there, too poor to get away. The rest have gone—some to Canada and some to the West. But by far the greatest number have gone to the wigwam of the Great Spirit. This island was a celebrated missionary station and in a high state of prosperity; its school numbered hundreds; its church was filled on Sundays to overflowing, while thousands of wondering Indians would remain outside, listening with intense interest to the words of the Great Spirit-man as he breathed his morning prayer to heaven; the cheerful response which came from a thousand voices, gave token that his presence was welcome.

That time, alas! has passed away. By one villanous act the fair fame of that noble institution was blasted, and now those buildings which cost thousands are a heap of ruins. The last time I saw them, I looked into the church and school-room; the floors were covered with torn books, soiled papers and broken slates. Snakes, toads, and venemous reptiles uttered their croakings and hissings where once the songs of Zion spoke, and in the pulpit where once the holy man of God stood fondly supplicating the Most High that he might be pleased to turn the hearts of his children to love him, sat a solitary owl, uttering his screechings in total defiance of any interruption.

But we have lingered on this spot too long; let us in imagination journey westward: we will travel up the Michigan Lake. On either side of that great lake we shall at the present day find towns, villages and cities that have sprung up as if by magic. Green Bay, Sheboyagan, Milwaukie, Southport, Racine and other towns on the one side; and on the other side we shall see Grand Haven, Kalamazoo, St. Joseph, New Buffalo and Michigan City, places of but a few years growth, where but a short time since, even while I resided at the west, naught was heard save the yell of the wild untutored savage, scarce a white

man resided within the limits of those places. But now mark the change. The war-whoop of the Indian is no longer heard there; they are peopled exclusively by white men. In place of the wigwam of the red man the palaces of the rich are reared as if by enchantment. Houses, stores, churches and other public buildings are springing up in quick succession. Canals, railroads and other sources of internal improvements are the projects now in contemplation; and the time will come, ere long—surely by the time the next census is taken—that the population of the mighty west will be legions. There is Chicago: it is now a city of 12,000 inhabitants—in 1831 the entire white population within 40 miles did not exceed 300, while the friendly Indians in the vicinity exceeded 7000. It was at the time of the Sac and Fox war. The country was almost entirely unsettled, almost the entire northern part of Illinois was inhabited exclusively by Indians.—The rapid growth of northern Illinois commenced at the conclusion of the war. The log houses of the Indian suddenly disappeared, the smoke from the Indian wigwams no longer ascended towards the heavens. The rapid improvements, commenced by the white man, had driven them into the praries; their wigwams were no longer pitched in the vicinity of the towns, except when they came to barter their furs for goods; the music of the saw and axe and the hammer had driven the game far away. The Indian's land east of the Mississippi had already been ceded to government by treaty; they only dwelt there by consent of government. When the Indians went away then, I went with them: I took up my quarters at the head waters of the Wis-se-ba—at the junction of two important streams, tributaries to the great father of waters—I opened a store and resolved to become an Indian trader. Permit me to tell you a coon story—not a political one, but a commerrial one. After exposing my goods (in all their Indian varieties) for some days without any success in selling, I became almost discouraged and nearly concluded to give it up. The Indians would come into the store by dozens; they would examine the goods and go away without buying. They had plenty of shu-ne-ah (money) and plenty of furs, but were destitute of goods, and that was to me a mystery. At length the head war chief of the nation came into the store in company with a large crowd of Indians. He instantly exclaimed: "How do, Thomas? come show me some of your nice goods; what do you ask for this? I'll take four yards of calico, three coon skins for one yard, half dollar exactly, by'meby, to-morrow, I'll pay you." The next day he came accompanied by his whole band; his blanket above his waist was stuffed with coon skins: "American, I'll pay that bill now." Suiting the action to the word he began to pull the skins from his blanket; throwing them on the counter he counted out twelve and stopped, still holding the thirteenth in his hand, at last he laid it with the rest exclaiming. "That's it exactly." I handed it back to him, telling him he owed me but twelve and the Great Spirit would not let me cheat him. We continued to pass it back and forth, each one asserting that it belonged to the other. At last he appeared to be satisfied; he gave me a scrutinizing look, then placed the skin within the folds of his blanket, stepped to the door, gave a yell and cried with a loud voice, "Come! come right away all of you and trade with the pale face boy, he is honest he will not cheat the Indian, he believes in the Great Spirit, his heart is big, he is an honest trader!" He then turned to me and said: "If you had taken that one coon skin, I would have told my Indians to have nothing to do with you, and would have driven you away like a dog; but now I have found that you are the Indian's friend and we will be yours." The Indians then began to flock into the store and trade, and before the sun had gone down, I was waist deep in furs, besides shu-ne-ah (money) in plenty. That one coon skin saved me.

Pork Stakes.—A loco in Lancaster offered to bet five dollars in property on the result of the election in our precinct provided a stake holder could be found who would hold the stakes in his hands. The loco found that the precinct was going against his party, and when urged to put up his stakes, said he was ready to comply literally with the terms of the bet he had offered; and turned out for his stakes a sow and five pigs. But no stake holder could be found to "hold them in his hands," the bet fell through, and the loco "saved his bacon."—*Wisconsin Herald.*

The Voice of the Brook.

BY EMMA C. EMBURY.

It cometh to me ever,
That melancholy voice,—
When the joyous tones of morning
Would bid my soul rejoice,
When the noontide ray has silenced
The tone of bird and bee,
When the star of Evening waketh
Earth's vesper melody,—
It cometh to me ever,
That low and tender song
Which the hidden brook is pouring
As it flows unseen along.

It cometh to me ever,
That solemn undertone,—
When sounds of mirth are in the air
It seems a far-off moan;
But when sad memories awake,
And life seems lone and drear,
Its voice of melody gives out
A hymn of holy cheer;
And sometimes too, in moody hour,
It falleth on my ear
With a sound as of the rustling wings
Of guardian angels near.

It cometh to me ever,
In the silent hours of night,—
When my spirit comes unwilling back
From Dreamland's world of light;
When its golden gates are closing,
And I linger still to hear
The music of those angel harps
That charmed my sleeping ear,—
Then comes the moaning of the brook,
With fancy's music blending,
Like the wail of human love and grief
Mid seraph choirs ascending.

It cometh to me ever,—
Howe'er the air is stirred
With noisier sounds of busy life,
That singing brook is heard;
It cometh like the mystic voice
Which e'en mid care and strife
Is whispering to our secret souls
A dream of holier life,—
The voice, which, when on danger's brink
Our heedless feet have trod,
Tells us that still within us dwell
The oracles of God.

Return in the St. Louis.

NUMBER XX.

The Indians may have been right in finding a resemblance between this Island and a turtle, but I could see none. For some reason they have always held it in veneration, and perchance it was this feeling, rather than any peculiar advantage it possesses as a military station, which made it so important, and gave rise to the notion, that, whatever power possessed it had control of the neighboring tribes. It never commanded the navigation of the Straits;—and, as a location for a force or fortifications for that purpose, the site of old Fort Mackinac, about twelve miles below, on the south side of the Straits, in my poor judgment, is preferable. That old fort, the scene of a celebrated massacre, has disappeared. It was probably merely a stockaded inclosure. If I can trust to boyish recollections, that massacre is far more effectively related by Henry, an Indian trader, who was the only white person whose life was spared, than by any of the fifty writers who have since endeavored to improve upon his materials, and tell the tale more thrillingly. Henry, too, was one of the first visiters of the Ontonagon River; and his travels are well worthy of being republished.

Mackinac is nearly circular, and usually opposes tall craggy cliffs to the water: but, on the south, presents, for a short space, a low plain, in which the sleepy little village nestles, and looks out upon a pretty bay, locked in, on each side, by a rocky reef. The village front is a hive of petty stores and groceries. Behind them are the dwellings, but few of which bear any special marks of wealth, or taste. Fishermen's huts are sprinkled on the beach on either side, and half a mile eastward, at the foot of the cliff, is the Mission House, a most comfortable and well conducted boarding house. All the buildings are of wood, and whitewash seems more fashionable than paint for ornament; and round, sharpened posts, or pickets, are a common material for fences.

From the village the ground rises suddenly one hundred, or one hundred and fifty feet, into a plain; and, on the very brow of the hill above the hamlet, is the so-called Fort, a most picturesque and conspicuous object. It is in fact merely a palisaded square of barracks, and is perfectly commanded by the hill in the centre of the island, on which stood Fort Holmes. Its snow white walls and pickets gleam in the sunlight, and make it visible at a great distance. The plain undulates towards the middle of the island, where it swells abruptly into a high hills, the loftiest part of Macinac, on which turfy embankments still mark the ruins of the old Fort. This hill is precipitous on three sides, but I think declines westwardly with an easy slope to the common level of the island. On the northerly side, an insulated rock shoots up from the plain below, nearly to the height of the hill. This tall and pointed rock, called the Sugarloaf, is a naked conical mass of limestone, and has in its side a cave, or hole, into which folks climb by the aid of a branch of a dead tree provided for the purpose—and in which, gentlemen, who, go where they will, have always an eye to business, occasionally leave their cards.

On the other side of the hill, not far from its base, is or rather was, Scull Cave. It is said to have been capacious, but the falling in of the roof has reduced it to a shallow hole. Human bones have been frequently disinterred there, giving some countenance to the tradition that a large party of Indians were smoked to death in it, by a hostile band. On the easterly shore is the Arched Rock of which we'll speak hereafter; and Robinson's Folly, of which we'll not speak at all, except to say, that it is a tall cliff with a legend attached to it, of little credit, and no interest.

The summer climate of Mackinac is most delicious and salubrious. Its winter is long, severe, but still, so say the inhabitants, clear, equable, and pleasant. Consumption in this country is scarcely known, and there are well authenticated cases of this fell disease being checked, and even, in its commencement, eradicated, by a residence in this pure, bracing air, and on the Southern shore of Lake Superior.

The cold must be intense, for the Straits are frozen, and people are often able to glide far out upon Lake Huron, and skirt its shores at a distance, even to Penetanguishine. The ice is crystal, and may be hewn out in three-foot cubes, What a building material it would furnish for imperial whim to work with!

In the winter the mails are brought monthly only, from Saginaw, by Indians,—or rather they travel from Saginaw on snow shoes, and guide and control the dogs who drag o'er snow and ice the mails on sledges. What a privation—this lack of a daily paper! How these poor people must suffer, cut off from the world for a full half of the year!—Pity them not! Or, at least pause and inquire whether they do not pity us, because we are cut off from their icy Paradise by winter. They have their homes there, and home to the healthful makes a happy, lovely land. News comes infrequently, but then it comes in masses which supply them till the next dog train comes trotting over the straits. What care they for the sunny South? They have plenty of the world's good things. Gaunt Famine and Disease both keep aloof, and leave both rich and poor, to their occupations. Gaiety reigns on the island, and presides at their merry meetings, which outlast the long brilliant, northern nights. They skate too, or drive the sledge, and hunt the rabbit, and rob Carp River of its speckled trouts; and so, in a round of hearty pleasures, they drive dull care away. and living within themselves, they scarcely think of the outer world, until the cracking ice is heaped by the wind into fantastic shapes, and the before fettered waters begin to flow. And then they think, perforce, of friends and relatives in lower and less favored latitudes, and begin to wonder when the first steamboat will arrive.

From the Buffalo Commercial Advertiser.

The Indians on our Southwestern Frontier.

The policy pursued by our government for many years in regard to the various Indian tribes, is calculated to excite some unpleasant apprehensions for the future. For nearly a quarter of a century, or, rather, ever since the tide of white population poured over the Alleghany Mountains, and spread upon the broad western plains, the Indians have been forced to retire, and by treaties made with them at various times, their original title to the soil within the limits of the western States and Territories has been extinguished, and they have been removed to lands set apart for their use west of Arkansas and Missouri. In that region they have been concentrated in large numbers. The spirits of most of them have been effectually broken by their long intercourse with the whites. Their bodies have become enfeebled by vicious indulgence and consequent disease, and the habitual restraint to which they have been subjected for so many years, has, in a measure, destroyed their warlike propensities. If left wholly to themselves, and unsupported, or unprompted to hostilities from any quarter, they would not be apt to prove very troublesome neighbors; and if at any time they should show any turbulent disposition, a small military force would suffice to keep them quiet.

But with the extension of our Southwestern frontier, our own citizens and the tribes of Indians to which we have alluded, have been brought in contact with other tribes that threaten seriously to disturb the peace of that quarter. By far the most numerous, warlike and best organized Indian nations, of which history gives any account on this continent, if we except the Aztecs, the original founders of the Mexican monarchy, are to be found on the vast plains stretching from Texas, Arkansas and Missouri to the Rocky Mountains. They are a people that have never acknowledged the white man's supremacy.—They are the best horsemen in the world, trained to arms from their youth, and like the Germans of old, eager for the joys of a contest. It is from them that we are to apprehend danger, and recent events in the progress of the Mexican war are likely to precipitate hostilities.

If these Indians should cry havoc, they would almost certainly be joined by the remnant of those tribes our government has removed to that quarter, who, though too much depressed and broken down to wage war on their own account, would gladly embrace such an opportunity to wreak revenge for oppression and wrongs so long endured. This matter, which should arrest the attention of our government, is well alluded to in the following extract from an article in the New York *Herald:*

The Indian whom we have in the course of ages seen driven from the eastern edge of the Atlantic—who has vanished gradually away, before the steady march of the mighty phalanx of Anglo-Saxon civilization—who has in fact become almost exterminated under the direful influences of whiskey and the small pox; this kind of Indian (the only kind with which we in this part of the Union are acquainted,) has offered in the process of subjugation and banishment from the lands now filled with our own cities and increasing population, very little impediment, comparatively speaking, and very little difficulty to our triumphant extension.

But in reference to the Indian on our Western frontier, it behoves us, and our government, to entertain other feelings than those of contempt and self-confidence—feelings which chiefly preponderate at the mere mention of the name—Indian.

This Indian, of whom we speak, belongs not to that weak and pusillanimous race which has fled from before the face and the approach of the white man. He of whom we now speak, has never yet been conquered. The Spaniards, at the height of their glory and military fame, when they were, beyond dispute, the most warlike people of Europe, yet never could succeed in subduing or conquering any of the tribes of Indians of the Western world, who hovered on the borders of their settlements, and were incessantly a thorn in their side and a reproach to their military prowess. These are men who may be said to live on horseback. They are a realization of the fabulous idea of the Centaurs, for they are perfect Centaurs, and eat, drink, sleep, and fight on horseback. They are men inured to hardship, accustomed to warfare, familiar with victory, swift in pursuit, fleet as the wind when pursued, Mamelukes, without the effeminacy of that race, and Arabs without the destructive clime and debased mind of the Arabs. Let it then be remembered—let it be considered well and in time—that such is the race of men with whom the rapid course of events within the last few years, and the rapid strides our republican empire, have at last brought us into immediate proximity and unavoidable contact.

Impelled by the anarchy of the Mexican war, and witnesses of the dissolution of the Mexican empire, these tribes, accustomed till now to respect the white man, have, naturally enough, assumed an attitude of greater boldness and of more audacious defiance than ever till now they have ventured to do. We lif up our warningt voice to the country and the Government not to overlook this speck of a gathering storm, and not to despise, or regard with levity and delay an element which may otherwise become the source of political disorder and disgrace. Even the dictates of a niggard economy, should wiser and more noble motives be without their effect, are sufficient to call forth the energy of our government, the watchful eye of our statesmen, and the timely action of Congress, towards this important subject. Our various past Indian wars, first with the Cherokees, then with the Winnebagoes, and next with the Seminoles, cost us, in the total, no less a sum than one hundred and twenty millions; it may be much more, certainly not a penny less. But these three items of past expense have to do with Indians few in numbers, divided in power, and destitute of resources and refuge. The Western Indians, on the contrary, are a united, numerous, and organized people: we should rather say they are a regular organized army, for we refer only to the warriors, and they are never out of the field, and seldom, indeed, out of the saddle. From sources which may be relied on, we learn that "the aggregate number of the Indian tribes who descend every season upon the Buffalo region, amounts to 250,000 mounted warriors." While, on the one hand, the wealth of industry and civi-

lization on our frontier settlements stirs up their cupidity, and affords a strond temptation to their wants: on the other hand, the diminution of the supply of buffalo (which diminution has been going on a *vue d'œil* for some years past) adds to their necessity, and augments their poverty and voracity. For some time past, as the columns of the *Herald* will testify, we have at regular intervals to record increasing acts of hostility by these powerful tribes; a permanent Indian army has even occupied Middle Arkansas for a length of time past; and if our government continue its supineness, we confidently believe that some serious tragedy, some ever to be regretted disaster, will occur to awaken alarm and terror. Better, therefore, to prevent, by timely foresight, than to have to regret with useless tears and unavailing repentance.

A suitable force, in proper numbers, maintained on the spot, well commanded, well mounted, and well equipped, would save millions of dollars and thousands of lives, by inspiring these warlike hordes with that fear and respect for our name and nation, which, if they are not made to feel, we, that is to say, our defenceless frontier States and citizens, will be made to feel and to suffer greatly.

From Santa Fe.

The following extract from a long letter in the St. Louis *Republican*, gives an impressive sketch of the wretched condition of affairs in New Mexico. The editor of the *Republican* says the writer is "a gentleman of intelligence and unblemished character, familiar with the whole of New Mexico, and one of those clear-minded men, who can dispassionately, and without partiality, discuss passing events. His statements will be confirmed by every intelligent man who has spent the past winter in New Mexico:"

Since the insurrection consequent upon the murder of our lamented friend, Governor Bent, and other American citizens, the affairs of the Territory have fallen into the greatest confusion. That insurrection, which arose in the northern district, and principally in the valley of Taos, was speedily and effectualy suppressed. In the several actions against the insurgents our troops displayed their usual gallantry, and the barbarous murders of Governor Bent and others were amply revenged. Thus far, all was as it should be—but since that period, I regret to say, nearly the whole Territory has been the scene of violence, outrage and oppression by the volunteer soldiery against all alike, without distinction—the unoffending as well as the offending. The parties of volunteers detached to different points on the frontier, with but very few exceptions, conducted themselves in the most insubordinate and oppressive manner, neither respecting the rights of property or persons.

To redress these wrongs against unoffending citizens, in the presence of this licentious soldiery, the civil authorities find themselves utterly powerless; and I add with regret, that the military authorities are incapable of commanding or controlling this lawless soldiery, or are entirely indifferent as to the protection of the citizens.

The volunteer detachments, at different points on the frontier, and even the soldiery in garrison at the capital, pay *little* respect to military discipline or order, and *none* to the civil authorities or the rights of citizens. Col. A. W. Doniphan made a hollow peace with the Navajos, took their promises for *things*, the performance of which he was *ordered*, and should have required on the spot.—And in consequence, before Col. D's command had fairly retired from their country two of his men were killed by the Indians, and a series of robberies and outrages commenced which have been continued with impunity up to the present time, until many of the defenceless inhabitants are utterly ruined. During no one year, for the last twenty years, have the depredations of these Indians been so destructive to life and property. Upwards of fifty citizens have been killed or carried into captivity, and more than 60,000 head of horses, mules and sheep have been carried off from the country called the Rio Abajo. No efforts have been made to protect that frontier, or to redem the promises made to that people.

And now, the time of service of nearly all the volunteers having expired, the garrison of Taos was some days since called to Santa Fe to be discharged. The same was proposed with regard to Albuquerque, and only prevented by the timely arrival of Lieut. Love with the dragoons. Taos has been thus left exposed to attacks from the Indians and the fugitives who had fled to the mountains and joined them during the late revolt.

By the statute law of the Territory, the Gov. is ex-officio Superintendent of Indian Affairs, but these duties have been assumed entirely by the military authority, and I am compelled to say, are conducted, so far as the Navajos are concerned, with the most shameful injustice towards the New Mexicans. While the Navajos are stealing the flocks and herds of the Mexicans, and killing the people, the Americans are allowed freely to visit and trade with these Indian freebooters; and it is generally believed, and with good reason, that these traders have in many instances been the instigators of the Navajos to their depredations on the Mexican settlements.

We must necessarily, therefore, appear as the aids and allies of their enemies rather than their protectors.

The present acting Governor, Don Donaciano Figio, has discharged the duties of the office with unwavering good faith and ability, but being a native Mexican, and having been deprived of the exercise of some of the most important functions of his office by the *stronger arm*, the military, he feels a delicacy which at times prevents him from acting with the decision and independence he otherwise might.

Many letters have been addressed to the Department of State, both by the late Governor Bent and the present acting Governor, with full details of the situation and the wants of the Territoy. Not one line has been received in reply. A petition was forwarded to the President for the appointment of a Governor to succeed Governor Bent. No notice has been taken of it. Therefore the civil government of this Territory stands virtually unacknowledged. The revenue of the Territory, as prescribed by law, is barely sufficient to defray the expenses attending the administration of Justice. The Governor and Judges of the Superior Court are performing duties difficult and arduous *without compensation* for their services. Their salaries are directed by law to be paid out of the treasury of the United States—but how, or in what manner, no one has been able to ascertain. Many of the officers can ill afford to serve without receiving the means of support.

Wisconsin.—Gov. Dodge has issued a Proclamation convening the Legislature of Wisconsin on the eighteenth day of this month to take such measures as may be deemed necessary to enable that Territory to become a sovereign State at an early day.

For the Western Literary Messenger

An Autumn Hymn.

The muffled winds are sighing
O'er Autumn's opening grave,
And withered flowers are lying
Like hopes which Childhood gave.
Each leafy crown is stolen
That hung the fountains o'er,
Whose bosoms, sudden swollen,
Their grief in rivers pour.

No sylvan song of gladness
The birds are here to wake;
The wind's low tones of sadness
Alone the silence break.
And thus is Nature weeping
For beauties torn away,
Like Age, his vigils keeping
O'er Manhood in decay.

But soon the storms will vanish
And vernal bloom appear,
And Nature then will banish
Each gloomy cloud of fear.
And soon both age and sorrow
Aside the soul will fling—
Its long, celestial morrow
Will be eternal spring.

J. Clement.

Buffalo Horticultural Society.

REPORT ON FRUITS.—SEPT. SHOW.

Your committee in offering this report upon the fruits that have just been exhibited, would beg leave to preface by some remarks on the superior excellence of the arrangement of the Fruit Tables, the skill and good taste in the arrangement of the Fruit, the great profusion and richness of the specimens, and the almost innumerable varieties on show. This being our last exhibition of the season has in some measure induced more than ordinary interest in the generous emulation of the members, and all that could be asked has been cheerfully responded to. The decorations of the Hall, with its floral designs, its temples, wreaths, festoons, &c., all tended to render the display of fruit the more imposing and rich, and elicited the admiration of the numerous visitors. For these embellishments your committee would return thanks to V. Pres't Coppock and our lady coadjutors, who are ever assidious and ready in these works of taste and art.

The fruit table in the centre of the Hall, 24 feet long by 4 feet wide, with two side tables of 40 feet in length were laden with the richness of Pomonas treasures—Grapes, Peaches, Pears, Apricots, Plums, Quinces, Apples, &c., embracing all the autumnal fruits in endless variety, vied with each other in the beauties of size, bloom, and color. The season has been one of fruitfulness, although the spring was backward being some twelve to twenty days later than usual; the blossoms notwithstanding set well, and many trees which are usually shy bearers have proved productive. The curculio has been less destructive; its habits are becoming better known, and salutary measures adopted to render it ineffectual in its depredations—as a whole the Plum crop has been an abundant one. The enterprise that has been manifest during the existence of our society in procuring all new and valuable, as well as the old choice varieties of fruit, is now beginning to be visible by the display of the fruit itself; and however commendable this enterprise is, your committee would not base their encomiums on the quantity of numbers as the quality of specimens. The anxious desire to possess every thing that is new in the shape of fruit trees because they are so, is not legitimately the great object to be sought for, but rather, a judicious and proper selection of those which have been tested in their various qualities and found adopted to our localities. We all know there are many fruits that possess an excellence in our locality that is lost by removal to another, and as friend D. Thomas observes, "three degree of lattitude may produce more than three degrees of flavor." Amongst Apples, the Northern Spy, Swaar, St. Lawrence, Roxbury Russet, Detroit Red, Cabashea, Seek-no-farther, Rhode Island Greening, &c.: and of Pears, the Seckel, Glout Morceau, Stone's Genetua, Summer Virgalieu, White Doyenne, Onondaga, Beurre Aremburg, Maria Louise, Duchess D'Angouleme, and Bartlet. These are standard sorts for this locality, truly fine within themselves, and sure producers. Of Peaches we fail as compared to the New Jersey growers; our soils are not warm enough, and our late frosts endanger a sureness of crop; yet notwithstanding we have many fine Peaches—Crawford's Melacaton, George the Fourth, late red Rareripe, and red-cheek Melacaton, are perhaps among the choicest of those that flourish with us. In Grape culture your committee are pleased to see much in progress. The specimens of hardy grape, Isabella, Catawba; early July, White Sweet Water, Black Cluster, Miller's Burgundy, &c., are rapidly accumulating and successfully grown. There are in progress also, by our enterprising amateurs, various *cold houses* for the cultivation of the richer but more tender foreign sorts, and another season or two will render us entirely independent of foreign importations. Your committee was highly pleased by the rich display of Quinces on show; the false error that has predominated in giving the Quince shady and out of the way places, under the fence, &c., with poorness of soil, is now nigh well exploded. The noble specimens exhibited by L. Eaton, Esq., measuring some 15 inches in circumference, are the result of strong feeding, open position, and well tilled borders. The scrapings of the poultry house have increased his stock nearly fifty per cent. in size.

Your committee cannot but pay a passing compliment to the great benefits that are resulting from the well directed efforts of our society; the increased and increasing attention that is given to the subject of Horticulture in our vicinity cannot

but be beneficially felt by all our citizens;—herein is a mine well worth working, the more it is explored the greater and richer its rewards. Fine fruits conduce as much to the health and happiness of a community as any one production of a rich and teeming soil.

The contributions were as follows:—

A. Bryant and Sons—Erie County Nursery—variety Pears, as follows:—seckle pear, wonder of winter, white doyenne, passa colmar, sugar top, buffam, Maria Louise, 5 fine specimens not named, catalac, vergalieu, cadett, Gansel's bergamot, autumn bergamot, virgalieu, beurre de Aremburg, Steven's Genesee, Newton, seedling, brown beurre, bergamot sylvange, swan's egg, orange, winter bell, doyenne sieule.

Peach—Crawford's meloctoton, lemon cling, red rareripe, oldmixon, magnum bonum, lemon rareripe.

Basket of fine Quinces of the orange and Portugal.

Apples—yellow belleflower, beauty of Kent, Lord Nelson, sweet pippin, pomme grisse, ribston pippin, glori mundi, Esopus spitzenberg, tallman sweeting, belle-bonne, domini, Russian transparent, Dutch apple, Dutch codling, Keswick codling, black apple, Hawthornden, maiden blush, northern spy, Poughkeepsie russett, red bell flower, New England seek-no-further, ramboe, easter pippin, fall pippin, Rhode Island greening, red and green sweeting, early lustre, winter russett, nonsuch, Alexander, striped gilliflower, sweet russet, Pennock's red winter, Famense, Hereford, pearmain, russet pearmain, Cox pippin, red cheek, red Siberian crab, yellow crab, golden beauty crab, autumn sweeting, pyrus japonica, barberry, tree cranberry.

B. Hodge, Esq.—Buffalo Nursery.—Grapes, royal muscadine, Isabella, black cluster.

Blood cling Peach.

Apples—American golden russet, autumn sweeting, autumn swaar, bellflower, beauty of Kent, beachemwell, belle fleur, brabant, black, black gilliflower, Boston russet, cabashea, Canada pie apple, early Dutch codlin, covert pendu, Cornish gilliflower, democrat, Detroit red, double flowering Chinese, drar d'or, Dutchess of Oldenburgh, favorite, golden sweeting, gray-house, granny-winkle, gloria mundi, hawthornden, large yellow bough, lady apple, Lyman's pumpkin sweet, lanagu, Keswick's codlin, Kirk's Lord Nelson, peach apple, pearmain Hertfordshire, pearmain golden, pomme de niege, fall pippin, King of the pippins, Quaker pippin, sweet pippin, London pippin, pomme grisse, pound sweeting, red injestrice, red and green sweeting, Rhode Island Greening, Roxbury russet, English russet, golden russet, sops of wine, seek-no-further, Siberian crab, spice sweeting, spitzenberg esopus, sweet gilliflower, tewkesburg blush, twenty ounce, Young's longkeeper.

Pears—autumn, autumn superb, Bleeker's meadow, beurre d'amalis, beurre spence, benrre easter, beurre brown, autumn bergamote, caillac white doyenne, Flemish beauty, Louise Bonne of Jersey, passa colmor, seckel, Stevon's Genesee, verte longue, Washington.

Nathaniel Wilgus—frost gage plums.

Wm. Webb—Apples—Alexander, yellow bell flower, St. Lawrence, Detroit red.

Catate Pears.

Plums—blue imperatrice, ichworth imperatrice.

Red cheek melocoton Peach.

S. F. Pratt—Grapes—white sweet water, black cluster. Apples—Detroit red.

Henry W. Rogers—Medott Pear.

Mrs. D. Burt—Orange Bergamot Pear.

C. Taintor—early autumn apple, Holland pippin, Newton pippin, greening, Roxbury russet, seek-no-further, pound sweeting, black apple, Esopus spitzenburg, twenty ounce, sweet bough, yellow bell flower.

Pears—brown benrre, Newton virgalieu, Marie Louise, bergamot, buffam, sugar pear. Portugal Quince. Isabella Grapes.

L. F. Allen—Pears, Maria Louise, glout morceau, swan's egg, Princess St. Germain, summer butter pear, orange bergamot, brown beurre, autumn bergamot.

Apples—scarlet winter, Roxbury russet, belle et bou. Orange Quince. Isabella Grapes.

W. R. Coppock—Isabella Grapes, very fine. Frost Gage Plums.

Lewis Eaton—Pears—Duchess d'Angouleme, large seckel, beurre d'Amolin, jaminette, brown beurre, Napoleon, Steven's Genesee, Angleterre St. Germain, demmpon virgalieu.

Apples—Detroit red, fall pippin, Rhode Island Russet, pearmain, fall russet, Ribston pippin, Hawthornden, Cabashea. Quinces.

Mrs. E. A. Maynard—Isabella Grapes.

Doct. Dellenbaugh—doyenne pear, yellow egg plum, German prune.

Mrs. Heywood—white sweet water grapes, Isabella grapes.

C. C. Haddock—Isabella grapes of uncommon size.

I. Gage—Isabella grapes, white sweet water, particularly fine.

For the Committee,

WM. H. MANN.

REPORT ON VEGETABLES

Your Committee regret that the past season has not shown more emulation on the part of the vegetable growers, in displaying their productions at our exhibitions. It is fair to infer, perhaps, that our market gardeners are as deeply interested in improving the growth of their articles, as those engaged in the culture of Fruit and Flowers.—Still at our exhibitions we have had but slight tangible evidence of the fact. Such specimens as have been exhibited have been creditable to the growers, and we hope another season will show a great increase in the number of contributors in this most essential aid to the culinary department of all good housekeepers. Our Vegetable gardeners as a class, may rank favorably with those of many of our older and more favored cities, and among the foremost we might name the Messrs. Bryant, whose sales we are told amount to over five thousand dollars annually, in this department alone. Mr. J. Keel, E. Tyler, J. Odlum, and others whose productions have elicited unanimous approbation, whenever exhibited at our shows. It may not be out of place here to advert to the too common practice of sending *monstrosities* only for exhibition, particularly in the vegetable line; this may be very well as a matter of curiosity merely, but contributors and growers should recollect that the *largest* specimens are not always the *best*, and that there is as much if not more merit in raising uniform medium sized productions, than in the nurture of some overgrown freak of nature merely for size.

The contributions for Sept. are as follows:—

Mr. E. Tyler—Walchian brocoli, very fine; a very productive variety of this delightful esculent,

well adapted to our climate: cauliflower, short orange carrot, large white carrot.

H. W. Rogers—Egg plants of fine size, white horn carrot, onions, two var.; parsneps, fine; mammoth squash pepper, pop corn, pear tomatoes, a particularly fine variety for pickling, Belgian carrots.

Lewis Eaton—Egg plants of extra size. Mr. E. is famed for the growth of fine specimens of the egg plant: until the past season the growth of which has been almost entirely confined to private gardens.

Mrs. H. P. Thayer—Cauliflower, a splendid head.

Mast. Charles E. Root—two very fine and extra large pumpkins.

A. Bryant and Sons—One dozen heads superior celery, red tomatoes, purple egg plants.

Lewis F. Allen—Sugar beets, blood beets, very large and fine.

James Keel—Ruta baga, remarkably fine and the third crop of the season; blood beets, orange carrots, a specimen bottle of tomato catsup, pronounced to be of superior flavor by all. Mr. Keel, we are told, manufactures annually from three to five hundred gallons for market.

Mr. Jessee Ketchum—Monstrous Beets!

Rev. A. S. Smith—Seedling potatoes, four and a half months from the ball. These potatoes are remarkably large and of many fine varieties.

For the Committee,

C. F. S. THOMAS, *Sec.*

Potato Rot.—There is but one remedy—that is to mow off the vines as soon as the potatoes have blossomed, or as soon as the potatoes have set, and are as large as pistol balls. This is a cure or prevention of the plague—nothing else will reach it. It is a disorder which alone can be cured by decapitation. All who have written on the subject, have mistaken the cause and the cure, and as Dr. Franklin would say, have come out at the little end of the horn! I tried the experiment last summer; it did well. There is no mistake, if the vines are cut off near the ground before the poison of the insect descends to the root of the potato the crop is safe. It is a winged insect that does the mischief. This is the fact, let philosophers humbug as they will about honey-dew, fungas, mildew, dew rust, young seed, old seed, hot weather, cool weather, too wet, too dry, &c., &c. All are wrong, and do not look to the way, or even squint, whence all the evil comes. Potatoes should be planted early, in order to be forward enough to part with their tops by the 25th of July, or the first day of August. The insect was ten or twelve days earlier last year than the year before. It may be earlier this year than last, or it may not come at all, which I hope. Where I cut off the vines last summer on the first day of August, the potatoes were sound—perfectly good; I am selling them for seed at one dollar per bushel. Those I cut off on the 16th day, were injured some—say one eighth lost.—*Belfast Journal.*

We give the above remarks without perfect confidence in the conclusions of the writer, but deem them more worthy of insertion from the fact that we know of similar experiments made in this county and which have been followed by the same results.

Thanksgiving.—Gov. Young has appointed the 25th of November, as a day of public Thanksgiving and Prayer.

Desperate Villain.—Baily, who has been sentenced to the State's Prison for life, for an attempt to assassinate Mr. Hotchkiss, was at the age of sixteen years sentenced to transportation for life in an English court of burglary. He remained at Vandieman's Land for several years, and secreted himself on board a whaling vessel, for the purpose of making his escape. His absence was discovered before the vessel sailed, and it was suspected that he was on board the whaler; the authorities had lances thrust among the oil barrels in order to ascertain whether Baily was on board or not. He was secreted near the kelson, perfectly safe, as he thought; having a friend in one of the sailors to furnish him with food.

The searchers, in thrusting down the lance, passed it through his leg. Baily knowing that if blood was found on the instrument he would be discovered, took a handkerchief from his pocket and wiped the blade as it was withdrawn from the wound, thereby escaping discovery. The vessel was afterwards smoked with brimstone, but he succeeded in keeping his place, and remained in it for thirty days after the vessel left port, living on what his friend, the sailor, secretly furnished him. Baily has written out his own history, which has been promised us for publication. In crime it almost equals that of "Jack Shepard." He left his parents at the age of seven years, and subsisted by petty thefts until twelve, before being detected. He was then tried and imprisoned. He was twice tried in England and transported for life, and each time made his escape; the second time to this country.

He here entered the naval service, robbed the vessel in which he was of a large amount of money, which he thrust into one of the guns, was caught, flogged through the fleet, then in the Mediterranean, again reached America, and was sent to the State Prison for knocking down and robbing a boy of a large amount of bank bills, in Wall street, in broad daylight. Having served out his time, about six months since, he was turned adrift; since when he has committed numerous robberies. The last in which he was concerned was that of Mr. Bennet, at Williamsburgh, which was committed some three days after he and his comrades attempted to assassinate Mr. Hotchkiss, in this city on the 3d of May last.—We shall publish some startling confessions made by Baily very shortly.—*Brooklyn Adv.*

Remarkable Family—Great Domestic Calamity.—On Sunday last three youths passed through this place on their way to the Blind Asylum in Columbus. They live in the town of Union in this county. They are brothers, and in the family of which they are members there are five individuals who were born blind. We have never heard of an instance upon record where so many in the same family were thus afflicted. Five out of the eight members of this unfortunate household are thus shut out from the light of heaven and condemned to a life of eternal darkness. Awful calamity! We understand that the cause of the dire misfortune is the frequent intermarriage of blood relatives in the same family.—*Dayton Transcript.*

Curious Amusement.—The communication was interrupted by telegraph west on Friday afternoon. A messenger was immediately despatched to ascertain the cause, and discovered that about three miles from this city, the wires had been broken by some person, who had shot off the peg, with a rifle, upon which the glass cap is fixed, and carried off about 600 feet of the wire. There is a standing reward of $25 for the detection of offenders of this kind.—*Rochester Adv.*

J. CLEMENT, EDITOR.

Idiots.

Not long since, the Legislature of Massachusetts appointed commissioners to inquire into the condition of the Idiots of the commonwealth, and "whether anything could be done for their relief." We have seldom been more interested than in the report of these commissioners. They have certainly elicited much important information in regard to the present condition of these unfortunates, and their capability for improvement, and opened a new field for philanthropic effort. The unfortunate and degraded of every *other* class in society, have hitherto claimed our sympathy and effort The insane have all the care and the best medical treatment which humane men can bestow; the blind are brought from "Nature's darkness" to enjoy the blessings of sight; the dumb are made to speak an intelligible language; and the morally degraded are reclaimed to virtue, and restored to society—but this neglected portion of the human race has always been treated as if branded by the wrath of God and set apart from the rest of mankind. We have always felt a deep interest in this class of beings; shut out from all the privileges, and enjoyments of society, denied all notions of external things by the non-communication of the brain with the senses, consequently possessing no ideas, their existence must be a blank; worse than that of the brutes, for they are not only deprived of all intellectual and moral improvement, but all physical enjoyment. In their present condition certainly they are not moral agents; and we have often wondered when observing their vacant stare, and listening to their brutish noises, whether they were immortal beings—whether they were to spend an eternity of such rayless gloom. Most surely unless their minds are irradiated, they must be unprepared to participate in the praises, and joys of heaven, or join in the wail of demons and lost spirits.

But the error which has so long blinded the minds of men to the wants and capabilities of this class, is fast fleeing before the light of successful experiment; and France has made this experiment. Says Mr. Sumner, a recent tourist in Europe:—

"During the past six months, I have watched, with eager interest, the progress which many young idiots have made, in Paris, under the direction of Mr. Seguin, and at Bicetre, under that of Messrs. Voisin and Vallee, and have seen, with no less gratification than astonishment, nearly one hundred fellow-beings who, but a short time since, were shut out from all communion with mankind, —who were objects of loathing and disgust,— many of whom rejected every article of clothing, others of whom, unable to stand erect, crouched themselves in corners, and gave signs of life only by piteous howls, others, in whom the faculty of speech had never been developed, and many whose voracious and indiscriminate gluttony satisfied itself with whatever they could lay hands upon with the garbage thrown to swine, or with their own excrements; these unfortunate beings, the rejected of humanity, I have seen properly clad, standing erect, walking, speaking, eating in an orderly manner at a common table, working quietly as carpenters and farmers; gaining, by their own labor, the means of existence; storing their awakened intelligence by reading one to another; exercising towords their teachers and among themselves, the generous feelings of man's nature, and singing in unison songs of thanksgiving!"

The fact is now established beyond a doubt, that Idiots may be educated; and we rejoice to see that the government of our own native state, which has so nobly held the van in most of the philanthropic movements of the day, is taking active measures to ameliorate the condition of this unfortunate class.

THE DEMOCRATIC REVIEW comes to us this month with its contents about equally divided between politics and literature. The political papers are able, and the literary uncommonly racy. We are gratified to see a constant improvement in its literary department. It contains an engraving of Nathan Clifford the present Attorney General of the United States, and a short biograpical notice.

THE AMERICAN REVIEW for Oct'r, opens with an article on "The Whigs and the War, and speaks pretty freely of the origin of the war, of what it is doing, of its ultimate object, and where the responsibility lies." Then follow "Catholic Reactive against the Reformation," "Night in the Brazils," "The Principle of Life" by a southern physician, a very mysterious, incomprehensible subject by the way, though very scientifically treated of, "The nature of this Government," "Kate Russell," Inductive Theory of Civilization." "Men, Women and Books" (a review,) "Life and Opinions of Philip Yorick, Esq.," "Lives of Lord Chancellors" (a review,) "Sonnet to" and "Our recent Corn Trade." Thos. S. Cutting, agent for this city.

INDIAN DIFFICULTIES.—A letter to the St. Louis *Republican* from Fort Kearney, September 22, states that the Pawnees and Sioux are at war, and that a severe battle is daily expected. The Sioux have over 2,000 warriors in the field, and have taken possession of the Pawnee village in the absence of the Pawnee braves, who were hunting buffalo. The Pawnees were hourly expected. The Sioux have also made a descent on the village of Otto Indians near Fort Kearney, killed some 20 persons, destroyed their corn, and put the whole population to flight.

☞ The Tioga County Court met on the 4th inst., Judge AVERY presiding. *There was no civil calendar*, and the Court adjourned to the following day to await the action of the Grand Jury. Litigation appears to be at a low ebb in Tioga.

THE LEXINGTON, Capt. G. RANDALL, leaves this port Monday morning of each week for Detroit, and returns Thursday. She is a neat, safe, commodious boat, and has been repaired during the past season to the amount of 3000 dollars.—Capt. R. is well known to the travelling public as a skilful seaman; the other officers are polite and attentive to the wants of the passengers, and those bound for Detroit or any of the intermediate ports will do well to patronize her.

Political Symptoms in Europe.

The present political symptoms of the courts in Europe indicate a singular state of things.—"Uneasy lies the head that wears a crown;" and high political responsibility is no very trifling affair to any one one who holds it. It seems as if thrones might go a begging, and there is no period of peaceful history when so many occupants desired to escape from them. Among these instances are some in which there undoubtedly exists a desire to do public good, but where the difficulties attending popular progress appear at times almost insurmountable.

Prussia has recently received a popular constitution, not without some tolerably explicit assurances from its chief potentate, that the powers it granted are not to be used against himself, and that they are more theoretic than practical.

Leopold of Belgium, an acute and sensible man, has given his people a liberal ministry, but intimates that he thinks them foolish to wish it, and evinces an impatience and disgust which are natural enough to kings who cannot have exactly their own way.

The Prince of Orange is said to meditate a resignation of his claims as heir-apparent, for a strange reason, viz:—"to spite his wife and prevent her ever becoming queen. The story is scarcely credible, though the mutual pique of the spouses is but too true."

The Emperor of Russia is positively declared to be tired of power and to wish for the ease of private life. His sending gold to purchase funds in England and France, is said to have been done with a view to provide for such an event.

LOUIS PHILIPPE stands fully acquitted of all desire for popular advancement, and the best that can be said of him, is that he does not wish France to be worse off than she is. He desires a continuance of his power, and yet no monarch has less reason to do so. "Isabella of Spain is weary of the continual intermeddling of public interest with her private happiness. The genius of politics, LOUIS PHILIPPE, began by sacrificing her to a Cretin husband, and the same genius now excites this same husband to render his wife as uncomfortable as possible; so that the girl-queen is driven to say—"Take my throne if you desire it, but leave me at peace."

The Pope is at times in similar doubts as to the happiness of wearing a crown. His, to be sure, is a triple one, and proportionately heavy. Poor Pius! his delight is in being liberal and doing good. But this amiable taste has thrown him into a sea of troubles. He has Austria, France, and his own Cardinals plotting against him—his people impatient and hard to satisfy. The good Father is frequently perplexed between them, and his instant thought at such moments is resignation."

And if Queen VICTORIA does not desire to renounce her throne, it is for no other reason than that she is enabled by the legal fictions of England to throw all the responsibility of government upon her ministers, who are changed as often as public opinion changes.—*Com. Adv.*

Later from Vera Cruz.

PHILADELPHIA, Oct. 9. 1847.

There has been an arrival at New Orleans from Vera Cruz, bringing dates to the 21st ult., and Brazos to 23d.

The Matamoras *Flag* says, that Gen Cushing's brigade, encamped at Palo Alto, were in good health, and would soon embark for Vera Cruz.

Lane's entire brigade had sailed for Vera Cruz.

Part of Hays's regiment, under Chevalie, was to remain with Gen. Wool.

Col. Butler's battalion of dragoons had left Monterey.

A north wind blowing; the weather is cool, producing some sickness.

Urrea has issued a proclamation, announcing the termination of peace negotiations, and that the Mexicans of the 8th gave severe lessons to the hateful invaders, by royally repulsing their assaults, and driving them to their positions.

The *Flag* says that the last rumor is that the Mexicans, inspired by the news of Scott's repulse at the Capital, are flying to arms throughout the country, determined to be in at the extermination.

Three thousand reported already there and at Victoria.

The names of the killed and wounded of Lally's command are published in the Picayune. Total 105.

SHOOTING OFF THE WIRES.—Some person or persons engaged in very serious sport on Friday last. The Telegraph wires were shot off some three miles west of this city, on the afternoon above named, and about 600 feet of the wire carried to parts unknown. The messenger who was sent from the Telegraph office in this city to repair the damage, finding that he had not sufficient length of wire to supply the place of that taken away, left the roll he had with him and returned for more. While absent this roll was stolen!

It will be seen by a notice in another column that the Telegraph Company have offered a reward of $100 for the detection of any person committing such offences. Shooting off wires is a dangerous business.—*Rochester American.*

THE STOMACH.—I firmly believe that almost every malady of the human frame is, either by highways or by-ways, connected with the stomach. I must own, I never see a fashionable physician mysteriously consulting the pulse of his patient, but I feel a desire to exclaim—Why not tell the poor gentleman at once, "Sir, you have eaten too much, and you have not taken exercise enough!" The human frame was not created imperfect; it is we ourselves who have made it so. There exists no donkey in creation so overladen as our stomachs.—*Bubbles from Nassau.*

YANKEES IN THE WEST.—A correspondent who went up the lake on the *Wisconsin* a week ago, after speaking in deservedly complimentary tones of that noble boat and her accomplished officers, relates the following:

During the voyage, we became acquainted with a gentleman who is connected with the St. Croix Lumber Company, a wealthy and important association of which ROBERT RANTOUL, jr., of Massachusetts, is President. This new acquaintance is from "down east," and is an unblemished specimen of the Yankee. It did one good to hear him tell, in his modest way, of the wonderful things which are being done by a few New Englanders in one of the most wilderness portions of the Mississippi Valley. He had been to the State of Maine to visit his family, and to get a millwright (whom he had with him on the boat) to build a saw mill on the St. Croix. And thus it is, a Yankee in the pine forests of Maine must be sent for to go nearly two thousand miles, just to build a saw mill. Truly the Yankee is an important personage. In the language of a late writer, "no other man is like him. It has been said of him, that he is made for all situations, and can *manage* to work his way in all places.—Place him on a rock in the midst of the ocean, and with his penknife, and a bunch of shingles he would work his way on shore. He sells salmon, from Kennebec, to the people of Charleston; haddock, fresh from Cape Cod, to the planters of Matanzas; raises coffee in Cuba; swaps mules and horses for molasses in Porto Rico; retails ice, from Fresh Pond, in Cambridge, in the East Indies; takes mutton, from Brighton, to New Orleans and South America; manufactures multicaulis, for the governor of Jamaica; becomes an admiral in a foreign nation; starts in a cockleshell craft of fifteen tons, loaded with onions, mackerel, and '*notions*,' for Valparaiso; baits his trap on the Columbia river; catches wild beasts in Africa, for Macomber's Caravan: sells granite, on contract, to rebuild St. Juan de Ulloa; is ready, like Ledyard, to start for Timbuctoo, 'tomorrow morning'—exiles himself for years, from home, to sketch in their own wilderness, the wild men of the woods, and astonishes refined Europe, with the seeming presence of the untutored savage. Introduced to Metternich, he asks 'what's the news?' Says, 'how do you do, marm?' to Victoria. Prescribes Thompson's eye-water to the mandarins of China, and if he pleases, makes the scouting Southrons rich with cotton inventions. He is found foremost among those who sway the elements of society—is the schoolmaster for his country, and missionary for the whole heathen world. He is unequalled in tact, and instead of going over round-about ways, starts across lots, for any desired point. If perpetual motion is ever to be discovered, he will be sure to be the lucky contriver—for he is the *fac totum* for the world."

Our ride on the *Wisconsin*, rendered delightful on many accounts, will henceforth be associated with the most pleasant reminiscences of Yankee character; and may the reader, of whatever section he may be, profit by the *moral* contained in the picture above copied.—*Com. Adv.*

AMUSING BLUNDER.—One of the subjects proposed by the English Fine Arts Commissioners for the decoration of the House of Lords is "Raleigh landing in Virginia." To this appears to be a trifling objection. According to a correspondent of the London Times, Raleigh was never in Virginia, nor did he ever set foot in North America. In 1659 he sailed for Virginia, but was soon driven home by stress of weather, and the misconduct of his crew. Subsequently, he fitted out five or six expeditions for that colony; and the energetic though unavailing efforts made by him to form a settlement there have doubtless so connected his name with Virginia as to lead to the popular blunder that he had himself visited its shores. These expeditions were commanded by Sir Humphrey Gilbert, Sir Richard Grenville, and other able navigators, but never by Raleigh in person.

STEAM TO BUFFALO!—We told the people of Green Bay, that if they would take hold and help themselves, in relation to the establishment of a steam communication with Buffalo, other capital and other enterprise would speedily be diverted to this channel. We learn from direct authority that John Jacob Astor, of New York city, is now negotiating with Captain Ward, the well-known steamboat owner, for the establishment of a line of two boats between Buffalo and Green Bay early the ensuing season. Capt. Ward writes that it is altogether probable he will accept of the proposition made by Mr. Astor; and that, at any rate, he has made up his mind to establish a weekly line on his own responsibility. This is good news for the North; and we hope it will stimulate our citizens to active exertion in the enterprise so auspiciously commenced.—*Green Bay Repub.*

NEW YORK, Oct. 9, 3 P. M.

The storm and flood at the South has done considerable damage in the vicinity of Baltimore and Philadelphia.

The bridge on the Washington Railroad, at the Savage river, erected at a cost of $7,000, has been swept off—thus interrupting communication beyond Baltimore.

The Whigs will have eleven majority in Maryland Senate, and the same number in the House of Delegates.

Returns from four counties in Georgia give a small gain for Towns, the democratic candidate for Governor.

STRANDED.—The Schooner *Outward Bound*, with a cargo of 11,000 bushels of wheat, in getting out of our harbor on Thursday last, touched her heel, paid off, and went on shore to the southward of the south pier. A small portion of her cargo was at once taken out, but the most of it was left on board. On Saturday night she commenced leaking, and has since leaked so as to injure her whole cargo. The vessel belonged to the Messrs. Richmond, and is insured. Part of the cargo, we are sorry to add, belonged to farmers of this vicinity, who were sending it on, on speculation.

The schooner *Black Hawk* also went ashore, north of the piers, on Saturday night or Sunday morning, she was however got off safely on Monday evening. As the weather is now fine, we hope the *Outward Bound* will be got off too.—*Racine Advocate.*

NEW YORK, Oct. 12—3 P. M.

The steam ship *Alabama* arrived at New Orleans on the 4th inst., bringing advices from Tampico to the 20th ult.

The *Picayune* says there is no later news from SCOTT's army direct, but it learns through a source entitled to great credit, that the Americans had 27 officers killed and 45 wounded in the battles of the 8th and 13th of September.

There is no confirmation of the reported death of any of the American Generals.

Letters received by commercial houses at Tampico from their correspondents in the city of Mexico, confirm entirely the *Picayune's* former reports of the battle of Mill El Rey, Chapultepec and the heights on the 8th and 14th, when General SCOTT carried the place at the point of the bayonet.

A circular from the Alcalde is published, dated at Guadaloupe, 14th September, and addressed to the Commandants of General Department, states that the American army charged on the 18th at daybreak with all their force, upon Chapultepec, which yielded after a spirited defence of six hours.

The Americans immediately marched upon another strong fortification, but their first advance was checked by the troops, led by SANTA ANNA, when after a short conflict the enemy was dispersed and finally routed.

After nine hours hard fighting, the capital being in a desperate situation, and anxious to avoid its bombardment, he determined to evacuate it.

A verbal report received at Vera Cruz, states that he retired to Guadaloupe with ten thousand troops and twenty-five pieces of artillery. No mention is made of the reported bombardment on the 14th and 15th.

MUTINY ON THE PLAINS.—The St. Louis Union of 30th Sept., has intelligence of the 24th of Aug. from the troops en route for Santa Fe, in a letter of that date from the Middle Semirone Spring. After mentioning the extraordinary march of 525 miles in thirty four days, performed on foot by a detachment of the companies of the Illinois Regiment, the writer states that by far the greater part of companies F. and G. were a few days before the date of his letter in open mutiny—absolutely refusing to obey positive orders. The dutiful force, consisting of but one company, was not sufficient to quell the insurrection, and the mutineers had pretty much their own way, till the regiment was joined by Lieut. Col. Boyaken, with a detachment of three companies. Order was then forthwith restored, and the non-commissioned officers who took part in the insubordination, were arrested and reduced to the ranks. The offence being above regimental jurisdiction, final proceedings in the matter had to be postponed until the arrival of the troops at Santa Fe.

Correspondence of the New Orleans National.

MONTEREY, Aug. 26, 1847.

There is very little news of a general nature stirring here. The order on this line of operations is to remain *statu quo*. Things may be summed up thus: General Wool remains at Buena Vista with the Mississippi rifles, the North Carolina regiment, and the "first families." The 10th regiment, Col. Tibbatts, will garrison Monterey. Several detachments will be placed at the posts below. General Taylor returns home in November.

Several men have been killed here lately, but nothing else could be expected, as the Americans walk through the out-of-the-way places of the town, at all times of the night, unarmed and perfectly reckless of exposure. However, if blood can appease their manes, their ghosts will never stalk the earth, for they are always amply provided with Mexican comrades.

Some fiend in human shape last night made a terrible illustration of a "little more grape, Capt. Bragg," for he placed under the bed of the gallant soldier an eight-inch bomb shell, with a train leading off, by which it was ignited. The explosion was terrific, but fortunately the captain received no injury. Two of the missiles went through his bed without touching him. His escape is looked on as miraculous, the contents of the shell having been scattered around for a hundred yards. No cause is assigned for this attempt upon Capt. Bragg's life, except that some of his men think he is too severe in his discipline. This is the second attempt upon his life.

FRIGHTFUL RAILROAD ACCIDENT.—We learn, verbally, that the mail train of cars from the East ran off Cayuga Bridge, at the usual hour of crossing, last night. Information of the fact was communicated by Telegraph to Rochester about midnight, with a request for an extra train to be despatched to the scene of the accident. Whether all the cars were precipitated into the Lake, and whether any lives were lost, our informant could not say; but a car filled with passengers could scarcely run off at that place without causing more or less destruction of life. The afternoon train will probably bring farther particulars.

P. S. By the train this afternoon we learn that no accident befel the mail and passenger train. What gave rise to the report was the running off or falling through the bridge of the engine drawing a freight train.—*Com. Adv.*

A LATE MORMON MIRACLE.—The Ottaway *Free Trader* gives the following with an endorsement of its truth:

It appears the prophet Strang needed a new house, and he determined his followers should build it for him. So he called them together, and told them that in consideration that they would erect the house, the Lord had authorized him to promise them a wonderful *endowment*. The building was soon completed, and now they apply for their reward. All the Saints are gathered together in the Church, the prophet takes them through a variety of ceremonies, such as head washing, feet washing, &c., and concludes by anointing the heads of all, with a composition "that had a queer smell." They are then directed to adjourn to another room that was totally dark, where they were to receive the endowment, which was to be in the shape of an extraordinary and visible manifestation of the spirit, rendering them at once impregnable thenceforth to all the shafts of Satan. Arrived in the dark room, sure enough, the heads of all shone, as if lit up by the brightness of the sun, and great was the rejoicing of the saints thereat But the prophet William, who was present, although staggered a little, mistrusted that "all was not gold that glittered," so he took some of the ointment and submitted it to an examination, and to the discovery! He found that it was a mixture of *oil and phosphorus!* and

that hence the whole illuminating operation was a gross cheat. He took the first opportunity to accuse the prophet, Strang, publicly and before the whole congregation of the imposition, who so far from denying it, coolly acknowledged the corn, and then preached a sermon, justifying the act, and maintaining that all the miracles of Christ, Moses, &c., were wrought in the same way—that is, by natural means. Of course, William could no longer hold fellowship with *such* a man.

Surgical Operation.—Dr. Blackman of this village, has recently performed the rare and important operation of *tying both carotid arteries* on the same patient with success! This formidable proceeding was called for to arrest the growth of an enormous tumor involving the upper jaw-bone, causing it to *bulge out*, as many of our readers who have seen the patient, may recollect, in the most frightful manner. It had already protruded from the nose and mouth, and was growing with alarming rapidity, threatening the boy with speedy destruction. An attempt had been made by one of the first surgeons of New York to remove the disease, but so terrible was the bleeding which followed, that he was compelled to abandon the operation. One only hope now remained for the boy, and that a feeble one, viz: by cutting off its supply of blood, to starve the tumour! The right carotid was tied by Dr. B. forty-four days ago, and three weeks afterwards, the same operation was performed upon the left. Notwithstanding the immense amount of blood thus suddenly abstracted from the brain, with the exception of a temporary blindness, (lasting only half an hour) not an unpleasant symptom has occurred! Both ligatures have come away, and the wounds on both sides of the neck are entirely healed. The lad, who is but thirteen years of age, and a son of Mr. Gideon Birdsall, of Plattskill, exhibited the most heroic fortitude on each of these trying occasions, and won the admiration of numerous physicians both from our village and the adjoining towns, who were present and assisted Dr B. in this responsible undertaking. The disease, we understand, has been materially checked in its progress, and we believe the doctor has now some hopes that a fatal termination may be averted." *Newburgh Telegraph.*

Mrs. Bancroft in London.—It so happened that one fine afternoon, this summer, our minister's wife, Mrs. Bancroft, walked down Regent street, and called at a fashionable store to purchase a shawl. She found an excellent one, costing only £20; and wishing to test its virtues, she threw it over her shoulders, and left her old one to be ordered home. She sallied out again, sailed along up Regent street, desiring to make a sensation with her splendid shawl, and she succeeded wonderfully. She soon perceived that she was drawing unusual attention. Some stood in great wonder, some stopped and looked, some laughed outright, villainous boys pointed with their canes, young ladies turned round on passing and blushed, gentlemen on looking at her suddenly examined the sky for stars, acquaintances rode by in carriages, nodded, smiled, and bit their lips immediately afterwards. What could it all mean? It certainly was very unusual and very singular, and Mrs. B. hurried home out of her breath and out of her wits, too. Her maid soon solved the mystery. The shawl proved to be one which was exhibited in the windows of the shop, the merchant having forgotten to remove the show label, and there it was still, bearing the following announcement, in magnificent capitals, "VERY CHASTE, at £20."—*Sunday Atlas.*

A Fighting Parson.—It is a well known fact, that many of the Southern Methodist parsons are members of the church militant as well as the church triumphant. It is said that a Methodist minister was Captain of a company in one of the Mississippi regiments. Just before the battle of Buena Vista commenced, and whilst the troops were forming, he delivered the following pithy prayer, at the head of his company:

"Be with us this day in the conflict, oh Lord! We are few, and the enemy are many! Be with us as Thou wast with Joshua, when he went down from Gilgal to Bethorn and Askelon, to smite the Amorites. We do not ask Thee for the sun and moon to stand still, but grant us plenty of powder, plenty of daylight, and no cowards. Take old Rough and Ready under Thy special charge. Amen. Company, by the right flank! quick step!—forward—m-a-r-c-h!" His company, it is said, performed wonders on the field that day.

Green Bay Land Office.—The receipts at this office for the month of August last, amounted to $87,895—and those during the present month, up to yesterday, amount to $84,801—total, $176,696 00.

The above statement shows an increase of settlement unparalleled in Wisconsin. The returns at the end of this month will probably run the above total up to $90,000—equivalent to 72,000 acres. This, divided into farms of 120 acres each, makes *six hundred farms* sold in Northern Wisconsin in less than two months! Where can it be beat?—*Advocate.*

Proclamation.

By JOHN YOUNG, Governor of the State of New York.

A day of Public Thanksgiving is due to Almighty God, for blessings bestowed upon the people of this State during the past year.

While a sanguinary war has been raging upon our national frontier—while the principal city of a sister state has been scourged with a pestilence that walketh at noon day, and while gaunt famine and disease afflict the fairest portion of the mother country, the state of New York presents a gladsome picture of universal happiness and prosperity. Seed time and harvest have been continued to the husbandman—the laborer and artizan have not sought in vain for employment—the ships of the merchant have traded in peace with the nations of the earth, and plenty has crowned the efforts of all classes of society.

The blessings of free government—the means of universal education—the security of person and property, and the supremacy of law and order, have been vouchsafed to us in an eminent degree.

For all these, and for other good gifts, we are indebted to that Providence whose bounty and protection are conferred upon all, without regard to country or condition.

I, therefore, respectfully recommend to the people of this state, to observe the Twenty-fifth day of November next, as a day of Public Thanksgiving; to abstain on that day from their usual avocations, and mingle with their thanksgivings, prayers to Heaven for the continuance of its smiles, and for its protection against famine, disease and crime.

In testimony whereof, I have caused the privy seal of the State to be hereunto affixed. Witness my [L. S.] hand, at the city of Albany, this eighth day of October, in the year of our Lord one thousand eight hundred and forty-seven.

JOHN YOUNG.

By the Governor,

Henry V. Colt, Private Secretary.

A Touching Incident.—The New Orleans *Picayune* says that a few days since a gentleman of that city saw in the streets a lovely little girl of tender years standing on the banquette bathed in tears. The good man approached her, and taking her by the hand inquired the cause of her anguish. The dear little creature continued to sob bitterly, until at length she exclaimed: "My father and mother have been taken to Heaven, and I am left an orphan." There were three or more persons by at this time, and the feelingly eloquent words of the engaging little one brought tears from every eye. The worthy gentleman who first addressed her said a few kind words with a view of relieving her, and then said: "I will be to you a father, and my wife (and no man has a better one) will greet you with a mother's smiles." He then took her by the hand and carried her to his residence.

This is an achievement, in the field of mercy, of which any good man should be proud.—*Nat. Intelligencer.*

STATE OF NEW YORK, SECRETARY'S OFFICE, } Albany, August 3 1847.

To the Sheriff of the County of Erie:

Sir: Notice is hereby given, that at the next general election to be held on the Tuesday succeeding the first Monday of November next, the following officers are to be elected, to wit:

STATE.

A Secretary of State, Comptroller, State Treasurer, Attorney-General, State Engineer and Surveyor, Three Canal Commissioners, and Three Inspectors of State Prisons.

DISTRICT.

One Senator for the Thirty-First Senate District, consisting of the county of Erie.

COUNTY.

Also, the following officers for the said county, to wit Four Members of Assembly, one to be elected in each Assembly District.

Yours, respectfully,
N. S. BENTON, Secretary of State.

Erie County Sheriff's Office, Buffalo, August 6, 1847.

A general election is to be held in the County of Erie, on the second day of November next, at which which will be chosen the officers mentioned in the notice from the Secretary of State, of which a copy is annexed.

au6oawtno2 TIMOTHY A. HOPKINS, Sherif.

STATE OF NEW YORK, Secretary's Office. } Albany, Sept. 22, 1847.

To the Sheriff of the County of Erie:

Sir: Pursuant to an act entitled "An act to provide for the election of a Lieutenant Governor," passed Sept 27, 1847, Notice is hereby given that at the next General Election, to be held on Tuesday succeeding the first Monday of November next, a Lieutenant Governor of this State is to be elected. Yours, respectfully,

N. S. BENTON, Secretary of State.

Erie County Sheriff's Office, Buffalo, Oct. 2, 1847.

Notice is hereby given, that at the General Election to be held on the 2d day of November next, there will be chosen a Lieutenant Governor of this State, agreeable to the notice from the Secretary of State, a copy of which is hereto annexed.

oc1oawtnlc TIMOTHY A. HOPKINS, Sherif.

MARRIED.

This morning, 7th instant, in St. Paul's Church, by the Rev. Dr. Shelton, Mr. E. M. MARTIN, and Miss M. LOUISA, daughter of Geo. W. Allen, all of this city.

At Prospect Hill, on the 7th inst., by the Rev. S. Sturgis, Mr. ALLEN T. BENNETT, of Albany, and Miss EMILY T., daughter of A. K. Penton, of this city.

On the 7th inst., by P. A. Child, Esq., Mr. WILLIAM BURGHER, of Pittsburg, Pa., and Miss OPHELIA COFFIN, of Lockport.

On the 16th inst., by the Rev. Mr. Schuyler, Mr. ROBERT CODD, Banker, and Miss JANE, daughter of J. B Young, Esq., of Cincinnati.

On the 5th instant, by the Rev. A. T. Hopkins, D. D., Mr. LEWIS B. HOWELL, and Miss GEORGIANA STOW, youngest daughter of Dea. A. Callender, all of Black Rock.

On the 6th inst., by P. A. Child, Esq., Mr. CHARLES HARRIS, and Miss MALVINA JACOBS, both of Tonawanda.

At Williamsville, by Esquire Johnson, Mr. T. B. CHAMPLIN, and Miss MARIA, youngest daughter of J. W. Smith, Esq., of that place.

Stereotype Foundry.

THE subscribers announce to Printers, Publishers and others interested, that having purchased the material for a complete Foundry, it is their intention to conduct the business of STEREOTYPING in all its branches, in connection with their other business. Having secured the services of competent workmen, they will be prepared to execute orders after November 1, in as good style as any of the Eastern Foundries, and at as low prices.

Stereotype Blocks, all sizes, furnished to order. Old Type taken in exchange for Stereotyping, at current rates.

☞ Cuts, Bordors, Small Jobs, &c., Stereotyped at short notice. JEWETT, THOMAS & CO.,
Commercial Advertiser Office, 161 Main street.

Blank Books of all descriptions ruled and bound to any pattern.

Periodicals, Music Books, Newspapers, Magazines, Old Books, etc., carefully arranged and bound in every variety of style, and at moderate prices. Ladies Albums, Port Folios, etc., made to order. n8

BUFFALO MUSICAL INSTITUTE FOR YOUNG LADIES.

At the residence of Prof. W. R. Coppock—Composer and Teacher of the Piano Forte, Organ, Singing and Composition.

An institute devoted exclusively to Musical Education is not yet common in this country; but in Europe the test of experience fully shows its great advantages over the too general superficial manner in which this important part of polite education is acquired. The advantages this institution offers to those desirous of completing their studies as Organists—or practical players of the Piano Forte, together with a thorough system of imparting the same to others is fully established by the many precedents of the past 10 years. The pupils are constantly guarded in their practice against all bad habits, and from the various stages of progress they may be in, are continually stimulated to effort and industry, by association with each other. The family too, are all players, and the theory is amusingly discussed, impressing its rules in a more pleasing manner, and more lasting upon the understanding, than by the mere dry study of an elaborate book. Music is composed and arranged from time to time, showing the various styles and harmonies analyzed, and adapted for performance on several instruments at the same time. This teaches a thorough knowledge of counting, and dividing passages into their given time. Vocal music is particularly attended to, and where the pupil has a moderate share of talent, we hesitate not to say, a correct and pleasing singer can be made. The Piano Fortes used are all new, and of the finest quality, and every inducement will be given to render the true spirit with as profitable. The building is commodious, and has a fine garden attached, with Green houses, Bathing house, &c., and is pleasantly situated in Seventh street, between Niagara Street, and the Railroad, and about midway to Prospect hill.

Terms made known upon application at the Institute, or by mail, post paid, directed Prof. Coppock, Buffalo.

Prof. Coppock, keeps constantly a choice selection of Piano Fortes for sale,

Buffalo, August 3, 1847.

PRINTERS' FURNISHING WAREHOUSE.

WILLIAM PRESCOTT, Manufacturer of Printing Inks, No. 6, United States Hotel Block, Pearl St., Buffalo. Printing Presses, Metal and Wood Type, Cards, and every other description of Printers' materials constantly on hand at New York prices, adding transportation. Also, sole Agent for the sale of C. J. Gayler's Patent Double, and Improved Single Salamander Book Safes n16 3m.

CHEAP CASH BOOK STORE.

The subscriber, dealer in Books and Stationery, at 188 Main Street, 4 doors above Seneca, keeps constantly on hand, an extensive stock, embracing the most valuable selections from Ancient and Modern Literature—and a general variety of Theological, Classical, Gift and School Books, &c., &c. The Amateurs of Knowledge and all interested in the purchase of Books or Stationery are respectfully solicited to call. Print and Cap Paper at wholesale.

Buffalo, April 20, 1847. F. W. BREED.

For the Western Literary Messenger.

A Ballad.

BY JOHN NORVAL.

I'm lonely, oh! I'm lonely, and weary o' the day,
And lang for night, that it may drive my waking thochts away;
But ah! for me the gloamin' comes in vain, while others sleep
And dream of happier days in store, I wake to mourn and weep.

I'm lonely, oh I'm lonely! care sits upon my brow,
And thochts arise to banish sleep I never felt till now;
I feel myself deserted—no sympathetic tear
Is shed to blot man's errings out—no mercy for him here!

I'm lonely, oh I'm lonely! I bring to mind the Past—
Those days that were too full of glee too pleasant long to last!
I think of all my mother said, er'e death had closed her 'ee,
"This worl's a wail o' care John! it hath been sae to me!"

I'm lonely, oh. I'm lonely! I seek the woods in vain
To hear the birds as I was wont—but ne'er shall do again;
There's sadness in their very song—they mind me o' the day
When I could sing as blythe a song—as licht o' heart as they.

I'm lonely, oh! I'm lonely! the tear stands in mine 'ee—
But why repine—tho' lang the road—an end to a' maun be!
To them wha joy while others mourn, and laugh when others weep,
There's but a'e road for a' to gang—a'e bed where a' maun sleep.

An Excursion to Manchester.

BY MISS CATHARINE M. SEDGWICK.

It is not a very disagreeable or sterile life, that a citizen of New-York or Boston need lead whose business confines him to the city, provided he can now and then take a day's excursion into the country. A New-Yorker may pass a happy day on the shores of the Hudson, any where between the city and Newburgh, and return in time to take tea in his own house—to bathe in his bath of blessed Croton—and sleep in his own accustomed place—with all the appliances and means of home about him. He may exchange the dusty street for the sea shore, and bathe in sea-breezes and surf; and, instead of blistering his eyes with red bricks, look at the sublimest of God's works—the upheaving ocean. He may go to a friend's house on any of the lovely bays or necks of Long Island, out of sight and hearing of the tiresome town; or, if imbued with true rural tastes, he may plunge into the sporting solitudes of Long Island, and pursue his prey by wood or water. We know merchants in the most active and oppressive business of the city, who do this. Let a man but cherish the tastes (and they are salvation to body and mind) which Heaven has implanted—the love of nature and simple pleasures—and he will have ample means for its gratification. Let him not lose his original nature, in the eager competitions and artificial pleasures of the city, but prefer the opportunity of cheerful, innocent, and elegant leisure, to excessive gains; put up with a simple lunch in the place of a luxurious dinner; and honestly love better the shadow of a tree on a cool hill-side, with birds for his musicians, than even the opera with his favorite singer; and he can have, at moderate price, these refreshments, any day in the week, and be sure of a happier to-morrow. "If it were not for to-morrow," said Byron, in estimating the joys of a revel. The highest wisdom is always to measure the enjoyment of to-day by the shadow it casts on 'to-morrow.'

I had a day's pleasure yesterday, that neither cast a shadow before or behind. A friend, who works like a good Providence, and without any bustle of preparation, by a process as quiet as that which brings the sunshine upon us, surrounds us with pleasant circumstances, so that all the wheels of life run easily—this friend had invited me to take an excursion to Manchester.

I am rather ashamed now to confess it, but I had never heard of Manchester, a town that has arrived at the mature age in manufacturing life of eight years, with a population of fifteen thousand souls; busy souls they are; and if one may judge by outward signs, full of cheerful self-complacency and honest ambition.

After a delicious breakfast in my friend's house, where may be seen a union of noble simplicity (such as is oftener fabled than realized,) with the luxury of wealth and the beauty of art, we took our places in the Lowell train. Here the number of our party was augmented to that of the muses and graces combined; and if the gentle dames of our citizens were neither muses nor graces, they had qualities quite as much to our purpose. I do not know whether it was the atmosphere that the born gentleman always carries with him, or that my friend did silently and unperceived exercise the beneficient arts of a host, but each of our company occupied the place he would have chosen; and unexpectedly (for who ever expected social enjoyment in a rail-car) found his surroundings so agreeable, that there was a buzz of cheerful conversation through our whole progress of fifty-five miles. To be sure, the day was as fine as if my friend had himself bespoken it; and June having just escaped from the clutches of this benumbing spring, was every where genially smiling in full fresh boughs, brimming streams, sweet cloverfields, and myriads of roses; roses laughing in the gardens, trailing over the little court-yards, and clambering to the very tops of the houses.—June is indeed the crown of the year, and the roses the jewels of her crown. We shot past the crowded suburbs of Boston, and through the rural districts that surround them, past gardens and woodlands, and darted into the far-famed city of Lowell, where we only stopped to exchange some thirty fellow creatures for some thirty others who, to our careless eyes, seemed as like as prints of printed calico of the same color and figure; but each of these had his distinctive marks, his own boundless world of memories, and hopes,

and projects. It is our insect vision that limits the world to our own horizon.

There is no second class of cars on this route, consequently we had the democratic principle of modern modes of transportation, without mitigation. There were brawny boatmen, of New-Hampshire, in their red flannel shirt-sleeves, returning from 'rafting' down the Merrimack, tall stalwart fellows, whose bodies had attained nature's generous dimensions. Their faces were intelligent, and their speech civil, without any indication of social subordination. How different from the demi-savages who come in swarms among us! men who have been undergoing the process of degradation from generation to generation; whose low foreheads, contracted eyes, and wide and open mouths show that approximation to the brutish nature which has been going on for the long years that they have been as the strong ass, couching down between two burdens—the burdens of civil and sacerdotal oppression. Still the generous instincts of their hearts have survived oppression and barbarism. Let them be kindly welcomed to our wide New World home, and strike root in our soil, and grow up to the full stature of free and enlightened men! Their children's children will be like these New Hampshire boys; men capable of self direction, of far-seeing projects, and extended responsibilities.—The spirit that would reject from our unsown fields these poor creatures, who, in their barbarizing process, have narrowed down their wants to potatoes, and are blighted with the potatoe blight is surely not the Christian spirit. They who are of this spirit seem to have forgotton that their title deeds to this New World were forced upon their fathers by the Old World despotism. They remind us of two friends, who, being permitted to walk in some beautiful private grounds, one, in the genuine spirit of elegant exclusiveness, said to the other, "This would be very charming if we had it quite to ourselves." "It seems not to occur to you," replied his companion, "that *we* are here upon sufferance!" In God's name, let our people remember this, and welcome their suffering brothers to their wide home; and give them 'right of way' to the untrodden wilderness which Providence has reserved for them. I beg pardon of my readers; these thoughts are naturally suggested by comparing our own and foreign laborers. While we feel proud in the one, let us be touched with pity for the other.

It is a gratifying exhibition of our Manchester population that we see in the cars, diverging from Boston in every direction. I have not the arrogance to claim for the gentlemen and ladies of Massachusetts general superiority to their class elsewhere, but placed as I was on this pleasant day, with people of fortune and education and habits of refinement, I could not but notice the simplicity of their manners, their freedom from pretension, and the quality of sympathy and general courtesy and kindness, that is well called 'human beingism,' which was exercised on the comfort of an aged person in our company, and in good natured civilities to poor women cumbered with many children, who got in and out at the several stations. One lady entertained a little fellow on her lap, while its martyr mother hushed his baby-sister in her arms. One gentleman bribed, with an apple, a young marauder, whose particular fancy it was to stride up and down, first stumbling on one side, and then falling on the other. And my friend—as courteously as if he were attending a fine lady—helped a poor little body with her brood out of the cars, whose husband stood awaiting her with a horse and wagon, in a very 'do n't-care-and-rather enjoying' manner. I was reminded of the poor wife, who said, in similar circumstances, "Ah madam, the man has it a *dale* pleasanter than the women!"

Our course lay along the Merrimack, brimfull from the late copious rains. It glides on its way with the full-leafed trees waving like banners over it, with coronals of flowers hanging about it, and fields flushed with the purple lupin on its margin, as if it were made for the adornment of these lovely rural scenes, and not as it does, every drop of it, to distil showers of gold over our Midas manufactures. Prosperity be with them! their showers go up in beneficent dews, refreshing all the land. Their spindles endow our colleges, open fountains and baths for our 'young barbarians,' and run freely as the water that feeds their mills, in every channel of liberality and charity.*

Arrived at Manchester, we had the most of our time, first, by going about to see the various processes of manufacturing by machinery, which has been brought to a degree of perfection only short of self-directing intelligence. Indeed to my perception, to which the complicated operations are inexplicable mysteries, these machines seemed like the living operatives, reasoning, 'calculating,' and 'concluding' beings. One, of its own head, stopped its hundred spindles to rejoin a broken thread, another advanced slowly, and returned rapidly as befitted its purpose, and yet another received to its dark chamber the delicate white mousseline that glided down from an upper room and by successive and, as it appeared to me, voluntary movements, delicately painted it, and then suffered it with quiet dignity to withdraw. The vestals who presided over these mysteries, were more prosaic than the machines themselves; and, with their nicely-plaited hair, gold beads, and comfortable dresses, cut according to the universal fashion of the season, looked like duplicates of the ministers of our households. There was no sign of discontent or debility among them, but health quite up to the average, and a look of satisfaction, which is an unfailing indication of prosperity in our acquisitive race. The din of the machinery was insupportable to me, even for the brief time we were looking at it, and especially in one well-filled room, *four hundred and fifty feet in length*, but the 'young ladies' assured me after being accustomed to it, I could talk and listen there as well as elsewhere. Such is use! and such the supremacy of the social nature of man and woman! From the manufactories, a few of us drove, with our kind host, to the cemetery, where a lovely piece of woodland slopes on two sides to a little thread of a stream, of the yellow hue of topaz, and as bright and transparent — Shaded and flowery paths wind along the slopes; and there is here deep retirement and the solemn beauty of nature to inspire religious meditation, and pensive contemplation. The beautiful cemeteries that are springing up in our country, indicate the rapid progress of civilization. The generous capitalists of Manchester, in their provision of this burial-place, and in the ample public squares, have shown a most laudable regard to the moral natures of their operatives. Whatever raises a man above the animal instincts and physical gratifications, advances him in the scale of being; and many an impress on immortal natures will be made, in moonlight walks, through the public squares and cemeteries of Manchester. Nature is most apt at this sublime ministry, and the falls and rapids of the Merrimack will devel-

* That this is no flight of fancy is known to every one who knows any thing of the history of the wealthy manufacturers of Massachusetts. Mr. Abbot Lawrence's late munificent gift of $50,000, to Harvard and his brother, Amos Lawrence's repeated beneficiences to Williams' College, are cases in point.

ope the sense of beauty in their young people. They have, thank God, leisure and education, and freedom enough for its nurture; their immortal natures are not crushed by the mortal necessity of each day straining every nerve to earn precarious daily bread. That they have a choice of destiny seems to be forgotton by those who would limit by legislation their hours of labor. They can almost make their own terms in house hold service, they can have the independence of rural labor, or they can make haste to be rich, and tend the spindles. Thank God again fervently, that there are no dreary depths and cold shadows in our humble life to embitter prosperity to the most sensitive. So, after a morning of varied pleasure and observation, we sat down to a dinner (delicious, for it included the luxuries of the season—salmon, peas, and strawberries), sure that not one of the hundred operatives we had seen but had a dinner as abundant and wholesome, if not as luxurious as ours.—*Union Mag.*

The Holy Land.

BY HARRIET MARTINEAU.

JERUSALEM—THE TEMPLE.

My room opened upon a little terrace—the flat roof of a lower apartment in our inn at Jerusalem, and from this little terrace I was never tired of gazing. A considerable portion of the city was spread out below me; not with its streets laid open to view, as it would be in one of our cities; but presenting a collection of flat roofs, with small white cupolas rising from them, and the minarets of the mosques springing tall and light as the poplar from the long grass of the meadow. The narrow, winding lanes, which are the streets of eastern cities, are scarcely traceable from a height but there was one traceable from our terrace, with its rough pavement of large stones, the high house-walls on each side, and the arch thrown over it, which is so fatniliar to all who have seen pictures of Jerusalem. This street is called the Via Dolorosa, the Mournful Way, from its being supposed to be the way by which Jesus went from the Judgment Hall to Ca vary, bearing the cross. Many times in a day my eye followed the windings of this street, in which I rarely saw any one walking; and when it was lost among the buildings near the walls, I looked over to the hill which bounded our prospect:—and that hill was the Mount of Olives. It was then the time of full moon, and evening after evening I used to lean on the parapet of the terrace, watch the coming up of the large yellow moon from behind the ridge of Olivet. By day the slopes of the Mount were green with the springing wheat, and dappled with the shade of the Olive clumps. By night, those clumps and lines of trees were dark amid the lights and shadows cast by the moon; and they guided the eye, in the absence of daylight, to the most interesting points—the descent to the brook Kedron, the road to Bethany, and the place whence Jesus is believed to have looked over upon the noble city when he pronounced its doom. Such was the view from our terrace.

One of our first walks was along the Via Dolorosa. There is a strange charm in the streets of Jerusalem, from the picturesque character of the walls and archways. The old walls of yellow stone are so beatifully tufted with weeds, that one longs to paint every angle and projection, with their mellow coloring, and dangling and trailing weeds. And the shadowy archways, where the vaulted roofs intersect each other, till they are lost in the dazzle of the sunshine beyond, are a perpetual treat to the eye. The pavement is the worst I ever walked on—large, slippery stones, slanting all manner of ways. Passing such weedy walls and dark archways as I have mentioned, we turned into the Via Dolorosa, and followed it as far as the Governor's House, which stands where Fort Antonia stood when Pilate there tried Him in whom he found, as he declared, no guilt. Here we obtained permission to mount to the roof.

Why did we wish it? For reason of such force as I despair of making understood by any but those to whom the name of the Temple has been sacred from their earliest days. None but Mohammedans may enter the inclosure now; no Jew nor Christian. The Jew and Christian who repel each other in Christian lands are under the same ban here. They are alike excluded from the place where Solomon built and Christ sanctified the temple of Jehovah: and they are alike mocked and insulted if they draw near the gates. Of course, we were not satisfied without seeing all we could see of this place—now occupied by the mosque of Omar—the most sacred spot to the Mohammedans, after Mecca. We could sit under the Golden Gate, outside the walls; we could measure with the eye from the bed of the brook Kedron, the height of the walls which crowned Moriah, and from amid which once arose the Temple courts; we could sit where Jesus sat on the slope of Olivet, and look over to the height whence the glorious Temple once commanded the Valley of Jehoshaphat, which lay between us and it: but this was not enough, if we could see more. We had gone to the threshold of one of the gates, as far as the Faithful permit the infidel to go: and even there we had insulting warnings not to venture farther, and were mocked by little boys. From this threshold we looked in; and from the top of the city wall we had looked down upon the inclosure, and seen the external beauty of the buildings, and the pride and prosperity of the Mohammedan usurpers. But we could see yet more from the roof of the Governor's house, and there we went accordingly.

The inclosure was spread out like a map below us; and very beautiful was the mosque, built of variegated marbles, and its vast dome, and its noble marble platform, with its flights of steps and light arcades; and the green lawn which sloped away all around, and the row of cypress trees under which a company of worshippers were at their prayers. But how could we, coming from a Christian land, attend much to present things, when the sacred Past seemed spread before our eyes? I was looking, almost all the while, to see where the sheepgate was, through which the lambs for sacrifice were brought: and the watergate, through which the priest went down to the spring of Siloam for water for the ritual purification. I saw where the Temple itself must have stood, and planned how far the outer courts extended,—the Court of the Women, the Treasury, where the chest stood on the right of the entrance, and the right hand might give without the left hand knowing, and the place where the scribes sat to teach, and where Christ so taught in their jealous presence as to make converts of those who were sent to apprehend him. I saw whereabouts the altar must have stood, and where arose, night and morning, for long centuries the smoke of the sacrifices. I could see the lavishing of Solomon's wealth upon the edifice, and the fall of its pomp under invaders who worshipped the sun; and the rebuilding in the days of Nehemiah, when the citizens worked at the walls with arms in their girdles; and in the full glory and security (as most of the Jews thought, of their Temple while they paid tribute to the Romans. O! the proud Mohammedans before my eyes were very like the proud Jews, who mocked at the idea that their

Temple should be thrown down. I saw now the area where they stood in their pride, and where before a generation had passed away, no stone was left upon another, and the plow was brought to tear up the last remains of the foundations.—Having witnessed this heart-rending sight, the Jews were banished from the city, and were not even permitted to see their Zion from afar off.—In the age of Constantine, they were allowed to approach so as to see the city from the surrounding hills—a mournful liberty, like that of an exile being permitted to see his native shores from the sea, but never to land. At length, the Jews were allowed to purchase of the Roman soldiers the leave to enter once a year,—on the day when the city fell before Titus.

And what to do? How did they spend that one day of the year? I will tell you; for I saw it—The mournful custom abides till this day.

I have said how proud and prosperous looked the Mosque of Omar, with its marble buildings, its green lawns, and gaily dressed people,—some at prayer under the arcades; female devotees in white sitting on the grass, and merry children running on the slopes,—all these ready and eager to stone to death on the instant, any Christian or Jew who should dare to set his foot within the walls. This is what we saw within. Next we went round the outside till we came by a narrow, crooked passage, to a desolate spot, occupied by desolate people. Under a high, and very ancient wall was a dusty narrow space, inclosed on the other side by the backs of modern dwellings, if I remember right. This ancient wall is the only part remaining of the old Temple wall; and here the Jews come every Friday, to their place of Wailing, as it is called, to mourn over the fall of their Temple, and pray for its restoration. What a contrast did these people present to the proud Mohammedans within! The women were seated in the dust—some wailing aloud, some repeating prayers with moving lips, and others reading them from books on their knees. A few children were at play on the ground; and some aged men sat silent, their heads drooped on their breast. Several younger men were leaning against the wall,—pressing their foreheads against the stones, and resting their books on their clasped hands in the crevices. With some, this wailing is no form: for I saw tears on their cheeks. I longed to know if any had hope in their hearts, that they or their children of any generation should pass that wall, and should help to swell the cry 'Lift up your heads, O, ye gates, that the King of Glory may come in!' If they have any such hope, it may give some sweetness to their rite of humiliation. We had no such hope for them;—and it was with unspeakable sadness that I, for one, turned away from the thought of the pride and tyranny within those walls, and the desolation without, carrying with me a deep-felt lesson on the strength of human faith, and then the weakness of the tie of brotherhood.

Alas! all seem weak alike. Look at the three great places of prayer in the Holy City! Here are the Mohammedans eager to kill any Jew or Christian who may enter the Mosque of Omar. There are the Christians ready to kill any Mohammedan or Jew who may enter the Holy Sepulture. And here are the Jews pleading against their enemies,—'Remember, O Lord, the children of Edom in the day of Jerusalem, who said, raze it, raze it, even to the foundation thereof. O, daughter of Babylon that art to be destroyed, happy shall he be that rewardeth thee as thou hath served us. Happy shall he be that taketh and dasheth the little ones against the stones!' Such are the things done and said in the name of Religion!—*People's Journal.*

From the N. Y. Commercial Advertiser, Oct. 12.

TEXAS ITEMS.—We have the Galveston *News* of Sept. 18 and 25, and the Houston *Telegraph* of Sept. 13 and 23.

One of the foremost things occupying the attention of the Galvestonians was the body of a whale, which had been somehow crippled at sea, and was afterward thrown, still living, upon the beach at Bolivar Point, where it was killed and cut up for oil. The writer who first mentioned it, in the *News* of the 18th, described it as about seventy feet long, but the editor "could not give it up so," and in his paper of the 25th declared the length of the animal to be eighty feet. The carcase would have yielded three hundred barrels of oil if properly managed, but for want of utensils very little was saved.

A fatal accident occurred at Galveston on the 17th, while some men were firing an 18 pounder at an ordnance depot. The men appointed to sponge the gun, after a discharge, did not understand the business and rammed down the charge without sponging; it exploded and blew them to pieces. Capt. Payn, who was at the vent, had his hands so shattered that the thumb of one and the middle finger of the other had to be cut off. He was badly hurt also in the face. The two men killed were Germans, Sebastian Finck and Frederick Wallsmith. One of them left seven motherless children, the other a wife and two children.

The *News* of Sept. 25 gives the following, from Corpus Christi:

Some time ago a young man 18 or 19 years of age, named Morris, from New York, was sent up from Brazos St. Iago to Corpus Christi for trial, on the charge of murder. At the last District Court the jury found him guilty only of manslaughter, on which, of course, the Court allowed him bail. Subsequently he became acquainted with a gentleman from New Orleans, and on an occasion of some difficulty between them, Morris offered a challenge to fight with pistols, which the New Orleans gentleman declined accepting.—Whereupon Morris took an opportunity and shot him through the heart; declaring at the same time that if he was not confined he should kill some one else. He was accordingly placed in irons. In the meantime two other men who had been sent up from Brazos St. Iago for trial, also for murder, were in confinement with Morris.—Soon after all three succeeded in making their escape: but they had not been gone long before Morris was apprehended in the chappural, nearly famished with hunger, and again secured. But such was the hardened character of Morris, some of the citizens being apprehensive of another escape, and other murders, despatched him by a summary process from Judge Lynch a few days ago. Meantime the two other prisoners have voluntarily come in and surrendered, and are now in confinement.

We learn from a gentleman who lately arrived from Bexar, that a large number of Mexican families have removed from the Rio Grande to that town, and others are expected to follow them this season. These families, however, possess little property, and appear to have removed from Mexico to avoid the oppressive exactions of the numerous guerrilla parties that now infest all the Eastern States of New Mexico. According to their representations, the people in the valley of the Rio Grande are in a deplorable condition. Unprotected in any manner by their own government, almost without laws or officers who are empowered to restrain marauding bands of their own countrymen, or to check the incursions of the savages, they are unable to enjoy the least security of person and property.

We are happy to learn that these families have been treated with kindness, and express much satisfaction that they have at last found a home where they can enjoy security and peace. We learn that Bexar is not the only town that has been benefited by the emigration from Mexico. Laredo, which has enjoyed comparative security since the ranging company of Gen. Lamar has been stationed there, seems to be slowly recovering its former prosperity. We have been informed that its population is now even greater than that of Bexar, and it is estimated that not less than five thousand souls are now residing in the town and the neighboring settlements. The number of Mexican votes that will be polled in Western Texas, at the election in November next, is estimated at about three thousand.

Mexican Sheep.—Several thousand head of sheep have lately been driven from the Rio Grande to our settlements on the San Antonio and Guadaloupe.—These sheep we learn are purchased on the Rio Grand for three or four bits a head, and the expense of driving them to our Western frontier is comparatively trifling. We have before mentioned that the raising of sheep has become one of the most lucrative branches of agriculture in that section. The sheep feed upon the prairie grass throughout the year, and require little more care than the wild deer. Their fleeces are not so large as those of the sheep of Ohio and Kentucky, and the wool generally is coarser.

We have received a letter from a gentleman residing in Navarro county, which mentions that an unusually large number of Indians have appeared in that section. They all profess to be friendly, and have in no instance attempted to molest the settlers; but the writer thinks the appearance of so large a number of Indians is an unfavorable indication, and he is apprehensive that they may become hostile when they ascertain the weakness of the settlements on that frontier. It is believed that many of these Indians have removed from Arkansas and intend to settle in the territory between the Trinity and Brazos.

From the same of the 23d.

Gold Mine.—The report that a gold mine had been discovered near Crockett, in Houston Co., is in all probability a hoax, circulated by interested persons to sell their lands at a high price. We have seen several gentlemen from that section, and they place no credit in the report.

We learn from a gentleman who has lately visited Torrey's trading house, that Major Neighbors and twenty rangers have gone into the Camanche country, to induce the principal chiefs to attend the council that is to be held at the trading house at the new moon. Mopechuca and Payayuca are, it is feared, still dissatisfied, but are opposed to hostilities. They have become alarmed to find that the rangers have been stationed almost directly in their hunting grounds, and they fear that the government is about to punish them for the outrages that have been committed, as they say, by the Waccos and Wichitas. The report that the Lipans have become hostile is not yet fully confirmed.

Upper Colorado—We have recently received a letter from a gentleman who accompanied a party of surveyors on an excursion to the Concho and Upper Colorado. We learn that the lands in that section are much less valuable for tillage than they have been represented by most persons who have explored it. The country is subject to severe droughts. The timber is generally of very small size and the grass is often completely parched up by the summer heat, with the exception of the narrow belts of land skirting the streams. They were told by the Indians that no rain had fallen there for twelve months.

Toward the sources of the Colorado and Concho the valleys are watered by the streams which burst out of the sides of the mountains, and they are remarkably fertile and beautiful. The Camanche chief Santa Anna treated Capt. Hudson and his party with great kindness. He informed him that the wild tribes from the Northern prairies were coming down to the Colorado to hold a grand council, and that they would certainly attack the surveyors unless they returned immediately to the settlements. He also sent runners to each of the other parties of surveyors to warn them of their danger. A grand council was held by the Indians soon after, and it was with great difficulty that Santa Anna could pacify the Northern bands and induce them to continue at peace with the whites. The war party was overruled in the council by a very small majority; and there is reason to fear that a new outbreak will occur if any surveyors should attempt to visit the Indian country at present.

Corpus Christi.—We learn from a gentleman who lately arrived from Corpus Christi, that the business of that place is almost entirely destroyed. Scarcely any traders have visited it for several months. Only ten or a dozen families remain in the place, and if it were not the county seat of Nueces county, it would probably be entirely abandoned. The trade has all been diverted to the settlements on the Rio Grande, and the Mexican traders prefer to purchase at those settlements, rather than venture across the open country between the river and Corpus Christi.—Hostile Indians and thieving Mexicans are almost constantly lying in wait on the Sel Colorado, and other streams, to intercept the traders.

Iron Mountain of Texas.—We have been informed by an intelligent gentleman who resides in Fredericksburg, that the surveyors who have been engaged in running the boundary line of the German colony have discovered a mountain near the Conchos river that consists entirely of iron ore. A portion of this iron has been smelted and yielded seventy per cent. of pure iron. According to the representation of those who have visited this mountain, it resembles the celebrated iron mountain of Missouri. It is not so large as the mountain in Missouri, being only four or five hundred feet high and probably half a mile in circumference. We are informed, however, that a range of hills extends several miles north of it, that appear to be composed almost entirely of iron ore. Within a tract of country fifty miles long by twenty broad, extending from the east bank of the Colorado northward toward the Brazos, there is probably sufficient iron to supply all the foundries in the world for the next century.—Owing, however, to the scarcity of fuel, this ore, except in the immediate vicinity of the Colorado and its tributaries, will probably remain for many years, perhaps for centuries, as valueless as the sandhills of the desert.

New Steamer.—A new Steamer of about 600 tons, called the *G. P. Griffith*, is now receiving her engine at the Cuyahoga Steam Furnace.—She has lately changed hands and is now owned by the gentleman whose name she bears. She will be out in a few days, when a more extended notice will be given.—*Cleve. Plain Dealer.*

A Horrible Sight.—A man by the name of Ansel McDonald, confined in the jail of this county, under the influence of delirium tremens, dug both his eyes out on Tuesday last! He presented a horrible spectacle to the beholder.—*—Onondaga Stand.*

Indian Council of the Six Nations, at Tonawanda.

From the Batavia Spirit of the Times.

For the following sketch of the recent Council of the Six Nations, held at Tonawanda, we are indebted to Ha-sa-no-an-da, (Mr. Ely S. Parke,) a native Indian of Tonawanda, who prepared it at our request. It may perhaps interest some of our "white" readers to know that the article is set up from Mr. Parker's own very neat and legible manuscript, without the alteration of a comma, capital letter, or word. It is quite seldom that an article sent us for publication is written and punctuated with so much accuracy.—Eds. Times.

On the 4th, 5th, 6th, and 7th inst, a Grand Council of the Six Nations of New York was held at Tonawanda, for the purpose of hearing again their religious code from Jimmy Johnson, the Grand High Priest of the Iroquois Confederacy.

Nothing was done the first day save the exchange of salutations and congratulations upon their safe meeting around the brand of the Iroquois religious council fire.

The Council was opened the second day by an introductory speech from an Onondaga Sachem. He spoke of the goodness of Providence in preserving the lives of so many to meet again around the sacred flame of their religion. He exhorted the people to good order and close attention to whatever might be said. And according to the custom of the Indians he returned to Jimmy Johnson the belt of wampum that had led him and others to seek the smoke of the Council fire, and in behalf of the Council he returned thanks to the Great Spirit and his servant from whom they that day expected to hear the will of the Creator to his red children.

The last speaker having resumed his seat Jimmy Johnson arose from the midst of his counsellors, and briefly returned his thanks to the people for their attendance, and prayed their requests to the Great Spirit that he might faithfully perform his duty. He gave the history of their religion in a few words. It seems that about 48 years ago, the Great Spirit looked down from heaven upon the sufferings of his red children below. He saw that they had greatly decreased and were grossly degenerating into the manner and customs of the pale faces, who were settling around them in great numbers. He saw the ravages of the fire water of the white man among them.

Though much decreased in numbers they had multiplied exceedingly in their sins. He then resolved to raise from among the Indians a preacher through whom he should communicate his will to his red children. He accordingly endowed a man with divine wisdom, and to whom the Great Spirit had at different times revealed his will, who preached to the Indians for 16 years, after which he died, or as Johnson says, when he was called from his labors to enjoy eternal happiness with the Great Spirit in heaven above.

For two days did the Council listen to the wise sayings of this man, repeated to them from the memory of Johnson. The doctrine laid down was not much adverse to universalism, although the preacher rejected, *in toto*, the idea of the Indians being saved by means of the sufferings and death of the Savior, yet he desired the Indians to understand that finally they would all enjoy happiness with their God, except a few who were doomed by their uncharitable and sacrilegious conduct to eternal punishment.

One peculiar idea was presented in his discourse which I will note: the idea was, that the souls of white people, dying, never passed from earth, but were continually wandering up and down to and fro in the earth, until the end of the world, when the Son of God should award them such judgment as their conduct on earth deserved. Of all the whites, however, Gen. Washington had been peculiarly gifted, (the idea was doubtless suggested from the fact, that the memory of George Washington, is held with great reverence among the Indians,) for on account of his humane and generous policy to the Indian race, the Great Spirit had assigned him a place in the Indian's heaven.

On the second, third and fourth days the grand religious, with some other dances, were performed. The grand religious dance was a magnificent display of Indian agility and strength. It was performed in Indian costume, by about 30 warriors, selected from the Onondaga and Seneca Nations. A spirit of rivalry seemed to exist between the two parties, for each exerted themselves to the utmost to excel the other.

Upon the fourth day many pathetic and eloquent speeches were made by various Sachems of the Confederacy in regard to the perpetuity and purity of their religion. But they dreaded the future, the fact staring them in the face that some portion of the whites had determined to rob them of the last heritage left them by their fathers, and to drive them unwilling from their homes, their council fires and the graves of their fathers, to a western wilderness, where naught to them was, save misery and death. They prayed by all that was sacred to them in the memory of their fathers and the justice and mercy of the Great Spirit, that it might not be permitted to them to accomplish their destructive designs. They resolved, Providence permitting, to meet again around the Council fire, always kept burning at Tonawanda, next year.

At this Council, William Parker, of the Seneca Nation and Turtle tribe, was installed, according to the Indian custom, a war or military chief.

No strong or spirituous liquors were allowed to be sold, during the Council, by any Indian to another.

After the Council was a grand Indian ball play. It was not one nation against another, but a mere trial, to see how far one nation would be warranted in challenging another.

Such is a condensed report of the Indian Council held at Tonawanda; and heaven only knows whether the place where the chiefs and wise men of the Six Nations have so often met to counsel, will continue to be preserved to them, or whether that, to them sacred ground, is to be desecrated by land speculators.

HA-SA-NO-AN-DA.

Fortune's Frolics.—We notice, in the correspondence of the *National Intelligencer*, the following account of a singular freak of fortune which recently came to the knowledge of the writer, and which has more the appearance of being "founded" than most narratives of that sort that find their way into the newspapers:

I heard of rather a striking case a few days since, which shows the strength of nerve needed by a man who is known to have the ability, and suspected to have the disposition, to be a "Mæcenas in the 19th century." An adventurer, portionless, though belonging to a wealthy family, emigrated in his youth from Newcastle, England, to Vermont, or the northeastern part of N. Y[illegible], and passed his life for years in that region as a hard-working farmer.

At length, one bright morning in October, arrives a spruce young gentleman from the city of New York to inform Mr. Nators, or Naturs, or something like it, (for that was the name,) that he was the heir of a fortune of five hundred thousand pounds sterling. Not your "great Jeu-

nings property," nor your "great Chase property," nor any other moonshine of that sort, but *bona fide* pounds, shillings and pence, coal mines, farms, and three per cent. consols to the tune of £500,000. The worthy man at first supposed the good news to be a practical joke, and would give it no heed—was rather annoyed at being trifled with, but slept upon it for a night, and concluded the next morning to pocket the affront and the legacy. He went down to New York, and received undoubted proofs of his good fortune, in the shape of various authentic documents from England, and he now began to show by numerous acts of beneficence to those around him, that the bounty of Providence had fallen into liberal hands. The news of his wealth and generosity spread together, and the world of beggars, high and low, were in commotion. Individuals, institutions and societies—(whether colleges and universities were among them, I do not say,)—committees of every name and for every object, benevolent, literary, educational, moral, patriotic, electioneering, deputed and volunteer; every person and everything that could move and beg was at his door. To use an expressive vulgarism, "it beat all natur;" it certainly beat poor Mr. Nature, and drove him out of the country. He changed his name, took the first packet for Europe, bought an old castle in Switzerland, and placed a moat and draw-bridge, and walls eleven feet thick, between himself and his sturdy persecuters.

Singular Occurrence.—On Sunday evening last a very large audience attended the North Pearl street Baptist Church, attracted in part by the fame and eloquence of the pastor, Dr. Welch, and partly, we doubt not, in consequence of the announcement made from the pulpit in the morning, that the rite of marriage would be solemnized at the close of the service.

The theme of the Rev. Doctor was the power and goodness of God, chosen as the basis for an appeal to the Christian charities and warm sympathies of his people, in behalf of the needy widow and children of the late sexton of the North Pearl street Church, G. S. Morton, who, though a colored man, was noted for his estimable Christian character, habits of industry, strict integrity, and learning and intelligence beyond the great majority of his class and complexion. The discourse was characterized by all the high and admired qualities which have placed Dr. Welch in the front rank of pulpit orators and extemporaneous preachers, and the appeal was not made in vain. In the midst of one of his happiest illustrations, and with voice and gesture admirably suited to the sentiment, he looked out upon the audience and exclaimed—"*The Spirit and the Bride say,* Come!"

The wedding party, having been notified of the time fixed upon for the performance of the nuptial ceremony, had stationed themselves at the foot of the stairway, in readiness for the signal, which was to be communicated by the sexton. The latter, when he heard the exclamation, "The Spirit and the Bride say, Come!" and saw the gesture, verily believed the time for the marriage had arrived, and immediately beckoned the party to approach. They promptly obeyed the summons, and bride and bride-groom, bride's-maid and groom's-man, marched solemnly up the broad aisle to the pulpit! The Doctor was in the midst of his discourse. The whole audience saw the awkwardness of the occurrence, many understood the true cause of the mistake, and all looked to see the preacher embarrassed and the nuptial party placed in a painful predicament. But in this they were disappointed. Closing the sentence thus curiously interrupted, Dr. Welch calmly stepped down from the pulpit, and almost before the echo of his voice in the utterance of his discourse had died away, he was heard addressing the candidates for marriage in a manner most appropriate to the occasion, and in the beautiful style and fervid eloquence for which he is so celebrated. The ceremony over, the wedding party retired, and the preacher, as little disconcerted as if nothing unusual had occurred, reascended into the desk, and taking up his subject at the precise point where he had left it, (though he uses no written notes,) proceeded to finish his sermon. So admirably was the awkward incident managed, that we doubt whether the party occasioning it ever suspected anything wrong.—*Albany Express.*

M. Bonpland.—This gentleman, the celebrated travelling companion of Humboldt, who has been recently numbered among the dead by several journals, is full of life and health. Having been detained for nine years in Paraguay by Francia, he obtained, towards the year 1830, the permission to leave that unlucky country, where he had had the impudence to engage himself without authority. He was detained eighteen months longer on the frontier, and when at length he recovered his liberty, he fixed himself opposite Corrientes, near the confines of Paraguay, where he is at the present time. He lived for seventeen years at San Borja, Uraguay, in the old Brazilian Mission establishment. He has solid interest there. He owns lands, and the seventy-five years that have passed over him make him more sedentary, and take from him almost all idea of returning. Travellers recently arrived from Paraguay by way of Brazil, one among others who passed several months with him, have not been able to induce him to come back. He thinks, however, he told them, of making a voyage to Montevideo when the river navigation becomes more practicable, but we cannot hope to see him for a long time. This information was furnished by M. de Mersay, who has returned from Paraguay, which he entered without difficulty, at the very time when M. de Castelnau was refused permission to penetrate to the head of his scientific mission. He finished at la Plata a voyage of discovery on which he was sent by M. de Villemain, and will soon arrive in France.

Learned Wood Sawyer.—We have in this city a German, about 30 years of age, who was educated in one of the German universities. He is an excellent Latinist, a good Greek and Hebrew scholar, and speaks and writes French, Spanish, German and English, and is an excellent mathematician. With all these accomplishments, he is compelled, for want of better employment, to saw wood for a living.—*Detroit Journal.*

The Potato Rot.—The loss occasioned by the mysterious disease in potatoes threatens to be even more severe this season than last. A friend in Maine, who sent his whole crop, valued at a thousand dollars, to this city, will have it all returned upon his hands: as the infection has developed itself in every barrel. Cannot our men of science assign some cause and remedy for this wide-spread calamity.—*Boston Trans.*

Punch says: It may be proper to state, that the distinguished person known among the ancients by the name of *Cupid*, has recently changed his name to *Cupidity*, and will hereafter devote his attention to matters of money, as well as love affairs.

The Victim of Consumption.

SUGGESTED BY THE DEATH OF MISS B.

When evening steals out from afar,
And the sun is approaching his rest,
New glory is shed from his car,
To beam o'er the brow of the west;
And thus at her life's sunny close,
Strange loveliness lighted her path;
Like the glory of sunset it rose,
Who thought it the herald of death!

Her eye beamed a tremulous light,
Her cheek wore a roseate glow,
'Twas strange with a sickle so bright,
That Death should have stricken the blow;
For false was that glow of the cheek,
And false was that light of the eye,
Her heart-strings but trembled to break!
Each pulse only quivered to die!

The smile of the spring-time was round,
"The sigh of the turtle was heard,"
And the rivulet's murmuring sound,
Was blent with the song of the bird:
Around did the flowerets wave,
As though they were spirits of love,
As the maiden was laid in her grave,
While the violets blossomed above.

BUFFALO, Sept. 26, 1847. P. S.

For the Western Literary Messenger.

THE ADAPTATION OF CHRISTIANITY TO THE CULTIVATION AND IMPROVEMENT OF THE MORAL NATURE OF MAN.—This fact is one of the highest proofs of the genuineness of Christianity. That it is a fact, is placed beyond all doubt, when contemplated either in the light of history, or the nature of Christianity itself. The history of its practical influence and results, is the history of the elevation, the reformation, and the increased prosperity and happiness of man. It has been the quickening, purifying leaven, wherever in human society its influence has been felt. Its nature is to bless and save, and its history has been true to that nature. Virtue, peace, and happiness, have ever attended its progress. It has enlightened man in reference to his character, relations, duties, and destiny; and has prepared him to fulfil the high end and purposes of his being. It has restrained him from wrong, quickened him in the pursuance of the right, and implanted the principles of moral purity in his breast. It has tamed the savage, civilized the barbarian, and been the efficient promoter of intelligence and refinement, among the civilized and enlightened. What has abrogated the obscene and cruel rites of idol worship, and snatched the bleeding victim from the altar of human sacrifice? Christianity. What has quenched the funeral pile, and rescued the helpless infant from the jaws of the crocadile? Christianity. What has absolved woman from her abject and cruel slavery to man, and placed her in her true position as a companion, sister, and mother? Christianity. What has abolished infanticide, and driven polygamy from the arrangements of human society—taken from the tyrant his sceptre—destroyed caste—and linked together by the ties of humanity and christian love, those of the most adverse dispositions and habits? Christianity. It has changed man from the beast and savage, into a man and brother. We speak of a pure christianity, and not of the many things which have worn its name, but whose works have proved them false. It is sometimes said that Christianity has been the cause of more bloodshed than any other single cause whatsoever. But this is a mistake. Christianity sheds no blood. Blood has been shed in opposition to it—blood has been shed in its name, but not by it—it was rather for the want of it. Just in proportion as the principles and spirit of Christianity have prevailed, war, bloodshed, and cruelty have ceased; and justice, kindness, and peace occupied their place. What nations have been most happy and prosperous in the past? Where have human rights and social enjoyments been most sacred? Where has there been least of cruelty and wrong? Has it not been where there has been most of Christianity? And what nations are most prosperous and happy now? Are not those where Christianity is most known and its influence most felt? All this is just what might be expected, from the nature of Christianity. It is perfectly adapted to man's condition; it is just what he needs. Its practical influence, is the proof of the perfection of its nature, and of its genuineness and truth.

For the Western Literary Messenger.

Psychology.—The Human Will.

PART SECOND.

4th.—Expressiveness, natural Language, the power to exhibit, through movements of the muscles, the action of the different faculties of the sensibility, etc.; the ability to exhibit our own passions and emotions not only, but to assume, to imitate, to take on, to copy their manifestations in others. This faculty stands directly between and in connection with the faculties of the sensibility, etc., and the muscular apparatus; the excited or spontaneous action of the former is the condition for the functional action of this faculty of the will, in giving the air and manner in walking, the modulation of voice in utterance, the actions and postures of the body and the movements of the eye and countenance. Those in whom this power of voluntary effort is feeble, will fail in giving adequate representation and expression to passion, emotion and sentiment; will be awkward in gait, unnatural in manners, eccentric and unadaptable. They may improve and perfect *it*, by exhibiting (in proper times and places,) every acting faculty by its *natural* muscular movements; by describing, representing, &c. The next most effectual method is to copy, to imitate, the manifestation of moral sentiment, social feeling, etc., as exhibited by the pure, the regenerated around them—not only act the moral virtues themselves, but adopt the *manner* of ac-

ting them which the *best* exhibit; not only should they be *intellectual*, but they should adopt all the valuable adaptations of ways and means to ends practised by the *great* around them; not only should they be original, in regard to the useful which they desire to employ, but they should strive to adapt their own to the inventions and improvements of their neighbors; not only should they strive to be regular in their habits, unexceptionable in their manners, amiable in temper, and incorruptible in morals, but they should aim at the attainment of excellence and perfection in all their *manifestations*, and in order to effect this should copy all matters of taste, in manners, expression, the fine arts and the refinements of sociality, morality and religion, practiced by those most in favor with the Saviour of men.

5th.—Communicativeness, utterance, the power to utter, articulate sounds as signs of thought—This faculty is in direct relation to the Intellectual Faculties and the muscles of the tongue and mouth: the condition whose existence is necessary to its functional action is intellectual action in the service of some one or more of the social faculties; it is used always more or less in functional connection with expressiveness or natural language. It gives the power and freedom, fluency and copiousness of utterance. Those in whom it is feeble will articulate with more or less difficulty, will stammer or stutter, will enunciate more or less inaccurately and indistinctly; that is, will easily forget the series of muscular movements necessary for the production of the sounds, which as signs of the thought formed by the acting intellect are to it related, and if recollecting some of them may forget others and so create the confusion seen in stammering. This will cause the employment of but few of those muscular movements or sounds, that is, words, and those of the most common and familiar, in communicating thoughts and feelings; will cause a "dry, barren, commonplace style," and an inveterate taciturnity. Such ones, if they desire improvement should talk more, give utterance to *more* of their ideas, increase the amount of their social conversation, inquire, answer,, argue reply and answer again. In their communications they should have and deliver a message, give egress to *ideas* and utter them *well;* in their efforts of utterance finish out completely their communications without interruption in reference to time or matter or manner, and in return give the same privilege to their companions; should keep up epistolary correspondence with friends, relations and acquaintances; put down on paper in good language their own observations and reflections on important subjects; take notes of sermons, discourses, debates and speeches; commit to memory; be careful to enunciate, distinctly and correctly; and lastly learn by the ear modern language.

6th.—Creativeness, power to make, to construct, to invest with new characters, to employ and apply the laws of quantity, extension, magnitude, solidity and motion in the service of the useful and beautiful. This voluntary power gives skill, art, dexterity, handicraft, and manufactures. It requires intellectual as the condition for its own functional action; stands between and in immediate connection with the muscles of the upper extremities and the intellectual faculties, acting in the service of the *love* of the useful, for the gratification of the personal or social feelings or both, or in the service of the beautiful for that of the moral faculties. Those in whom it is feeble will have little ability to contrive, construct and repair; will take very little pleasure in the effects produced by mechanical principles; will perform clumsily all manual operations; display little ingenuity; will be poor penmen, draughtsmen, and mechanics. Its improvement lies in its exercise; such men should work at manual operations, should practice writing and drawing together; should plan, model, invent, mould, and repair as opportunity in the exercise of their callings will allow; and aim at and strive for perfection in whatever they may attempt with the hands; should cultivate delight in examining mechanical principles and their practical applications; and endeavor to obtain the *practical idea* in all constructions.

7th.—Repressiveness, self restraint, the power to withhold the open manifestation of the thoughts and feelings, through expressiveness and communicativeness; to suppress the premature, excessive, or entire functional action of thoroughness and strenuousness; to control the application of attentiveness and creativeness. It stands, in the class of the souls voluntary faculties, between attentiveness, creativeness, communicativeness, expressiveness, strenuousness, and thoroughness on the one side, and decisiveness on the other; in connection with and between the social and lower faculties of the sensibilities, below the moral feelings, above in logical relation, *prior* to the observing department and in chronological relation, *prior* to the reflective department of the intellectual faculties; attentive observation in the service of the *sense* of the safe, is the condition for its functional action, which again is the condition for the functional action of the reasoning faculties. In these connections its function gives self government and prudence. When it is feeble its possessor will be blunt, hasty, precipitate, impetuous, open-hearted, undisguised, unsuspicious, undeceptive, communicative, impolitic, unable to keep dark when he ought not to reveal; liable to commit himself, to imposition, and unable to penetrate the intentions, secrets, plots, and stratagems of others. To improve this power—1st, restrain the manifestion of anger and revenge; 2d, withhold the exhibition of feeling, until by moral reflection, its expression is seen to be proper; 3rd, be not loquacious, communicate neither plans or opinions until *wisdom* allows an affirmative decision; 4th, withdraw the attention from the passions and their objects, and direct it to the subjects of the reasoning faculties, while in the service of

the moral and religious sentiments whenever occasion permits; 5th, cultivate policy, finesse and management as much as possible in business affairs; 6th, reflect, deliberate, acquire the habit of circumspection and attentive consideration.

8th.—Decisiveness, fixed purpose of acting according to rule, persistance in design, unalterable continuance in progress, unvaried conduct in pursuits, immutability of character. This, the supreme faculty of the will, requires as the condition to functional action, that of the reasoning faculties in the service of the moral sentiments, especially those of *merit* and *justice;* —stands between the Deity above and the other voluntary powers below, between the religious on the one side and the moral, social and personal departments of the faculties of the sensibility on the other, and between inspiration and intellectual function. It gives to the functions of the moral faculties, their necessary quality of perpetuity, and in so doing makes *moral character.* The functions of the moral faculties, as moral principles, are recognized as virtues only through the function of this faculty of the will. Those in whom it is feeble are fickle, unstable, irresolute, not to be trusted, nor relied on, can in life accomplish very little, and the very creatures and sport of circumstances. To such persons the improvement of this power is of the utmost importance. In order to do this they should, 1st, carefully avoid commencing any thing for the execution and accomplishment of which their strength and capacity are not fully competent; and, whatever is thus judiciously commenced, never *leave* unfinished. 2d, allow no obstacles to turn from a course once determined on; 3d, permit no persuasion or influence to overcome moral judgment; 4th, never yield when right, but, be firm and steady in adherance to right resolutions; resist to the death all temptations to break moral decisions, or principles, and hold out to the end; 5th, cultivate patience in waiting for the results of acting causes, of efforts put forth, of purposes vigorously commenced and zealously continued; that is, lay systematic courses of action, or plans for the future requiring length of time for their accomplishment, pursuing them meanwhile with that perseverance, prudence, attention, zeal and energy which will effectually repel compulsion and triumphantly overcome impossibilities.

Chinese Agriculture.

At the present moment, when the most heart-rending scenes of human misery are occurring in Europe, in consequence of famine, it cannot be uninteresting to turn for a moment to the subject of Chinese Agriculture. Every one is familiar with the story, that from the remotest antiquity, once in each year, the Sovereign of that Empire descends from his throne to hold the plow, whilst the Empress plies the loom. This lesson of industry is not without political object, and, in a nation ruled by patriarchal sway, may have been quite as "protective a policy" as any tariff that the ingenuity of economists could devise. China proper contains about 830,716,360 English acres of ground, and, it is supposed, that one half of the land is capable of cultivation, whilst each acre can sustain an individual. If such be the facts, we find that there is arable land in the Empire sufficient to sustain 415,000,000 inhabitants, and that the census of 1812, by making the number 361,279,896, brought it within about 54,000,000 of its utmost capacity of internal production.

The paternal government has, therefore, with a provident foresight, always maintained storehouses and depots, whilst it taught the people the necessity of careful and economical cultivation. By dressing chiefly in cotton and silk, and importing the few furs and woollens they consume, a large part of the empire is saved the waste of *grazing*, especially as their chief animal food is pork. The Chinese laborer would consider *meadows* of every kind as land in a state of nature and utterly useless. *Their great crops, therefore, are grain.* For rice, the great staff of Indian life, every thing else is sacrificed. They allege that a field of grain will yield as much straw for the nourishment of cattle as it would have produced hay, besides taking into account the advantage of the cereal product for the sustenance of man, of which they can spare a small portion in plentiful seasons, to nourish such beasts of burthen as are absolutely required on their farms.

It is said, upon good authority, that a Chinese agriculturist would smile if it were intimated that the soils had need of rest occasionally, and would be destroyed unless permitted to lie fallow for a season, or were employed in cultures designed only for manures. The result is, that China is wrought like a garden, and that no offal is lost that can contribute to the minutest improvement of the earth. The Chinese soils, in general, are not superior to those of Europe, and all the farms, even in the northern provinces, yield annually two crops; whilst it is asserted that those in the south often produce *five in the course of two years*, without having been permitted to lie fallow for a single season during the thousands they have been devoted to the purposes of agriculture. The whole country is irrigated with the greatest care. A network of canals laces the empire, diffusing water throughout the whole country, as in the trenches of a garden; and as all the immense transportation of the nation is conducted on them by the sail and oar alone, the innumerable beasts of burden that consume the products of the earth in other countries, are dispensed with in China.

The Chinese do not lose an inch of available ground. The rocky hills which in Europe are converted into vineyards, are by their industry, made productive of *grain.* Pleasure grounds of great extent; parks for the maintenance of deer alone, and waste land devoted to the sports of a dissipated court or nobility, have no existence in the Empire. The small gardens surrounding their country retreats, diversified by useful and beautiful cultures, are the only luxuries of this sort permitted by the national spirit of economy; yet, by delightful situations, judiciously improved, and by picturesque scenery, they endeavor to compensate, in miniature, for those vast domains, which, in other countries, are at once the objects of an aristocracy's pride, and the causes of a people's poverty.—*Southern Quarterly Review.*

Cochin-Chinese Boats.—"After the engagements which took place against the Cochin-Chinese, the sailors of the 'Victorieuse' perceived several small boats floating about. They were picked up; and found to be formed of thin sheets of copper, without any wood in their construction. They are to be sent home, and placed in the Naval Museum."—*French Paper.*

J. CLEMENT, EDITOR.

PROGRESS: A SATIRICAL POEM, by J. G. SAXE: New York: John Allen, 139, Nassau Street. 1846.

This poem has been published nearly a year. We have before referred to it, and given extracts which were floating through the channel of the newspaper press. For months we have longed for a copy of it; but not till a few weeks since, did the golden rivulet of wit and humor meet our thirsty lips. Having thoroughly tested its virtues, we can assure the reader that it is like "stolen waters"—sweet.

Progress "was written at the instigation of the Associated Alumni of Middlebury College, and spoken before that Society, July 22, 1846." The learned body who listened to its recital are to be envied. So witty a poem coming fresh from the lips of its author, and being pronounced in Mr. SAXE's peculiarly grave style of delivery, must have excited the risibility of a Puritan bishop. With what a zest must have been received the following lines, which portray some of the "Protean phases" of capricious FASHION, and which were pronounced with the solemnity of a funeral sermon:

"To-day, she slowly drags a cumbrous trail,
And 'Ton' rejoices in its length of tail;
To-morrow, changing the capricious sport,
She trims her flounces just as much too short;
To-day, right jauntingly, a hat she wears
That scarce affords a shelter to her ears;
To-morrow, happy searching long in vain,
You spy her features down a Leghorn lane;
To-day, she glides along with queenly grace,
To-morrow, ambles in a mincing pace;
To-day, erect, she loves a martial air,
And envious train-bands emulate the fair;
To-morrow, changing, as her whim may serve,
'She stoops to conquer' in a 'Grecian curve!'
To-day, with careful negligence arrayed
In scanty folds of woven zephyrs made,
She moves, like Dian in her woody bowers,
Or Flora, floating o'er a bed of flowers;
To-morrow, laden with a motley freight
Of startling bulk and formidable weight,
She waddles forth, ambitious to amaze
The vulgar crowd, who giggle as they gaze."

Scarcely less racy than the above, is the following capital hit on the most fashionable kind of ladies' schools:

"Where Education, in its highest sense,
Gives place to Learning's shallowest pretence;
Where hapless maids, in spite of wish or taste,
On vain 'accomplishments' their moments waste;
By cruel parents here condemned to wrench
Their tender throats in mispronouncing French;
Here doomed to force, by unrelenting knocks,
Reluctant music from a tortured box;
Here taught, in inky shades and rigid lines
To perpetrate equivocal 'designs;'
'Drawings' that prove their title plainly true,
By showing nature 'drawn' and 'quartered' too."

Here is a happy and very direct thrust at transcendentalism and modern Orphic poetry:

"Room for the sages!—hither comes a throng
Of blooming Platos trippingly along.
In dress how fitted to beguile the fair!
What intellectual, stately heads—of hair!
Hark to the Oracle!—to Wisdom's tone
Breathed in a fragrant zephyr of Cologne.
That boy in gloves, the leader of the van,
Talks of the 'outer' and the 'inner man;'
And knits his girlish brow in stout resolve
Some mountain sized 'idea' to 'evolve.'
Delusive toil!—thus in their infant days,
When children mimic manly deeds in plays;
Long will they sit and eager 'bob for whale,'
Within the ocean of a water pail!
The next, whose looks unluckily reveal
The ears portentous that his locks conceal,
Prates of the 'orbs' with such a knowing frown,
You deem he puffs some lithographic town
In western wilds, where yet unbroken ranks
Of thrifty leaves build enchanted banks;
And prowling panthers occupy the lots
Adorned with churches on the paper plots!
But ah! what suff'ring harp is this we hear:
What jarring sounds invade the wounded ear?
Who o'er the lyre a hand spasmodic flings,
And grinds harsh discord from the tortured strings?
The sacred muses, at the sound dismayed,
Retreat disordered to their native shade,
And Phœbus hastens to his high abode,
And Orpheus frowns to hear an 'Orphic ode!'"

The reader will perceive, that although Progress is a satirical poem, the writer preserves his wonted good humor. On this point, he says that his muse

"Strove to be just in each satiric word,
To doubtful wit, undoubted truth preferred,
To please and profit equally has aimed,
Nor been ill-natured even when she blamed."

And she *has* accomplished her end; for the poem will both "please and profit" all who read it.

THE PUBLIC FAREWELL OF THE MISSIONARIES.—This took place last Sabbath evening in the Cottage Baptist Church of this city. It was a deeply interesting and solemn occasion. The opening prayer was made by the pastor; afterwards a hymn was sung, which was followed by a brief and eloquent discourse on "The right which christians had to expect that all nations would have the gospel preached to them." Mr. Stoddard then rose and made a few remarks on the origin and progress of the Burman mission, the present condition of Assam, to which place he is under appointment, his own feelings in sundering the ties that bound him to friends and country, and closed by an earnest appeal to the impenitent. "Yes my native land I love thee," was then sung, after which Mrs. Stoddard came out before the audience and calmly told her feelings in regard to the trials which the Lord had called her to pass through, thanked the church for their kindness in supplying her temporal necessities, and tenderly bade them farewell, *forever*. Mr. Sheldon then in a touching and affectionate manner, presented in behalf of the church, the *parting hand*. The hymn "Reunion in Heaven" was sung and the services closed.

The article under the head "The adaptation of Christianity to the cultivation and improvement of the Moral Nature of Man," is an extract from one of a series of sermons being delivered Sabbath afternoons by Rev. Mr. Sheldon of the Cottage Church. These discourses are characterized by deep thought, clear and logical reasoning, beauty and appropriateness of language. Mr. S's style as a whole, is chaste and elegant; there is no daubing with foreign material to make it glitter, but the "glorious gospel" is clothed in its primitive simplicity and truthfulness.

NEW PUBLICATIONS.—"*Boys' Autumn Book*," descriptive of the season, scenery, social life and country amusements. By Thomas Miller; embellished with 36 beautiful engravings. An excellent book, got up in Harper's best style, and appropriate to the season.

"*Life of Henry Fourth, King of France and Norma.*" Parts one and two. By G. P. R. James. Mr. James has long been favorably known as one of the most popular novelists of the day, and his French novels particularly have owed much of their reputation to the general historical accuracy obscured in the construction; in selecting the materials for these Mr. James has had an eye to this present work and a cursory examination induces us to believe it interesting and accurate. The work is to be completed in four parts, making two handsome volums.

"*The Wayside Cross, or the Raid of Gomez.*" By Capt. E. A. Millman. This forms No 106 of Harpers' cheap series of novels, and is sold at the low price of one shilling.

"*Pictorial History of England*" No. 30. All the above are Harpers' publications, and for sale by A. BURKE, under the Mansion House, Main Street.

CANAL BUSINESS OF BUFFALO—A NEW ERA.—By the statement in our commercial column, furnished by H. P. THAYER, Esq., Canal Collector, it will be seen that *the Canal tolls already received this season at the office in this city, amount to more than* ONE MILLION OF DOLLARS. The late hour at which the statement was received, precludes any extended comment, but the fact that more than one million of dollars in tolls has been taken at a single office in one season is too imporant to be passed over without remark. It is an era in the history of the canal, and the business of our city. —*Com. Adv.*

☞ The U. S. frigate *Columbia*, Captain ROBERT RITCHIE, bearing the broad pennant of Commodore ROUSSEAU, arrived at Norfolk, Va., last Monday, in 38 day from Rio. The *Columbia* brought as passengers, Hon. HENRY A. WISE, late Minister to the Court of Brazil, and family; ROBERT MOYLAN WALSH, late Secretary of Legation, and Mr. WILLIAM HOLLAND, U. S. Consul's clerk at Rio de Janeiro.

FATAL ACCIDENT ON THE CENTRAL RAILROAD.—We learn through our travelling correspondent, who is now in Michigan, that the train of passenger cars going westward on Thursday afternoon, the 14th inst., ran off the track four miles west of Albion, on the Central Railroad, and killed the engineer, whose name was MYERS.—The locomotive fell down an embankment twelve feet high, and landed bottom side up with the engineer underneath, and so fastened down that immediate extrication was impossible. He was dreadfully bruised, and so scalded in some parts that the flesh came off his limbs. The accident occurred about four o'clock, and was occasioned by a wedge of wood which, it is supposed, had been put on the track designedly. The fireman was also badly, but not dangerously burnt or scalded. No injury was done to the passengers.

☞ A Telegraphic report, published in the New York papers reports that Generals WORTH, PILLOW and SMITH—the first reported wounded and the last killed—are safe, and that WORTH had been appointed by Gen. SCOTT Military Governor of the city of Mexico.

In regard to the report that Gen. REA had captured and taken possession of Puebla, the *Journal of Commerce* says it publishes the report without attaching the least importance to it. No dates nor authorities are given, but we presume it is based upon the silly stories of the Spanish paper, *La Patria*, at New Orleans, as mentioned in the subsequent telegraphic despatch to the Baltimore *Patriot*.

GEN. WOOL'S SWORD.—The Common Council and citizens of Troy, where Gen. WOOL resided for many years, previous to his going to Mexico, are about to present a sword to that most accomplished officer and gallant soldier, in compliment to his personal worth and distinguished military services at the battle of Buena Vista. The *Journal of Commerce* says:

It is a Roman sword, thoroughly classical in style, and surpassingly elegant in workmanship. The mountings—hilt and scabbard—are of gold. The blade is two-edged, broad and straight, about two feet four inches long, and looks as if made to be used by a warrior, rather than to be worn by a carpet knight. The hilt is surmounted with a Roman helmet. On its sides are figures of Hercules and Mars. The wings of the American Eagle are outspread beneath the guard, and on the guard is the following appropriate inscription:

"Presented by the Common Council and Citizens of Troy, N. Y., to their townsman Brigadier General John E. Wool, as a token of their personal esteem, and of their high appreciation of his gallantry and military ability, as displayed on the bloody field of Buena Vista, the 22d and 23d days of February, 1847."

The scabbard is richly engraved with battle scenes, arms and banners, and other suitable devices, and bears the following impressive inscription:

"QUEENSTON, Oct. 13, 1812. PLATTSBURG, Sept. 11, 1814. BUENA VISTA, Feb. 22 and 23, 1847."

The design was furnished by Brown, the sculptor.

JEWISH POETRY.—The first Rabbi of the Synagogue of Rome, M. Moses Israel Kazzan, who has recently entered on his new office, composed on the occasion, a hymn, which is pronounced by connoisseurs a piece of poetry almost worthy to take a place beside the psalms of David. Poetical creations in the sacred language are not at all rare among the Israelites of the present day, but what is especially remarkable in the work of M. Kazzan is the subject, which is the Pope, the civic guard and the present state of affairs in Rome. Some stanzas, expressing a touching gratitude, are consecrated to the head of the Catholic Church, who sees only sons in the children of Israel.—*Translated for the Boston Daily Advertiser.*

The permission granted to the Jews of Rome—a privilege for many years withheld—to a Rabbi, is quoted in many European journals, as one among other proofs of the tolerance of the new Pope. Rabbi Kazzan is one of the most learned Jews of the age. He was born at Jerusalem, and it is said can trace his ancestry back for more than ten centuries through the Levitical line.

A TERRIBLE CALAMITY PROVIDENTIALLY PREVENTED.—As the magnificent steamer *Hibernia*, No. 2, was on her last downward trip from Pittsburg to Cincinnati, fire was discovered in her hold, and upon raising her hatches flames burst out and ascended nearly to the hurricane deck, threatening almost certain destruction. The Cincinnati Commercial says:

'There were three hundred passengers on board, men, women and children, and the alarm is said to have been terrible. The captain, a cool energetic man, set all hands to work to save the boat, and the lives of the passengers, and by scuttling &c., the fire was extinguished.

The fire is said to have originated from the explosion of some chemicals that were in the hold. To the horror of all on board, it was discovered that some half burned casks, marked coffee, contained kegs of gunpowder, surrounded by coffee, and the staves of one powder keg were actually charred! It seems almost a miracle that the boat was not blown to atoms and 300 souls ushered into eternity. One shudders at the very thought of such immiuent peril.

☞ WORSE AND WORSE.—Potatoes are in a worse condition than they were last year. The crop is abundant, but farmers and dealers tell us that it seems impossible to keep them. Buyers purchase rather sparingly from this reason. It may be that those farmers whose potatoes seem likely to keep, are hoarding them up until a high price can be obtained for them. It is certain that those brought into the city soon become unfit for use.

The condition of this crop throughout the British provinces and this country, at least as far South as Georgia, is similar to that prevailing here. We do not observe that in the States west of Ohio and Michigan, the same complaints are made. The malady appeared to travel from the eastward.

CINCINNATI, Oct. 15.

During a violent thunder storm at the city of Nashville, Tenn., on Tuesday evening last, the powder magazine at that place was struck with lightning, causing an awful explosion which shook the city as by an earthquake, and spread dismay, destruction and death on all sides. One hundred houses were destroyed and many lives lost.

Ten dead bodies have already been recovered from beneath the sad ruins. The dwelling of Mr. SHEAVERS was torn to pieces, his family badly injured, and one young lady killed. Buildings owned by the following persons were either entirely destroyed or much damaged:

Mrs. Cleveland, Mrs. Reed, Messrs. Williams, Taylor, Chandler, Banno, Faner, Harris, Moore, Cole, Stout, Stephens, J. L. Smith, Reverend Henry Marsh, C. Glovers and Dearing, including a new Methodist Church.

NEW YORK, Oct. 14—3 P. M.

44 counties heard from in Pennsylvania show a Democratic gain of 8,991 compared with the Governor's vote of 1845. SHUNK will have over 10,000 majority probably.

In Georgia returns have been received from all but 10 counties. TOWNS is elected of course, and the Senate stands 24 Whigs and 21 Democrats.

Five Senetorial Districts to hear from. In the House the Whigs have 62 and the Locos 59, and 9 to hear from.

OHIO.—The Tribune has the following by telegraph:

THE CARS AT INDIANAPOLIS.—On Friday last the first train of Cars entered Indianapolis, and about two thousand visitors had the satisfaction of "riding on a rail" into that flourishing city.—The Indianapolisians and their neighbors, had a tremendous glorification in honor of the important event.

FROM MEXICO.—We have received, this morning, an extra from the office of the New Orleans *Picayune*, issued on Monday, the 4th, (on the arrival of the Alabama,) which ought to have reached us yesterday. We copy from it only the following letter, its other contents having already appeared in our columns:

VERA CRUZ, Sept. 24, 1847.

A detachment returned last night from Gen. Lane's command, which had arrived at the National Bridge without encountering any serious obstacle, although the guerrillas made their appearance on several occasions, in small numbers, without doing any harm to our command.

You will be surprised when I tell you that this detachment was sent back to *obtain ammunition*. It appears that upon the arrival of Gen. Lane's command at the bridge a report was current that Cerro Gordo had been fortified by the guerrillas, and was occupied by them in force. Preparations were made to continue on and attack them, but upon inspection it was found that the men on an average had only about eight cartridges each, and it was impossible to continue with the prospect of fighting over two hundred miles of the way, without powder and shot. A requisition calling for 100,000 rounds has been filled today, and all the spare troops (Louisiana rangers) will go along to escort: but this command only took about six day's provisions, and by the time this ammunition reaches them they must run short at a place where provisions cannot be had except from Jalapa or this city for so large a body of men.

Truly this is a serious affair, and I am sorry to see an officer of Gen. Lane's experience make such a blunder. But the difficulty of transportation from this to the bridge is very great, and I am told that Lieut. Hughes' command have been obliged to live for several days upon half rations of bread; yet his teams have been taken to send down here for this ammunition instead of provis-

ions for his command. Then again, having taken all the mounted volunteers for this escort, it is impossible for the commanding officer of this post to supply them with what they require. Fresh beef can be obtained in abundance, but men cannot live on this alone, particularly as the troops stationed there are not acclimated, and I am also informed on good authority that the yellow fever has made its appearance among them, as well as in Col. Collin's command at the San Juan.

Col. Collin's command, which is stationed at the San Juan bridge, was attacked a few days since by the guerrillas, who killed one private and wounded two others, which shows that notwithstanding the lower part of the road is fully occupied by the Americans, it is occupied by the guerrillas also.

From the Washington Union.

LATEST FROM VERA CRUZ.—We have been favored with extracts of letters received at Washington from officers at Vera Cruz, which we lay before our readers:

"VERA CRUZ, Sept. 25, 1847.

"We are without any news from the army since they went into the city of Mexico, but momentarily expect an express.

"There was a letter received yesterday from Mexico, which stated that Santa Anna was desirous to keep open the negotiations until intelligence could be received from Washington; that the wealthy citizens of Mexico were urging upon him this measure.

"Gen Lane was last at the bridge, and sent back for further supplies.

"Governor Wilson has been sick for the last four days, but is somewhat better this morning. The city has become much more healthy."

Extract of a letter from

"VERA CRUZ, Sept. 26, 1847

"SIR: The Alabama having this moment arrived, the Quartermaster has informed me that she sails immediately back, and only affords me a moment to say that yesterday I saw a letter from a Mexican in Mexico, dated the 18th inst., which stated that Gen. Santa Anna had left the city with 1500 cavalry for Oajaca; that he had delegated his powers as President to Senor Pena y Pena and two of the Judges of the Supreme Court—that is, he had resigned the Presidency, and placed the above named gentlemen in his place to act.

Last evening, however, to our surprise, we heard, by letters from Jalapa, that Santa Anna had reached Puebla with 2000 cavalry, and that Col. Childs, who has command of the forts above the city, had commenced bombarding, and had hove 300 shells into the city. This, sir, is the strange news we received last evening from Jalapa. My own opinion is—and I am not alone—that Gen. Santa Anna is endeavoring to make his way to the seacoast to embark, or was on his way to Oajaca: for with so small a force he could not think to cut off the reinforcements for Gen. Scott.

Strange to say, we are without any letters that can be depended on—nothing from the army or even from foreign houses.

Mexican letters say that the leperos had sacked the city, and that Gen. Scott could not control them; but we cannot believe anything from the Mexican writers.

I think that Pena y Pena and his associates will call Congress together, and will endeavor to open negotiations.

Gen. Lane was at the National Bridge when last heard from, and ought to reach Jalapa on the 1st of next month.

Major Lally, I understand, has been ordered to march up. The city is comparatively healthy. I think there is truth in the first report; the other may be doubtful."

We have been kindly furnished with the following extracts of a letter from an officer of the army in Mexico to his friends in this city, which gives some details that have not heretofore fallen under our notice. The officer belonged to Col. Child's command, and the subject has reference to the march from Jalapa to Puebla:

"Between Jackson and Perote is a famous pass, stronger than Cerro Gordo. We had learned before leaving Jalapa that at the pass of La Hoya we were to be attacked by a force of from 1000 to 1500 men. The road for fifteen miles runs through a valley, or rather up the sides of a mountain, still higher mountains completely commanding it. All these points we were compelled to occupy before we could venture to pass with our 350 wagons. This was immense labor to the men in climbing up the steep and rugged sides; but the result was, that but two shots were fired at us during the day. By night we arrived at the most difficult pass—at a point which the Mexicans commenced fortifying when they left Cerro Gordo, called La Hoya. Our position was in a lovely valley surrounded by mountains.

Those points near enough for musquetry to reach us we occupied, and again encamped in a rain, having been all day accomplishing eight miles. On the morning of the 20th we again commenced sending detachments of troops upon the mountains, and in two miles came to a point where the enemy were strongly posted, and where we could see them in great numbers. We then sent a large detachment to gain their rear and ascend the mountains so as to drive the Mexicans towards the road instead of from it. The enemy on the hill saw that our troops were gaining their rear, started early to cross the road, and place themselves more in our front; in doing so, they fell in with a force sent from Perote, under Col. Wynkoop—they having heard that we were to be attacked.

Hearing this fire in our front, we could not imagine what it meant until we came upon them; the enemy were then running in all directions; we followed them into the hills for two miles, when we found our pursuit a hopeless one, and returned to the road, having killed, during the day, a dozen of them. Capt. Walker, who came with the Perote troops, in charging a picket of the enemy the night before, lost eleven horses—his own fine horse and saddle and his Philadelphia sword.

"A priest of some consideration, who went to Mexico several weeks since, contradicted the report there in circulation that we had desecrated the churches, &c.; stated that, so far from this, Jalapa was never so orderly before—that nothing was taken without being paid for. Santa Anna heard of it and banished him from the city; he arrived here yesterday, and says he was banished for telling the truth.—*Union.*

NARROW ESCAPE.—A man, whose name we did not learn, while passing over the railroad bridge, just above the high falls of the Genesee, on Tuesday evening, fell through an opening, and was carried by the current, which is now very swift, to the very brink of the falls, when fortunately he came in contact with some rocks, which stayed his progress until ropes were thrown him, which he clung to, and was thus saved from an inevitable grave. Persons should beware crossing the bridge on foot, as it is intended only for the cars.—*Roch. D. Adv.*

Correspondence of the N. O. Picayune.

BUENA VISTA, August 26, 1847.

All the Mexican women have fine hair; as for the dressing the least said about it the better—it is always black and very long and thick, and generally speaking, left hanging loose about their shoulders. In riding through the streets I have often seen half a dozen heads thrust out of a door with such dishevelled, wild looking locks, as have forcibly illustrated my ideas of the wierd sisters, who sold Mr. Macbeth so beautifully. Beauty among the women, a due regard for the truth, cool and comfortable as she lies at the well's bottom, compels me to say it is not common, notwithstanding the praises that have been sung of them. If it were not a brutal comparison I would say that you can admire them as you would a horse, and speak of their fine points; they carry themselves well, have a good gait and small feet. Their features partake strongly of the Indian character, particularly among peons or country estates; in towns and cities they lose them in a measure and their complexion becomes lighter. There is one thing about them, however, which none can see without admiring: it is a native politeness and grace that cannot be excelled by all the polished elegancies of modern days. Every little civility is extended with an air that would puzzle a Parisian lady to excel, and a blunder in others is never noticed at all, let it be ever so gross a one. This same ease and politeness extends to the men also; and a rough looking fellow, whom you might fear in the road alone, will offer you a *cigarita* with the air of a courtier, and while you are lighting it from his, raise his hat, and as you return his cigar, thanks you with a bow for your condescension.

The country is infested with vermin—the men are alive with the most repulsive kind, while the heads of the women suffer some, their kindness and assiduity to each other notwithstanding.

In their manner of living, as well as everything else, the Mexicans are away behind the age. Their dwellings are all rude and uncomfortable, from the cane *jacole* on the banks of the Rio Grande to the rude, rough house of *adobes* in the cities. In the poorer houses you see generally one comfortable bed, a pile of skins, a few saddles and bridles, a couple of benches, several cushions of the same material as their blankets, a crock with water, a meagre display of leather breeches, and a beggarly account of other wearing apparel; on the walls a few rough daubs of saints and rude ornaments; upon the ground floor a number of naked children, or sometimes partly clothed, and any quantity of rubbish. You very rarely see a Mexican, either man or woman, sitting upon a chair or bench, even when they have them—a sort of natural propensity inducing them to *squat*, if I may be allowed the use of the word.

THE LARGEST DAY'S WORK YET—BEAT IT WHO CAN.—One of the largest, if not *the* largest, day's work ever done in Rochester, in the way of milling, was performed at the mill of Elisha D. Ely, on St. Paul's street, Wednesday. There was *ground, bolted, packed* and *shipped*, during the day, *seven hundred and eighty-four barrels of flour*. The mill has nine run of stone; and if any establishment of equal capacity can turn out a greater quantity of flour, we would like to have it named. The amount of wheat required was 3,528 bushels; and adding 50 barrels of flour which were ground but not bolted, and it swells the aggregate to 3,755 bushels!

The Oswego people think that 750 barrels of flour is a very large boat load; but in this instance the boat *American Eagle*, Clark Halstead, Captain, took on board 800 bbls., drawing 3 feet and 4½ in. water.—*Roch. Adv.*

☞ The Washington correspondent of the Baltimore *Patriot*, thus states the amount of Mexican territory we should have received by a treaty concluded on the basis proposed by the Mexicans:—

She offered to give us 32,000 square miles of New Mexico east of the Rio Grande, and 291,000 square miles of California, west of the same river—in all, 323,000 square miles, embracing more than one-fifth of the whole Mexican territory. It would give us the Bay of San Francisco and the town of Monterey, on the Pacific. Most of the territory offered thus to be ceded to the United States is good for nothing. Still it is just about equal to that between the Nueces and the Rio Grande, for which the war is to go on, and the stream of blood and carnage and death and expense is to flow on!

DEACONESSES.—The Protestants of France, as we learn from the Presbyterian's correspondent, are trying to establish an order of female religious laborers, under the title of Deaconesses, to be, according to appearances, a kind of Protestant counterpart of those orders of nuns and sisters and other kinds, of female celibates, which Romanism has found so convenient for carrying out its purposes of subjugation. That female benevolence and labor are most valuable in promoting the best objects of Christianity, is a truth that Protestants would be the last to deny: but that in the work of charity, it is necessary or wise that they should be segregated into orders, shut out from matrimony, and invested, with a sort of ecclesiastical function and character, common sense and all history warrant us to doubt. The works of charity appropriate to woman's sphere are never better done than when left to the spontaneous impulses of piety, working in accordance with natural laws and usages of society.

STATE OF NEW YORK, } ALBANY, August 3
SECRETARY'S OFFICE, } 1847.

To the Sherif of the County of Erie:

SIR: Notice is hereby given, that at the next general election to be held on the Tuesday succeeding the first Monday of November next, the following officers are to be elected, to wit:

STATE.

A Secretary of State, Comptroller, State Treasurer, Attorney-General, State Engineer and Surveyor, Three Canal Commissioners, and Three Inspectors of State Prisons.

DISTRICT.

One Senator for the Thirty-First Senate District, consisting of the county of Erie.

COUNTY.

Also, the following officers for the said county, to wit: Four Members of Assembly, one to be elected in each Assembly District.

Yours, respectfully,
N. S. BENTON, Secretary of State.

ERIE COUNTY SHERIF'S OFFICE, }
Buffalo, August 6, 1847. }

A general election is to be held in the County of Erie, on the second day of November next, at which which will be chosen the officers mentioned in the notice from the Secretary of State, of which a copy is annexed.

au6oawtno2 TIMOTHY A. HOPKINS, Sherif.

STATE OF NEW YORK, }
SECRETAT'S OFFICE. } ALBANY, Sept. 28, 1847.

To the Sherif of the County of Erie:

SIR: Pursuant to an act entitled "An act to provide for the election of a Lieutenant Governor," passed Sept. 27, 1847, Notice is hereby given that at the next General Election, to be held on Tuesday succeeding the first Monday of November next, a Lieutenant Governor of this State is to be elected. Yours, respectfully,
N. S. BENTON, Secretary of State.

ERIE COUNTY SHERIF'S OFFICE, }
Buffalo, Oct. 2, 1847. }

Notice is hereby given, that at the General Election to be held on the 2d day of November next, there will be chosen a Lieutenant Governor of this State, agreeable to the notice from the Secretary of State, a copy of which is hereto annexed.

oc1oawtnlc TIMOTHY A. HOPKINS, Sherif.

"Reef Sails."

BY MRS. LYDIA H. SIGOURNEY.

A thoughtless pair, with streamers gay,
O'er Hymen's waters sweep,
Profusion dancing at the helm,
And Prudence laid to sleep;
At Labor's ancient chart they scoff,
On murdered hours they tread,
And lavish waste another's gold
When all their own is fled.
Reef sails! reef sails! a whirlpool's nigh,
The angry breakers sound;
Haste, change your reckoning, ere ye plunge
In gulfs profound.

Young Beauty, in her painted barque,
Like Egypt's boasted queen,
For whom, 'tis said, the world was lost,
With haughty brow is seen;
The morn is fair, the breeze is rare,
And gliding on her way,
She deems each billow's flashing crest
To her doth homage pay;
Reef sails, my lady! there's a cloud
To threat thy noontide skies,
A wrecking sand, a lonely strand,—
Be timely wise.

Pride launches bold, with canvass spread,
And topmast towering high,
Regardless of the warning blast
That through the shrouds doth sigh,
Reef sails! 'tis not for him of dust,
Whose fall the worm doth wait,
To magnify the fleeting pomp
That seeks his high estate;
Reef sails! reef sails! life's bubble breaks,
The stern grave claims its part,
But heaven's eternal favor crowns
The lowly heart.

BUFFALO MUSICAL INSTITUTE FOR YOUNG LADIES.

At the residence of Prof. W. R. Coppock—Composer and Teacher of the Piano Forte, Organ, Singing and Composition.

An institute devoted exclusively to Musical Education is not yet common in this country; but in Europe the test of experience fully shows its great advantages over the too general superficial manner in which this important part of polite education is acquired. The advantages this institution offers to those desirous of completing their studies as Organists—or practical players of the Piano Forte, together with a thorough system of imparting the same to others is fully established by the many precedents of the past 10 years. The pupils are constantly guarded in their practice against all bad habits, and from the various stages of progress they may be in, are continually stimulated to effort and industry, by association with each other. The family too, are all players, and the theory is amusingly discussed, impressing its rules in a more pleasing manner, and more lasting upon the understanding, than by the mere dry study of an elaborate book Music is composed and arranged from time to time, showing the various styles and harmonies analytically, and adapted for performance on several Pianos at the same time. This teaches a thorough knowledge of counting, and dividing passages into their given time Vocal music is particularly attended to, and when the pupil has a moderate share of talent, we hesitate not to say, a correct and pleasing singer can be made The Piano Fortes used are all new, and of the finest quality, and every inducement will be given to render the true spirit with us profitable. The building is commodious, and has a fine garden attached, with Green houses, bathing rooms, &c, and is pleasantly situatuated in Seventh street, between Niagara Street, and the Falls rail road, and about midway to Prospect hill

Terms made known upon application at the Institute, or by mail, post paid, directed Prof Coppock, Buffalo

Prof. Coppock, keeps constantly a choice selection of Piano Fortes for sale.

Buffalo, August 3, 1847.

PRINTERS' FURNISHING WAREHOUSE.

WILLIAM PRESCOTT, Manufacturer of Printing Inks, No. 6, United States Hotel Block, Pearl St., Buffalo Printing Presses, Metal and Wood Type, Cards, and every other description of Printers' materials constantly on hand at New York prices, adding transportation. Also, sole Agent for the sale of C J Gaylor's Patent Double, and Improved Single Salamander Book Safes a18 2m.

CHEAP CASH BOOK STORE.

The subscriber, dealer in Books and Stationery, at 186 Main Street, 4 doors above Seneca, keeps constantly on hand, an extensive stock, embracing the most valuable selections from Ancient and Modern Literature and a general variety of Theological, Classical, Gift and School Books, &c. &c. The Amateurs of Knowledge and all interested in the purchase of Books or Stationery are respectfully solicited to call. Print and Cap Paper at wholesale.

WESTERN
LITERARY MESSENGER.

VOLUME IX. BUFFALO, SATURDAY, OCTOBER 30, 1847. NUMBER XIII.

For the Western Literary Messenger.

"The Night Cometh."

O man! the day is sunny,
And its censer full of balm;
The air is bland and bracing,
And it nerves the brawny arm.
Then while the light is streaming
On the whitened fields around,
And the voices of the reapers
Like a holy anthem sound,
Into the golden harvest
Thrust the sickle with thy might,
For fast the day is waning,
And cometh soon the night.

O worn and weary worker,
Whose sun is in the West,
Thy labor, nearly ended,
Will sweeten coming rest.
And great shall be the honor
Of thy spirit, truly just,
When the task of life is finished
And thy body lies in dust:
For the toilers in the vineyard
Of the glorious God of love,
For ever rest from labor
In the palaces above.

From the National Era.

The better way, or the Wife's Victory: A tale of Domestic Trials.

BY SUSAN D. E. SOUTHWORTH.

"I would not have him, though he owned all the mines of Golconda," said bright Kate Gleason to her sister, Mrs. Lindal.

"And why not pray?" said gentle Mary Lindal."

"Oh! because he has got such a horrible temper."

"How do you know that?"

"By a great many signs; by the shape of his head and the color of his hair, the glances of his eye, the curl of his nose, and the set of his mouth ——"

"Oh! stop, stop; of whom are you speaking? That incomparable man, in philanthropy a Howard, in wisdom a Newton, in patriotism a Washington, in——"

"Temper a Bluebeard."

"Kate, I will not hear another word of this. You are speaking of—of—" and Mary Lindal blushed.

"Out with it! of Grenville Dormer Leslie, your husband. But I give you fair warning, Mary, that though you may feel a vocation to become Mrs. Bluebeard, I am not particularly inspired to play 'Anne! sister Anne!' and run the risk of catching my death of cold by standing on a windy tower, to 'see if anybody is coming,' when he is about to slay you for your disobedience."

"But perhaps I shall not be disobedient," said Mary.

"Perhaps you shall not *be* disobedient," repeated Kate, with a withering sneer. "Well, for my part, when *I* am married, if ever my husband ventures to lay a command on *me*, I shall make a point of breaking it, at whatever cost of convenience by way of asserting my independence."

"Not if you love, Kate."

"Either way, either way. Now, I like Lem Dunn very well; and if neither of us change our minds, we may be married when he returns from sea; but fancy Lem Dunn playing husband *a la Grand Turque*, and daring to say, 'you shall' and 'you shall not,' really, if I were in a good humor I should laugh in his face, and if in a bad one, I should be apt to box his ears."

"I must believe you are jesting, Catherine."

"Then I will be as serious as his Eminence Archbishop Leslie himself, and say that I really cannot see why we woman should be called upon to 'honor and obey' so implicitly, unless we could be first convinced of their superior excellence by whom such honor and obedience are claimed."

"We are not. We *should* be first convinced of men's superiority, before we give them that 'right Divine' to control our actions and destinies, which by all Christian and human law is the just prerogative of a husband, whether or not he be mentally or morally superior to his wife."

"Pooh! nonsense! fiddlestick! with your Divine prerogative and the rest of it. If a woman marries a jackass, I suppose she is bound to obey him!"

"When a woman marries a man whom she feels she cannot respect, she places herself in a false position, from which nothing can extricate her; and, however repugnant however galling, they may become, the same duties of submission and obedience are incumbent upon her, in all cases where they do not clash with the laws of God. A woman, in such a case, is an object of deep commiseration, although, having brought the evil upon herself, by a desecration of all her most holy instincts, she suffers but a just and most fitting expiation of her fault. *I* could not love, and would not give myself away to a man on whose wisdom I could not rely as on God's, to whose will I could not submit as to God's,

"Idolator! Would you set up an earthly God, and fall down and worship him?"

"Wives, submit yourselves to your husbands *as to the Lord!* There is Scripture for the idolatry, if you choose to call it so."

"Pshaw! If you were not talking foolishly, you would be talking wickedly. 'Satan can quote Scripture for his purpose.'"

"So he can. I am now quite convinced of that fact. But do not let us trifle with such holy and beautiful mysteries, dear Kate. There is another text of Scripture to the same purpose ——"

"Oh, yes! There are hundreds; pray don't recite them."

"Just this one, Kate, I love it so much. 'The head of the woman is man; the head of the man is Christ; and the head of Christ is God.' Is it not a lovely chain, a beautiful climax, from weakness to Omnipotence; like Jacob's ladder from earth to heaven?"

"Sweet Providence! You have put my brains in a complete whirl, with heaven and earth, and chains and ladders, and heads and husbands; but out of the chaos one fact and feeling stands very

distinctly. If Lem Dunn expects any such subordination from me, he will find himself very much mistaken; but he is not so presuming, poor Lem Dunn."

"I think *you* will find yourself mistaken in your estimate of his character and expectations."

"Well, perhaps so; in that case, I shall only have a little more trouble in breaking him in. But suppose now, only for argument, that you are deceived in Leslie; suppose his temper to be violent?"

"I will take care not to arouse it."

"His will unbending?"

"I shall not waste my strength nor risk my peace by seeking to bend it."

"His nature selfish?"

"Methinks, as I love and esteem him more highly than myself, I should only unite with him in his self-worship."

"His heart and mind unprincipled and depraved?"

"Impossible! impossible!" continued Mary, indignantly, "I will not for a single instant suppose such a thing, even for argument's sake. I have seen my error in permiting you to go on so long. Leslie has none of the bad qualities you have named. He is every way worthy of the highest esteem."

"And if he were not so?"

"If I were his wife, my duties would not be less incumbent upon me—would not be less scrupulously performed. But I shall not find myself in the degrading position of a wife who cannot reverence her husband, in giving myself to Leslie. I obey a Divine instinct that will not mislead me; in loving him, I shall offer the best worship, and in obeying him the most acceptable service to the Deity."

Mary and Catherine Gleason had lost their parents during their infancy, and had become the charge of their grand-father, old Capt. Gleason, a retired merchant. At the time Capt. Gleason received his grand-daughters into his house, he was mourning the loss of his younger son, who was supposed to have perished at sea, on his passage home from Europe. The ship in which he was to have taken passage had never been heard of since her setting sail from Liverpool, and was now believed to have been wrecked. Years flew by, and no clue was obtained to the fate of the lost ship or the lost son.

Mary Gleason, at the age of sixteen, had, in obedience to her grandfather, given her hand to Mr. Lindal, a wealthy merchant, some twenty years her senior. In the second year of her marriage, she became the mother of a lovely little girl. Soon after the birth of the little Sylvia, the failure and death of Mr. Lindall left Mary again dependent on the bounty of her grandfather, who received her and her child with the deepest sympathy and affection. Little Sylvia soon became the especial pet and plaything of the whole household.

Although Mary Lindal had faithfully discharged her duties as a wife, she had never loved her husband, except as a friend. Her whole affections centered upon her child, the little Sylvia. She was her constant companion, in doors and out doors, in parlor, chamber, and street, by day, and at night she slept encircled in her arms, pressed to her bosom. At the age of four years, Sylvia had been attacked with a violent and contagious fever. No words can describe the anguish of the mother, as she watched, day after day, and night after night, for weeks, beside the bed of the little sufferer; no pen can portray the joy when, at last, her darling was pronounced out of danger.

Mrs. Lindal was very beautiful, graceful, and accomplished, and a co heiress with her sister Catherine: consequently, she was much followed and flattered. Notwithstanding her numerous admirers, and some very eligible offers, the seventh year of her widowhood had passed away, and she was still unmarried. In the mean time, Catherine Gleason had grown up to womanhood, more radiantly beautiful than her sister had ever been.

At length, in the twenty-fifth year of her age, Mrs. Lindal became acquainted with Mr. Leslie, the subject of the conversation with which this sketch opens. Mr. Leslie was a man of great personal attractions, pure morals, and distinguished talents. Mary Lindal ever listened to his brilliant conversation with delighted attention. Convinced by his clear-sighted views and able exposition of truth, she had insensibly acquired a habit of shaping her opinions by his own. There was one circumstance about their acquaintance that peculiarly attracted Mary. It was this: He *never* flattered her, never by any chance paid her a compliment, excepting this—the most, the only acceptable one, of constantly seeking her society.

I think it was that agreeable jiber, Rochefoucault, who somewhere asserted that any woman may be safely flattered on any subject, from the profundity of her understanding to the exquisite taste of her fan. Without venturing to differ from such authority, I will simply assert that Mary Lindal was an exception to this rule.

* * * * *

At the end of a twelve-month's acquaintance, Grenville Dormer Leslie and Mary Lindal were married, and took possesion of a handsome house in a fashionable quarter of the city.

An event occurred soon after their marriage, that greatly pained the affectionate heart of Mary. This was the death of her grandfather. The old gentleman had made a will, leaving his property equally divided between the sisters, Mary and Catherine. This property, however, as is frequently the case, was not half so large as had been reported, and his grand-daughters inherited only about twenty thousand dollars apiece. A few moments before his death, while holding little Sylvia's hand within his own, Capt. Gleason turned his dim eyes on Leslie, and said, "I have been thinking of this poor child, Leslie; if time were allowed me, I would alter my will, giving her mother's share of the property to her at her mother's death, or perhaps at her own marriage.—You are wealthy, Leslie, and your children, if you shall have any, will be handsomely provided for, while poor Sylvia——"

"Shall fare as one of my own," said Leslie.

"I believe you, and I thank you; now call Mary."

Leslie summoned his wife.

"Ma-y," said the dying man, as she came up to the bedside, "I leave you a certain sum; I wish you and Leslie to consider it as intrusted to your care for the future use of Sylvia. *You* will, of course, have the use of it for—for many years to come." The old man spoke with difficulty. Turning his fast-failing eyes once more on Mr. and Mrs. Leslie, he added, "I have been so strangely thoughtless of this poor child's future—but now promise to do as I ask you." Mary promised, through her tears, while Leslie assured him that his wishes should be scrupulously fulfilled.

The old man soon after breathed his last.

* * * * *

Six months after the death of Capt. Gleason, Mrs. Leslie and Catherine Gleason, who was an inmate of her house, were sitting together in the parlor, engaged in needlework, and talking of the expected return of Lieut. Lemuel Dunn, the

affianced husband of Catherine, whose marriage was to take place upon the promotion of the lieutenant to a captaincy. There was a ring at the hall door, and a few minutes after—

"Mr. Gleason" was announced.

Both ladies rose to receive him, looking strangely at each other and at him.

"I suppose it is impossible, ladies, that you should remember or recognise a relative who left his native country while you were yet in the nursery. I am Henry Willis Gleason, at your service."

Mrs. Leslie and Miss Gleason stood speechless with surprise and incredulity for an instant, but, quickly recovering their self-possession, greeted their new-found relative with the warmest affection.

"But my father! my dear old father! Where is he? How is he?" The ladies wept. At last, Catherine found words to say—

"It is six months since grandfather went to Heaven."

"Oh! that he had lived to see this day!" exclaimed Mary. "Oh! that he could have lived to be blessed in your return."

"He believed me dead?" questioned Gleason.

"Yes," said Mary, "for the last ten years he has believed you dead."

The reason for his protracted absence and apparent death was now demanded and explained. It was a long story, in substance the following:—Ten years before, he had left his native shores, to make a voyage to Europe and a tour of the Continent. After having travelled over the greater part of Europe, he visited the city of St. Petersburg and the Court of Russia, where, after a residence of some months, he was so unfortunate as to give offence in some unknown manner to the Emperor, for which he was banished to Siberia for a term of ten years; and these ten years had actually been passed among the everlasting snows of Asiatic Russia. Upon his return to St. Petersburg after receiving his discharge, he met with some travelling countrymen of his own, who furnished him with money and everything requisite for his comfortable return home. Gleason had but just concluded his narrative, when Leslie entered, who, on being introduced to him, expressed the most sincere satisfaction at his unexpected return.

* * * * *

"Mary," said Mr. Leslie, entering his wife's room on the morning succeeding that of Gleason's arrival, "Mary, I wish to hold a few moments counsel with you."

Mrs. Leslie, who with a flushed cheek and kindling eye, was gazing upon an exquisite picture upon the easel before her, while the brush was half raised in her hand to give another touch to the piece, did not immediately hear the entrance or remark of her husband, and she started with surprise and pain, as an impatient voice exclaimed at her side—

"I wish, madam, you would not consume so much time over that paltry daubing, nor become so engrossed in it as to be utterly unconscious of all that is going on around you."

Mary instantly laid down her brush, (and it was years before she again resumed it,) and turned with a gentle and cheerful smile to listen to what her husband had to say.

"At the time that Capt. Gleason made his will he supposed his son to be deceased, did he not?"

"Yes; from the loss of the ship, and as uncle Henry did not return or write."

"And if he had known that his son was living he would, of course, have left him the bulk of his property?"

"Doubtless."

"Then you must see, as I do, that the property should and must be restored to him, as the rightful heir."

"The whole of it?"

"Of course, the whole of it."

"Catherine will not agree to it."

"Catherine may do as she pleases with that which she may choose to consider is *justly* as well as legally her own, but the portion left to us must be given to the proper inheriter."

"The portion left to *Sylvia*, you mean," amended the mother, gently.

"I mean nothing of the kind," said Leslie, with cold gravity.

"Surely you remember your promise," said Mary.

"Surely, madam, I remember the promise given to a dying father, who little thought when he exacted it that he had a living son, or that the promise ever would be urged as an excuse for keeping that son out of his just inheritance. I am pained to see, madam, that your feelings as a mother somewhat obscure your sense of justice. I shall be glad to obtain your cheerful co-operation in this matter, but if that is impossible I must act without it."

Mary, who saw that she had been wrong, and that a cloud had gathered upon the brow of her irritable lord, hastened to dissipate it by saying, "Yes, my motherly love *has* made me wish to be unjust; forgive me, and do whatever seems to you to be right; my dear husband, I will subscribe to all."

"Thank you, dear Mary; and now I will confess to you that the giving up of that money will be as great a sacrifice on *my* part as it is on *yours* in behalf of your daughter; for just at this time my business is greatly embarrassed, and the use of twenty thousand dollars for a year or so would be of incalculable benefit to me. But the sacrifice must be made notwithstanding."

"Yes, it must be made. You are right, as you always are." But the child's interest was sacrificed, not so much to the mother's sense of justice as to her wifely duty—to her husband's will.

"Mary Leslie!" said Catherine, bursting into her sister's bedroom, with a heated and angry brow, "I hope you have not really consented to sign away all that property you had in trust for little Sylvia?"

"Yes," said Mary, quietly.

"And why? why? why have you made your child a beggar?"

"My husband thought it right to give up the property, and I obey wishes."

"Spaniel!" exclaimed Catherine, with a withering sneer, and flung out of the room.

The necessary arrangements were soon made, and Gleason put in possession of one-half the wealth of his deceased father. Mary Leslie saw that her child's only chance of independence was cut off forever; but she was a loyal Christian and a loving wife, and she reposed trustingly under the shadow of the goodness of God, and in the righteousness of the husband to whom he had given her. And even though it did sometimes painfully cross her mind, that Leslie might have been a little more gentle with her, in a controversy in which her maternal feelings were so deeply involved, she considered that his somewhat overbearing temper was the sole defect in an otherwise excellent character, and she prayed for patience and strength to "overcome evil with good." She remembered with pride and pleasure the purity and strength of principle that had forced him to alienate a sum which, however finally disposed of, would just now have so materially assisted him in his business. With Kate, however, she had much ado to keep her temper; and she looked

forward, with secret joy, to the time when "Lem Dunn's" promotion should deliver her from the trial. Kate often indulged in a recreation which she herself denominated "speaking her mind," and which was anything but an amusement to Mrs. Leslie; so that Mary could not always refrain from repaying her in kind; for in her love for Kate, there was not, of course, that feminine instinct of submission that characterized her love for her husband. With Mary, love was religion; and her love to God and to her husband always acted upon and augmented each other. Mary Leslie could not, therefore, be unhappy; on the contrary, her daily sacrifice or obedience would have been a source of the greatest happiness, but that her husband, from real or seeming insensibilty, never noticed the offering, by commending the votary. [TO BE CONTINUED.]

SINGULAR SENSIBILITY TO MUSIC.—Some years since, when the steamer *Cleveland* was one of the 'crack' boats on lake Erie, we took passage one beautiful morning for Detroit. A fine band stationed upon the hurricane deck discoursed most delightful music, and contributed not a little to enliven the party. Among the passengers were a lady and her infant. The child was lying listlessly upon its mother's lap, when, the moment the music struck up, a singular change came over its little frame. Its eyes brightened, its lips were parted, its hands elevated, it vibrated through its whole frame like a harp-string to the time of the tune. A livelier air was played, when it was affecting, almost painful to behold the quiverings of the little creature. Every feature was wrought up to an expression of the most intense interest. The music ceased and the child wept.

So far as our limited observation in such matters avails us, it is rarely that a mere child weeps. It squall, bawls, and yells outright, but the silent tear seldom trickles down its cheek. The little incident made an impression upon our mind, and we then thought that if that child's ability should equal its susceptibility to the concord of sweet sounds, we should hear of it again. The denouement of the affair is yet to be told. A day or two since, we met the identical mother and daughter, the latter a sprightly girl of ten, with an eye full of soul and a voice full of melody. She presides at the piano as though it had been her companion from infancy, and sings like a bird. May her song never be softened by the touch of sadness.—*Chicago Journal.*

A Wife to her Husband.

Linger not long. Home is not home without thee:
Its dearest tokens only make me mourn.
Oh! let its memory, like a chain about thee,
Gently compel and hasten thy return.

Linger not long. Though crowds should woo thy staying,
Bethink thee; can the mirth of friends, though dear,
Compensate for the grief thy long delaying
Costs the fond heart that sighs to have thee here?

Linger not long. How shall I watch thy coming,
As evening shadows stretch o'er moor and dell;
When the wild bee hath ceased her busy humming,
And silence hangs on all things like a spell!

How shall I watch for thee, when fears grow stronger,
As night draws dark and darker on the hill!
How shall I weep, when I can watch no longer!
Oh! art thou absent, art thou absent still!

Yet I should grieve not, though the eye that seeth me
Gazeth through tears that make its splendor dull;
For oh! I sometimes fear, when thou art with me,
My cup of happiness is all too full.

Haste, haste thee home into thy mountain dwelling!
Haste as a bird unto its peaceful nest!
Haste as a skiff, when tempests wide are swelling,
Flies to its haven of securest rest!

An Hour with Alexander Von Humboldt.

[The readers of the Literary World, in perusing the following account of a late interview with the celebrated HUMBOLDT, will rejoice to recognize in this most interesting "Incident of Travel," the pen of a distinguished countryman, which of late years has only been, too long idle.]

Towards sunset on the first of July, the railroad cars from Hamburgh brought me to the gate of Berlin. Entering the city, the twilight of a northern summer illuminated the stately houses, and the broad Avenue of Unter Den Linden.—Leaving the proud portal of the Brandenburgh Gate, with the car of victory on the top, carried off as a trophy by Napoleon, and after eight years of captivity, restored in triumph to its place—and riding on to the other extremity of the avenue, I had before me at one view the Schloss Platz, or Palace Square, with the colossal palace, and all the most magnificent buildings of the city, all enlarged and made more grand by the mellow twilight, and exhibiting an architectural splendor hardly to be met with in any capital of Europe. Turning off on one side of the square, at nine o' clock, I was "taking mine ease" in the salon of the Hotel de Ruisse.

I had gone over in the Washington, the pioneer of the American mail-steamers to Bremen, and was striking over the continent for a passe on the Rhine, and to intercept the steamer at Southampton on her return to New-York. I had but a day for Berlin. There was but one object in it I had any special desire to see, and that was—Humboldt. I might visit Berlin again, the other monuments of the city would remain; but he might pass away.

Early in the morning, I called upon Mr. Donaldson, our minister, and to my extreme regret learned from him that Baron Humboldt was with the king at Potsdam, thirty miles distant, in feeble health, and unable to receive visitors. Fortunately I had occasion afterwards to call upon Baron Von Rœnne, formerly Prussian minister to this country, and incidentally mentioning to him my disappointment and regret, he stopped me abruptly and with friendly earnestness said that I must not leave Berlin wit houtseeing Baron Humboldt, at the same time looking at his watch, calling up my servant, telling him that the cars for Potsdam started at 12, and hastily writing a line of introduction, without allowing me any time for acknowledgments, he hurried me off to my carriage. A brisk ride brought me to the depot just time for the cars, three-quarters of an hour carried us to Potsdam, and almost before I had recovered from my surprise, I was at Baron Humboldt's residence.

It was in the Royal Palace, a stately and historic pile, once the residence of Frederick the Great, with his apartments remaining in the same state in which he left them. One wing was now occupied by Baron Humboldt, and it seemed a just tribute and a right reward—a proper crowning of his fame, alike honorable to Prince and subject, that after years of travel, of physical and intellectual labor, he should, in the evening of his days, return to the town in which he was born, to live in the Royal Palace, the guest and friend of his king.

Ascending to the door of his apartments, I was disappointed anew by positive word from the servant in attendance, that the Baron would not receive any visitors that day. With very little hope of success, but disposed to try every chance I left my letter and card with an intimation that I would call again at 2 o'clock.

On my return, the expression of the servant's face as he opened the door, relieved me of all apprehension. Showing me into an adjoining apartment, Baron Humboldt came to meet me, with the flattering greeting that no letter of introduction was necessary.

I was entirely mistaken in the idea I had formed of his personal appearance, and was surprised at not finding him bowed down, and bent by age. Nearly half a century ago, he had filled the first place in the world of letters, sitting as it were, upon a throne, lighting up the pathway of science to the philosopher, and teaching the school-boy at his desk. He was recorded in the annals of a past generation. Indeed, his reign had been so long, and his fame went back so far, that until I saw him bodily, I had almost regarded him as a part of history, and belonging to the past; even then, alone and in the stillness of the Palace, I could hardly keep from looking at him as something monumental, receiving the tribute of posthumous fame.

He is now nearly eighty, but has the appearance of being some years younger. In stature, he is rather under than above the middle size, with a frame, probably in youth, well-fitted for the hardships of his arduous travels. His head might serve as a study for a craniologist; his face is broad, and his eye remarkable for its intellect and expression. He was dressed in a plain suit of black, without ribands or decorations of any kind, and his apartments correspond with the simplicity of his personal appearance. He was debilitated from an attack of illness, but the vigor and elasticity of his mind were unimpaired. He spoke English with much fluency, but with an accent, and his manner of speaking and the tone of his conversation remin ed me of Mr. Gallatin, who was an old personal friend, and to whom he wished to be remembered.

The ruined cities of America being the means of bringing me to is acquaintance, were of course the first subject referred to, but learning my connexion with the line of mail-steamers to Bremen was the immediate object which had brought me to Germany, he expressed his satisfaction that I was identified with an enterprise, at that moment most interesting to Germany. He considered the action of our Government in establishing the line, wise and statesmanlike, as, for a commercial people like ours, it must be the means of opening new relations, and a wide field for the enterprise of our citizens. He himself felt a lively interest in its success, believing that the Germans of all classes were desirous of direct intercourse with us; that they had a great variety of manufactures which might be exchanged to advantage for the large amount of our staples now consumed in that country, when more frequent intercourse should give a better knowledge of each other's wants and resources: as between the United States and Germany, there never could be any feeling of rivalry or any cause of collision, and the closer we could be drawn together, the more advantageous would it be to both countries He spoke of the long lines of railroads now constructing in Germany, to connect the Rhine and the Danube, the Adriatic and the North Sea, with branches from towns and manufacturing districts, winding into each other all over the country, furnishing facilities for travel and transportation to the sea-board, such as had never been known before, the greater part of which, both as a matter of feeling, and on the score of interest, must in the first instance turn towards the United States.

He inquired about Mr. Wheaton, our late minister to that country, whether he had arrived in the United States before my departure, and what was to be his future career. He said that it was understood at Berlin, that he was to be appointed minister to France, and expressed his surprise that the United States should be willing to lose the public services of one so long trained in the school of diplomacy, and so well acquainted with the political institutions of Europe.

Although I had heard Baron Humboldt spoken of as one of the privy councillors of the king, I did not expect to find him, at his advanced age, and with his great work Cosmos to occupy his mind, bestowing much of his attention upon political relations; but the political condition of Prussia, and indeed of the world, seemed to be the subject which interested him most. It was, in fact, just at that moment an interesting point in the history of Prussia. The long-called-for Diet, which had been looked to with great anxiety throughout all Germany, had closed its session but two days before my arrival. For the first time in the history of Prussia, delegates had been permitted to assemble at the capital, and in the hearing of the king, discuss the measures of his government. Great reforms had been proposed, and boldly and fearlessly debated. The debates had been published, and the voice of a liberal party heard all over Germany.

Baron Humbolt himself is a liberal, a firm believer in progress and improvement, known and recognised as sympathizing with that great politecal party which has for its lofty aim the greatest good to the greatest number, bettering the condition of the masses, and increasing the sum of human happiness; and while throughout the civilized world he has filled the "measure of fame" as a traveller and philosopher, in Prussia he is regarded besides as one of her soundest and best statesmen.

Out of Europe, Mexico seemed to be the country which interested him most; perhaps from its connexion with those countries which had brought me to his acquaintance, or more probably because it was the foundation of his own early fame. He spoke of Mr. Prescott's History of the Conquest and said that I might, when the opportunity offered, say to that gentleman as from himself, that there was no historian of the age, in England or Germany, equal to him.

And he was keenly alive to the present condition of Mexico: he was full of our Mexican war: his eyes were upon Gen. Taylor and the American army. I was well aware, that in the conduct of this war. General Taylor was drawing upon himself the eyes of all Europe; and that whatever might be the differences of opinion as to its necessity or justice, it was producing everywhere, in monarchical and anti-republican countries, a strong impression of our ability and power for war—which, in *enlightened* (?) Europe, even at this day, more than all the fruits of peace, industry, and extended commerce, more than the exhibition of 20 millions of people abounding in all the comforts of life, raises us to the rank of a "first rate power," and makes us "respected."

Baron Humboldt said that with one of his own maps before them, the King and his military council had followed General Taylor from his encampment at Corpus Christi, to Palo Alto and Resaca de la Palma, through the storming of Monterey, and the bloody scenes of Buena Vista. They had fought over all his battles, and with his positions all marked on the map, were then looking for further tidings. They had seen and appreciated all his difficulties at Buena Vista. In Prussia war is a science, and according to the leading policy of Europe, to be always ready for war, every male in Prussia, the highest nobleman's son not excepted, is compelled to serve his regular term in the army. In the teeth of all settled opinions, and as it were upsetting the whole doc-

trine of standing armies, General Taylor, with a handful of regulars, and a small body of volunteers who had never been in battle, had stood up for a whole day against a murderous fire, and had finally defeated four times his number. Field Marshals and Generals of Prussia, among them veterans who had studied the art of war on the great battle-field of Europe, were struck with admiration at the daring and skill displayed at Buena Vista; and this admiration, Baron Humboldt said they expressed without reserve, freely, publicly, and everywhere. Amid the bitterness and malignity of the English Press, it was grateful to hear from such lips, that the leading military nation did justice to the intrepidity and firmness of our volunteers, and to the courage, skill, and high military talents of General Taylor: while Baron Humboldt's comments upon his dispatches and orders, and in fact upon all that related to him personally in the conduct of the war, were such as no American could listen to without feeling proud.

I had occupied, without any interruption, more than an hour of Baron Humboldt's time, when the servant entered to summon him to dinner—with the King, I would have left him at once, but courteously saying, that if late, he would excuse himself by mentioning the cause that detained him, he urged me to remain a few days, for the purpose of making certain acquaintances at Berlin, and, pressed as he was, insisted upon giving me a line to a distinguished gentleman of that place, without seeing whom he said I ought not to leave. Circumstances did not permit me to deliver the letter; but I had the satisfaction of bringing it home with me, written in German, in a strong, firm hand, as an autograph of Humboldt and a memento of one of my most interesting incidents of travel.

On the Culture of Bulbous Roots.

By a Member of the Buffalo Horticultural Society.

"All hail! ye lovers of Flowers."

Upon the production of a fine flower, depends chiefly the skill and proper regimen that has been adopted for its growth—too many fancy for themselves that in committing the seed or plant to earth, nothing farther is needful, but to wait with patience the allotted time. Such being the too general belief, a few hints at this time, on the true principles of growing bulbs may save much disappointment. The first requisite is a *rich fresh loam*. Select if possible a position sheltered from the winds, having a Southern exposure, dry and airy—and here lay out in any desirable form a *bulb bed*—thus, take away the surface soil to a level with the walk, or still lower if an under drain can be produced. Spread evenly four or six inches of well decomposed cow-dung, and upon this, sprinkle a handful of salt, (all bulbs are fond of salt in small quantities.) Now procure some fresh sandy loam taken from the surface of a common, or a pasture field; chop well the sod, and cover the bed to the depth of a foot; rake it neatly, and let it remain for a week, to settle.—About this time, (middle of Oct.,) or until hard frost sets in, plant the bulbs in this wise: Take a blunt dibble, or stick, somewhat larger than the bulb, and press it into the soil about four inches at the distance of eight inches apart, for Tulips, and Hyacinths, and perhaps somewhat closer for Anemones and Ranuncules. Having at hand some clean coarse sand, put into the hole the depth of an inch, and upon this place the bulb in an upright position, and fill around to the surface with the sand. The bulb will then be covered to the depth of two, or two and a half inches. The sand is esteemed valuable in protecting the bulb against rot. The whole bed may now have a slight covering of leaves or coarse straw litter.—Thus let it remain until the beginning of March for Hyacinths, or a little later, for Tulips, when the whole may be carefully removed and left clean. If possible, prepare a frame, that an awning may be stretched over the flowers during their blooming, to shield them from the intensity of the sun's rays at noon, as also the beating Spring rains, which so much destroy the colours and form of a fine flower. In planting the bulbs, be careful to mark the position of each by labels, or numbers, that their name may be preserved, and fail not to keep the bed neat, and free from weeds. In their arrangement, much good taste may be exercised, by intermixing the various colours to form a harmonious whole; and in their gradations of size, reserving those of shorter stem for the foreground, &c.

It must be borne in mind that the bulb lasts but for once flowering, a new one forming as the plant declines. In the Tulip and Hyacinth, the new bulb is formed at the side of the old one; in the Iris, under, and in the Gladiolus and Crocus, over the bulb. It is very necessary that the leaves should be carefully protected from injury, as upon them depends the maturing of the new bulb—when, however, they have begun to decay, they should be taken up and carefully dried, by throwing a little dry sand over them for a few days, when the fibrous roots, and leaves, may be rubbed carefully from them, and placed in a cool situation until the time of replanting. Bulbs should not be permitted to seed, as by so doing, the future flowers are very much weakened;—when, however, it is desirable to grow from seed, it may be sown in similar soil, and there suffered to remain until it flowers, which for bulbs generally, is from three to five years. Tulips, as well as many other bulbs, should not be grown in the same soil for several successive years, as their exudations are said to be poisonous to themselves, although not so to other plants.

ON THE CULTURE OF BULBS IN POTS AND GLASSES.

Of Hyacinths, there are some twelve to fifteen hundred varieties, comprising all the various hues, such as yellow, purple, blue, white, pink, crimson, red, &c., &c. They produce their flowers on short erect stems, covered with florets or small bells; each floret is filled with petals rising towards the centre, and is suspended from the stem by

short strong foot stalks, the largest at the bottom, and forming a most beautiful pyramid. When grown in glass, the coloured glass should be preferred—the roots of all plants shun light, and in the case of Hyacinths, white glass causes them to grow and flower weakly. The water used, should be fresh rain-water, and by placing a piece a charcoal at the bottom of the glass, the water need not be changed oftener than once in four or five weeks, or until the water becomes slimy, hence the plant is not so frequently disturbed.—The best plan, however, of removing the water when necessary, is, to have such a quantity of the same degree of temperature as that in the glass, that by elevating the bulb a very little you continue to pour to overflowing until the whole has been changed. Endeavor to fit the bulb to the rim of the glass, but should the bulb be too small, put a collar of cotton to suit, so that when the water is put in, it may just touch the bulb. It should then be put into a dark *warm* closet until the roots and crown have made a growth of half an inch or so, when it must be brought out into the light, and in a day or two, give it the strongest light you possess, keeping it regularly turned, side for side, every few days. A window that has a southern exposure, is the best adapted, for it is light, with genial heat, that gives strength, and strength ensures richness of flower. Single Hyacinths, are more generally esteemed a florist's flower, and for water-pot culture, are generally selected; either, however, will well repay the small amount of labor necessary to grow them. For growing bulbs in pots, take a six-inch pot, the deeper the better, give it a good drainage of broken charcoal, upon which place a bit of sod, prepared thus: Take a sod cut two inches thick, from a good rich pasture or common, of a loamy soil, put it into an oven and bake it to a char—a piece of this placed upon the drainage, is not only very enriching, but retains a nutricious moisture for the roots, and prevents a leaching of the soil, when watering. Fill the pot with the rich compost before described, not forgetting the sand, and place it in the warm closet, &c., for the same purpose. Let the bulb be covered about half an inch. Water regularly but moderately, and give plenty of air, taking care that the plant does not get chilled in so doing. As the plant is coming into flower, water occasionally with weak, *clear*, guano-water. Hyacinths, Tulips, Narcissus, Jonquils, Snowdrops, &c,, may be grown in this way, and richly repay the maiden's care.

That caterer for the palate in choice things, has also been catering for the intellect of Flora's votaries. Mr. C. C. Haddock is dispensing with a liberal hand, some several bushels of rich and choice bulbs, in *variety*. Tulips, Hyacinths, Narcissus, Jonquils, Ranuncules, &c., &c., from the famous Dutchman, Vander Schoots, of Haarlem. From all which we may reasonably anticipate a magnificent show at the Horticultural rooms, next May.

"Hail to thee! hail thou lovely flower!
Still shed around thy sweet perfume,
Still smile amid the wintry hour.
And boast e'en then a Spring-tide bloom."

W. R. C.

Coal and Iron in Alabama.

Mr. Tuomey, a Professor in the University of Alabama, in a report on the Geology of a part of the Iron and Coal region of Tuscaloosa county, Alabama, gives the following account of mines of Coal and Iron, but more particularly of the latter, which in their abundance, the ease with which they might be worked, the facilities for transportation, and the nearness of favorable markets, exceed any thing of which we have ever heard:

It exhibits in the neighborhood of *Tuscaloosa*, formerly the seat of government of the State, a region of coal and iron of unbounded richness almost, and from its geological position susceptible of being most easily wrought. The bed of the Black Warrior river for one hundred miles is through coal; the dip of the coal *strata* is invariably towards the river, so as to afford the certainty of easy drainage. These immense coal fields are nearer by two hundred miles to the Gulf of Mexico than any other source of supply, and on the border of a navigable river, or of which the obstacles to the navigation may be readily overcome; running into the Tombigbee, and thence past the city of Mobile into the Gulf. Tuscaloosa is most favorably placed to become the centre of a manufacturing population. It is in a very healthy region in the hill country, with a considerable white population scattered through the high lands anxious for employment, and which would afford, in abundance and cheaply, the labor requisite in factories.

With coal and iron at their doors—with water power in profusion, in a cheap and healthy country—nothing seems wanting to the introduction and prosperity of manufactories in this region but experience and capital. It should be added, that most of the land lying within the coal and iron region embraced by the survey of Professor Tuomey (executed, as it states, with equal care and skill, and presenting its results with great precision and care) is still public property, and may be entered at the established price of $1 25 per acre.

An iron mountain in Texas, though less likely to be useful at an early period, is one of the wonders of the world.

We have been informed by an inteligent gentman who resides in Fredericksburg, that the surveyors who have been engaged in running the boundary line of the German colony have discovered a mountain near the Conchos river that consists entirely of iron ore. A portion of this iron has been smelted and yielded seventy per cent. of pure iron. According to the representation of those who have visited this mountain, it resembles the celebrated iron mountains of Missouri. It is not so large as the mountain in Missouri, being only four or five hundred feet high and probably half a mile in circumference. We are informed, however, that a range of hills extends several miles north of it, that appears to be composed almost entirely of iron ore. Within a tract of country fifty miles long by twenty broad, extending from the east bank of the Colorado northward toward the Brazos, there is probably sufficient iron to supply all the foundries in the world for the next century. Owing however, to the scarcity of fuel, this ore except in the immediate vicinity of the Colorado and its tributaries, will probably remain for many years, perhaps for centuries, as valuless as the sand hills of the desert.

For the Western Literary Messenger

Love's Apology.

When the bright-robed morn, a blushing maiden,
Awakens the birds from their slumbers deep,
And smiles o'er the turf with dew drops laden,
Kissing each flow'ret awaking from sleep,
The thrilling song that the loving bird,
Has sung to the morn, thou'st often heard,
Thou'st seen the flowers with smiles return,
The glance bestowed by the dewy morn;
But thou ne'er hast blamed either bird or flower,
For loving the morning's dewy hour!

When Cynthia, pale, o'er the throbbing waves,
Scatters her light from her silvery urn,
While the sea-gems flash in their hidden caves,
And the stars around in beauty burn;
Thou'st seen the breast of ocean swell,
As the moonlight o'er the waters fell;
Thou'st seen the trembling billow rise,
As "the moon, their mistress" walked the skies;
But thou ne'er hast blamed them because they love,
The quiet morn and the stars above!

As morn to the flowers, the moon to the sea,
The smile of beauty has been to me!
When her silvery laugh my'ear has heard,
My pulse has throbbed like ocean's tide;
I've felt the heart within me stirred,
And my lips like the breathing flowers have sighed,
When the smile of Beauty has glanced on me.
Like morn o'er the flowers, the moon o'er the sea!
Wilt thou chide because my heart has burned,
When the eyes of Beauty to mine were turned!

P. S.

The Battles near Mexico.—Entrance into the City.

Correspondent of the New Orleans Delta.

City of Mexico, Sept. 25, 1846.

The Mexicans having repeatedly violated the armistice agreed upon between our army and themselves, Gen. Scott on the 6th notified the Mexican authorities that unless they made explanation, satisfaction and reparation for the injuries we had sustained, he should consider the armistice at an end on the 7th, at 12 o'clock. They not complying with the demands of Gen. Scott, we commenced preparations for the attack.

The General-in-Chief received information that at Molino del Rey, where stood several buildings, the Mexicans were at work casting cannon, shells, shot, &c. Desiring to stop their military operations, he directed Gen. Worth, with his division, supported by Gen. Cadwalader's Brigade, to attack and destroy the place, on the morning of the 18th, and then retire. The buildings, which the Mexicans call *Casa Mata*, is situated on the West side of Chapultepec, and within six pound range of the guns of the fort. On the West side of the buildings, and the breastworks around them, is a large open plain, gradually descending to the position occupied by the Mexicans —a deep ravine inclines round this plain, or open space, until it arrives within about two hundred yards of the building upon which rested the enemy's right flank. Two 24 pounders, belonging to Capt. Huger's siege train, were placed in position to batter down the breast-works and buildings, if they were found to be occupied by a heavy force—but they did not fire but a very few shots, before Gen. Worth advanced his infantry down the plain, and attacked the enemy's works in the front and centre. The Mexicans opened upon them a most murderous fire from the point attacked, and both their flanks, which mowed down our troops like grass before the scythe.

Many of the best officers of the division were cut down, and the heavy loss in the ranks caused the advance to waver for a moment, until the supporting force came up, which also sustained a severe loss. A column of lancers, numbering 4,000 to 5,000, which were stationed on the enemy's right, perceiving the effect of this deadly fire on our infantry, came charging down, in the hope of being able to take advantage of circumstances, and put our troops to rout—but they were soon checked in their onward career. Col. Duncan brought two pieces of his battery to bear upon them, and Capt. Drum, with the two recaptured Buena Vista pieces, also opened his fire on them—while at the same moment, Major Sumner, with two squadrons of dragoons, and Capt. Ruff's company of mounted rifles, which, until then, had been held in reserve, passed down under the fire from the enemy's works, and charged the head of their column, which they could not stand for a moment, and commenced a confused and precipitous retreat. After that, they rallied twice, and attempted to return, but at each time our little handful of dragoons made them leave without exchanging cards; while the cavalry and the infantry, rallying, succeeded in carrying the buildings and breast-works which the enemy held, and compelled them to retreat—capturing seven pieces of artillery, a large quantity of ammunition, small arms, &c., and about 600 prisoners.

As soon as they were driven from the buildings, Capt. Drum and Col. Duncan advanced their light batteries, and Lieut. Stone brought forward one of the 24 pounders, the whole of which opened a most destructive fire upon them, as they retreated across a low plain to the rear of the position they at first occupied. Our loss was very heavy, and I regret to say, that some of the very best officers of our army fell killed and wounded, while the Mexican loss was very slight, until they commenced their retreat. While the cavalry were passing in front of the enemy, in order to charge the column of lancers, they were not under fire more than ten secouds, and during that time they sustained a loss of 6 officers wounded, 32 privates killed and wounded, and a loss of 105 horses. There were but two officers that did not have their horses shot under them—but there is one thing very remarkable, that the horses from which the riders had been shot, wheeled and moved with the same regularity as though they had been mounted, until they came to halt from the charge, when they all kept on in a body in direction of the enemy.

We were deceived in reference to the character of the buildings, as there was no foundry, or even a semblance of one—and after blowing up some of the buildings, and bringing off our killed and wounded, we evacuated the place, as the occupation of it would give us no advantage. Our loss was 800 killed, wounded and missing.

The result of this engagement taught us one lesson, which was, that the Mexicans use their arms well, and fight well, when they are in position; and although the superiority of our arms, and the valor of the troops will eventually triumph, yet still we must call into requisition all our military science and skill, or we purchase our victories at too dear a price. A list of the killed and and wounded, you will find in the general recapitulation which I send you. Many a tear will be shed on its perusal, and many a heart will bleed for the noble souls, and the old and firm veterans who fell in the assault.

Col. Riley was now advanced from San Angel. (his former camp) to El Piedad, in order to make a diversion, and hold the en rance to the Piedad

and San Antonto road. Gen. Pillow's division moved up to within supporting disrance, and thus rested our army until the 11th, without any thing of moment occurring. The Engineer corps were busily employed night and day in their reconnoisance, ascertaining and examining the positions of the enemy, and the different entrances to the city. The engineers, throughout all our operations, have performed a most dangerous and laborious duty. They have proved themselves to be men of sterling worth—of masterly ability, and bright ornaments of their profession.

There was a little incident which occurred to Capt. Mason in one of his reconnoissances, which is worthy of record. It became necessary on one occasion for him to go very close to the enemy's breastwork, in order to ascertain its true position. As he approached, a Mexican officer rode out with two of his escort, and came up within a very short distance, when Capt. Mason drew his revolver. The Mexican then in Spanish saluted, "Good morning." The Captain responded.—The Mexican then said, "You seem to be very curious; suppose you come a little closer." "No, I thank you, sir: I can see very well from where I am." "Walk inside, sir: we will endeavor to treat you as well as the accommodations of the camp will enable us." "I am much obliged to you, sir, for your kindness, but prefer partaking of your hospitalities on some future occasion." And holding his spy glass to his eye, he continued, "I only want at the present to see how you are situated. I can see two guns in embrasure, one in barbet, and I think you have one in embrasure a little farther to the left. That gun I see your men loading, I do not think you will be able to bring to bear on me, as I will keep you between it and myself;" and moving round a little to the right, he continued his observations. Capt. Mason, who had been making his observations during the whole time of the conversation, said to the officer, "I have no desire at present to be brought within the range of your guns, and having learned all I want to know about your position, I will bid you good morning, sir;" and then returned to where he had left his escort.

On the 11th, a column of cavalry sallied out from the fort on the San Antonio road, either for the purpose of threatening our position or taking Capt. Magruder's battery, which was stationed with the picket within about 800 yards of their fort, though in a great measure covered from the range of their guns. As soon as they got their column moved out into a place free from all obstructions, Capt. Magruder opened two pieces upon them with shot and shell, which passed through them with great destruction, and they took to their heels, and got back to the fort as quick as possible. The fort opened two guns on the battery, but without farther effect than killing one man of the 15th Infantry. An officer shortly after rode up and inquired of Capt. Magruder if the fort had fired on him. Holding a 12 pound shot, he replied, that he had the gentlemen's card, and he expected that the cavalry would carry back his compliments to the fort.

About sundown, Gen. Twiggs, with the balance of his division, arrived at Piedad and Gen. Pillow moved with his division to the south of Tacubaya, and took a position on the west side of Chapultepec, and Gen. Quitman, with his division, occupied the road from Tacubaya to the city of Mexico, Gen. Worth's division remaining in Tacubaya.

In the course of the night three heavy batteries were planted in front of the castle of Chapultepec: No. 1 commanded by Capt. Drum; No. 2 by Lieut. Hagner; No. 3 by Lieut. Stone—all under the general command and superintendence of Capt. Auger, Chief of the Ordnance. Also, during the night General Twiggs's division planted Capt. Steptoe's in front of the fortifications on the San Antonio road, it being intended that Gen. Twiggs should make a feint for the purpose of drawing out the enemy in that direction.

At daylight on the morning of the 12th, all the batteries opened—the feint made by Gen. Twiggs's division succeeded admirably. As soon as Capt. Steptoe opened his guns, the enemy marched out several heavy columns, and in reaching the fort passed within range of Steptoe's guns, when he turned a heavy and destructive fire upon them.—As soon as they reached the work he turned his attention to the fort, and in the course of an hour's cannonading drove them out of it, and silenced all the guns. Capt. Steptoe's fire throughout was one of the most effective and well-directed that has been witnessed during the war, while his position was such that the enemy's shot had little or no effect upon him.

The siege batteries continued an uninterrupted fire upon the Castle of Chapultepec throughout the day, which was answered by eleven guns in the work. Our guns proved to be very destructive, as we found after the work was taken 500 dead men unburied but thrown in ditches. The building was also completely riddled.

It was determined on the morning of the 13th to storm the Castle of Chapultepec and the works connected with it. The General-in-Chief, knowing the strength of the fortifications, and the strong force with which it was garrisoned, concluded to assault it with old and well tried troops—not that he did not posses confidence in the divisions of Generals Pillow and Quitman—but in carrying a point which was the key to all our future operations, it would not do to make a mistake or omit to take every advantage. Therefore, the storming parties from the divisions of Gen. Worth and Gen. Twiggs, which had so frequently been under severe fire, were selected. The heavy batteries continued their fire upon the fort, and about 7 o'clock, when the brigade of Gen. Smith arrived as a supporting force to the division of General Quitman—as soon as Gen. Smith's brigade reached its position—the division of Gen. Pillow passed Molino del Rey and ascended the hill on the west side, the Voltigeur Regiment, which had been advanced into the timber to clear it of the enemy's skirmishers, became the assaulting force, supported by the balance of the division.

Gen. Worth was situated to the north and on the left of Gen. Pillow. A part of Gen. Quitman's force ascended the hill on the south and to the right of Gen. Pillow. As the division of Gen. Pillow, and a portion of Gen. Quitman's ascended and carried the Castle in most gallant style, the balance of Ger. Quitman's force and the brigade of Gen. Smith, swept the works on the road, the whole of the commands moving harmoniously and simultaneously together, much to the honor and credit of their respective commanders, struck the enemy in different positions at one and the same time a fatal blow. The hill, where Gen. Pillow's command ascended, had been mined for the purpose of blowing up our troops when they arrived at a certain point, but the rapid movements of the Voltiguer Regiment, and the deadly effect of the fire of their rifles, as they followed up the enemy from the first position, prevented their carrying out their views and intentions.

Just as the command of Gen. Pillow rose the hill, and while in the act of assaulting the work, he fell wounded, and Col. Ransom was killed; but so lucidly had Gen. Pillow explained his objects aad intentions in carrying the work, and aided by an active and efficient staff, that his com-

mand moved on and carried the work without even being brought to a stand. As Gen. Quitman's division was charging on the work in the road, Brig. Gen. Shields received a severe wound in the arm; and as soon as the works were carried he returned and had it dressed, and again mounted his horse, which was shortly afterwards killed under him, but he continued to command his brigade, which was actively engaged throughout the day, and the name of Shields will long be remembered in connection with the laurels won by the Palmetto of the South and the Empire of the North.

Gen. Pillow being disabled by his wound, Gen. Worth took the command of both his own division and that of Gen. Pillow, and advanced along the aqueduct leading to the gates of San Cosmo. Gen. Quitman, with his own command and Gen. Smith's brigade, also advanced towards the city by the aqueduct leading into the city at the gate of Piedad, which is commanded by the .Citadel. On each of the routes the two columns met with a decided and stubborn resistance, and after the advance of Gen. Worth's command had reached the gate of San Cosmo the fire was so hot that they were compelled temporarily to abandon it—and did not make a permanent lodgment until towards evening, when a portion of the siege train battery was brought into action, as also a piece or two of the mountain howitzers, which hurled the shot and shell about the ears of the enemy a little hotter than they desired.

Gen. Quitman's column, with the Rifles at their head, continued steadily and cautiously on, taking position and breastwork as they came in contact with them until they arrived near the gate of the city. Here the firing was so heavy, both from small arms and artillery, that it was deemed prudent to carefully reconnoitre it before attacking. Accordingly, Lieuts. Beauregard, of the engineers; Lovell, of Gen. Quitman's staff, and Van Buren, of Gen. Smith's staff, went forward to ascertain the position of affairs; they returned, and upon their report the Rifles, supported by a small force of infantry, was advanced forward for the purpose of picking off the artillerists, which they did—being partially covered by the aqueduct—with the same success and accuracy as one of our Southern or Western men would shoot squirrels.

This rendered the situation of the Mexican artillerists so uncomfortable, that they were unable to stand to their guns long enough to load them, and they commenced moving their guns, which was perceived by Gen. Quitman, and he ordered a charge, which was carried into execution as soon as ordered—Lieut. Stuart, of the Rifles, leading the way. It captured the main work, with two pieces of artillery, which Capt. Dunn turned on the retreating enemy. Gen. Quitman was himself among the first to mount the breastwork and plant the standard thereon, at 1 o'clock; the enemy then formed and three times attempted to charge us and retake the position, but the unerring and deadly fire of the rifles, together with a volley of grape from Capt. Dunn, so cut them to pieces that they would not approach nearer than rifle shot. The third time they tried to advance under the cover of the arches of the aqueduct, but if ever a Mexican poked his head out for the purpose of slipping from one arch to the other, some rifleman would be sure to put a ball through it.

During the whole of the afternoon the Citadel and a fort on our right continued a concentrated fire upon the gate, where our troops were, in the hopes of driving them out, but in this they were much mistaken although we had but little cover. Here it was that the lamented Capt. Dunn fell mortally wounded; the death of no man in our army has been more sincerely regretted than his—throughout the bombardment of Chapultepec he stood by his guns, and when the works of the enemy were stormed, he continued to advance his battery under the heaviest fire, himself possessing and infusing into his men, a cool and deliberate bravery and self-possession surpassed by none. You will recollect that it was he who recaptured the Buena Vista guns, still covered with the blood of those who fell over them at the time they were lost, and afterwards used them with such decisive effect at the battle of Molino del Rey on the 8th inst.

Under cover of the night Gen. Quitman's column erected a breastwork, and put into position a battery of two 18s, one 68 pound howitzer and one 24 pound howitzer, intending to warm up the citadel in the morning. Gen. Worth's column got his guns in a position to rake everything in its vicinity, and after night Lieut. Hagner threw a few shot and shell into the city, which no doubt intimidated the enemy very much, as they had a taste of this at Vera Cruz.

After the results and successes of the day, Gen. Scott intended, on the morning of the 14th, to make a lodgment on the "New Paseo," entering by the San Cosmo gate, and bombard the city, and for this purpose the balance of Gen. Twiggs's division was ordered from El Piedad to the support of Gen. Worth.

On the night of the 13th, Santa Anna evacuated all his positions and retreated from the city, having had more than one-half of his army killed and wounded or taken prisoners. Among the latter was Gen. Bravo, with his staff, at Chapultepec.

Santa Anna found that if he fought us on the 14th, he would hardly have a body guard left to cover his retreat.

Early in the morning the two columns took up their march. Generals Quitman and Smith, at the head of their columns, entered the grand national plaza at 7 o'clock.

The column was formed in the plaza by order of Gen. Quitman. The national flag of the vanguard of the Cerro Gordo division, while the command came to a present, was flung to the breeze on the National Palace, and it now triumphantly waves over the Halls of the Montezumas.

Gen. Worth's command halted four or five squares from the Plaza, where Col. Garland was wounded.

About eight o'clock Gen. Scott and staff, in full feather, escorted by the cavalry, came into the city, amidst the huzzas of the soldiery on all sides. As he entered, the band of the 2d dragoons, mounted, interested the staring crowds with "Hail Columbia."

As the escort entered the Grand Plaza, the band moved the patriotism of the whole of us to a little higher pitch, by the good old fashioned national air of "Yankee Doodle."

Correspondence of the Picayune.

MEXICO, Sept. 14.

An immense crowd of blanketed leperos, the scum of the capital, were congregated in the plaza as the commander-in-chief entered it. They pressed upon our soldiers and eyed them as tho' they were beings of another world. So much were they in the way, and with such eagerness did they press around, that Gen. Scott was compelled to order our dragoons to clear the plaza.—They were told, however, not to injure or harm a man in the mob—they were all our friends.

About five minutes after this, and while Gen. Worth was returning to his division near the Alameda, he was fired upon from a house near the

Convent of San Francisco. Some of the cowardly Polkas, who had now commenced the assassin game of shooting at every one of our men they saw, from windows, as well as from behind the parapets on the azoteas or tops of the houses. In half an hour our good friends, the leperos, in the neighborhood of the hospital of San Andras and the church of Santa Clara, also commenced discharging muskets and throwing bottles and rocks from the azoteas. I have neglected to mention that just previous to this Col. Garland had been severely wounded by a musket, fired by some miscreant from a window.

For several hours this cowardly war upon our men continued, and during this time many were killed or wounded. It was in this species of fighting that Lieut. Sidney Smith received his death wound. The divisions of Gen. Twiggs in one part of the city, and Gen. Worth in another, were soon actively engaged in putting down the insurrection. Orders were given to shoot every man in all the houses from which the firing came, while the guns of the different light batteries swept the streets in all directions. As the assassins were driven from one house they would take refuge on another; but by the middle of the afternoon they were all forced back to the barriers and suburbs. Many innocent persons have doubtless been killed during the day, but this could not be avoided. Had orders been given at the outset to blow up and demolish every house or church from which one man was fired upon, the disturbances would have been at once quelled. As it is, I trust that the lesson the rabble and their mischievous leaders have received today may deter them from future outrages.

On entering the palace General Scott named General Quitman governor of Mexico—a most excellent appointment.

Yours, &c., G. W. K.

City of Mexico, Sept. 17, 1847.

The capital is now quiet enough, and although the inhabitants say but little they are probably not altogether contented with their new masters.—They say that the Lord and Santa Anna are to blame for all their misfortunes—their own lack of prowess and courage is not thought of. They say that Providence withheld the rains and gave the Yankees fair weather for their operations, while Santa Anna deserted them in their extremity, and gave up the city without even making terms for them, The latter has gone no one knows whither. Some contend that he is on his way to the coast, with the intention of leaving the country; others that he has gone toward Queretaro; while many think that he is lurking about Guadaloupe or San Christobal, within a few miles of this, yet with only a small force of cavalry at his command. His wife, who has been living all the while at the houre of his particular friend Mackintosh, has gone out in the direction of San Christobal in search of him. Santa Anna, just before he left the city, grossly insulted Gen. Torres, who commanded at the Belen gate, for deserting his post. It is also said that he has quarreled with Lombardini. These are old tricks of the tyrant—throwing the blame upon others to coger his own shameless conduct.

Lieut. Morris, of the 8th infantry, has died of the wound he received at the hard fought battle of El Molino, and it is thought extremely doubtful whether Lieut. Ernst, of the 6th, wounded at the same time, can recover. I do not learn that any other officers are considered as in a dangerous condition.

List of Officers Killed and Wounded.

FIRST DIVISION—MAJOR GEN. WORTH.

Names of the Officers Killed, Wounded and Missing in the action of Molino del Rey, Sept. 8.

Killed.—1st. Lieut. Wm. Armstrong; Bvt. Capt. G. W. Ayres; 2d Lt. W. S. Burwell; Bvt. Lieut. Col. Martin Scott, Capt. M. E. Merrill; 2d Lieut. E. B. Strong; Lt. Col. Wm. M. Graham; 1st Lieut. R. H. L. Johnson.

Wounded.—Capt. J. L. Mason, Eng'rs, severely; 2d Lt. J. B. Foster, severely; Capt. C. Kerr, severely; 2d Lt. Smith, 2d Lt. Tree, 2d Lt. Walker, severely; 1st Lts. H. J. Hunt, W. Hayes, 2d Lt. H. F. Clark, slightly; Capt. E. K. Smith, mortally—since dead; 2d Lt. F. S. Dent; 2d Lt. and aid-de-camp H. Thorn, slightly; 1st Lt. M. L. Shackleford, 1st Lt. C. B. Daniels, severely; Capt. R. Anderson, severely; 2d Lt. G. P. Andrews, slightly; Asst. Surg'n. J. Seniors, slightly; Adj. H. Prince, severely; 2d Lt. A. B. Lincoln, do.; 1st Lt. S. Smyth, slightly.

Bvt. Col. J. S. McIntosh, severely—since dead; Asst. Surg. Wm. Roberts, severely; 2d Lt. C. S. Hamilton, badly; Capt. A Cady, slightly; Capt. W. H. T. Walker, severely; 2d Lt. R. F. Ernst, severely; Major C. A. Waite, Bvt. Maj. George Wright, slightly; Bvt. Maj. A. Montgomery, Capt. L. Smith, severely; 1st Lt. J. Burbank, mortally—since dead; 1st Lt. J Beardsley, severely; 1st Lt. C. Morris, mortally—since dead; 1st Lt. J. D. Clark, severely; 2d Lt. G. Wainwright, badly; Lt. J. G. S. Snelling, severely; Maj. Geo. W. Talcott, 2d Lts. G. L. Kitzing, R. Swann, Wm. J. Martin, Washington Terrell, slightly; Maj. John A. Savage, severely; Captain Thomas Glenn, Lts. Hays, Thomas Shields, Samuel B. Davis, slightly; Capts. Wm. H. Irvin, P. M. Guthrie, severely; Adjt. D. S. Lee, slightly.

Names of the Killed, Wounded and Missing of the 1st Divisions in the actions of the 13th and 14th Sept.

Killed.—Lieut. A. J. Rogers; 2d Lt. J. P. Smith.

Wounded.—A. A. Gen. W. W. Markall, volunteer, A. D. C. George W. Kendall, slightly; 1st Lieut. J. J. Stevens, severely; Lt. Col. John Garland, commanding 1st brigade, severely; 1st Lt. S. Smith, mortally—since dead; 2d Lt. Maurice Maloney, condition not stated, Capt. D. H. McPhail, slightly; 1st Lt. L. A. Armistead, slightly; 2d Lt. James Longhurst, 1st Jos. Seldon, severely.

SECOND DIVISION—BRIG. GEN. TWIGGS.

In the action at Chapultepec and the Garita de Belen, on the 13th, and in the city of Mexico on the 14th and 15th September, 1847.

FIRST BRIGADE.

Wounded.—1st Lt. Earl Van Dorn, slightly; Maj. W. W. Doring, severely, arm lost; Capts. J. S. Simonson, J. B. Backenstos, S. S. Tucker, 2d Lt. T. S. K. Russell, Bvt. 2d Lt. I. A. Palmer, Capt. Geo. Nauman, slightly; 1st Lt. and Adjt. J. M. Brannan, severely; 1st Lt. J. M. Haskin, do,

SECOND BRIGADE.

Killed.—1st Lt. Levi Cautt.

Wounded.—Capt. Silas Casey, 1st Lt. N. Lyon, slightly; Capt. Thos. Handey, severely.

THIRD DIVISION—MAJ. GEN. PILLOW.

During the attack on Chapultepec and the city of Mexico on the 13th and 14th Sept. 1847.

Major Gen. Gideon J. Pillow, wounded severely; Lt. G. T. Beauregard, wounded twice slightly.

FIRST ARTILLERY, CO. 1—FIELD BATTERY.

Wounded—Capt. J. B. Magruder, twice.

NINTH REGIMENT INFANTRY.

Killed—Col. T. B. Ransom.

FOURTEENTH REGIMENT INFANTRY.

Wounded—Col. Wm. Trousdale, severely; Capt. J. M. Scantland, severely; Col. Robt. G. Beale, very slightly; 2d Lts. Rich Steel, Robt. W. Bedford, slightly.

FIFTEENTH REGIMENT INFANTRY.

Wounded—Capt. E. A. King, slightly.

VOLTIGEUR REGIMENT.

Wounded—Lt. Col. Jos. E. Johnston, slightly; Capt. Moses J. Barnard, twice slightly; 1st Lts. Jas. Tilton, H. C. Congenecker, [Adj't] slightly; 2d Lts. J. L. Reno, severely; W. J. Martin, slightly.

FOURTH DIVISION—MAJ. GEN. QUITMAN.

Several actions near the city of Mexico, on the 14th and 15th September, 1847.

Killed—Major L. Twiggs, Capt. A. Van O'Linda, 1st Lt. J. M. Morgan, 2d Lt. J. Wells Cantey.

Wounded—Lt. Col. J. M. Geary, slightly; Lt. A. S. Towrison, Capts. E. S. Williams, Chris. Sieb, Lt. John Keefe, Capt. James Caldwell, severely; 1st Lt. and Adj. D. D. Baker, 1st Lt. and A. Q. M. J. S. Devlin, slightly; 2d Lt. Charles A. Henderson, Maj. A. H. Gladden, Act'g Adjt. M. Clarke, severely; 1st Lt. A. B. O'Bannon, 2d Lt. C. J. Kirkland, Capt. J. H. Williams, slightly; Lt. Col. Charles Baxter, mortally—since dead; 2d Lts. Mayne, Reede, Capts. J. Barclay, S. W. Peel, slightly; Capt. C. H. Pearson severely; 2d Lt. Bell, 2d Lt. J. W. Steen, 2d Lt. J. B. Davis, 1st Lt. Chas. H. Janes, Capt. M. Fairchild, Lieut. J. W. Green.

General Staff.—Brig. Gen. James Shields, severely; F. N. Page, A. A. G., slightly; M. Lovell, A. A. A. G., slightly; Capt. Dauly, vol. aid, severely.

GENERAL TOTAL.

	Killed.	*Wounded.*	*Missing.*
1. Gen. Worth's Division....	140	766	27
2. Gen. Twiggs' Division....	36	191	10
3. Gen. Pillow's Division....	21	111	10
4. Gen. Quitman's Division...	42	267	..
Total.....	238	1335	47

Killed, wounded and missing in the four divisions of Generals Worth, Twiggs, Pillow and Quitman, 1623.

CITY OF MEXICO, Sept. 24, 1847.

Not a little joy has been manifested by all at the arrival here of the American prisoners—Captains Clay, Heady and Smith, Lieutenants Churchill, Davidson and Barbour, and sixteen privates—who have recently been confined at Toluca. It seems that they were released by the Governor, on his own responsibility, they promising that the same number of Mexican prisoners, and of equal rank, should be delivered up to him. Those officers who refused to give their parole when all were ordered to Toluca, and who afterwards escaped, have performed active service here in the different battles. Major Gaines has been serving on the staff of Gen. Scott, Midshipman Rogers on that of Gen. Pillow, Major Borland on that of Gen. Worth, and Capt. Danley on that of Gen. Quitman. The latter was severely wounded on the 13th, but will recover.

G. W. K.

CITY OF MEXICO, Sept. 26, 1747.

Assassinations continue. No less than ten murdered soldiers were found this morning in the vicinity of the quarter of San Pablo, and eight on the previous day. The fault lies partially with our own men, who straggle from their quarters and get intoxicated at the first *pulqueria* or grog shop; but the fact that even in this state they are set upon by gangs of armed ruffians, shows that a feeling of revenge and deep hatred obtains against us; and the frequency of the murders would prove that a regular system of assassination is organized, the wire workers very likely some of the priests and leading men.

In my last I stated that Col. McIntosh was sinking under his wounds—that brave officer died last night, and is to be buried tomorrow with all military honors. He fell pierced by two balls while gallantly leading his men to attack the Casa Mata on the 8th Sept., and his system, suffering under wounds received in former battles, was not able to overcome the shock.

Yours, &c., G. W. K.

CITY OF MEXICO, Sept. 28, 1847.

We have rumors without number from Puebla today. One is that Santa Anna has been killed in an encounter with Col. Childs in the vicinity of that city; another story would make us believe that he has been taken prisoner, after defending himself for some time at the paper mill called La Constancia, in the neighborhood of Puebla. The accounts say that Col. Childs was reinforced by Major Lally, and that he immediately entered the city, drove out the guerrilleros and surrounded the mill above named. What credit to place in these rumors I know not; but if Santa Anna is really a prisoner it has been intentional—he has given himself up. If he has been killed, it has been what the Mexicans would term one *casualidad*, a sheer accident, for no such intention ever entered his head.

It is said that the Mexican Congress is to assemble at Queretaro, on the 5th of October—next week—and that Pena y Pena has gone out to be installed as the acting President. I have heard Mexicans say that the body has many members who will deliberate manfully and seriously in favor of peace; but my opinion is, that a majority of them will talk of little save honor and ditches and glory, and last extremities and ruins, and of being buried under them, and kindred nonsense. Some of them may be bribed, or hired, to espouse the peace side. We shall see.

Paredes was here in the city a few days since, without followers, and has gone North, perhaps toward Guadalajara, his old and favorite ground, to stir and influence the minds of the people against the Yankees, and try his hand against them. He is, no doubt, one of the bravest and best Generals Mexico has ever produced.

Gomez Farias is at Queretaro, but we do not hear what he is doing. General Herrera is also there, and if any leading man in Mexico is in favor of peace, he is the one. His influence, however, is confined almost entirely to the *moderados*.

Mr. Wells, the partner of Hart in the army theatre, died here a day or two since. He may be recollected in the United States, not only as a pantomimist but as a dancer and actor of some distinction. Capt. Pemberton Waddell, of one of the new regiments of infantry, is also dead. The wound of Gen. Shields, although painful, is improving. A musket ball struck him in the left arm at the storming of Chapultepec, but binding a handkerchief around it he continued with his men until everything was calmed. Gen. Pillow is almost entirely recovered. Since commencing this I have heard another rumor to the effect that Alvarez and the Congress of Puebla have risen upon Santa Anna and put him to death. This can hardly be credited. Alvarez is doubtless in that direction. He took special good care to keep himself and his pintos out of harm's way during the recent struggles in that vicinity.

The loss in the different divisions in the storming of Chapultepec and capture of the city on the 13th is as follows: In that of General Quitman about 300, in that of Gen. Twiggs 268, in that of Gen. Pillow 142, in that of General Worth 138. Owing to his previous heavy loss the latter only had about 1,000 men engaged in the last battles. As I know it will be of great interest to their friends, before closing this letter I will state that the wounds of almost all the officers are doing well. I can speak positively of Colonel Garland, Majors Wade, Waite, Loring and Gladden, of Capts. Mason, Walker, Danley, and of Lieuts. Foster, Shackelford, Selden and Lugenbeel, and I mention them as being some of the most severely wounded. Yours, &c., G. W. K.

Some of the incidents related in the letter below, written by a Frenchman to one of his countrymen in Vera Cruz, have been partially reported by the Telegraph, but the details, will, nevertheless, be found interesting:

MEXICO, Sept. 28, 1847.

MY DEAR SIR: I avail myself of the departure of the British courier to sketch you the scenes it has been my luck to witness in the capital and its environs, the Mexicans having been beaten in all points, and in every way, from the 8th to the 13th inst.

Gen. Santa Anna left the Capital on the evening of the 13th, and took the road of the interior. On the 14th, in the morning, the Americans entered the city in a very quiet manner, and Gen. Scott was already in the Palace, when, on a sudden, the people of the low classes commenced throwing stones on the Americans from the tops of the houses, and from all the streets, whilst individuals of a better standing, fired from the windows and balconies on the Yankees, who were far from expecting such treatment.

Gen. Scott ordered immediately pieces of artillery to be placed in all directions, and soon swept the street with grape shot; but this proved insufficient to subdue the insurrection. General

Scott then sent a few companies on divers points, with orders to break open every house out of which the Mexicans should fire; to put to the sword those found within, and lastly, to sack the property therein contained.

This order was executed with great moderation, thanks to the secret instructions of General Scott, but in some cases, with stern energy, soon put down the insurrection.

These scenes lasted three long and sad days—from the 14th to the 17th—and, I assure you, we were much alarmed during the whole time.

All foreigners, including those imbued in other respects with prejudice towards the Americans, agree in one point—that the American army had not done the hundredth part of the injury it had a right to do, and which European armies have done in similar circumstances. A foreigner myself, and having seen warfare in Europe, towards the end of Napoleon's military career, I, judging by comparison, give it as my sincere and candid opinion, if a Continental army had been stoned and fired upon by the population of a vanquished city, the inhabitants would have been dealt with rather roughly.

Now we are tranquil; but it is a sad tranquility, as we fear new disturbances. Our precarious situation will not change for the better, until peace be concluded, or the Americans send about 15,000 men. The army of invasion is really too small; for figure to yourself 7,000 men in a city of upwards of 200,000 hostile souls, and in Puebla less than 1,500 to restrain a population of more than 50,000. This is really too little. The Americans have covered themselves with glory in all the battles fought in Mexico; they are all and each of them heroes; but it is a great thing to see a handful of Americans cut their way through three hundred miles of dense populations, and hoist the *star-spangled banner* on the domes of this capital.

TRIUMPH OF AMERICAN ART.—A correspondent of the *Albany Evening Journal* says:

While the steam engine, (in its application to purposes of locomotion) the lightning rod, the spinning gin, the magnetic telegraph, and other American inventions and discoveries have gained a world-wide renown, the researches in the new science of *Palæontology*, by Geologists in the United States, have already attracted the especial notice and admiration of scientific men thro'-out Europe.

But the object of this note is to call public attention to the remarkable fact, that a young man residing at Canastota, in Madison co., N. Y. has, by the force of his own singular genius and extraordinary perseverance, succeeded in constructing more powerful miscroscopes than have ever been produced before, *either in this or any other country*.

A letter written by Prof. BAILEY, of West Point, is quoted in proof of this statement. In that letter Prof. B. says that Mr. SPENCER's lenses showed beautifully objects that had been sought in vain by the aid of the highest powers of other miscroscopes. "I feel therefore," adds the Professors, "no hesitation in pronouncing his Miscroscopes far superior to Chevalier's; and they show all the lines on the most difficult objects which I could see with the Lowell instrument at Boston.

This is a triumph for American art, in which we should all rejoice, and feel it a duty to spread the knowledge of."—*Com. Adv.*

Funeral Display.

"At my death," says Sir Thomas Brown, "I mean to take a total adieu of the world, not careing for a monument, history or epitaph, not so much as the memory of my name to be found any where but in the universal register of God." This sentiment, so characteristic of one of the greatest of "the great old prose writers of England," is the sentiment of every thorough christian and all truly great men. And display after their death, whether at their interment or at a future period, is repulsive to their feelings when alive, and is looked upon as a sad exhibition of misplaced regard and human weakness. This counsel to friends is like that of Milleande:—an old lord in Ford's beautiful play of the "Melancholy Lover:"

"When I am dead
Save charge, let me be buried in a nook;
No gems, no *pompous* whinings; these are fooleries.
If, while we live, we stalk about the streets,
Jostled by carmen, foot-posts and fine apes
In silken coats, unminded and scarce thought on,
It is not comely to be haled to the earth
Like high-fed jades upon a tilting day,
In antic trappings."

We are sorry to say that such counsel as this, full grown common sense, is seldom regarded by the friends of the deceased. They have no thought of saving charge. Not only must an army of uninterested mourners (?) be marshalled, but a long procession of carriages must figure on the occasion, even though the relatives are unable to defray the expenses thus incurred.

The distribution of invitation cards to attend funerals, a custom prevalent in Canada and some other countries, appears to be in bad taste. Would it not be preferable to have only such individuals present on a funeral occasion as are drawn to the house of mourning by sincere friendshipial attachment at least, to the lost? How *can* real mourners take any pleasure in being crowded in the house of sorrow, or jostled at the grave, by disinterested personsl Such things, it would seem, *must* be dissonant to the feelings of the afflicted. Be this as it may, they are at best but a cold mocking of the sacred instincts of our nature.

Afar from home and amongst strangers, we have witnessed to day the *pompous* interment of a Son of Temperance. During the sermon, the speaker said he rejoiced that there was such a society as the one to which the deceased belonged BECAUSE *it had a tendency to make large and respectable funeral processions!!* The worthy association assembled on the occasion, must have blushed at this argument in their behalf. We can, for our part, most heartily say, Heaven deliver us, while living, from any *conventional* ties which,

alone shall constrain others, when we are dead, to follow us to the "narrow house." Let no mortal view our open grave unless he can drop a tear into it out of respect to us as an individual *merely*. We would prefer one sincere mourner to a nation of indifferent spectators.

FEMALE TEACHERS FOR THE WEST.—A meeting was held last Sabbath evening at the first Presbyterian Church, in connection with the departure of thirty-two female teachers from the east to the west, accompanied by ex-governor Sldae of Vermont, the agent for "The National Board of Popular Education," under the patronage of which these young ladies are sent out.—Mr. Slade addressed the meeting at considerable length on "The organization of Board—the wants of the west—the need of immediate and vigorous action in meeting these wants, and the most practicable plan for accomplishing the object in view." Mr. S. stated that he had travelled for the "Board" about one year in endeavoring to arouse the attention of the west to the subject of Education, and in establishing auxiliary organizations in the most important western cities.—The present location of the "Board," if we mistake not, is at Cleveland, Ohio. Last spring it sent out thirty-three teachers who are now laboring in different portions of the North-western states with a good prospect of success. The plan on which the Board is now operating, met with the hearty approval of the clergymen present, and cannot fail, we think, of accomplishing all it proposes.

THE MOSQUE OF ST. SOPHIA.—The *Builder*, an English publication, says the Church of Santa Sophia, at Constantinople, which has been converted into a mosque since 1453, and is the most ancient Christian church that exists, is now undergoing a thorough restoration, by order of the Sultan, under the direction of M. FOSSATI, an architect. As we are informed, adds the *Builder*, they have removed the layer of plaster with which the superb mosaics and frescoes that decorate the walls were covered, and which are not less important as regards art than they are in respect of history.

THE POTATO CROP ABROAD.—A private letter to the editors of the *Batavia Times* dated London 21st ult. states that notwithstanding whatever the papers may say, the writer is entirely satisfied, from personal observation in England and Ireland, that the potato crop in both those countries will prove a total failure. Decay had already commenced and was rapidly increasing.—Reasoning from analogy, we have expressed an opinion that this would ultimately be found the case in those countries, as well as in the United States. The Continent of Europe, it has been admitted, is severely visited by the this affliction; and the British press has an interest to serve in refusing to make public the extent of the failure.

☞ The following is an illustration of the very extensive business continually carried on in the fine grazing counties in our neighborhood. There is so far as we know, not any way of accurately estimating its amount. The cattle are driven along various roads and to various places, chiefly to New York and Boston, and sometimes to Philadelphia, or the country near those places, where after being fattened they are sent to market. They are sometimes sent to various places in Upper Canada also, and even to Montreal.—If the money value of the cattle exported from these lands were in the shape of wheat, it would attract public attention and a greater influx of settlers than at the present time:

"WHERE DO THEY COME FROM?"—It is surprising to witness the numbers of horned cattle that pass over the Allegany road through this village. Scarcely a day passes at this season that does not bring along its three or four droves; and occasionally it does appear as if the roads was covered with a continual drove from daylight till dark.—*Perry Dem.*

THANSGIVING IN PENNSYLVANIA.—The Governor of Pennsylvania has also appointed Nov. 25th, as a day of public thanksgiving—making the eighth State in which the same day is to be observed.

NEW YORK, Oct. 22, 3 P. M.

It was rumored at the Capital by messengers from Puebla, on the 27th, that PAREDES, BUSTAMENTE, and other influential persons, were about to invite a foreign Prince to Mexico to settle the difficulties of the country.

Gen. QUITMAN issued orders on the 25th notifying all officers of the Mexican army at the Capital to report immediately to the Inspector General of the American army, and another under date of the 27th regulating the value of commodities.

Some accounts reiterate the statement that the Americans had lost three thousand since the army left Puebla, while others state the loss at 1623, as follows:

Gen. WORTH'S division 140 killed, 766 wounded, and 27 missing. Gen. TWIGGS'S division, 38 killed, 194 wounded, and 10 missing. Gen. PILLOW'S division 21 killed, 111 wounded, and 10 missing. Gen. QUITMAN'S division 41 killed and 267 wounded. Total killed, wounded and missing, 1623.

"We have destroyed," says the despatch from the South, "the Mexican army of over 30,000 men—upwards of 6,000 of which have been taken prisoners. We have captured seventy pieces of artillery—27 at the battle of Contreras—10 at the fort of Cherubusco, and 33 on the 12th, 13th and 14th.

The last of Mr. KENDALL'S letters dated the 29th, mentions two rumors with regard to SANTA ANNA, one of which is that he has been taken prisoner by Col. CHILDS, and the other that he had been slain by Gen. ALVAREZ and the Congress of Puebla.

A correspondent of the *Delta* gives a graphic account of the entrance of Gen. SCOTT into the Capital, but it is too long for this despatch.

One of the first acts of Gen. SCOTT was to appoint Gen QUITMAN Civil and Military Governor of Mexico, and Col. J. F. BELTON Lieut. Governor.

Gen. QUITMAN's department embraces the following officers:

Capt. F. N. Page, Assistant Adjutant General, Lieuts. M. Lovell, M. Wilcox, and R. P. Hammond, aid-de-camp, Capt. J. T. Davis, Secretary, and Mr. Levi, interpreter.

NEW YORK, Oct. 25—3 P. M.

The Southern mail brings New Orleans papers to the 17th, but nothing later from the army.

The Picayune contains a circular from Pacheco, Mexican Secretary, addressed to the Governors of the several States, recounting the disasters which have befallen Santa Anna and the Mexican army—Santa Anna's resignation of the Presidency, and his determination not to lay down his arms until ordered to do so by the Mexican Government.

The Telegraph is out of order beyond Wilmington, Deleware.

NEW YORK, Oct. 21—7 P. M.

Santa Anna not wounded, but resigned the Presidency, and retired to Luca, 15 miles from Gandaloupe, with the remnant of his army, for the purpose of attacking our trains. Most of the deserters hung. Riley only flogged.

Clay and others joined Scott in taking the Capital. Scott issued congratulatory orders, requesting officers and men to return thanks to God for our triumph, and enjoined strict discipline and sobriety.

An American paper has already been issued at the Capital.

The report that Gen. Rhea was at Puebla is fully confirmed, and the Sun of Liberty of the 27th ult., says our troops under Col. Childs were bombarding the city from the surrounding heights; the same paper of the 2d inst., says Santa Anna was at Puebla. His force after its junction with Gen. Valencia amounted to only 3000 men, and was quartered in the Convent of Saint Carmain.

The Americans shortly fortified in a massive building, awaiting reinforcements in the utmost security. At intervals bombs were thrown into the city, doing very little execution.

It is not true that the Americans were at any time severely repulsed.

A letter from the capital says the Americans entered the city in a very quiet manner, and Gen. Scott was already in the Palace when on a sudden the people of the lower classes commenced throwing stones on the populace, while individuals of the better order fired from the windows and balconies. Gen. Scott ordered parks of artillery to be placed in all directions and soon swept the street. But this proved insufficient. Gen. Scott then sent a few companies in advance parties, with orders to break open every house out of which the Mexicans could fire, to put to the sword those within and sack the property. This order was executed with much moderation.

Farther details by the Fashion represent that the Mexican Gen. Rhea, is certainly in possession of Puebla, and that forces was concentrating there from all quarters.

Col. Childs having returned is well posted near by, expecting Gen. Lane and Maj. Lally to arrive soon.

Gen. Lane was at Jalapa on the 30th ult.—Bescot, who took a convoy for him to the National Bridge says, he saw no enemy. Col. Fairchilds in returning from the bridge, was fired upon, and one man wounded. Gen. Patterson was to leave soon with 2000 men.

A bearer of despatches from Gen. Scott is reported killed at Cordova.

ARRESTED.—We understand the first and second Mates of the steamer Chesapeake have been arrested under an indictment found in the last United States Court, for manslaughter, (in disregarding the lives of passengers lost by the sinking of the Chesapeake,) and are now confined in this place.—*Clev. Plain Dealer.*

THE WIRES ARE UP.—We noticed day before yesterday the arrival of 50 bundles more of Telegraph wires, and yesterday they were being strung along on the tops of the posts leading up Fort street. A few weeks more and this city will be struck by lightning every day.—*Detroit Adv.*

"THE PRAIRIE ON FIRE."—The prairie has presented a beautiful appearance for the past few evenings in the neighborhood of the city, as the fire has swept over it. The season for the annual burning has arrived, and the long line of fire on the South and West nightly, looks like a bright opening through the earth, or in detatched spots like the watch fires of an army—so noiseless, yet so grand.—*Chicago Journal.*

SUICIDE.—Mr. Tucker, a young man residing on Fifth street, between Race and Elm, committed suicide last by blowing his brains out with a pistol. He died instantly. He had been for some time in a melancholy mood, but none knew the cause of his dejection.—*Cleveland Plain Dealer.*

STATE OF NEW YORK, } ALBANY, August 3
SECRETARY'S OFFICE, } 1847.

To the Sherif of the County of Erie:

SIR: Notice is hereby given, that at the next general election to be held on the Tuesday succeeding the first Monday of November next, the following officers are to be elected, to wit:

STATE.

A Secretary of State, Comptroller, State Treasurer, Attorney-General, State Engineer and Surveyor, Three Canal Commissioners, and Three Inspectors of State Prisons.

DISTRICT.

One Senator for the Thirty-First Senate District, consisting of the county of Erie.

COUNTY.

Also, the following officers for the said county, to wit: Four Members of Assembly, one to be elected in each Assembly District.

Yours, respectfully,
N. S. BENTON, Secretary of State.

ERIE COUNTY SHERIF'S OFFICE, }
Buffalo, August 6, 1847. }

A general election is to be held in the County of Erie, on the second day of November next, at which which will be chosen the officers mentioned in the notice from the Secretary of State, of which a copy is annexed.

auboawtno2 TIMOTHY A. HOPKINS, Sherif.

STATE OF NEW YORK, }
SECRETAY'S OFFICE. } ALBANY, Sept. 23, 1847.

To the Sherif of the County of Erie:

SIR: Pursuant to an act entitled "An act to provide for the election of a Lieutenant Governor," passed Sept. 27, 1847, Notice is hereby given that at the next General Election, to be held on Tuesday succeeding the first Monday of November next, a Lieutenant Governor of this State is to be elected. Yours, respectfully,
N. S. BENTON, Secretary of State.

ERIE COUNTY SHERIF'S OFFICE, }
Buffalo, Oct. 2, 1847. }

Notice is hereby given, that at the General Election, to be held on the 2d day of November next, there will be chosen a Lieutenant Governor of this State, agreeable to the notice from the Secretary of State, a copy of which is hereto annexed.

oc loawtnlc TIMOTHY A. HOPKINS, Sherif.

☞ Mr. KENDALL in one of his letters from Mexico, under date of the 24th of September, relates the following:

'Speaking of Mr. Trist, reminds me of a story current on the 13th. It is said that, shortly after Chapultepec was carried, that gentleman rode up the height, and on being recognized by a gallant Irish soldier, the latter accosted him with, "I say, sir, it's a beautiful thraty we've made wid 'em to-day sir." The story is worth relating, at all events.

SHOCKING DEATH.—David Darrow, an old and much respected citizen of Stow township, Summit County, was digging a well on his premises the other day, when suddenly the banks caved in upon him, burying him twenty-five feet under.—It was soon discovered, and the neighbors rallied and commenced digging him out. After five hours of intense exertion and great excitement they reached the body, and found it dead.—*Clev. Plain Dealer.*

MARRIED.

This morning, 20th inst., by the Rev. Dr. Tucker, Mr. WILLIAM SMITH, and AMANDA A., daughter of Henry Bacon, all of this city.

This morning, 21st instant, by the Rev. Dr. Lord, Mr. ROBERT D. FOY, and Miss ANGELINE F., daughter of Samuel S. Taff, all of this city.

On the 20th inst., by the Rev. Dr. Tucker, Mr. WILLIAM H. SPENCER, and Miss SARAH A. WESTERVELT, all of this city.

On the 26th inst., by Rev. Dr. Tucker, Mr. I. M. LELAND, of Hartland, and Miss CALISTA L. HERRINGTON.

On the 24th inst., by P. A. Child, Esqr., Mr. CYRUS A. LOVELAND, and Miss FANNY NILES, all of this city.

At Lancaster, on the 26th inst., by Rev. Mr. Havens, Mr. WILLIAM H. DRIESBACH, of Wisconsin, and Miss LAURA WHEELOCK, youngest daughter of John G. Wheelock, of Lancaster.

DIED.

On the 12th inst., WINSLOW S. HALE, merchant, of Coldwater, Mich.

On the 15th inst., Mrs. MARGARET ABBOTT, aged 62 years.

On the 20th instant, at the Western Hotel, of asthma, Gen. WILLIAM B. SHELDON, lately of Janesville, W. T., aged 49 years.

On the 24th instant, SARAH AUGUSTA, daughter of James and Sarah G. McKnight, aged 16 years.

Mrs. Steele's Female Seminary.

THE Regular Fall and Winter Session of this Institution will commence on WEDNESDAY, the 3d day of November, and continue twenty-two weeks. All the Studies usually pursued in the best Schools are thoroughly taught in this Seminary, including the Languages, Vocal and Instrumental Music, Drawing and Painting.—One competent Assistant Teacher is provided for every ten Pupils

This Institution is under the supervision and control of a responsible Board of Trustees. The Seminary buildings are pleasantly located on the banks of the Niagara River, Black Rock, within one mile of the city of Buffalo, and are sufficiently commodious to afford a comfortable home for a large number of pupils.

TERMS—The price of board, washing, lights, fuel and Tuition in all the English Studies, is $112 per annum.—The extra charges are, for Music on the Piano $10 per quarter; German or French Language $7 50; Drawing and Painting $5.

☞ Pamphlets, explanatory of the plan of the School, may be obtained at the principal Bookstores in this city.

Buffalo, Oct. 14, 1847. o:t14d&ctf

NEW PUBLISHING HOUSE AND WHOLESALE BOOKSTORE.

The subscribers beg to inform Booksellers, Buyers and dealers in Books, and all interested in education and literary advancement, that they have recently opened an extensive Book and Stationery Establishment. Their assortment of Books in the various departments of literature is complete and well selected; comprising a full assortment of School and Classical Books in general use, Law, Medical and Theological Books, in great varieties. Their facilities as Publishers enable them to offer Books on as favorable terms as most of the Eastern Houses Orders from the country solicited and promptly answered.

Citizens and the public generally are invited to call and examine Books and Prices, where will be found the one progressive principle "Small Profits on numerous Transactions."

DERBY & HEWSON,
a7 No. 164 Main Street, Buffalo.

BUFFALO MUSICAL INSTITUTE FOR YOUNG LADIES.

At the residence of Prof. W. R. Coppock—Composer and Teacher of the Piano Forte, Organ, Singing and Composition.

An institute devoted exclusively to Musical Education is not yet common in this country; but in Europe the test of experience fully shows its great advantages over the too general superficial manner in which this important part of polite education is acquired. The advantages this institution offers to those desirous of completing their studies as Organists—or practical players of the Piano Forte, together with a thorough system of imparting the same to others is fully established by the many precedents of the past 15 years. The pupils are constantly guarded in their practice, against all bad habits, and from the various stages of progress they may be in, are continually stimulated to effort and industry, by association with each other. The family too, are all players, and the theory is amusingly discussed, impressing its rules in a more pleasing manner, and more lasting upon the understanding, than by the mere dry study of an elaborate book. Music is composed and arranged from time to time, showing the various styles and harmonies analytically, and adapted for performance on several Pianos at the same time. This teaches a thorough knowledge of counting, and dividing passages into their given time. Vocal music is particularly attended to, and when the pupil has a moderate share of talent, we hesitate not to say, a correct and pleasing singer can be made. The Piano Fortes used are all new, and of the finest quality, and every inducement will be given to render the true spirit with us profitable. The building is commodious, and has a fine garden attached, with Green houses, Bathing rooms, &c., and is pleasantly situatuated in Seventh street, between Niagara Street, and the Falls rail road, and about midway to Prospect hill

Terms made known upon application at the Institute, or by mail, post paid, directed Prof. Coppock, Buffalo

Prof. Coppock, keeps constantly a choice selection of Piano Fortes for sale,

Buffalo, August 3, 1847.

PRINTERS' FURNISHING WAREHOUSE.

WILLIAM PRESCOTT, Manufacturer of Printing Inks, No. 6, United States Hotel Block, Pearl St., Buffalo. Printing Presses, Metal and Wood Type, Cards, and every other description of Printers' materials constantly on hand at New York prices, adding transportation. Also, sole Agent for the sale of C. J. Gayler's Patent Double, and Improved Single Salamander Book Safes n18 3m.

CHEAP CASH BOOK STORE.

The subscriber, dealer in Books and Stationery, at 188 Main Street, 2 doors above Seneca, keeps constantly on hand, an extensive stock, embracing the most valuable selections from Ancient and Modern Literature—and a general variety of Theological, Classical, Gift and School Books, &c., &c. The Amateurs of Knowledge and all interested in the purchase of Books or Stationery are respectfully solicited to call. Print and Cap Paper at wholesale.

Buffalo, April 20, 1847. F. W. BREED.

JEWETT, THOMAS & CO.

PUBLISHERS,

Steam Press of Jewett, Thomas & Co.

WESTERN LITERARY MESSENGER.

VOLUME IX. BUFFALO, SATURDAY, NOVEMBER 6, 1847. NUMBER XIV.

For the Western Literary Messenger.

Translation from Horace.

What slender youth, where roses bloom,
Pregnant with odors and perfume,
Beneath some grateful bower,
Woos thee, O Pyrrha! false and fair?
For whom bind'st thou thine auburn hair,
The favorite of an hour?

Alas! too soon thy fickle heart,
And gods as fickle as thou art,
He shall in vain deplore,
And, inexperienced, with surprise,
On the smooth main see winds arise
And surging billows roar.

Trusting too well that thou wilt be
Forever fond, forever free,
He now enjoys thee well—
And little deems the fickle breeze
More constant than thy will, to please
The victims of thy spell.

The sea-god's sacred shrine will show
That I, in token that I owe
My safety to his care,
A garment, dripping with the brine,
And tablet, with a fit design,
Wave high, suspended there.

SCHOOLCRAFT, Mich., Oct. 15, 1847. E. L. B.

From the National Era.

The better way, or the Wife's Victory: A tale of Domestic Trials.

BY SUSAN D. E. SOUTHWORTH.

[CONCLUDED.]

But the greatest trial and the greatest triumph of the wife were now at hand.

Twelve months succeeding the events recorded above, Mrs. Leslie sat in her parlor. It was eight o'clock in the evening, the snow was falling fast without, within everything wore an air of the greatest possible comfort. A coal fire was glowing in the grate, a snow-white cloth was laid for tea. Mrs. Leslie reclined upon a lounging chair near the fire; her face was somewhat paler and thinner than when we noticed her last, but scarcely less attractive. Her large, tender eyes wore an expression of holy and meditative love that was very beautiful. Her work (an embroidered slip) had fallen from her hands upon the carpet. Sylvia sat on a low stool at her feet, dressing a doll. Catherine reclined upon a distant sofa, absorbed in a novel, (her constant occupation when not visiting, dressing, or disputing.)

"Who are you making this for, mamma?" inquired Sylvia, taking up the little dress.

"*For whom*. You should try to speak correctly, darling," said her mother, coaxingly.

"Well, then, *for whom*, mamma, are you working this little frock?" persisted Sylvia.

"First find out what rule of grammar you have just now transgressed, and then perhaps I may tell you darling."

"Why can't you tell the child? For my part, I don't see the use of mystifying children," exclaimed Kate, throwing aside her book and coming to the fire.

The front door was now heard to open, and in another instant Mr. Leslie entered.

Going up to Mary, with more tenderness than we have ever yet seen him display, he took her hand, and, pressing a kiss upon her brow, said—

"How are you, this evening, sweet wife? Nay, sit still. I will ring for tea, or Sylvia, do *you* do so. Why, Sylvia, an affectionate daughter should be ever on the watch to save her mother trouble."

Sylvia sprang to obey. Tea was soon brought in, and they gathered around the table

"I bring you good tidings, Catherine. Lieut. Dunn has received his promotion.

"Then I congratulate the lieutenants. There is one fool the less among their number," said Catherine, piqued, perhaps, that "Lem Dunn" had not hastened to her with the news himself.

"Capt. Dunn is now on duty, but will pay his respects to you to-morrow," said Leslie, divining her cause of dissatisfaction.

After the tea service was removed, the conversation became rather constrained. Catherine took up her everlasting novel, Mary resumed her seat and her needle-work, Sylvia, bent on following up the hint of her step-father, began to arrange her mother's work-box, while Leslie walked up and down the floor, after the manner of a man who *has done*, or is *about* to do, something disagreeable. At last he took a seat, drew a letter from his pocket, examined the superscription, turned it over, glanced at Catherine, who had closed the book, and was now looking at him with quiet impudence, and finally replaced the letter in his pocket. He evidently had something to say, but was withheld by the presence of Catherine. I am really mortified to be obliged to record such a weakness on the part of the stately Mr. Leslie, but truth must come, and Mr. Leslie really stood in a little awe of Catherine. He had no sort of influence over her. She would do and say just exactly what she pleased, however disagreeable it might be, and he could not prevent her; nor could he decently turn her out of the house, nor would he descend to quarrel with her. Consequently, Mr. Leslie was ever on guard to avoid any chance of controversy with Miss Gleason.

Fortunately, Mary, with her usual tact, saw the impatience of Leslie to unburden his mind, and, making an excuse to the Catherine, retired early to her own room. Leslie followed her almost immediately.

Catherine's beautiful lips were disfigured by a mocking smile, as her glance followed Leslie from the room.

"Come, Sylvia, honey, let us go up stairs to bed. The Bashaw is meditating some new atrocity. I know it by his looks. He is afraid to let *me* know it, though."

"Ma'am?" said Sylvia, raising her large eyes to the face of her aunt.

"Yes; and I should not wonder if it was against *you* again, too. Perhaps he wants to black your face, and crisp you hair, and sell you for a negro."

"Who—no—of whom are you speaking, Aunt Catherine?"

"Of His Infallibility the Grand Seignior, your step-father."

"Then, please do not speak of him in that way, Aunt Catherine, and call him bad names."

"Why not, miss?"

"Because mamma would not like it."

"Oh! your mamma is as great a ———. But what are you staring me in the face in that manner for? Don't you know it is very rude? Come along up to bed."

And they left the room.

* * * * *

"Something has disturbed you, Leslie," said Mary, after waiting for a few moments in vain for Leslie to open the conversation. "May I inquire, without indiscretion, what it is?"

"Certainly, Mary. I have not now, nor have I ever had, any concealments from you. I have never, from a false sentiment of tenderness, withheld from you any cause I might have for anxiety. I have several vexing cases just now. In one of them, you have an especial, perhaps you may think, an exclusive interest."

Leslie then drew the letter from his pocket, and added—

"This letter is from Madame D'Arblay, of New Orleans, now in this city, at the Astor House."

"From whom?"

"Madame D'Arblay, the mother of the late Mr. Lindal, and the grandmother of your daughter, Sylvia."

"Oh! yes; I recollect now having heard that the mother of Mr. Lindal married the second time a Frenchman by the name of D'Arblay, and removed to New Orleans; but that was many years ago."

"Yes. And now she writes that she has been left, by the recent death of Mr. D'Arblay, entirely alone, the sole mistress of a large fortune, without a relative on earth, except her grandchild, our daughter Sylvia."

"Well?" questioned Mary, pale with a presentiment of what was coming.

"Madame D'Arblay makes up the very handsome proposal to make Sylvia her heiress, on condition that we allow her to return with her grandmother to New Orleans, and reside permanently beneath her roof."

"But I cannot part with Sylvia," said Mrs. Leslie.

"Do not decide hastily, Mary; you must consider in this matter your child's interest, not your own feelings," said Leslie, tenderly but gravely.

"I cannot! I cannot part with her. Indeed, indeed, I cannot," cried Mary, trembling.

"But this is childish, Mary."

"It would break Sylvia's heart to leave me."

"Not at all. By no means. Grief is very shortlived with children of her age."

"Yes! yes!" exclaimed Mary, passionately, "and affection, too! and impressions, too! She will soon forget her mother. She will only be consoled for her separation from, by ceasing to love her mother!"

"You have not a mother's *disinterestedness*, Mary, or you would be willing to make any sacrifice of your own feelings to secure for your child the immense advantages offered by her grandmother."

"You did not seem to consider wealth such an immense advantage twelve months ago," said Mary, bitterly.

"Mrs. Leslie forgets herself, and forgets what is due to me," said Leslie, rising and walking towards the door, adding, as he was about to leave the room, "I will leave you, Mary, by reflection and solitude, to recover your lost recollection."

Mary sprang to his side, and seizing his hand, exclaimed, as she burst into tears—

"Forgive me! forgive me! It is the first time; it shall be the last. But my heart is *so* wrung, *so* tortured, you do not know—you could not understand, unless you were a parent. But tell me, then, how you have decided; for that you *have* decided I know, and that your decision is immovable I know; therefore, tell me at once; it will save us a world of useless argument, controversy, and vexation. How have you decided?"

"That Sylvia shall return with her grandmother," said Leslie, gently but firmly.

Mary let fall the hand of her husband, and, growing very faint, sunk back on her chair.

"These are the reasons that have influenced my decision," said Leslie, resuming his seat by her side: "We have deprived Sylvia, justly and righteously, it is true, but we *have* deprived her, of the reversion of a sum that would have made her independent. At the period of that transaction, I believed that I should be able to secure for Sylvia every advantage which that money would have given, and, finally, to have given her a portion of equal amount. I will now admit, that the temporarary possession of that sum led me into a speculation which failed by the sudden withdrawal of it. I have never recovered that failure and I am now on the very brink of insolvency. Nothing but the strictest economy and the most careful financial diplomacy will save me. I have therefore great doubts of ever being able to carry out my plans for Sylvia; consequently, it becomes my duty, my painful duty, to determine that our daughter be given up to her grandmother."

"I did intend to say no more," murmured Mary, in a quivering voice, "yet———"

"Well?"

"Madame D'Arblay, is she a proper person, at her advanced age, to bring up a girl?"

"Read her letter," said Leslie, handing it.—"You will find no infirmity there; and for the rest, you have doubtless heard enough of her piety and intelligence to feel secure that the moral and intellectual welfare of your daughter will be safe, while her vast wealth will insure her all the more worldly advantages of which she is now deprived."

"But is it not very sickly at New Orleans?"

"You have not yet read Madame D'Arblay's letter through, or you would see that she spends her summers at her villa on the Gulf, which, she says, is remarkably healthy in its location."

"When shall we have an interview with Madame D'Arblay?"

"I was thinking to-morrow, about twelve o'clock you had better make her a call."

"And do you know—do you know how long she will stay in the city? I mean, how long shall I yet have dear Sylvia with me?" And the mother burst into tears.

"I do not know, of course, as I have not yet seen Madame D'Arblay. But we will talk no more at present, Mary; you *must* compose yourself. I will leave you for that purpose for a few moments. On my return, let me find you quiet." And Leslie descended the stairs.

Mary threw herself on her knees, and prayed long and earnestly, then rose calmly, and retired to rest.

* * * * *

"See here, Mr. Leslie," exclaimed Kate Gleason, as she entered the breakfast parlor the next morning. "What have you been saying to Mary? She is up in her chamber in tears, and Sylvia is sobbing by her side. I can't get anything out of her, but I know *you* are at the bottom of it. Now, what is it all about?

"I have no explanations to make you, Miss Gleason," replied Leslie, taking his hat, and leaving the room to evade a quarrel.

"I'll make Lem Dunn call you out for that, sir!" cried Kate, as he went out.

Kate looked the very idea of a beautiful scold, as she stood there, her bosom heaving, her cheeks glowing, eyes sparkling, lips curling and quivering, and the tangled masses of jet-black ringlets falling in tear-sprinkled disorder about her face and neck.

"Captain Dunn!" announced a servant, throwing open the door, and Capt. Dunn entered.

"Ah! I'm glad you've come! I'm *very* glad you've come. You're come in *excellent* time. Go after that man! Go after him! He's—he's——" Kate was out of breath.

"What man, dear Kate? What is the matter?" inquired Captain Dunn in surprise.

"That Leslie!"

"Leslie! Why, what has he done?"

"He has abused his wife, and insulted me; that is, he has made her weep, and treated me with contempt."

"Tell me all about it, Kate—tell me all about it; and if he has been wanting in proper respect to my little betrothed—I'll—I'll annihilate him," said Capt. Dunn, laughing; for he had known Leslie too long and too well to imagine that there could be any real cause of complaint. Unfortunately, Catherine could tell him but little about it, and that little was not very much to her credit.

"He's a terrible fellow, Kate," laughed Capt. Dunn, as she concluded her account, "a very terrible fellow, indeed. Upon second thought, I should rather not fight him. He would shoot at me—he might hit me—in which case, I might be mortally wounded, and the service would lose" ——.

"A coward! an arrant coward! a poltroon, who will one day bring disgrace upon the flag, if he is not hung before that comes!" exclaimed Kate, as she flounced out of the room, in a great passion, passing Leslie, who was about to re-enter.

Captain Dunn was laughing heartily.

"You laugh now, my dear Dunn," said Leslie, smiling, "but will you laugh a year hence?"

"Yes! oh, yes! that is, I hope to do so."

"Have you no misgivings concerning your future peace?" asked Leslie, seriously.

"For my *peace?* I don't know; for my *happiness*, not one. Kate's temper amuses me beyond measure."

"Yet, I heard some ugly names called, as I came in."

"Yes! yes! Oh! I've no doubt Kate will have given me twenty beatings before this time next year."

"You will weary of it."

"Well, when the blows grow unpleasant, I have only to catch the little shrew in my arms, and hold her very tight, until she becomes quiet and good," said Dunn, laughing.

"Ah! and then—do you know what she will do?"

"No. What?"

"Try to frighten you to death, by going into a hysteric fit, or worse—falling into a swoon."

"Ha! ha! ha! Is that Mrs. Leslie's method?"

"No! Bless dear Mary! Don't jest with her name, Dunn."

"I be hanged if I don't, just as much as I please. What! Haven't you been jesting with Kate's? 'It's a bad rule that won't work both ways.'"

Mrs. Leslie entered at this moment, equipped for a drive, and Leslie excused himself, and attended his wife to her carriage.

Mrs. Leslie drove to the Astor House, and was shown into the private parlor of Madame D'Arblay. Madame D'Arblay was at this time in her sixty-fifth year. Her tall, graceful, and majestic figure and stately carriage would have rather repulsed the gentle Mary, had not her face been so sweetly prepossessing. Her countenance wore an expression of holy calm, of heavenly goodness, very beautiful to look upon. Mary was at once reassured by her countenance and demeanor. They conversed a long time, the subject being a recapitulation of and enlargement upon the plan proposed in her letter. She made many inquiries, however, about Sylvia, and expressed a great desire to see her. At Mary's earnest entreaty, Madame D'Arblay consented to leave her apartments at Astor's, and take up her abode for the period of her visit at Mrs Leslie's.

The next hour, Madame D'Arblay was comfortably ensconced in Mary's large easy chair, by the parlor fireside. Sylvia, who had fallen in love with her at first sight, was nestling at her feet. Mrs. Leslie sat with her back to the light, to shade as much as possible her tear-stained face. Kate was sulking in her own room, and "would not be entreated" to come down and be sociable. There was so much in the pious and intelligent conversation of Madame D'Arblay to set the fears of Mary at rest on the subject of the welfare of her child, that when the dinner hour arrived, and Leslie, Captain Dunn, "Uncle Gleason," and Kate, had joined them, Mary had actually become cheerful.

The month of Madame D'Arblay's visit drew to a close. Mary, after a severe struggle with herself, and much prayer, had grown composed, and tranquilly prepared Sylvia for her journey. Leslie was unusually attentive and tender towards her; Madame D'Arblay mentally condemned the seeming indifference of Mrs. Leslie to the departure of her child, but she quietly ascribed it to the influence of her second marriage. Kate, with whom Sylvia was a great pet, had out scolded her protype and namesake, and was now not upon speaking terms with any of the family, and had banished "Lem Dunn" into perpetual exile—until recalled. Sylvia, child-like, was delighted with her new dresses, new books, and new toys, and the prospect of a long journey and new scenes, and had no room in her heart for painful sensations.

* * * * *

The last evening of Madame D'Arblay's stay arrived.

"Oh! Aunt Catherine! Aunt Catherine!" exclaimed Sylvia, bursting into Kate's sanctum, "to-morrow we're going. I'm so glad. Mamma has just laid out my new blue pelisse and velvet hood, and my nice chinchilla muff, all ready for to-morrow at six."

"Yes, miss!" said Kate, severely, "you seem very much delighted to leave your poor, pale, sick mother, who is grieving herself to death at the idea of parting with *you* who do not care for her."

A thunderbolt fell upon the child's gladness, and destroyed it all at once. She burst into tears.

"Oh! Aunt Catherine, is mamma sorry? Doesn't she want me to go? I thought she wanted me to go. I forgot I had to leave mamma; I only thought of the fun. I will run now and tell mamma that I won't go; no, *that* I won't." And Sylvia made for the door.

"Mr. Leslie will compel you, miss," said Catherine. The name that was a spell to all the household arrested the flying steps of Sylvia for an instant, then saying—

"I will speak with mamma," she ran out.

* * * * *

Mary Leslie, who had nerved her gentle heart to go through the impending trial, was in her own room, still engaged in laying out such articles of

dress as would be needed by Sylvia for the next morning. Mrs. Leslie's tranquillity was entirely overthrown by the impetuosity of Sylvia, who now burst into her presence, exclaiming, as she threw herself into her mother's arms, "Mamma! mamma! I can't leave you; I don't want to go any longer now I know you do not wish it. I *love you*, mamma, better than fine clothes, and grandmothers, and journey's; and so, mamma, I *cannot* go, and I *will not* go."

Mrs. Leslie was quite unprepared for this outburst, Sylvia had been so tractable and so cheerful up to this time. She repressed her tears with difficulty, and replied, with an effort—

"*Cannot* and *will not*, Sylvia! why, what manner of words are those, and where learnt you them? You will, of course, do as your parents wish you."

"Aunt Catherine says that if they send me away from you, mamma, it will break you heart, for that you don't want me to go"

"Catherine is mistaken: listen to *me*, my darling Sylvia. I *do* want you to go; and though I may be very sorry to part with my dear little girl, yet I shall soon get over the grief, because I know it will be for her benefit. And now," added the mother, with an effort at cheerfulness, "let us talk about the fine ride in the cars you will have, and look at the pretty things I have put in your nice little travelling basket."

"No, no, mamma! No, no, mamma! I don't care for the ride in the cars, and don't want the travelling basket. I love *you!* I want to stay with you," exclaimed Sylvia, bursting into tears. "Oh, mamma, *don't* let me go! don't, *please* don't I did not think about parting from you before, and I know I can't! *indeed* I can't!"

There was grief, there was agony, on the mother's countenance, as she crushed back the rising emotions of her heart, and choked back her tears. She struggled to speak, but could not do so with the calmness requisite to soothe her child. She could only press her closer to her bosom in silence. Neither spoke for some moments; at length—

"Mamma, do you know the night you were married, when I slept alone in my little bed? Well mamma, I cried all night; I could not sleep, because I was away from you. I knew that I should see you soon in the morning, but still I wept; yes, and I wept many nights, too, although you did not know it, and although you were not further off than the next room, and I could see you every day. Now, so many days must come and go, and so many nights pass, and—and—no mother to—to—" and Sylvia, breaking from her mother's hold, threw herself, in a fit of hysterical sobbing, upon the carpet.

"Oh! God, have mercy on me, and give me strength," exclaimed the mother, in strong emotion, as she went towards Sylvia, stood for an instant to gain self-control, then took her child in her arms, and, reseating herself, pressed her to her bosom, smoothed back the shining ringlets of her hair, and imprinted kiss after kiss upon her fair brow, as she talked gently and soothingly to her, and, rocking her to and fro, finally succeeded in subduing her emotion. Exhaustion, after so much excitement, soon put Sylvia to sleep; yet still the mother rocked and sung, even as she had done when the little girl in her arms was a babe—thinking, perhaps, that it might be the last time she should ever hold her thus. At last she arose, and, laying Sylvia on the bed, sunk upon her knees, and poured out her whole soul in prayer to her Creator—first, that this trial might yet be spared her, "if possible;" then, that if it were not, she might have strength and resignation to bear it cheerfully. How earnestly, passionately, fervently, she prayed! And when emotion became so great that words failed, the upturned straining eye, the clasped hands, and heaving sighs, bore up the silent prayer; and at last when the weary head sunk upon the folded hands, and thought no longer took the form of words, the heart, the untiring heart, still bore up the prayer, in one intense, absorbing yearning after mercy. Unknown to Mary; there was one spectator to this scene. Leslie was standing within the door. He had entered, silently and unobserved, at the moment that Mary had lain the sleeping Sylvia on the bed, and sunk down by her side in prayer. The first words of the prayer arrested his intention of coming forward or speaking. He had seen, and had heard—and never before had the pure and holy heart of his wife been so unveiled as in that prayer; and while it yet ascended, in all its Christian beauty and eloquence, he quietly withdrew from the room, murmuring, "the angle, the angel, how blind I have been! I must save her this trial; there is but one way, for I must save her without sacrificing Sylvia." He passed to the door of Madame D'Arblay's room, and knocked. The pleasant voice of the old lady bade him enter; he did so, and merely saying—"Will you come with me to Mary's chamber, Madame? She seems much distressed at the thought of parting with her daughter to-morrow." He accompanied her thither, and withdrew. Mary's voice was still heard, but in low, interrupted, and quivering tones. Her tears were falling like rain, and her hands wringing and twisting over each other; but the *words* of Mary's prayer, breathed, as she deemed, to the ear of God alone unfolded the most secret thoughts and feelings of Mary's pious heart.

"Oh, God!" exclaimed Madame D'Arblay, "I did not dream of this. Mary, Mary, my dear child, arise. Your prayer is heard and answered."

Mary started in surprise to her feet, and was caught to the bosom of the old lady. "Mary, my dear daughter," said she, "your child shall not be taken from you, neither shall she lose anything by remaining with you. Oh! Mary, how little did I know you! How unjustly have I judged you, when I condemned the indifference with which you seemed to regard a separation from you child. But, Mary, how could you suppose that I would have taken my grand-daughter away, had I not thought that you were willing, nay, anxious, for her removal to my abode? Forgive me, Mary, but I fancied that your second marriage had unnaturally alienated your heart from you child; I was therefore the more anxious to receive her. But, Mary, why did you not make me acquainted with your feelings on the subject?"

Mary, who during this long speech had had time to collect herself, replied—"Mr. Leslie, Madame, had determined that Sylvia should go with you. He thought that her residence beneath your roof would be a solace to you, and an advantage to herself. I could not seek to thwart his his purpose, by making an appeal to your sympathies, you know, Madame."

"You were right, my daughter, perfectly right. You have won my deepest love, my highest esteem, Mary Leslie! You have won it by your self-control. You have established yourself firmly and permanently in your husband's respect and affection; more than that, you have proved and known the power of faith and prayer. Never forget it my child! Now, Mary I must tell you my improvised plan. Though I will not take Sylvia away, neither will I leave her. I am glad this has happened. I like you so much, Mary, I want to live with you. I have been so solitary: and, after all, a little girl is not company enough

for an old woman. So, Mary, if you will give me an easy chair by your fireside, and a place at your table, I will even spend the close of my life with you. I will do everything for Sylvia here, that I would have done at home; and when I die, I will leave her all I posses; and if she marries before that event, I will dower her handsomely. What say you, Mary?"

"Oh, Madame!" exclaimed Mary, seizing her aged hands, and pressing them to her bosom and her lips, "If I have been silent, it has been from deep emotion. Words will not convey my thanks. It will take a lifetime to live my gratitude." At this moment the supper-bell rung, and its alarum awoke Sylvia from her deep sleep, who, when informed of the change in her grandmother's project was delighted beyond measure; and, after bestowing many caresses on her grandmother and her mamma, ran to tell "Aunt Catherine" the good news. What effect the "good news" had upon Kate may may be gathered from the follow circumstance: Kate took pen and paper from her desk and wrote a note. Meeting the errand boy on the stairs as she descended to supper. she gave him the note, telling him to carry it to Captain Dunn, on board the store ship Edymion, promising to give him a half-dollar if he returned with an answer very quickly. Kate's note ran thus—

"Captain Dunn: Will you be so kind as to call at Harpers', and get 'Forest Days' for me. It is just out. Bring it to me *this evening*.

"Yours, &c. C. Gleason.

"*Friday Evening*"—

for Kate, with her impetuosity, exercised a precaution which I would recommend to all young ladies, and would not commit herself, by writing love-letters or billetdoux; for she said, "I might change my mind, or he might change his; and then—there!" Captain Dunn answered the note in person, and took his seat with the happy family at the supper table. Kate's good humor was entirely restored. She welcomed back her exile with affectionate frankness. Sylvia's bright eyes were glancing and flashing from one face to another, each countenance seeming to reflect its own gladness. Madame D'Arblay regarded the scene with a look of quiet self-complacency; that seemed to say, "I have made them all happy!" Mary's countenance expressed quiet and grateful happiness. Leslie's eyes were occasionally fixed upon the face of his wife, with looks of ineffable and holy tenderness. Leslie never subjected her love to another trial. He was deeply moved by the gentle resignation. the tender submission, with which she had yielded up the dearest object of her affections and her most cherished wishes, to be dealt with according to his good pleasure. That submission had given her a place in and an influence over his heart. that no beauty, grace, or accomplishments—no, nor intellectual nor moral excellence *without it*—could have secured.

A month from this time, a gay party was assembled at Mr. Leslie's, to honor the nuptials of Captain Lemuel Dunn, U. S. N., and Miss Catherine Gleason.

Beautify Home.—Men will say that appearance is nothing, and that the pleasures of the sight are not to be valued and cultivated! I say that appearance is always to be regarded; that we cannot render our homes too beautiful and attractive. Our first object should be to make our dwellings as convenient and comfortable as art can make them; our second object should be to render them to an equal extent tasteful and elegant. Do what we can, and all we can, we shall fall far short of rivalling even the simplest forms and combinations of nature.—*Selected.*

For the Western Literary Messenger.

The Ladies' Graduating Class.

In fancy's eye I see them now,
As on that glad, auspicious day,
When, wreathed with flowers, each beauteous brow
Glow'd with expression's lofty ray.
Around their teachers there they stand,
In mental graces heavenly fair,
To take the bright seal from their hand
Of fruits of knowledge gathered there.

On every brow the eye can trace
The lines of deep and patient thought;
Which give to nature's mould a grace,
With polished dignity inwrought;
In every eye how brightly plays
The light which intellect inspires,
Most sweetly blent with virtue's rays,
And sacred truth's immortal fires!

At learning's fane they long have knelt,
And paid their tireless vigils there;
The charms of classic lore have felt,
And grasped its treasures rich and rare.
Thy wonders, Science, now they see,
For ages long and dark concealed,
Till eagle-eyed Philosophy
The hidden stores to man revealed.

'T is thus they stand as miners bold,
Who deep have delved in richest veins,
Exulting o'er the massy gold
Which well rewards their ceaseless pains.
Thus brightly shines that sister-band,
With high resolves in every heart;
Then slowly give the parting hand,
And from those hallowed halls depart.

But, not to close their noble toil
They pass without those sacred walls;
Their feet may press another soil—
Their voices sound in other halls;
Yet, where the trees of knowledge grow,
And bend with rich and golden fruit,
Their unforbidden thoughts shall flow,
And wisdom crown their high pursuit.

And O! how gladdening is the thought,
That all those fruits and flowers, and gems—
Earth's choicest wealth—which they have sought
To deck their spirits' diadems—
At meek Religion's holy shrine,
A willing offering shall be laid,
In honor of that love divine
For them a willing offering made.

Ada.

Anecdote of O'Connell.—O'Connell was a zealous, perhaps we should say, a bigoted Catholic. He performed the prescribed duties of his religion rigidly and laboriously, but not ostentatiously. We remember having heard on good authority a singular instance in which this spirit was shown to the extent of superstition. A Member of Parliament arriving one dreary frosty winter morning at Canterbury, beheld in the grey light a figure, with which he thought he was familiar, issuing muffled up from the cathedral. A further observation convinced him that it was Daniel O'Connell. Prompted by curiosity, he made inquiry of the beadle regarding this phenomenon, who stated that the gentleman who had just gone forth had given him a sovereign to be permitted to stay all night by the tomb of Thomas A'Becket.—*London Patriot.*

Politeness consists in being easy yourself and making others so.

Dr. Chalmers' Idea of Christianity.

He possessed in highest measure that divinest faculty of spirit, the power of creating its own world; but it was not a poet creating worlds to look at; it was the reformer and philanthropist in haste to people and possess them. His was the working earnestness which is impatient till its conceptions are realities and its hopes embodied in results. For example, he took his idea of Christianity, not from books, nor from its living specimens: for the Christianity of books is often trite, and the Christianity of living men is often arrogant and vulgar; but he took his type of Christianity from its divine original—benignant, majestic, and God-like as he found it in the Bible and gave this refined and lofty idea perpetual presidency in his congenial imagination. And what sort of place was that? Why, it was quite peculiar. It was not like Jeremy Taylor's—a fairy grotto where you looked up through the woodbine ceiling and saw the sky with its moonlit clouds and the angels moving among them; or listed the far-off waterfall now dying like an old-world melody, or swelling powerfully like a prophecy when the end is near. Nor was it like Foster's—a donjon on a frowning steep—where the moat was black, and the winds were cold, and the sounds were not of earth, and iron gauntlets clanged on the deaf unheeding door. Nor was it his favorite Cowper's—a cottage with its summer joy, where the swallow nestled in the eaves and the leveret sported on the floor—where the sunbeam kissed the open Bible, and Homer lay below the table till the morning hymn was sung. Nor was it the imagination of his dear companion, Edward Irving—a mountain-sanctuary at even tide, where the spirits of his sainted sires would come to him, and martyr tunes begin to float through the dusky aisles, and giant worthies enter from the mossy graves and fill with reverend mien the ancient pews. More real than the first—more happy than the second—more lordly than the third, it was more modern and more lightsome than the last. It was a mansion airy, vast, and elegant—an open country all round it and sunshine all through it—not crowded with curiosities nor strewed with trinkets and toys—but massy in its proportions and stately in its ornaments—the lofty dwelling of a princely mind. And into this imagination its happy owner took the gospel and enshrined and enthroned it. That gospel was soon the better genius of the place. It gave the aspect of broad welcome and bright expectation to its threshold. It shed a rose-tint on its marble and breathed the air of heaven thro' its halls. And like an Alhambra with a seraph for its occupant, it looked forth from the lattice brighter than the noon that looked in. Yes, it was no common home which the gospel found when it first consecrated that lofty mind: and it was no common day in the history of the church when that spirit first felt the dignity and gladness of this celestial inmate. Powers and resources were devoted to its service—not needed by that gospel, but much needed by gospel-rejecting man. And, not to specify the successive offerings laid at its feet by one of the most gifted as well as grateful of devotees, we would mention his parochial sermons and his astronomical discourses. In the one we have the gospel made so palpable that the simplest and slowest hardly can miss it; in the other we find it made so majestic that the most intellectual and learned cannot but admire it. In the one we have Christianity brought down to the common affairs of life; in the other we have it exalted above the heavens. In the one we see the gospel in its world-ward direction, and starting from the cradle at Bethlehem, follow it to the school and the fireside and the dying bed; in the other we view it in its God-ward direction, and following its fiery chariot far beyond the galaxy, lose it in the light inaccessible. In the one we have existence evangelized, in the other we have the gospel glorified. The one is the primer of Christianity; the other is its epic.

But it was not in mere sermons that his imagination burned and shone. His schemes of beneficence—his plans for the regeneration of his country took their vastness and freshness from the idealism of a creative mind. At first sight they had all the look of a romance—impossible, transcendental, and unreal. And had the inventive talent been his only faculty, they would have continued romantic projects and nothing more;—a new Atlantis, a happy valley, or a fairy-land.—And if he had been like most men of poetic mood, he would have deprecated any attempt to reduce his gorgeous abstractions to dull actualities. But Chalmers was never haunted by this fear. He had no fear of carnalizing his conceptions, but longed to see them clothed in flesh and blood. He had no tenderness for his day-dreams, but would rather see them melt away, and leave in their place a waking world as good and lovely as themselves.

Power of Bible Truth —Sent from heaven, but little thought of—locked up in that trite small-printed book, the Bible—lies the germ of moral renovation—the only secret for making base spirits noble, and fallen spirits holy. Received into the confiding heart, and developed in congenial affections, it comes forth in all the wonderful varieties of vital Christianity; and, according as the recipient's disposition is energy or mildness, activity or contemplation, it creates a bold reformer or a benign philanthropist—a valiant worker or a far-seen thinker. In bolts that melt as well as burn, it flashes from Luther's surcharged spirit; and in comprehensive kindliness spreads its warm atmosphere round Melancthon's loving nature. In streams of fervor and fiery earnestness, it follows Zuingle's smoking path, and in a halo of excessive brightness encircles Calvin's awful brow. In impulses of fond beneficence it tingles in Howard's restless feet, and in a blaze of indoor gladness welcomes Cowper's friends. But whether its manifestations be the more beauteous, or the more majestic, of all the influences which can alter or ennoble man it is beyond comparison the most potent and persuasive. In the sunny suffusion with which it cheers existence, in the holy ambition which it kindles, and in the intensity which it imparts to character, that gospel is "the power of God."

And just as its advent is the grand epoch in the individual's progress, so its scanty or copious presence gives a corresponding aspect to a nation's history. When its power is feeble—when few members of the community are upborne by its joyful and strenuous force—when there is little of its genial infusion to make kindness spontaneous, and when men forget its solemn future, which renders duty so urgent and self-denial so easy—the public virtues languish, and the moral grandeur of that empire dies. It needs something of the gospel to produce a real patriot; it needs more of it to create a philanthropist; and, amidst the trials of temper, the seductions of party, and the misconstructions of motive, it needs it all to give that patriot or philanthropist perseverence to the end. It needs a wide diffusion of the gospel to fill a parliament with high minded statesmen, and a country with happy homes. And it will need its prevailing ascendency to create peace among the nations, and secure the good will of man to man.

A Scene in a Gambling House.

The following very remarkable circumstance is vouched for by Green, the reformed gambler.—There is a degree of romance attached, that in a manner relieves it of the horror excited by the catastrophe. It occurred at New Orleans some years ago:

A sea captain was in the habit of frequenting a roulette table, kept by a Frenchman, in company with a party of gamblers. Green remarks that they played with more regard to fairness then, than is customary or general with them now.—The captain was evidently influenced in his visits more by a wish to kill time, than from any passion for the sport. He had visited the room frequently, and his invariable bet was twenty-five cents, and winner or loser, he never increased it. He visited the place on the night in question.

The sea captain, having placed his bet upon the red, sat with his head leaning upon his hand, as if to await the result of the game. The ball fell into the column, and he was the winner. The wheel started again, but the captain did not move, and, contrary to usual practice, the amount of his bet was doubled. He won the second, third, fourth and fifth—the sum doubling each time. Thus it went on to the eighth time, when the gamblers began to be excited, and uttering loud curses, exclaimed—"He wins again!" At this, many who were in the room gathered around the table. The result of the ninth and tenth being the same, one of them cried out—"He is a fool! why don't he make sure of what he has won?" The eleventh, twelfth and thirteenth brought the same result, and many exclaimed—"He is mad!" But the game went on, and the captain continued heedless. The fourteenth was in his favor. At the fifteenth, thousands were at stake, from the small beginning of twenty-five cents, and all eyes seemed fixed in amazement. Still he won. The sixteenth was the same. The bankers vociferated curses upon the wheel-players. Others urged the captain to withdraw at least a part of his winnings. *Sixteen thousand dollars* was at stake. The ball flew like lightning, but there was no change. The money was piled up before the captain in heavy bank notes, but he moved not a finger, nor uttered a word. At this juncture, a husky voice, in a seaman's phrase, was heard—"Haul in, old captain! you don't bet all that pile against this set of land pirates! haul in!" and a hand was stretched forth from one at the table, grasping the money, and depositing it in a hat. It was the first mate of the captain's vessel. Having thus secured the money, he seized the captain by the shoulder, saying—"Come, you have a full cargo, it's time to hoist off,"—when, horrible to relate, the corpse of the captain fell against him. He had been sitting with his head upon his hand throughout this exciting scene; having died while in the act of betting his first quarter. The mate called for water, and dashed it into his face; then for spirits; but all efforts to resuscitate him were in vain. Life was extinct.

Green goes on to detail the result.

The gamblers then demanded that the money should be refunded: but the mate had rolled it up in a handkerchief, put it into the hands a cabin-boy, and charged him to run with it for his life to the ship, and deliver it to the clerk, and summon the crew to the gambling house. The tumult and confusion were so great that the boy slipped away unnoticed.

When the corpse was laid on the plank, the gamblers again demanded the money of the mate, stating that as the captain had undoubtedly died betting the first quarter, justice required that it should be returned to the bankers. The mate, in a tone of defiance, replied that the orphan children of the captain needed the money, and should have it. Force was then threatened if he refused to deliver it up. Seeing that their threats were unheeded, they rushed upon him with violence, seized his hat, and bore it off, supposing they had thus secured the money: but to their surprise the hat was empty. A large number who were present took the part of the mate, and great excitement prevailed throughout the house. An assault was made upon the mate. Some cried one thing, and some another. "Down with him him!" "Get the money!" "Let him alone!" "You have no right to rob him!"—mingled with oaths, and imprecations, and curses. At this moment twenty or thirty of the ship's crew rushed in, and one word from the mate brought them to his rescue, and the gamblers were made to stand at a distance. Something was said respecting the money, which led the sailors to suppose that the mate had been robbed, and they were about rushing upon *Monsieur Grumpin*, as the proper person to indemnify him for any loss he might have sustained; but were diverted by the entrance of some twenty of the city watch, armed with short swords. The sailors knew the character of this posse, made up of what is called among them, "*wharf rat Frenchmen*," and were no more daunted by their array of force, than they would have been by the display of tin swords in the hands of so many trained monkeys. A fracas was, however, prevented between the sailors and the watch, by the assurance of the mate, that the money was safe, and a request from him that they would return to the vessel. He proposed to take the corpse on board, but was informed by the Captain of the watch, that a Coroner's inquest must be held over it before it could be removed. He then seated himself by the corpse of his Captain, to watch over it during the rest of the night; and the gamblers retured to the common work of darkness, playing cards and drinking liquor, meanwhile, now and then uttering curses upon the dead body of the Captain.

Which was the Brute?—We find the following extraordinary story in a late number of the Edingburgh Chronicle:

An instance of animal sagacity and humanity, unequalled in our remembrance, took place before our door lately. An unfortunate dog, in order to make sport for some fools, had a pan tied to his tail, and was sent off on his travels towards Galt. He reached the village utterly exhausted, and lay down before the steps of Mr. Young's tavern, eying most anxiously the horrid annoyance hung behind him, but unable to move a step farther to rid himself the torment. Another dog, a Scotch collly laid himself gently down beside him, and gaining his confidence by a few caresses, proceeded to gnaw the string by which the noisy appendage was attached to his friend's tail, and with about fifteen minutes exertion severed the cord, and started to his legs with the pan hanging from the string in his mouth, and after a few joyful capers around his friend, departed on his travels in the highest glee at his success.

The widow of Dr. Benjamin Rush yet lives, and resides in this city, at the age of nearly ninety years. She retains the complete use of all her faculties—is active, gay and cheerful in the bosom of her family, and commands the profound and universal respect of a large circle of admiring friends. We think she is the only surviving partner of any of the fearless and patriotic men who pledged life, honor and fortune in Independence,—who braved the power of a great Empire, and by that act secured a distinguished place for their names and their country among the nations of the world.—*Phil. Enq.*

Strength from the Hills.

BY MRS. E. OAKES SMITH.

Come up unto the hills—thy strength is there—
Oh though hast tarried long,
Too long amid the bowers and blossoms fair,
With notes of summer song.
Why dost thou tarry here?—what tho' the bird
Pipes matin in the vale—
The plough-boy whistles to the loitering herd,
As the red day-lights fail—

Yet come unto the hills—the old strong hills—
And leave the stagnant plain—
Come to the gushing of the new-born rills,
As sing they to the main;
As thou with denizens of power shalt dwell,
Beyond demeaning care—
Composed upon his rock 'mid storm and fell
The eagle shall be there.

Come up unto the hills—the shattered tree
Still clings unto the rock,
And flingeth out his branches wild and free,
To dare again the shock.
Come where no fear is known—the sea-bird's nest
On the old hemlock swings—
And thou shalt taste the gladness of un-rest,
As the torrent round thee rings.

Come up into the hills—the men of old,
They of undaunted will,
Grew jubilant of heart and strong and bold,
On the enduring hill—
Where came the soundings of the sea afar,
Born upward to the ear,
And nearer grew the moon and midnight star,
And God himself more near.

From the Buffalo Commercial Advertiser.

NEW ORLEANS.—A single, sudden death, whether by violence or disease, often makes a profound impression on the community in which it occurs. But when men fall by the thousand in battle or by pestilence, hearts grow seemingly callous and men pursue their usual avocations or pleasures with as much apparent reckless indifference to the fearful mortality on every side, as if they were immortal. From the days of the Plague at Athens, two thousand years ago, it has every where been noted that where death has been most busy, men have been most careless of his approach, and most devoted to the enjoyments of the hour.—The gayest cities in the world are those where the lease of life is the frailest and briefest. Such places are not necessarily the most depraved, or unfeeling. Man cannot mourn always. The living and the present have claims at least equal to those of the dead and the past. Danger ever imminent at last ceases to alarm or even be noted, and the fact that in New Orleans, the population, on the cessation of the pestilence, should resume their accustomed pleasures with renewed zest, although to us in a colder climate not subject to such fearful visitations, it may seem indicative of deplorable thoughtlessness, is, in reality, precisely what we are doing, even while we complacently flatter ourselves that we entertain juster notions of the true purposes and solemnities of life. Death knocks alike at the palaces of kings and the cottages of peasants. His visits are inevitable. There is not a man who does not know that the icy hand of the king of terrors will one day be laid upon him, yet because we are not subject to a pestilence that sweeps away thousands in a month we wonder that men will dance on the brink of the grave. Why, what else are we doing? And what, when rightly considered, is the difference of a few years? and that is all there is between the greatest old age of the North and the shortest span of the South. We of the North are not less devoted to business and pleasure than the people of New Orleans; the only distinction is, that we crowd neither into the same short compass.

But we are insensibly running into an essay when we merely intended to introduce with a few lines the following from the *Picayune*, which strikingly illustrates the elasticity and recuperative powers of the Capital of the South-West:

"We have but just emerged from the most terrible and fatal epidemic that New Orleans has ever been visited with, and yet the streets in which, it seems but yesterday, scarce aught was to be seen save the funeral cortege, are now alive with business, and with preparations for the season at hand. Ships from many a land are crowding the wharves and unburthening themselves of their valuable freights. Magnificent river steamers are to be seen at the steamboat landings in sufficient numbers to show that the wonted intercourse with our up-country friends has been resumed with the usual activity. Many old citizens have returned from their summer excursions, and not a few of the "floating population" begin to show themselves. A stranger walking through New Orleans now could scarcely realize that within three or four months about five thousand of its people have been borne to their graves.

Everything betokens that we shall soon be in the midst of one of the briskest seasons we have ever had, and it is gratifying to note that the fearful scourge through which we have passed has but measurably affected the preparations for our extending commerce. New stores are being built and old ones are being enlarged in almost every quarter of the business portion of the city. Nor have the improvements demanded in the harbor by the constant increase of trade been neglected. In the First and Third Municipalities wharves are being or have been extended or repaired, and in the Second Municipality no effort has been spared to enlarge and improve the facilities for shipping and steamers. While ample preparations have been making, however, for the demands of commerce, it seems that the demand for domicils does not meet with an adequate supply. One would naturally suppose that in a city depopulated to such an extent as this has been during the past summer, residences could be easily obtained—yet so it is not. "This house to rent" is an announcement that the eye of the "house-hunter" looks for almost in vain, we care not how industrious he or she may be. Even the Third Municipality, the usual successful resort of those who despair of finding a tenement in a location more to their liking, is full to the brim."

MEMORY OF A MOTHER.—JOHN RANDOLPH, some years since, addressed himself to an intimate friend in something like the following:

"I used to be called a Frenchman, because I took the French side in politics, and though this was unjust, yet the truth is, I should have been a French atheist, if it had not been for one recollection, and that was the time when my departed mother used to take my little hands in hers, and cause me on my knees to say, '*Our Father which art in Heaven.*"

Correspondence of the Journal of Commerce.

CONSTANTINOPLE, TURKEY, Sept. 1, 1847.

Ere this you have doubtless heard of the defeat of the forces of the famous Kurdish Chief Bader Khan Bey, by the Turkish army. I never anticipated that the Turks would make such easy prey of this devastator of the Nestorian Christians, who, it was pretended, could bring 50,000 warriors into the field. In a week or two after the first enagement, however, besieged in one of his castles, he was obliged to surrender; and now we shall have him, probably for a long period, as a captive, to gaze at in Constantinople.

Under the administration of the most enlightened and liberal Grand Vizier that an Ottoman Sultan ever secured, Turkey is fast realizing and consolidating all those new and improved institutions which have only hitherto had an existence on paper. Reschid Pasha marches much less precipitately forward in reform, than he did on his return from his first embassy to France, and as a result, the capital is perfectly free from rumors of conspiracies. Yet thousands give him the name of the Ghiaour Pasha.

To carry out his schemes of a reformed administration, he is in the greatest want of suitable employees for every branch of the service. Their deficiency is in intelligence and education. To remedy this evil there is a Council of Public instruction, who are devising Normal and Elementary schools for the whole people. In the meantime, there is a superior and secondary military school, a superior and secondary naval school, and a superior and secondary medical school. The secondary schools are preparatory to the superior ones. In them all, a course of education, liberal compared with anything previously existing, is pursued. But to crown all, there is now building, under the shadow of Saint Sophia, a *University*, to receive pupils of every religion, and to be taught by professors of whatsoever nation. The secondary school for this already exists on a small scale.

The young and enterprising MR. LAYARD, an Englishman, has just returned from an eight months tour to Mosul, where he has been engaged in disinterring the monuments of the *real* old Nineveh. It is pretended with some plausibility that MR. BOTTA has not dug up the real Nineveh at Khosrabad, but that the mound called in the vicinity Nimrod is the spot, about a day's journey from Mosul. The discovery of the word *Ninus* on the inscriptions confirms this supposition. The Turkish firman gives the English the sole right to disinter the remains of Nimrod, which is many times larger than Khosrabad, which belongs to the French. The rivalries of those two nations, however, will make us better acquainted with those hitherto hidden realms of antiquity. The hundreds of drawings taken by Mr Layard's own hands, will be a most valuable contribution, not only to general history, but also to the materials for Sacred history.

The Patriarch of the Chaldeans, or Nestorian Catholics, has had such a serious quarrel with the French and the Pope, that the Pope has deposed him. It would appear that either the Patriarch, or the Turkish Government of its own accord, had it inserted in his diploma of office, that "as now the Chaldeans had a Patriarch, they would in future have no need of foreign interference." When the French, who pretend that by their convention with Turkey, they are protectors of *all* the Catholics in the East, wished to conduct some affair in their own way through the Apostolic Vicar (a Frenchman) and the French Consul, the Patriarch, appealing to his Diploma, rebelled. And his rebellion has been carried to such a point that he has threatened either to make his church independent of the Pope, or to join some branch of the Protestant church, say the English. His people for the most part are heartily with him. But in most of such conflicts, Rome gains the victory. The last we heard of this Patriarch, he was in Persia, to preserve himself from being carried to Rome.

Dr. Smith, of South Carolina, who is in the service of the Sultan, assisted by Mr. Hamlin, a missionary from New England, has had the honor of exhibiting to the Sultan, in one of the halls of his Palace, the working of Prof. Morse's Electric Telegraph. The Sultan, after devoting two hours attention to it, requested that the machine might remain till the next day, for the purpose of exhibiting it to all his Viziers and Ministers.—Dr. Smith having declined any favor for himself, the Sultan decreed a diploma and decoration for Prof. Morse.

Yesterday a Frenchman meeting me in the street said with great enthusiasm, "Monsieur, we are three or four million Frenchmen, who are going to embark for America, with a constitution to form a separate State in the United States; but our whole scheme is based upon Christianity. Our system is Fourierism immensely improved; and our agent is already presenting the plan to the government in America." You will know whether this accords with any movements you hear of in other directions.

SENDING A LETTER BY TELEGRAPH.—A few days since a young countryman from our neighboring State arrived in New Albany, and inquired for the "telegraph." His appearance indicated that he had traveled with a speed little inferior to the telegraph itself. "Whar's the telegraph?" was his hurried inquiry of the first person he met upon arriving in Main street—at the same time asking what would be the cost of sending a "letter" to Cincinnati.—Now, this Kentuckian lived in a district where the principles of Morse's invention were not so perfectly understood as in the patent office at Washington, nor had he ever attended a course of Dr. Bentley's lectures; much less did he trouble himself about the disputes of Morse and House, of Kendall and O'Reilly.

The gentleman to whom he addressed himself being somewhat of a wag, informed him that if he went to the office with his letter they would charge him pretty heavily; but that he could, by climbing up one of the posts, put his letter in one of the holes through which the wire passes, and the first "shock" would take it to its destination, "free of postage." Being a disciple of Franklin of the strictest sect, our Kentucky friend saw no good reason for the expenditure of half a dozen dimes, when his object, as he thought, could be otherwise so easily attained. But he reckoned without his host. In a coon hunt he was counted "some," and if his rifle failed to fetch a possum, he would, with an agility little inferior to the subtle animal itself, climb up and "bring" it himself.

Having made the necessary preparations, he commenced the ascent of one of the "neatly dressed" posts that "ornament" our principal street. When he had reached an elevation of about fifteen feet, his hands slipped, and down he came, jarring his whole frame, and considerably bruising himself.

Nothing daunted by the failure of this his first experiment, our "operator" made another effort, and had almost gained the necessary altitude, when the same misfortune, and a much worse bruising overtook him as before. This double failure would have been sufficient to check the courage of most men; but who ever heard of a Kentuckian saying, "I can't?" Picking him-

self up, and consoled with the idea that the "third time is the charm," he recommenced his labors, and succeeded in putting the precious document in its proper place.

Descending from his elevated position, the next trouble was to know how, or where, or when he should get a reply to his communication.—But the wag, who was standing by (together with a number of others,) enjoying this ludicrous scene, was at no loss for giving the necessary instructions to the Corn-cracker. He told him that if it came to the knowledge of the telegraph agents that he had been thus clandestinely sending "despatches" without paying the usual fees, they would certainly make him pay dear for his whistle. He instructed the green one, therefore, to go about a half mile east of town, climb one of the undressed posts, and there await the arrival of a reply, for which he must keep a sharp look out or it would escape his observation. The instructions were obeyed, and the last we heard of this telegraph operator from Kentuck, he was snugly perched on one of the posts, a little way out of town, with his eyes intently bent on the magnetized wires.—*New Albany (Indiana) Democrat.*

Stampede among College Students.

Many entertaining stories are told of the pranks of College students; but in the following is detailed the silliest, most lugubrious attempt to rival them that we ever heard of. The gay, dashing adventures that form the staple of collegiate traditions bear about the same resemblance to this exploit that the exciting contest of thorough-bred racers, displaying matchless beauty, grace and game, does to a stampede among a herd of awkward, snorting, heavy-heeled steers running like mad for a while, and then, exhausted with the unwonted effort, with heads and tails drooping, slowly sneaking back to the farm yard. We can admire the one spectacle, while the other is only the subject of laughter and ridicule :

From the Utica Gazette.

If there is an anomaly in the world, it is a male mortal in the transition state between petticoats and the *toga virilis*, that is to say in College.—To him, anything that troubles no one else and puts himself to a vast deal of inconvenience is a capital joke. Last week thirty-four out of forty of one of the classes in Hamilton College took a fancy to "bolt." It was a scheme concocted within a few minutes, and they left the hill as the ball rooms of Belgium's capital turned out the officers for the field of Waterloo, with whatever toggery they happened to be wearing at the time, some in morning gowns, some in slippers, some in roundabouts and all in hot haste. They assembled in a field near the village, and there "in green pasture and by side of the still waters" each assumed a pumpkin transfixed on his walking-stick as the emblem of (*we didn't hear why they chose the pumpkin,*) and swore on that fruit of the vine, that he would not be a lettered man. Thence they walked in a body to Manchester, where in convention one of the slippered moved to obtain carriages. Done, and they rode to Whitestown, thence walked to Utica where they took wheels and rode to Trenton Falls The dressing gowns and slippers and straw hats could not admire the beauty of natural scenery as they wished, but they revelled in the luxury of independence, having a moist time of it till Friday, when they returned home tired, wet, and proud, having spent $150 in two days, and bored the Faculty by suffering fatigue and cold to their heart's content. Our informant stated that some of them were considered the "flower of the class." Whether the flower of College is improved by *bolting* we don't know, but we suggest farther grinding. Perhaps the grain that the article was made of was not sufficiently ripe. We really think that more fun might be had with far less trouble. We like fun, *oh, don't we?* but it never seemed possible that fun could be raised of such materials as shaved horses, even though the skin were buttered afterwards, or as persuading cows into the belfry by the horns and tail—or as burning assafetida on the stove of a room to worry a professor, and snuffing it yourself to keep him company—or as sitting up all night between two of the most fatiguing days of a College year to "ring the rust" off a bell when no one compels the performance of such duty—or as coming down a lightning rod at 1 o'clock at night from the top of a chapel steeple to escape detection after ringing the bell.

This is the famous class "who rung the rust" off in '46—and this feat is one of the most marked results of that brightening. How we would hate to go to Trenton Falls in the rain, 'specially in morning gowns and slippers!

Col. Martin Scott, who was killed in one of our sanguinary battles before the city of Mexico in Gen. Worth's division, was a native of Bennington. Vt. He was educated at West Point, and from that school entered the army some thirty years ago. He has since then seen much hard service, and conducted himself always with great caution, skill, and kindness. In his youth he was famous among the sharp shooters of the Green Mountains, very few of whom could perform feats to be compared with his. He never shot game in the body; but at whatever height or distance, always struck the head. He would drive a nail into a board part way with a hammer, and then takinging the farthest distance at which his eye could distinctly see it, drive it home with his unerring bullet. He has always been much respected and beloved by his townsmen for his amiable and benevolent qualities, associated with the most exact integrity. With a moderate income, he had so economized in his personal expenses, as to support his own family, and very essentially to aid two maiden sisters, several nephews, and other relatives, who with his wife, and immediate family now at Milwaukee, are left to mourn his loss.—How these hearts bleeding ache. How many such circles of bleeding, aching hearts have our victories made. The guilt of all this misery must rest on some body. Who is it? Wretched man. For these losses and this guilt, the nation takes 'ts pay in glory. What a pity that men should not reflect that all true glory is in doing good.—*—Jour. of. Com.*

Character Indicated by the Laugh.—How much of character is there in a laugh? You know no man till you have heard him laugh—till you know when and how he will laugh. There are occasions—there are humors, when a man with whom we have been long familiar, shall quite startle and repel us, by breaking out into a laugh which comes manifestly right from his heart and which we had never yet heard before. Even in fair ladies, with whom I have been much pleased, I have remarked the same thing. As in many a heart a sweet angel slumbers unseen till some happy moment awakes it, so there sleeps often in gracious and amiable characters, deep in the back ground, a quite vulgar spirit, which starts into life when something rudely comical penetrates into the less frequented chambers of the mind.—*Blackwood's Magazine.*

Editorial Department.

J. CLEMENT, EDITOR.

A Ride down the St. Joseph River.

PART FIRST.

On a sunny afternoon in the middle of October, we stepped on board a little steamer at Constantine and started for the mouth of the St. Joseph, distant 130 miles. It was the first downward trip of the beautiful "Michigan" and many were anxious to see how she would run with the current. She had been constructed for river navigation—was flat bottomed, and "squat" on the water, graceful as a swan. She started at two o'clock, and when fairly on the way it was all excitement to observe her antic movements. The river is as crooked as a politician's life, and as uneven in the "tenor of its ways" as a capricious woman; now wading its deep way through a muddy bottom and now racing it over gravel and cobble stones like a little stream in summer suddenly raised by heavy showers and half mad with transport at its own bigness. When our sportive water bird came to a curve she would run round it like Childhood playing at hide and seek; and when she approached any rapids she would glide gracefully up to them, dip her bill in the ruffled surface and then leap down the stream till she found deep water, like Youth in pursuit of butterflies.

Reaching Mottville, where she had just been built by the Messrs. KELLOGG of White Pigeon, she took on a cargo of flour. This village is ten miles below Constantine by water and six by land. It has been settled nineteen years, and has a population of about three hundred. It contains amongst other things, a paper-mill, two breweries, a tannery, and a hat factory. It was formerly on the old grand travers of the Indians from east to west, that is, from Detroit to Chicago; and was a somewhat noted halting place for American soldiers in the famous Sac War. Gen. WILLIAMS was there on one or two occasions with a few hundred men, and made a great slaughter among charged bean pots and whiskey barrels.

The Michigan being freighted, she dropped down to Bristol, Ia., and there halted for the night, it being unsafe to navigate the river in the dark. This place has a pleasant location, twelve miles below Mottville. It is in Elkhart County, sixteen miles from Goshen, the seat of justice. The village has been settled seventeen years and is about the size of Mottville. It has but one public house, which, the night we were there, was overflowing with wide-a-wake sleepers.—They were a motley crowd: some intoxicated with mirthfulness and some with whiskey; some shaking with laughter and some with the ague; some with a lap full of children and some in the lap of poverty; peddlers with their cross dogs, and emigrants with their crosser wives; children crying for the want of sleep and grown people all anxiously praying for a place where they might seek it. We were the last to ask for the abiding place of the eyeless god, nor did we do this till the "Pleasures of *Hope*" were completely exhausted. Without waiting to count the number of sleepers in the *other two* beds in our miniature chamber, we finally took a bee-line for the land of dreams. Tarrying a brief season amongst its spicy groves, the firing-up of the little Michigan brought us to a "realizing sense" that daylight had come again and that at least a good share of the world must be awake.

How gloriously the sun rose that morning, and how beautiful every thing appeared in the light of young day. Does not nature always look loveliest in the morning? The mind is then unvexed by the cares of the day, the heart is measurably pure, and consequently we are best prepared to appreciate the Beautiful. On that occasion the gray willow-boughs seemed bending unusually low by the waters' edge, as if at their matin devotions, and the very stream itself seemed instinct with holiness. The forests that skirted the shores were myriad dyed and glorious beyond description; but like all things else of earth they were parting with their glory. To us each tree, casting off its gorgeous livery, stood like a preacher on the river's banks; for every dry leaf that rustled for a moment amid its fellows on the half-naked twig, and then, falling on the bosom of the stream, was borne away, reminded us that *our* Autum, with its killing frosts, must come ere long, when the tree of life must begin to part with its verdancy; when the green leaves of the heart—the hopes and joys that budded in youth and that blossom in manhood—will one after another become sere, and then, falling upon the stream of time, float for ever from our sight. It cannot be well with Age unless its roots can pierce the mould of divine truth, for there only can sustenance be obtained when the leaves of the tree have fallen and the winds of death are whistling in its naked branches.

To CORRESPONDENTS.—Returning from a trip to the west just as our paper is going to press, we find a large number of communications on hand, for which the several writers will accept our thanks. The following are accepted:—"*The Swallows*" and "*The Messenger Dove*," two beautiful translations from the French, by Prof. Kendrick; "Night in Autumn" and lines "*On reading Mrs. Norton's Autumn Winds*," by "THE RECLUSE," who is very welcome; "*Nelly Gray*," by T. C. Wheeler; and "*A Serenade*," by "D. F. D."

We cannot publish "The Beacon Light" without the author's name. It is needless to send us anonymous contributions.

We would like an interview with "*A Melancholy Clerk.*"

THE LIBERTY CONVENTION.—Through some inadvertancy we omitted to mention last week that the Liberty Convention which lately met in this city, nominated JOHN P. HALE, of New Hampshire for President, and Judge KING, of Ohio, for Vice President.

THE SCHOOL FOR YOUNG LADIES, at Hamilton, Madison Co., of which Miss ELIZABETH DELANCEY is principal, we hear spoken of in the highest terms of commendation. The superior accomplishments of Miss DeLancey will be apt to secure for this school an unusually wide reputation.

THE UNION MAGAZINE for this month glitters like —*as it is*—the pure ore. The embellishments "Steps to Ruin" and "The Novel Reader," are "beautiful exceedingly," and contain a moral. In the literary department Mrs. Embury, Mrs. Kirkland, Mrs. Jane C. Campbell, Miss Sedgwick, Miss Sloman, W. O. Bourne, Redwood Fisher, etc., etc., have done their best.

☞ HARBOR APPROPRIATIONS.—The Senate has passed a bill providing specifically for an appropriation of $150,000 to this purpose, and it is now submitted to the Assembly. The bill of the Senate is considered more favorable than the measures which were first passed by the Assembly. We understand that Mr. Flagg has been energetic in promoting the interests of Buffalo in this matter.

BIRTHS AND DEATHS.—Dr. CIST, whose statistica observations are astonishing two continents, has just arrived at the following rational conclusion: "The greatest number of births occur between nine o'clock in the evening and six in the morning, whilst the smallest number between six o'clock in the morning and nine in the evening.—Individually regarded, the ratio of deaths from inflammations, phthisic, and pulmonary hemorrhage, is greater in the afternoon; from extanthemata, just before midnight; from cerebral apoplexy, during the day; and from diseases of the nervous system in general, in the hours which immediately follow midnight."

NEW YORK, Oct. 29—3 P. M.

The Episcopal Convention adjourned last evening.

ALEXANDER H. NEAL, house and sign painter, 43 Ann street, was found dead in his shop about half-past 9 o'clock this morning.

He had been killed by a blow with an iron bar which was found near by. Suspicion rests upon an apprentice 18 or 20 years of age.

Accounts from Bogota to Aug. 23d state that serious difficulties had occurred between Peru and Bolivia. The latter maintains that Peruvian citizens of distinction had been attempting to produce a revolution in its territory.

The former complains of the violation by Bolivia forces, and of the expulsion of its diplomatic agent. Both republics have called extraordinary sessions of their respective Congress.

At Eucadon all was quiet.

THE ELECTION.—The Whig ticket has prevailed in this State by a large majority.

Later from Mexico.

NEW YORK, Nov. 1.

The steamer *James L. Day* at New Orleans brings accounts from Vera Cruz to the 19th.

Nothing later from the capital. Some particulars of Santa Anna's attack on Puebla are given. On arriving at Puebla Santa Anna ordered Col. Childs to evacuate, saying he would allow him to form a junction with Scott or with the American force at Perote.

Colonel Childs declined, and on the 27th ult. Santa Anna commenced a heavy cannonading on the American works from three different points, Juan de Dias, Santa Cosa, and Santa Yhonula.

Childs returned the cannonade, firing into the centre of the city, and doing much damage.—Hostilities were suspended at night and renewed next morning.

On the 29th, Santa Anna raised a breastwork with cotton bales. The Americans, meantime, kept up a continual fire on the workmen which was for some time returned briskly by the Mexicans; but finally, at the intervention of many citizens, Santa Anna ceased firing.

The artillery then marched to the Convent of Santa Rosa and commenced a fearful attack, but night produced cessation of firing. The monks were removed from the Convent and on the 30th nothing was doing except a few grenades thrown from the direction of San Juan Del Rio in rear of the Convent in whose church Gen. Rea had erected a battery to operate upon San Jose.

On the 1st Santa Anna with two thousand cavalry and infantry sallied out of Puebla to attack the American train which was at Perote on the 14th but before reaching Zeydualco, all his soldiers except one hundred and thirty persons pronounced against him, declaring him a traitor, unworthy to command, &c. He received an order from Queretaro, to repair thither with the troops under his commad, but declined, and marched with his hussars to Oajaca to raise another army, and come back to give battle to Los Yankeos

When Santa Anna left Puebla the cannonading ceased, and the cotton warehouse of Valesco, which had furnished bales for his breastworks, with two thousand bales in the Convent of San Domingo, were fired and burnt.

Senor Pena is discharging the duties of President at Queetaro, and has refused to recognize the associates appointed by Santa Anna. He prefers Congress should appoint a President.

The report prevailed at Vera Cruz on the 18th that a company of Texas Rangers, attacked by guerillas 12 miles in the interior, had been all but two but off.

The Legislature of the State of Vera Cruz, met at Huatusco on the night of the 27th, and new State officers were elected who were believed to be more active in raising supplies to prosecute the war.

Gen. Cushing has issued orders declaring sixty of the Massachusetts regiment guilty of insubordination, and disarmed them to remain at Vera Cruz. The names are not given.

Herrera according to Arco Iris, has collected 10,000 men at Queretaro—all of the National Guards.

The reinforcements designed for Gen. Scott reached Perote October 4th.

When the *James E. Day* left, there were upwards of 4,000 men at Vera Cruz, ready to leave, in addition to those on the way to reinforce Gen. Scott.

It was rumored that it was in contemplation to advance the war into some state which not been previously attacked.

The Mexican people had become much changed in opinion since the fall of the Capital, and were now in favor of peace.

The expedition fitted out at Vera Cruz against the guerillas had returned, after routing several parties.

The National Bridge was stronly fortified by an American force, and all was quiet in that quarter.

The Legislature of the State of Vera Cruz, in session in that city, had proposed the adoption of vigorous measures against the guerrillas.

Major Polk succeeds Major Cook in command of the detachment of cavalry at Vera Cruz.

The steamer *James Casey* had burst her boilers at Vera Cruz, injuring several persons.

The vomito had again made its appearance in Vera Cruz, but in a mild form.

Two Days Later from France—Tidings of the French Steamer Philadelphia.

From the N. Y. Herald.

The fine packet ship Zurich, Capt. Thompson, arrived yesterday, in a passage over the Atlantic of only twenty-four days, bringing advices from Havre to the 5th Oct., inclusive.

We learn from Capt. T. that on the 25th inst. at 8 o'clock A. M., in lat. 42 31, lon. 59 34, he passed the French steamer Philadelphia, bound to this port. She was making about eight miles an hour, and from her course, and the slow rate she was going, it was thought that she must have been out of coal, and that she was making for the nearest port—probably Halifax. The Zurich, in three hours, left her, hull down, completely out of sight.

The advices from Bologna are of the 25th ult. The persons arrested on the night of the 16th have been all discharged, with the exception of M. Pigozzi, who has published, without the permission of the censor, a letter justifying his conduct.

The Common Council voted eight thousand Roman crowns to arm the National Guard of Bologna.

The Ferrarese, on the 22d ultimo, saluted the Tuscan flag. There were cries of "*Vive Pius IX.*," "*Vive l'Independence Italienne*," "*Vive le Cardinal Cracchi.*" The Austrian garrison remained all day on their arms.

We learn that six Austrian regiments are on their route to form a military cordon on the Piedmontese frontier. They have already arrived at Milan. It is supposed the Sardinian government will take the same measures.

It is said that Austria, already has 60,000 men on the line of the Po, between Plaisance and Ferrara.

The Duke of Modena has re-entered his dominions, with the reigning duke, and the hereditary Prince of Lucca.

An Austrian official arrived yesterday from Ferrara, and continued his journey direct to Rome and Naples. Austria insists on obtaining the passage for a body of her army, destined for the kingdom of the Two Sicilies. The Pope is formally opposed to this passage.

M. Zanotini, member of the provisionary government of 1834, has just returned to Bologna, after sixteen years exile.

Somewhat of a serious episode has disturbed the calm that has lately fallen on affairs in the Spanish capital. Some hint having appeared in *El Faro*, a Madrid paper, that M. Salamanca, of the Cabinet, was endeavoring to create a new power near the Queen, a young Colonel Gandara, a determined partisan of Espartero, conceived that he was alluded to, and demanded an apology from the editors A lame one was published after a lively argument among the editors, the principal one and two his colleagues retiring from the paper on its appearance. The Colonel was not satisfied with the apology, and challenged M. Coello, the chief editor, who had retired from the paper. The challenge was taken up for him by the *ad interim* actual editor, M. Tasara, and a meeting took place; but after two harmless shots on both sides, the affair terminated without injury on either side.

It is said that the new Captain General of Catalonia, Don Manuel de la Concha, has written to the government that he hopes by the end of October that not one single band of armed Carlists will remain in that province.

The Queen has granted a second private audience of Colonel Gurrea, former Secretary of the Duke of Victoria.

The grape gathering has already begun in France. The crops in Provence, Roussillon, Narbonne, Montpellier and Nimes will be larger than last year. The wine of Bordeaux (claret) is genenerally thought to be excellent and extra. Champagne and Burgundy will be abundant and of a superior quality. The Rhenish wine will also be of a capital brand. We see by the preceding that the wine's *recolte* will be remarkable this year, and that the rumors that the grapes would not arrive to maturity were false and erroneous.

Shocking Accident.—On Friday evening last, a middle aged German woman, one of a company of immigrants on their way westward, in a line boat, was horribly crushed at Shell's Lock, about five miles below Little Falls. Some difficulty had occurred among the immigrants in the hold, caused by the use of ardent spirits, of which she had also partaken, and being unable to defend herself, she was standing out upon the outside of the boat as it passed into the lock, and was caught and badly crushed between the boat and side of the lock. Both collar bones were broken, and her ribs and ankle much bruised. She has her senses, and can speak, but is entirely helpless.—She was taken off at this city, on Saturday afternoon last, and a place provided for her in Bleecker street, opposite the Market, by the kindness of Mr. H. Bushnell, to whom much credit is due.—She will remain there until her husband, who is in Louisville, Ky., comes to her aid, or other arrangements are made for her comfort. No blame can be charged to the boat hands or lock tender, as they warned her of her danger, but she not understanding, did not heed them.—*Utica Her.*

American Tea.—We learn by a communication in the Union, that the Hon. James Buchanan, Secretary of State, has recently received a package of tea, grown in Brazil, from our Consul at St. Catharine's. The leaf is somewhat larger and darker than the Chinese tea; its flavor is strong and aromatic, and resembles the best specimens from China. When prepared, it strongly assimilates the mixture of black and green tea, so much, indeed, almost exclusively, drunk in England; after China, the greatest tea drinking country in the world. The tea plant was first introduced into Brazil by King John, of Portugal. The writer of the communication states that the successful cultivation of this plant in the United States, may be looked upon as a matter of certainty, as a climate exists in the States of North and South Carolina, Georgia, Tennessee, Florida, Alabama, Mississippi, Louisiana and Texas, extending one degree south of the Rio Grande, precisely similar to the climate of the tea growing districts of China.

Collision of Railway Trains--Providential Escape.

From the Albany Argus.

On Friday morning a collision took place on the Western (Boston and Albany) Railway, about a mile west of the Charlton station, between the Albany passenger train, which left Boston at 8 that morning, and a freight train. The passenger train had got fairly under headway after leaving the Charlton station, and was proceeding to the Spencer station when the collision took place, the passenger train running on a down grade and the freight train on an up grade. Neither train was in sight of the other but a few seconds, before the collision. The locomotives of both trains were completely disabled; the baggage and express package cars broken up; the passenger cars suffered material damage, the last in the train receiving the greatest injury, almost all the seats having been broken up and several of the passengers being bruised. Fortunately, however, no life was lost. The engine drivers and stokers on both trains, with one exception, jumped off and received no injury; one man fell across the second track and broke his leg.

Immediately as the collision took place, the rebound of the cars composing the freight train was so great as to detach ten of them, which ran back towards the Spencer station, on the downward grade, acquiring additional speed as they progressed, and not a brakeman on any one of them to check their speed. Great anxiety was manifested at the scene of the disaster, for fear of a collision between these freight cars and the morning passenger train from Springfield, which was then due at Spencer, but three miles distant. That train had reached Spencer, and notwithstanding the importunities of the passengers and the engine driver to proceed, the conductor, Mr. Parker, directed the engine driver to back the train on to the switch, and thus leave a free track for the Boston passenger train. Scarcely had this been done, when the ten freight cars passed the Spencer station at most frightful speed; indeed so rapidly did they go by that no one supposed there were more than three cars passing. Mr. Parker fearing some accident had occurred, concluded to move on slowly, and come up to the scene of the disaster. Here a meeting of the Springfield train, most of whom were delegates to the late Baptist State Convention at Springfield, was organized and while a committee was absent in one of the cars drawing up resolutions expressive of their thanks to Mr. Parker, the conductor of their train, it was suggested that a most fitting occasion presented itself to return thanks to God for their signal deliverance from danger. In the center of the track the passengers of both trains united in an earnest prayer, offered by one of the many ministers in attendance—a sight which our informant says, would not be met with elsewhere than in New England. The resolutions expressive of their thanks to Mr. Parker for his judicious decision were then passed, and the Boston Courier says a purse was made up to purchase and present to him a silver cup or pitcher.

The cause of the collision was solely owing to the workers of the freight train; it was running out of time; the driver's watch was out of order, and the driver himself was a green hand. And it appears to us there was most culpable negligence in not providing more brakemen to the freight train, especially to the last car.

The runaway freight cars were not arrested until they had passed the Spencer and East Brookfield stations, and had nearly reached that at South Brookfield, a distance of many miles. It is singular that they caused no accident in their progress.

The Boston Courier says the whole neighborhood where the collision took place is covered with flour, which gives the country the appearance of having been visited with a snow storm.

The loss is estimated at $18,000 to $20,000.

The City of Buffalo.—Had not enough already been said of the delightful and edifying anniversary there, I should not leave such a theme for the purpose of descanting on the astonishing growth of this young city, and its more astonishing prospects. When I passed through it, at the period before mentioned, there were but a few houses; Rathbun's Hotel was the most conspicuous. Now, this is an inferior building by the side of the splendid American House. And as I ascended seven flights of stairs in the latter hotel, and from its balcony surveyed the whole of the extended and rapidly extending city, I could hardly believe it the same place. One who had never seen it before might indeed find nothing more to wonder at than in many of our Eastern cities,—except, perhaps, its still muddy streets in some parts, and its hogs that are suffered to wallow in them. But its progress, and then again its prospects—these were the engrossing theme to my mind.—And what, thought I, will this city be a thousand years hence—this mart and thoroughfare of the West?

And when I descended, and visited the wharf where the thickly crowded steamers and other vessels are packed together—and when I was told of the project now in contemplation of building a sea wall, or rather a lake wall, from the present harbor to Black Rock, a distance of four miles along Niagara river, for the purpose of sheltering the boats and shipping between it and the shore—and when I was told of the commerce now carried on, and the rapidity of its increase, I could be at no loss for the cause of the present and prospective growth of this city. So busy a scene as that limited wharf exhibited I have beheld nowhere else. And if four miles more shall be added within the projected basin, and shall be alike occupied, as it may one day be, with lake craft, what limits shall we assign to this emporium?" —*New England Puritan.*

Increased Speed on Railways.—The latest English papers give some account of an engine which has recently been invented for the maintenance of high speed upon railways of narrow guage. It has been put in operation with the fullest success. The peculiarities of the engine consist chiefly in the disposition of the wheels, which permits them to support the wear and weight of locomotive apparatus of far greater power than any previously used, while at the same time the weight of it is so distributed that the centre of gravity is placed much lower than usual. To these advantages are added the corresponding power of using driving wheels of any diameter, together with the great advantage of bringing the largest portion of the entire weight of the engines to bear upon the extreme wheels. The engine has run thirty miles in thirty-three minutes, including the time lost "in getting up speed," and in slowly coming to rest. Many of these miles were gone over at the rate of sixty-five miles per hour. A mail train of sixteen carriages, weighing together about eighty tons, was taken from Camden Town to Tring, up hill nearly the whole way, a distance of thirty miles, in forty minutes, including the stoppages, or at an average speed of forty miles per hour, which is equal to about fifty-three miles per hour average speed on a level.—*N. Y. Post.*

The Close of the Mineral Season for 1847.

From the Lake Superior News.

By this heading we do not mean to be understood that mineral operations close with navigation, for the winter is considered the best season for mining. It is the navigation which is closing up and will in a few days put an end to ingress and egress to and from the works of the several companies on the southern shore of Lake Superior, until probably the middle of May next.—Col. D. R. McNair, the U. S. Mineral Agent, has made up his Report, as we understand, to the 30th Sept. which exhibits returns of ores and metal raised, and shipments out of the District for smelting, from the commencement of operations, as follows:

	Ores and Metal raised.	*Am't ship'd.*
By Lake Superior Company,	1,111,841 lbs.	34,441 lbs.
Eagle Harbor Company,	321,000	81,164
Copper Falls Company,	317,050	15,263
Pittsburg & Boston Copper Harbor Co.,	7,283,340	1,497,491
North West Company,	190,000	7,2[illegible]4
Lac La Belle Company,	200,000	1,329
Suffolk Company,	300,000	383
Algonquin Company,	120,000	11,135
Mendenhall Company,	80,000	4,049
All others making rep'ts,	1,327,989	40,296
Total,	10,244,260	1,693,865

Leaving the balance of 8,550,395 lbs. of mineral to be smelted in the mining district.

The receipts since the transfer of the charge of these lands from the War Department to the Treasury Department, exceed by a very considerable amount every expense attendant upon their management and the collection of rents, and it is computed that with what will be raised by the 30th Sept. 1848, at the rates of this year, the rents will amount to some $25,000 over and above expenses.

There are many companies who have commenced mining, with good shows of mineral and prospects of success, who are not as yet sufficiently advanced to make returns; and a great many who were doing well have turned their forces to building, opening of roads, clearing the land, and raising potatoes, until they could erect smelting works—four of which are going up and will be in operation the ensuing summer—one on the Ontonagon, one at Eagle River, one at Dead River and one at Isle Royal. It should be also mentioned that explorations have been carried on extensively with the anticipation of taking up these lands when they come into market, and that the discoveries surpass all previous anticipations.

Gen. E. J. Roberts, Assistant Agent U. S. Mineral Lands, will, we understand, make his head-quarters for the winter at Eagle River, the Ontonagon, or Fort Wilkins, where the business of the Agency will be transacted until the re-opening of navigation.

The affairs of the Diocese of New York as affected by the General Convention.—The precise position of this much vexed question seems not to be very generally or clearly understood. We give our understanding of the matter as follows. The warmest friends of the suspended Bishop wished his immediate and unconditional restoration, or that the sentence should be declared a nullity. Those most opposed to him wished to have the Diocese declared vacant, and a new bishop elected by the diocesan convention. The General Convention have done neither.—They have, by their action decided, directly or indirectly, that the sentence is valid, that the Diocese is not vacant, and that neither a new Bishop nor an assistant Bishop can be elected. They have authorized the Convention of the Diocese to elect the Bishop of some other diocese to the office of *provisional* Bishop, who shall have as full authority in the diocese as if he were the regular diocesan. In this respect, and in this only is the condition of the Diocese improved by the action of the General Convention. During the last three years it has only had occasional services from Bishops who came merely at the invitation of the standing committee, and who had no express canonical authority to act. The condition of the Bishop himself is not practically altered. His memorial to the Convention, pleading to be relieved from the sentence because of its illegality was referred to the joint Committee, who treated it with perfect silence. A canon has been passed, however, which gives the House of Bishops power to remit or modify his sentence, in any way or at any time they may see fit, provided only that they may not aggravate the penalty which has been inflicted. This power is not probable the House of Bishops will use. It is expected that, under the decisions of the General Convention, a provisional bishop will soon be appointed, and the feelings so long excited by this vexed question will, ere long, subside into comparative repose.—*N. Y. Express.*

Somnambulism.—A friend of ours, a lawyer, and an old bachelor, kept missing his shirts. His washerwoman was accused of retaining them. In the course of two weeks, a clear dozen of whole shirts were gone, and no person could give the least account of them. This was curious! His wardrobe was supplied with another dozen of bran new shirts, and, most astonishing to tell, in one week half of them mysteriously disappeared! His shirts were in his trunk, it locked, and the key in his pocket, yet one by one, they were going! He mentioned the circumstance to a friend, who promised to room with him a few nights, to see if they could solve the mystery.—That night, about midnight, the shirt-losing bachelor arose in his sleep, threw his cloak over his shoulders, and walked out, bitter cold as it was, with nothing on but his shirt and cloak.

His friend followed him to the mill pond, a couple of hundred yards off. Approaching to the pond, the bachelor looked all around to see if any body was looking at him, then took off his cloak and laid it on a rock. Looking all around again, he *pulled off his shirt*, walked fifteen or twenty steps to the bluff, and *hid his shirt in the crevice of the rocks!* He took up a pole, threshed the ice until a place was broken large enough to bathe in, and then walked gently down, and took a good bathing! He then came out, put on his cloak, and cooly returned without his shirt! He returned to his office, raised the window, (for he had crawled out at the window when he left,) and crawled in; hung up his cloak; took the key out of his pantaloons pocket, unlocked his trunk, took out and put on another shirt, relocked his trunk, put the key in his pocket, and went to bed! all the while profoundly asleep

Next morning, behold another shirt was gone! Being told of the whole affair, by his friend, they went to the bluff to hunt for his shirt, and on examination, found, in the same hole, in the rock, *nineteen shirts* safely snugged away, all right!

Had his Throat Cut with a Telegraph Wire!—A young gentleman named Sawyer, of high respectability, was riding at a very fast rate to see a female acquaintance in Dearborn Co., Indiana, a few days since, when he came up against the telegraph wires, which cut his throat, producing almost instant death. The wires had been lowered for the purpose of making certain repairs on the line. He was a resident of Whitewater township, Hamilton Co., Ohio.—*Rochester Daily Advertiser.*

SONG FOR THE SEASON.

BY ELIZA COOK.

Look out, look out, there are shadows about;
The forest is donning its doublet of brown,
The willow tree sways with a gloomier flout,
Like a beautiful face with a gathering frown!
'Tis true we all know that summer must go,
That the swallow will never stay long in our eaves;
Yet we'd rather be watching the wild rose blow,
Than be counting the colors of Autumn leaves!

Look low, look low, the night-gusts blow,
And the restless forms in hectic red,
Come whirling and sporting wherever we go,
Lighter in dancing, as near the dead!
Oh! who has not seen rare hearts, that have been
Painted and panting, in garb that deceives,
Dashing gaily along in their fluttering sheen
With Despair at the core, like the Autumn leaves!

Look on, look on, morn breaketh upon
The hedge-row boughs, in their withering hue;
The distant orchard is sallow and wan,
But the beautiful apples gleam richly through.
Oh! well it will be if our life, like the tree,
Shall be found, when old Time of green beauty bereaves,
With the fruit of good works for the Planter to see
Shining out in Truth's harvest, through Autumn leaves!

Not in hour are leaf and flower
Stricken in freshness, and swift to decay;
By gentle approaches, the frost and the shower,
Make ready the sap veins for falling away!
And so is Man made to as peacefully fade,
By the tear that he sheds, and the sigh that he heaves,
For he's loosened from earth by each trial-cloud's shade,
'Till he's willing to go, as the Autumn leaves!

Look back, look back, and you'll find the track
Of human hearts strown thickly o'er
With Joy's dead leaves, all dry and black,
And every year still flinging more.
But the soil is fed, when the branches are shed,
For the furrow to bring forth fuller sheaves,
And so is our trust in the Future spread
In the gloom of Mortality's Autumn leaves!

THE DELAY.—Having put up a new steam engine and a new press this week, an unavoidable delay occurs in the appearance of this number of the Messenger.

MARRIED.

On the 27th instant, by Rev. J. C. Lord, R. W. BURGESS, Esq., of Washington City, D. C., and Miss CYNTHIA S., daughter of J. J. Baldwin, Esq., of this city.

At Bath, Steuben Co., on the 21st inst., by the Rev. S. W. Alden, Hon. CARLOS EMMONS, of the Senate, and Mrs. CAROLINE POWERS, widow of the late Rev. P. Powers, of the Genesee Conference.

DIED.

In Perry on the 13th ult., of hæmorrhage from the lungs EDMUND H., eldest son of John and Sarah Tompkins. Aged twenty-six years

Deceased died in the full enjoyment of religion.

Mrs. Steele's Female Seminary.

THE Regular Fall and Winter Session of this Institution will commence on WEDNESDAY, the 3d day of November, and continue twenty-two weeks. All the Studies usually pursued in the best Schools are thoroughly taught in this Seminary, including the Languages, Vocal and Instrumental Music, Drawing and Painting.—One competent Assistant Teacher is provided for every ten Pupils

This Institution is under the supervision and control of a responsible Board of Trustees. The Seminary buildings are pleasantly located on the banks of the Niagara River, Black Rock, within one mile of the city of Buffalo, and are sufficiently commodious to afford a comfortable home for a large number of pupils.

TERMS—The price of board, washing, lights, fuel and Tuition in all the English Studies, is $112 per annum.—The extra charges are, for Music on the Piano $10 per quarter; German or French Language $7 50; Drawing and Painting $5.

☞ Pamphlets, explanatory of the plan of the School, may be obtained at the principal Bookstores in this city.

Buffalo, Oct. 14, 1847. oct14d&ctf

NEW PUBLISHING HOUSE AND WHOLESALE BOOKSTORE.

The subscribers beg to inform Booksellers, buyers and dealers in Books and all interested in education and literary advancement, that they have recently opened an extensive Book and Stationery Establishment. Their assortment of Books in the various departments of literature is complete and well selected: comprising a full assortment of School and Classical Books in general use, Law, Medical and Theological Books, in great varieties. Their facilities as Publishers enable them to offer Books on as favorable terms as most of the Eastern Houses Orders from the country solicited and promptly answered.

Citizens and the public generally are invited to call and examine Books and Prices, where will be found the one progressive principle "Small Profits on numerous Transactions."

DERBY & HEWSON,
n7 No. 164 Main Street, Buffalo.

BUFFALO MUSICAL INSTITUTE FOR YOUNG LADIES.

At the residence of Prof. W. R. Coppock—Composer and Teacher of the Piano Forte, Organ, Singing and Composition.

An institute devoted exclusively to Musical Education is not yet common in this country; but in Europe the test of experience fully shows its great advantages over the too general superficial manner in which this important part of polite education is acquired. The advantages this institution offers to those desirous of completing their studies as Organists—or practical players of the Piano Forte, together with a thorough system of imparting the same to others is fully established by the many precedents of the past 15 years. The pupils are constantly guarded in their practice, against all bad habits, and from the various stages of progress they may be in, are continually stimulated to effort and industry, by association with each other. The family too, are all players, and the theory is amusingly discussed, impressing its rules in a more pleasing manner, and more lasting upon the understanding, than by the mere dry study of an elaborate book. Music is composed and arranged from time to time, showing the various styles and harmonies analytically, and adapted for performance on several Pianos at the same time. This teaches a thorough knowledge of counting, and dividing passages into their given time. Vocal music is particularly attended to, and when the pupil has a moderate share of talent, we hesitate not to say, a correct and pleasing singer can be made. The Piano Fortes used are all new, and of the finest quality, and every inducement will be given to render the true spirit with us profitable. The building is commodious, and has a fine garden attached, with Green houses, Bathing rooms, &c., and is pleasantly situated in Seventh street, between Niagara Street, and the Falls rail road, and about midway to Prospect hill

Terms made known upon application at the Institute, or by mail, post paid, directed Prof. Coppock, Buffalo.

Prof Coppock, keeps constantly a choice selection of Piano Fortes for sale,

Buffalo, August 3, 1847.

CHEAP CASH BOOK STORE.

The subscriber, dealer in Books and Stationery, at 183 Main Street, 4 doors above Seneca, keeps constantly on hand, an extensive stock, embracing the most valuable selections from Ancient and Modern Literature—and a general variety of Theological, Classical, Gift and School Books, &c., &c. The Amateurs of Knowledge and all interested in the purchase of Books or Stationery are respectfully solicited to call. Print and Cap Paper at wholesale.

Buffalo, April 20, 1847. F. W. BREED.

For the Western Literary Messenger

The Swallows.

FROM THE FRENCH OF BERANGER.

Captive on the Moorish coast,
Thus the fettered warrior sighs;
Birds that shun the realm of frost,
Once again ye greet my eyes.
Swallows, that in hope's gay dance,
Seek afar this burning strand,
Sure ye leave my native France:
Tell me of that much lov'd land.

I for three long years implore,
Sweet memorials of that home,
Where my cradled life of yore
Dream'd of happy days to come,
When beneath the lilacs green
Babbling waters tell their tale,
You my childhood's cot have seen;
Tell me of that lowly vale.

One beneath that roof was born
Which o'er my young childhood smiled;
Oft you've heard my mother mourn
O'er her lov'd and long-lost child,
Dying, she in fancy hears
Footsteps which of old she knew;
Then afresh she pours her tears;—
Tell me of her love so true.

Is my sister wedded yet?
Have you seen our village throng
At her happy bridal met,
Mingling festal dance and song?
And those friends who braved of old,
By my side the hostile spear,
Do they all their homes behold?—
Tell me of those friends so dear.

Ah, the stranger's foot abhorr'd
Treads perchance their dust above;
'Neath my roof he rules as lord;
Rudely claims my sister's love.
Me no mother's prayers await;
Chains henceforth are mine below;
Swallows, speak my country's fate;
Tell me, tell me of her woe.

A. C. KENDRICK.

Madison University, Hamilton, N. Y.

From Fraser's Magazine.

The Memoirs of a Lady.

FROM THE GERMAN.

I am now sixty years of age, and having all my life been forced to disguise my feelings and act a part, will at last fling the mask aside and speak the truth. But to whom shall I address myself? for, unless it be to laugh at her, an old lady will hardly find a friend willing to listen to the histoty of her life. Well, I shall address this confession to myself, and speak freely and frankly. It will be some relief to me. I shall be writing a kind of moral testiment; and when the pen has once done its duty, the past will no longer be my own. The past! Good Heaven! how far does it now lie behind me, and yet how near does it still appear!

I shall sleep to-night in yon chamber, which I have not entered for forty years. Everything here seems so much like what it was when I last occupied these apartments; I saw so true a representation of former times in their appearance, that I actually recoiled with affraight on beholding the reflection of my own wrinkled face in a mirror: I had almost fancied that I was still to find myself young and unchanged. Alas! from today every remnant of youthful feeling has vanished from my breast.

I lost my mother in infancy, and was only ten years of age when my father died. An elder sister became my guardian; but as she had just made a brilliant marriage, and was entering the gay world at the most promising period of her career, in flower of youth and beauty's pride, she was glad to be relieved from taking charge of me. I was, therefore, placed for my education in a convent which was then in considerable vogue, and in which were many young ladies of rank and fortune. It was usual for the pupils to remain in this establishment till they had attained their sixteenth or seventeenth year, then to marry, or to join their friends in the great world. This was also my sister's intention with regard to myself, as she very frankly told me when she bade me adieu, and left me at the convent under the charge of a governess.

Among the pupils was a Lady Emily O——, to whom I soon became greatly attached. She was several years older than myself, full of talents, spirit, and romance. She lived in the clouds, so to express it, and Platonic love was her ideal of all that was great and beautiful. As I also possessed an easily excited fancy, Lady Emily's conversation fell upon a fruitful soil; though she was candid enough to tell me that the real world offered little foundation on which to raise such brilliant structures of ideal beauty and perfection as she was fond of building.

"Men are not what I take pleasure in representing them," she often said; "it is only my fancy that loves to paint them in such bright colors. But you will know them in time, and you will be easily understood."

As I grew up I gradually adopted the notions of my friend, and lived with her in an ideal sphere, of which we were, in truth, the only inhabitants. I forsook the playmates of my own age, and passed whole days in hearing this modern Heloisa read *Werther*, and tales of the same class which she had herself composed in a still more exaggerated strain. Beyond hearing me repeat my lessons, my governess took little trouble about me; and as the lady-superior was satisfied with her reports, no one paid the least attention to my general way of going on.

When I was fifteen years of age, Lady Emily died and left me all her papers and manuscripts. These I took with me when soon afterwards I quitted the convent, and made them my constant, almost my only study. How impatient I was to see the world I had pictured to myself so beautiful; but which, when beheld, I hardly recognized. Instead of allowing me to form a romantic attachment, to select (as the patron of my life) the object of my affection, my family presented Baron Nierking to me, and told me to look upon him as

my future husband; that he was a man of wealth, rank, and station—although unexceptionable, in fact; and that our marriage was a settled affair. When I attempted to remonstrate I was laughed at, called a little fool, and was greatly surprised to find myself married before I had time to object, and almost before I knew how it happened.

My husband was about fifty, had once been handsome—knew it, and still thought himself so. He was a man of limited and little cultivated understanding, and of cold disposition. He had never loved me; but the world called me happy, for I had wealth at command, and was allowed perfect and uncontrolled freedom. What could I desire more?

"Happy" indeed! and what is this happiness of which all are speaking? I picture it to myself as a spirit, or essence, inhabiting a golden temple with numerous gates, each surmounted by emblematical figures—toys of all sorts; here flowers, and there laurels; and every individual on approaching hurries towards the gate which seems the most attractive. But how to open it when attained? One aspirant sometimes spends a whole life in knocking at all; another, in constantly tarrying at the same. Here a gate yields to our efforts, we think the goal is gained; when, lo! a laughing demon points to the divinity we wish to approach, then thrusts us out, and we find ourselves as far from the mark as ever. This was my fate. Love constituted my ideal of happiness; I could comprehend no other, and this one source of happiness was to be denied me.

Notwithstanding my foolish and extravagant fancies, I yet retained, during the early period of my married life, the strictest sentiments of duty. I suffered in my solitary position, and pride made me reject all the attention paid me; but I confess that even this feeling of duty ultimately gave way, and consigned me to grief and sorrow. I sighed and sought for a heart to love me. At last I pictured to myself an ideal, and of course, incomparable lover, having all the features and perfections of the favored heroes of my romances. I looked round the brilliant circles of society, and smiled when I compared the most distinguished cavaliers with his fancied perfections. By degrees all my thoughts were fixed on this ideal lover, to whom I became at last fondly and affectionately attached. I spoke to him, wrote to him, sometimes represented him as ill, sometimes as jealous; he joined the army, got into danger, and I sacrificed myself to insure his safety. At last we met again, and then followed a period of undisturbed happiness. He understood me perfectly, accompanied me through life, joined me in society, and became a perfect guardian angel; for I watched carefully every step of my conduct in order to give him no cause of complaint. On his account I rejoiced in the attention paid me, and in the admiration my general behavior excited; nor was any pleasure or gratification which I was not ready to relinquish merely to oblige him: I was playing a real comedy of love in secret. This comedy lasted for three years, and the consequences impressed themselves strongly on my character; many of my friends hardly knew me again; some were alarmed by the change; but I took no notice of their conjectures, and allowed them to think whatever they pleased. What was the world's opinion to me?

I was twenty-three years of age when I passed four weeks on a visit at the castle of one of my cousins—even here, where I now write these lines. My ideal lover was not with me; his absence caused me, of course, much grief, and I was sighing for the hour of our next meeting. The period of my visit was at an end and my departure fixed for next morning, when my coachman reported that the carriage had received an injury which could not be repaired in less than a day. The delay vexed me a good deal, but my cousin consoled me, as she expected a very pleasant addition to her party in the morning.

"My uncle," she said, "is coming: and who do you think, Bertha, accompanies him? Why, your favorite poet, the poetical hero, the adored of all the women, whom you have so long been anxious to meet—Count Arthur G——."

These tidings easily reconciled me to the accident which had befallen my carriage; though I reproached myself, in some measure, for this feeling. Did not all my thoughts belong to him whom I had left at a distance? But my curiosity was excited, and the day passed in speculating on the appearance of this lauded irresistible. We were four young ladies at the castle, and every one of us had formed a different opinion on the subject. When assembled for breakfast next morning, it was immediately observed that all the toilets were more carefully selected than usual; the spirit of coquetry seemed to pervade the whole party, and it might have been thought that we were all in love with Count Arthur, so frequently and impatiently did our eyes glance from the clock to the castle gate. At last a carriage drove up, and the whole party instantly hurried to the window; I did not follow the example, but hastened to my own room, hardly able to explain to myself the nature of my emotions. It actually required time and some effort before I could recover sufficient composure to return to the drawing room. With downcast eyes, and strangely agitated, I opened the door, but heard only one voice, that of my uncle, who accosted me in his usual friendly manner; I could hardly answer, till, looking about, I found that we were alone.

"Where are the ladies?" I then inquired.

"In the garden with Count Arthur, my fair baroness."

Without further remark the old gentleman immediately went up to a glass-case that contained some valuable antiquities, which, as a keen antiquarian, he always contemplated with renewed pleasure. I followed mechanically, and was listening, without attention, to a learned treatise on an ancient tiara, when steps approached, and a young man of grave and calm aspect joined us. It was the count himself.

"Count Arthur, my niece, Baroness Nierking," said my uncle.

A few commonplaces followed on this introduction; and though he must, of course, have seen me, I waited till he had addressed me before I ventured to raise my eyes in order to look at him. He joined in the conversation, and, though very celebrated at the time, was totally unassuming. His observations all showed the man of taste and information, and I found them so striking, that I could almost have fancied them my own.

The party now assembled and proceeded to visit the castle, and especially a turret of some historical note, which my uncle never failed to inspect. To reach it we had to pass through a room which had been assigned as a study to the count, and where we found that some of his papers had been thrown carelessly on the table, as if preparatively to their being put in order. This led to a request that he would favor us by reading some of his compositions; he consented at last, and I took my seat on a sofa exactly opposite to him. His reading was impressive, and he seemed to address every striking line of poetry so especially to me, that the other ladies actually appeared jealous, so that I was forced to rise merely to escape their inquisitorial glances. The count followed my example and joined me; my heart beat as if my very breast were about to burst asunder.

I found myself drawn towards him by an irresistible power, which he probably observed.

"And your ladyship has actually resolved to leave us to-morrow?" he said.

"Yes, my lord," I replied, looking round the room rather than at the speaker.

"But wherefore so soon?" he continued.

"I leave with regret, but I am expected at home;" and these words having gradually restored my composure I left him, and the party returned to the drawing room. A lady took her place at the piano and sung, another followed her example, and my uncle pressed me to do the same. My heart was full, and I consented; and feel convinced that the tones of my voice had never been so touching. The count stood by my side; he did not speak, but seemed fully to share my emotions. I dwell so long on the history of this day, because it was the first, the events of which impressed themselves on my heart for life; the first day till to day—which is the last.

After dinner followed a walk in the garden. Count Arthur gave me his arm; at first we spoke in the common-place manner of the common-place things, that so often lead to the most interesting conversations. At last we came to the theme of endless novelty and variety—the theme which has some time or other spoken home to the hearts of all who can feel, and of which all have either heard or thought—I mean love.

Count Arthur inquired what was my idea of love? I had none.

"Do you think with me, my lady," he continued, "that men in general too readily give way to this dangerous passion? I mean, of course, those who are capable of feeling it, for the others are not worth taking into account. Only look around you, and I am sure your ladyship will see nothing but lovers."

"Lovers! no, pardon me, my lord; only men of gallantry."

"You are unjust, my lady; you, of all others, ought to know what real love is; for what other but a real attachment could you inspire?"

In saying which his eyes rested on me in the softest and most expressive manner.

"Do not, on that account," he continued, "take me for an absolute Amadis; I am far from speaking by experience, for I have never yet been in love—really and truly in love. I have often admired a lady, taken pleasure in her conversation and society, felt even a passing *passion*, but no deeper sensation. And yet I look with the most fervent anxiety to the moment when I am to meet the angel that is to brighten my existence. My heart is hoarding the most enthusiastic gratitude wherewith to repay her generosity; for a poet without an adored is like a sky without stars.

This conversation was, I felt, very dangerous for me, but I could not tear myself away from him, and it was only when the party returned to the castle that we were separated. His eyes followed me during the whole of the evening, and most of his speeches were addressed to me, or filled with allusions applicable to our relative situations. I was completely dazzled.

Arrived in my chamber I threw myself into an arm-chair, covered my face, and remained for two hours, I believe, unmoved in that position, passing all the events of the day before me. The most minute trifles had impressed themselves indelibly on my memory; every word he had uttered stood in flaming latters before me, and, as may well be supposed, completely deprived me of sleep during the night. The chamber-maid, who came to call me in the morning, found me already up and dressed for the journey. O, how full my heart was! I had hardly entered my carriage when a servant brought me a letter; but the agitation that seized me told me from whom it came. I opened it with a trembling hand, impatient to be alone, that I might, with my whole heart, enjoy the pleasure of reading it. The contents were in verse—verses full of sorrow and tenderness. I concealed them in my bosom, resolved that no mortal eyes but my own should ever gaze upon them. During the last stage of the journey, my ideal lover again came to my recollection; but alas, how changed! for when I looked for his image in my heart, I only found the portraiture of Count Arthur! Fancy's dream had become reality, and airy nothing had now assumed "a local habitation and a name."

From this moment I only lived for him. Surrounded by his writings, I read them over and over again, and entered into all his feelings. If a new work of his appeared, I was the first to secure it and devour its contents, which always, I thought, contained allusions to our mutual sentiments and unfortunate attachment. I fancied myself depicted in all his heroines, and believed that he was addressing me in the speeches of all his lovers. If he spoke of the pang of separation, of the afflictions of hopeless love, he was only, as I deemed, speaking of me. I had only changed the object of my folly, and now loved so ardently that I could not even hear his name mentioned without changing color. Nothing was more ludicrous than the absolute contempt with which I treated all other gentlemen who endeavored at times to pay me attention; a pitying smile was their only reward. I measured them by the fancied greatness of my new idol, and, alas, how little did they then appear! Without ever sending one of them, I wrote, I suppose, no fewer than five hundred letters to this lover of a single day. I told him everything, my joys and sorrows; spoke above all, of my love. My imagination grew more and more extravagant respecting him till I actually rhapsodized.

Thus passed my youth; and it was worth being young for the possession of such feelings. Then came the period of the desolating French wars; our home was rendered insecure; and I removed with my husband to one of the capitals of northern Germany. It happened to be the usual residence of Count Arthur; but he was then absent on some diplomatic mission. His sister, with whom I became acquainted, was a very common-place, prosaic person, but appeared an absolute *Corinna* in my eyes, merely because he was attached to her. I fancied, of course, that he must have spoken to her about me, and questioned her at least a thousand times on the subject; and she thought, at last, that she recollected his having returned from the south of Germany some years before, with an unfortunate attachment in his heart. This was enough for me; all doubts were now removed, and I should hardly have been more delighted had a declaration of love come even from his own lips.

But the wide-spreading ravages of war again forced us to change our quarters, and we removed to Prague. I was no longer young, and my fancy gradually began to cool; but I still thought of Count Arthur with the most affectionate tenderness, and, though I wrote no more letters, still occupied myself a great deal with him. I often read the verses he had sent me, and always with *secret* delight, for no one had yet been allowed to see them; they constituted the only link between us, and formed, I may say, the principal joy of my existence. These continued dreams ended, at last, by making me believe in the full truth of the romance which imagination had conceived. If his name were mentioned I often repeated, almost involuntarily, "Oh, I am very well acquainted with Count Arthur!" and these words

were generally accompanied by a pensive and self-satisfied smile, which must often have made the hearers believe that I knew him but too well.

The restoration of peace enabled me, after an absence of many years, again to return to my home. My husband had died during our exile; I was now a widow, without children, in possession of considerable property, and a good deal courted, therefore, by my relations. The cousin whom I formerly mentioned did not forget me; but her kind heart was above being influenced by selfish motives. She resided for a time with me, on one of my estates, for her family had been obliged to part with the castle where we had met Count Arthur—a loss which she deeply lamented. But chance again brought the property into the market; a moderate price only was demanded, and as she was enabled to raise the money she instantly repurchased the place, and returned with delight to the scenes in which she had passed her youth. I promised her an early visit; but illness, business, various occupations, delayed me, and years passed away before I could carry my resolution into effect. At last, about eight days ago, I received the following letter:—

"My dear Bertha—I can no longer let you off; and your presence at my castle, on or before the 18th of July, is now indispensably necessary. I shall accept no apology; a heartfelt pleasure awaits you, and I should never console myself were you to decline my invitation."

How could I resist such entreaties? Though sixty years of age, I was still a woman, with all a woman's curiosity. On the 18th of July, therefore, I arrived at the castle, and no sooner entered the drawing-room than my cousin, rushing into my arms, exclaimed, with her usual spirit and vivacity,—

"Now, tell me quickly, which of all your former acquaintances are you most anxious to meet again? Speak frankly and sincerely."

I named a few at random.

"Not so, not so," she replied; "a still older acquaintance, one first met here in this very castle, and whom your heart continues to acknowledge."

I was so weak as still to blush.

"That's it," said my cousin; "now you are right. It is Count Arthur; I expect him here every minute. The charming Arthur! I wonder what has become of his elegant figure and brown curling locks!"

"Even, I suppose, what has become of our beauty, which has turned to wrinkles and ugliness."

I said this on purpose to prevent her from saying so, but did not wish to believe my own words. My heart could not harbor the possibility of finding Count Arthur changed from what I had seen him some forty years before.

We spoke of past times, of the very day on which we had formerly expected him, even as we did now. But what a difference! Then in youth, now in age! At this moment the sound of wheels was heard, and the count's chariot drew up. I hastened into the embrasure of a window to see him alight; the carriage-door opened, and I actually shrunk back in terror when I beheld him. Was this Count Arthur?—a decrepid old man, whose tall figure was almost bent together, whose face was full of wrinkles, and wanted every particle of that dignity which often accompanies age! This, with a few gray hairs scattered round an almost bald head, was all that now remained of the once gay and gallant count!

My cousin received him in the most friendly manner,—

"Welcome, my dear count!" she said; "here is a lady who will be delighted to see you again."

After I had recovered myself a little, I approached.

"Do you not know her? It is my cousin, the Baroness Nierking, whom, on your former visit, you found so amiable and interesting."

"Oh, yes, certainly, certainly!" was his embarrassed reply, as he bowed to me.

I perceived at once that he had entirely forgotten me. It was a pang that struck my heart keenly, and as my cousin probably perceived it, she drew him aside, and mentioned our former meeting to him. He listened attentively, and seemed to call his best powers of memory into exertion.

"I cannot recollect," he said. "I know that you had a party of ladies here—some very charming ones, no doubt; but, except yourself, I remember no one in particular."

Two large tear-drops fell from my eyes. It was the whole of my past life that I mourned, for with a single word this cruel man had now robbed me of the whole of my previous existence.—What now remained to me, and where was my compensation to be found for the past? In a few years of suffering, and then in death!

The count took a seat near me, and I collected myself so far as to address some words of courtesy to him. He hardly answered till I turned the conversation exclusively on himself; then only he seemed to revive, and was evidently pleased when a circle formed round him. But a young lady having been led to the piano, he again grew moody; for he was no longer the sole object of attention, and this he evidently looked upon as a sort of insult.

I remained near him, and as he found me a good listener he endeavored to resume the thread of the conversation, in which, as it was my wish also, he easily succeeded. I spoke of the journey which led to his former visit at the castle, and he assured me that it had afforded him great pleasure.

"And yet you no longer recollect our walk in the garden, nor my singing?" I had almost added—"Your love," when reflection saved me from the folly.

"Oh, perfectly, my lady!" was his reply; but I easily perceived that it was a mere piece of commonplace gallantry.

"But permit me, my lady," he continued; "did I not give you some verses on that occasion—some pretty, soft, sighing, lyrical effusion? I am sure I must have done so, for, during my tour in this part of the country, I hardly met with a pretty woman to whom I did not show such a mark of attention. Ladies like these things, and if you sing to them, you sing yourself into their hearts; they love to become immortal with poets. If you have any such verses, pray give them to me, for I retain no copy, though I know that I wrote some very good things at that time. I am printing a new edition of my works; will you not accept a place in it?"

I was no longer able to retain my calmness; my recollection turned to bitterness, and I could not resist the satisfaction of vexing an old fop, for whom I had shed so many tears, and who now told me that I had shared the little attention he paid me with every pretty woman in the country! I had inspired him with nothing more than the slight transient satisfaction he experienced in the company of thousands of others! And now he wished to have my secret treasure restored, to expose that to the gaze of the public which I had concealed even from the eyes of friendship—I who had so wished that only his eyes had rested on those glowing lines! No, never!

"I am truly grieved, my lord count," I replied "that I no longer posess your valuable autograph. If I rightly recollect, it was a long poem which

you did me the honor to dedicate to me—an elegy, I believe, or something of that kind. But when I ceased to be young, all such matters found their way into the fire; and I fear that your homage must have fed the flames along with the rest."

This told, and my vengeance was complete.—His vanity was so deeply hurt that he sprang quickly from his seat, and haughtily uttering the werds, "Great pity!" left me to enjoy the satisfaction of having so skilfully winged the dart.

What futher passed I shall not relate. Why, indeed, should I? Here I am now sitting in the very same place where I first thought of him, and I may say loved him. My childish letters, his verses, his portrait, I have consigned to the flames. I am now nothing more than an old woman, whose reason was never before sufficiently on its guard, but who has now received a shock which has brought her to herself, and who can, fortunately, still look back upon the past without shame thought not without regret for her folly. However severe has been the blow which has cured me of my errors, I am yet bound to bear it with gratitude; for it has enabled me, after hours of reflection, to tear off the veil that for years had covered my eyes. But on what am I now to rest them?

I had often resolved never to join what is termed the saintly sisterhood, and did not know that a call to that effect might yet be awakened in my solitary and forsaken heart. May Heaven forgive me! I now know and feel that there is nothing true but God, and to him my last days shall be dedicated. Oh, that I had sooner thought so! How much error and repentance should I have spared myself, and how much of hope should I have gained!

The Holy Land.

BY HARRIET MARTINEAU.

BETHANY AND PLAIN OF JERICHO.

We made an excursion from Jerusalem to the Jordan and the Dead Sea; going by way of Bethany and Jericho, and returning by the Convent of St. Saba. There is at this day so much danger of falling among thieves in going down from Jerusalem to Jericho, that travelers join parties when they can, and unite their guards into a corps of armed men. Our own party of four joined the ten with whom we had traveled in the desert: and four strangers, European gentlemen, requested permission to ride with us. Thus we were eighteen: and the dragomen, cooks, housekeepers, and mule-drivers, who took charge of our tents and baggage, and ten armed guards, swelled our number to that of a caravan which no robbers were likely to attack. Indeed, we scarcely saw anybody the whole way. The dangerous part of the road appeared deserted, and the plain of Jericho, once studded with towns, and filled with fertility, lay before us almost as lifeless as the basin of the Dead Sea.

We left Jerusalem by St. Stephen's gate—my three friends, myself, and our servants and baggage, and met the rest of the traveling party at the bridge in the Valley of Jehoshuphat, at 9 A. M. We proceeded by the camel road to Bethany, which winds up the side of Olivet, and crossed its ridge to the east. As soon as we had passed the ridge, Bethany came to view, lying on the eastern slope of the mount of Olives, and, as we all know, "fifteen furlongs" distance from Jerusalem. It is now a village inhabited by about twenty families: a very poor place; but looking less squalid than might be expected, from its houses being built, as everywhere in that country, of stone,—square, substantial, and large, compared with cottages in England. Its position on the side of the hill is very fine, seen from below.

Before descending the hill, however, we alighted from our horses to visit an old tomb which is called the tomb of Lazarus. No enlightened traveller believes this to be really the place where Lazarus was buried; but to see any ancient tomb on that spot was an opportunity not to be missed; and we gladly went down the dark hewn-steps to the little chamber where some corpse had once been laid. I had often wished that the old painters had enjoyed such opportunities: and then we should have had representations of Lazarus coming forth from chambers in the rock, and not rising from such a grave as is dug in European church-yards. The limestone rocks of Judea are full of holes and caverns: and we know from the Scriptures how abundantly these were used by the old inhabitants as dwellings for themselves and their cattle, as a shelter to the wayfarer, a refuge to the fugitive, a hiding-place for robbers, and a place of deposite for the dead. Where a cavern was found with holes or recesses in its sides, a little labor would make it an extensive place of burial. By squaring the entrance, and giving some regularity to the arch of the roof, a handsome vestibule was obtained: and then the recesses were hewn into form for the reception of bodies. Sometimes these recesses had pits; sometimes niches in their walls, so that each recess could contain several bodies: and sometimes they were small, so as to contain only one each. Sometimee the vestibule opened out into passages, which had recesses on each hand; so that a large company of the dead might be hidden in the heart of the mountain. The whole was secured from wild beasts and other intrusion by a stone door fitted to the entrance, or a large block rolled up against it. Those who have seen these eastern tombs can never again be puzzled, as I was in my childhood, when reading of "the chambers of the grave," and of the dead calling to one another in the house of death, and of the stone being rolled away from the mouth of the sepulchre. Many a child wonders, as I did how the way was made clear for Lazarus to come forth merely by the removal of a stone; but, once having stood looking in at the door of a sepulchre, how vivid becomes the picture of Jesus standing there, and calling to Lazarus "with a loud voice," to come forth! How one hears that voice echoing through the chambers of the tomb, and sees the dead man in his ceremente appearing from the steps of the vault, or the shadow of the recess!

In the tomb which we explored at Bethany, the vaults went down a considerable way into the rock. One flight of deep, narrow steps led us into a small vaulted chamber; and two or three more steps, narrower still, into the lowest tomb, which had litte more than room for one body.—The monks, when taken as guides, show in the village what they call the house of Martha and Mary and that of Simon the Leper; but we did not inquire for these, having no wish to mix up anything fabulous with our observations of a place so interesting as Bethany.

We looked back upon the village again and again as we descended into the valley; and it was painful to lose sight of the place where Jesus was wont to go to solace himself with the friendship of Lazarus and his sisters, and rest from the conflicts which beset him in the great city over yonder ridge. But we were now on the road from Jerusalem to Jericho, and about to pass among the fastnesses of the thieves who seem to have infested this region in all times. After riding along the valley, sometimes on the one hill and sometimes on the other, for three or four miles,

we left behind us the scanty village spread along the bottom of the valley, and began to ascend to the hollow way which is considered the most dangerous spot of all. Here Sir Frederick Henniker was stripped and left for dead by robbers in 1820. His servants fled and hid themselves on the first alarm. When they returned, he was lying naked and bleeding in the sultry road. They put him on a horse, and carried him to Jericho, where he found succor. Perhaps he was thinking of the parable of the Samaritan when this accident befel him. I was thinking of it almost every step of the way.

Another story was presently after full in my mind:—A beautiful Catholic legend which was told me by a German friend in America, when I little dreamed of ever traveling over this spot.—Our road now gradually ascended the high ridge from which we were soon to overlook the plain of Jericho. The track was so stony and difficult as to make our progress very slow; and the white rocks under the mid-day sun gave out such heat and glare as made me enter more thoroughly into the story of Peter and the cherries than my readers can perhaps do. And yet the many to whom I have told this legend in conversation have all felt its beauty. It is this:

Jesus and two or three of his disciples went down one summer day, from Jerusalem to Jericho. Peter—the ardent and eager Peter—was, as usual, by the Teacher's side. On the road on Olivet lay a horse-shoe, which the Teacher desired Peter to pick up: but which Peter let lie, as he did not think it worth the trouble of stooping for. The Teacher stooped for it, and exchanged it in the village for a measure of cherries. These cherries he carried (as eastern men now carry such things,) in the bosom-folds of his dress. When they had to ascend the ridge, and the road lay between heated rocks, and over rugged stones, and among glaring white dust, Peter became tormented with heat and thirst, and fell behind. Then the Teacher dropped a ripe cherry at every few steps: and Peter eagerly stooped for them. When they were all done, Jesus turned to him, and said with a smile, "He who is above stooping to a small thing, will have to bend his back to many lesser things."

From the ridge we had a splendid view of the plain of Jordan—apparently as flat as a table to the very foot of the Moab Mountains, while the Dead Sea lay, a blue and motionless expanse, to the right—the south,—and barren mountains enclosed the whole. The nearer mountains were rocky, brown, and desolate, and here and there the remains of an aqueduct, or other ancient buildings, marking the sites of settlements which have passed away. The distant mountains were clothed in soft and lovely hues which can be seen only through a southern atmosphere. The plain was as delicious a region as ever man lived in. Josephus called it a "divine region;" and tells of its miles of gardens and palm-groves; and here grew the balsam which was worth more than its weight in silver, and was a treasure for which the Kings of the east made war. Jericho is called in the Scripture the City of Palm-trees; and Jericho was but one of a hundred towns which peopled the plain. Now, all near was barren; and equally bare was the distant tract at the foot of the mountains; but in the midst was a strip of verdure, broad, sinuous, and thickly wooded, where we knew the Jordan flowed. The palms are gone; and the Sycamores, and the honey which the wild bees made in the hollows of their stems. The balsam which Queen Cleopatra so coveted as to send messengers from Egypt for plants to grow at Heliopolis has disappeared from the face of the earth; and, instead of these and the fruit and sugar canes which were renowned in far countries, we find now little but tall reeds, thorny acacias, and trees barren of blossom or fruit. The verdant strip, however, looks beautiful from afar, and shows that the fertility of the plain has not departed. There is enough for the support and luxury of man, were man but there to wish for and enjoy them.

We descended by a road like an irregular staircase, the steepest hill I ever rode down. The gentlemen dismounted: but the heat was so excessive that I ventured to keep my seat. When I glanced up from the bottom and saw the last of the party beginning the descent, it looked so fearful that I was glad to turn away. We were now at the foot of the mountain called Quarantania, supposed by the monks to be the scene of the temptation. A few pilgrims come from afar, every year, to spend forty days on this mountain, barely supporting life during the time by the herbs they find there. I need hardly say that there can be no good reason for fixing on this mountain as the place, and that the choice of it is probably owing to its commanding the plain of the Jordan and its cities—once no unfair specimen of the "Kingdoms of the earth, and the glory of them." The caverns in the face of this mountain, once used as dwellings or tombs, are now the abodes of robbers. When some of our party showed a desire to reach the lower ones, the Arab Sheikh who was responsible for the safety of the party, drew his sword across his throat, to show the danger and barred the way.

It may be remembered that the men of Jericho complained to Elisha the prophet that the water of their spring was not good, either to drink or to water their land for tillage, (2 Kings, ii. 19) and that though their city was pleasant they could not enjoy it for this reason; and that Elisha purified the spring, 'so that the waters are healed unto this day.' Beside this spring, now called Ain Sultan, we encamped in the afternoon, and found its waters truly delicious. Nothing could be prettier than this encampment, in a spot so forest-like as to contrast strongly with any thing we had seen for many weeks past. Our tent was close upon the brink of the clear rushing brook: but the heat was so excessive that we could not endure the tent, and had our dinner table placed under a tree, whose roots were washed by the stream. Broad lights gleamed upon the rippling waters, and deep green shadows lay upon its pools. Our horses were feeding in the thicket beyond; and the Arabs sat in groups near the tents. Other parties of our company were dining or lying on the brink of the stream. Every encampment of travellers in those places are beautiful: but I never but once saw one so beautiful as this.

After a walk to the remains of an aqueduct, and other traces (mere traces) of former habitations in the days when Jericho was a great city, I went, with one companion, to see the spring, which was but a short distance from our tents.—The water bubbled up from under some bushes, and spread itself clear and shallow, among some squared stones, which seemed to show that the source had once been closed. By this time it was dusk; the evening star hung over the nearest hill. All was silent above us, except the rustle and dip of the boughs which hung above the water. My companion and I found the temptation to bathe quite irresistible. Under the shadow of a large overhanging tree there was a pool deep enough for the purpose, and there we bathed, rejoicing with the people of Jericho in the sweetness of the water.

The Eastern traveler feels a strong inclination to bathe in every sacred sea, river and spring.—

How great the interest is, and how much like that of a new baptism, those at home may not be able to imagine; and such may despise the superstition which leads hundreds of pilgrims every year to rush into the Jordan. But among all the travelers who visit the Jordan, is there one, however far removed from superstition, who is willing to turn away without having bowed his head to its sacred waters?

There was no moon to-night; but the stars were glorious when we came out of our tent to take one more look before retiring to rest. Here and there the watch-fires cast yellow gleams on the trees and waters; but there were reaches of the brook, still and cool, where the stars glittered like fragments of moonlight. This day stands in my journal as one of the most delicious of our travels.

---

*"Give and it shall be given unto you; good measure pressed down, and shaken together, and running over, shall men give into your bosom."—*Luke vi.* 38.

The New York correspondent of the *National Intelligencer* describes in the following a plan, which, we learn from other sources, is seriously entertained. The fact that it is so, and that this or some other plan is deemed necessary to relieve the crowd in Broadway, will give country readers some idea of the tide of life that rushes through that main artery of the great city:

ELEVATED RAILWAY IN BROADWAY.—*A new Broadway over Broadway.*—The crowded state of the great central thoroughfare in this metropolis has for some years been a subject of much complaint, and the difficulty is increasing from year to year. The omnibuses and other vehicles are now so numerous as to render it difficult, troublesome, and often hazardous to life for foot people to cross the street. The conviction has long prevailed that *something* must be done ere long to relieve Broadway from this pressure. But how the thing should be accomplished has been a difficult problem to solve. Laying rail-tracks in Broadway, opening new parallel thoroughfares by widening other streets or opening new ones, and other projects, have been much discussed for two or three years past, but public opinion has yet settled down upon none of them. Some new and magnificent plans are now under consideration. One of the principal of these I have been examining a little while this morning.

This plan is an invention by John Randal, jr., a civil engineer. He has been two years engaged in perfecting his model, and at an expense of about four thousand dollars. He is now exhibiting to the citizens a complete model, thirty or forty feet in length and ten or twelve in breadth, showing the whole plan of the road and the movements of the cars. The rail-tracks are elevated fourteen feet above the curbstones of the sidewalks, to be supported by iron pillars along the curbstones, and iron cross-pieces running across the street, the whole frame-work to be iron. On this frame-work are to be laid four railroad tracks from Bowling Green to Union Place, about three miles, and running *round* the Bowling Green and the Park at Union Place, thus forming an endless road. The two inner tracks are for the main cars, and the two outer tracks for what are called *tenders*. The cars are to be attached to and moved by an endless rope; the motive power to be one or more steam engines at some central point on the road. The main cars are to be in constant motion without any stoppages during the running hours of the day and evening, at a speed of perhaps six miles an hour.

At the corner of every cross street, or every second cross street, will be stations where passengers ascend by stair-ways and steps into one of the tenders, which for the time are stationary. But immediately one of the main cars comes up, and when abreast of the tender fastens to it by the operation of the machinery, and takes it along to the next corner or station and there drops it, and fastens to another tender, which it takes along to the next station, and so on. As soon as a tender is attached to a main car, so as to become as it were a main part of it, a door is opened by the conductor, and the passengers step from the tender into the main car, and those in the main car who wish to stop step out into the tender.—The door is then closed to prevent accidents, and the main car leaves its tender at the next corner.

It is calculated to have sixty or seventy of the main cars, so there may not be more than two or three minutes between them, and as many tenders as there are corners or stations. It is calculated also to have promenades by the side of these tracks, either half the width or the whole width of the sidewalk below, and, in order not to obstruct too much the light below, they will be covered by a semi-transparent glass. Various other appendages are suggested to give more or less the conveniences of a *street* in this upper story of Broadway, but it is not necessary to describe these at present.

The expense of erecting this railway and putting it in full operation, is estimated by the inventor, after careful calculation, at a million and a half or two millions of dollars. If the City Council shall sanction the plan, then application will be made to the State Legislature to charter a company for its construction. The perfect operation of the model is a pretty strong argument in favor of the plan. It has been already visited by many of our citizens, and, I believe, has generally made a favorable impression.

WAR HAS REPOSE, WORK NEVER HAS.—It is a benevolent arrangement of Providence by which man is under the necessity of laboring to live, but that is a malevolent arrangement of men by which man is doomed to live merely to labor. Life was intended to be a blessing to every creature on whom it was bestowed, but under the present order of things, it may perhaps be questioned if it be not to many as much of a curse as a blessing. Nor is this a peculiarity of this particular age or country alone; I believe it may with truth be affirmed that the same state of things has existed in all ages and countries, as well as under all systems of government. In the language of one who himself fell a victim to excessive toil—

> "We are lowly, we are lowly,
> Our misfortune is our crime;
> We have been trodden under foot
> From all recorded time."

Yes, the many have ever been, more or less, subject to tyrannised over, by the few. The people have ever been the tools, the playthings of the privileged orders!—and the two principal means used in their subjugation have ever been, and still are, war and work. And it is questionable whether the one system or the other has been more destructive of human life. We hear more of the victims of the war system; the death it inflicts is more summary, and in general more appalling, and so attracts greater attention. But over-labor, though less ostentatious, is equally sure and fatal in its results—and, after all, is perhaps the greater destroyer of the two. War has its seasons of repose, work never has.—*W. Fergusson's Lecture on Protracted Labor.*

For the Western Literary Messenger

Night in Autumn.

I may not sleep! weird voices now are calling,
And visions rise 'twere vain to bid be fled—
Too much wild music on my ear is falling—
Too much of loveliness o'er earth is shed.

I hear from far a low-toned, fitful wailing
Through the huge boughs of ancient forests lone,
While rifled clouds, slowly and darkly sailing,
Are wreathed with brightness by the half-hid moon.

Such is the hour when fancy, winged and fearless,
Pausing 'midst ruins of the storied past,
Might trace dim forms of earth's long-lost and peerless,
Or catch dread murmurs on the rustling blast.

But thou, my soul, to thy own chambers turning,
Fain would I hold still converse now with thee—
This tear which swiftly down my cheek is burning,
Whence gushed it thus, so suddenly and free?

No vain regret from memory's wand upstarting,
Bends with stern brow my shrinking heart above,
Nor rules young hope, its rainbow radiance darting,
Nor the warm, joyless fever-dream of love:

And the lost friend, whose noble worth, attesting,
Does every power its undimmed record keep,
On whose tired form the peaceful turf is resting,
Is much too blest for even grief to weep.

Life—human life, thou vision vainly pondered!
Poor human breasts, ye heave with conflicts strange:
Sad, weary exiles from a bright bourne wandered,
What haunted thoughts o'er earth unresting range!

List! the lone forest wind, now widely rushing,
With strength'ning, deep'ning tone, arrests my ear,
As if, the mind's chaotic tumults hushing,
It spake unearthly things we pined to hear.

And does it not? As the low hymn of sadness
Mourns the wild wrecks along life's stormy coast,
So in swift notes as of o'ermastering gladness,
The listening spirit learns—all is not lost.

Yea, is not now yon reverent whisper telling
Of Him from whose bared brow the heavens shall flee,
Yet who with us mysteriously is dwelling,
Centre of bliss and hope—the Deity!

Even o'er me the awful joy is stealing:—
With thrilling sense of audience high I bend,
And all mind's quenchless thirst—heart's restless feeling,
God, God, to thee, chastened and changed, ascend.

Mayville, N. Y. The Recluse.

For the Western Literary Messenger.

Coleridge.

Reminiscences of Samuel Taylor Coleridge and Robert Southey. By Joseph Cottle. New-York: Wiley and Putnam. 1847.

This is a work of deep interest. The author, in early life, was the friend and associate of many whose names afterwards became distinguished and identified with the literature and philosophy of the age in which we live. The "myriad minded" Coleridge, the elegant and profound Southey, Wordsworth the priest of "nature's inner shrine," the enthusiastic Robert Hall, the stern and contemplative John Foster, the great Sir Humphrey Davy and others of less fame make their appearance in this book and give us an opportunity of learning, to some extent, their early aspirations, hopes and fears. But among them all Coleridge is far the most conspicuous, both on account of his frailties and intellectual powers. It is to be regretted that some of the developments made by the author in regard to the habits of this wonderful man have been permitted to see the light. The readers of Coleridge much prefer considering him as the eloquent, imaginative, profound and glorious being that he appeared to be when, though unacquainted with his life, his genius first flashed upon their minds through his writings. It is, indeed, questionable whether much good has been gained by displaying to the world the vices of the great and distinguished man, prone as he is to sin, is more inclined to shelter his evil habits beneath the authority of some great name, than to be deterred from them by witnessing the fearful and destructive consequences to which they may lead. The remark made by Dr. Johnson on first hearing of the death of Goldsmith, "let his frailties be forever forgotten," was founded in wisdom as well as in pure friendship. Mr. Cottle, together with those who sympathize with him in shedding crocodile tears over Coleridge's errors are not to be envied. Let them enjoy in peace the exercise of their natural disposition; but we prefer contemplating the bright side of Coleridge's character, and fathoming if possible the depths of his mind.

Coleridge, when at Cambridge, paid his addresses to a Mary Evans, who rejecting his offer, he took it so much in dudgeon that he withdrew from the University to London, and enlisted in the 15th Elliot Light Dragoons under the outlandish name of Silas Tomken Cumberbasch.

"He had been placed as a sentinel, at the door of a ball-room, or some public place of resort, when two of his officers, passing in, stopped for a moment, near Mr. C., talking about Euripides two lines from whom, one of them repeated. At the sound of Greek, the sentinel instinctively turned his ear, when he said, with all deference, touching his lofty cap, "I hope your honor will excuse me, but the lines you have repeated are not quite accurately cited. These are the lines," when he gave them in more correct form. "Besides," said Mr. C., "instead of being in Euripides, the lines will be found in the second antistrophe of the 'Œdipus of Sophocles.'" "Why, man, who are you?" said the officer, "old Faustus ground young again?" "I am your honor's humble sentinel," said Mr. C., again touching his cap."

* * * * * *

The officers now kindly took pity on the 'poor scholar,' and had Mr. C., removed to the medical department, where he was appointed assistant in the regimental hospital. This change was a vast improvement in Mr. C.'s condition; and happy was the day, also, on which it took place, for the sake of the sick patients; for Silas Tomken Cumberbatch's amusing stories, they said, did them more good than all the doctor's physic! Many ludicrous dialogues sometimes occurred between Mr. C. and his new disciples; particularly with one who was "the geographer." The following are some of these dialogues.

If he began talking to one or two of his comrades; for they were all on a perfect equality, except that those who went through their exercise the best, stretched their necks a little above the "awkward squad," in which ignoble class Mr. C. was placed, as the pre-eminent member, almost by acclamation; if he began to speak, not-

withstanding, to one or two, others drew near, increasing momently, till by-and-bye the sick-beds were deserted, and Mr C. formed the centre of a large circle.

On one occasion he told them of the Peloponnesian war, which lasted twenty-seven years. "There must have been famous promotion there," said one poor fellow, haggard as a death's head. Another, tottering with disease, ejaculated, "Can you tell, Silas, how many rose from the ranks?" "

"The inspecting officer of his regiment, on one occesion, was examining the guns of the men, and coming to one piece which was rusty, he called out in an authoritative tone; "Whose rusty gun is this?" when Mr. Coleridge said, "Is it *very* rusty, Sir?" "Yes Cumberbatch, it is," said the officer, sternly. "Then, Sir," replied Mr. C. "it must be mine!" The oddity of the reply disarmed the officer, and the poor scholar escaped without punishment."

What can better illustrate the fascination of Coleridge's conversation, than the influence it appears to have exercised over his comrades during this period of his life. The poor ignorant soldier forgot his pains and misery when listening to the words of the man of genius, though apparently in circumstances as humble as himself.—And well he might for it was a brother that spoke to him from the depths of our common natures, from that boundless source of truth which exists in all.

The following graphic description of Coleridge's college life will be read with interest:

"When he quitted college, which he did before he had taken a degree, in a moment of mad caprice—it was indeed an inauspicious hour! 'In an inauspicious hour I left the friendly cloisters, and the happy grove of quiet, ever honored Jesus College, Cambridge.' Short, but deep and heart felt reminiscence! In a literary Life of himself this short memorial is all that Coleridge gives of his happy days at college. Say not, that he did not obtain, and did not wish to obtain, classical honors! He did obtain them, and was eagerly ambitious of them; but he did not bend to that discipline which was to qualify him for the whole course. He was very studious, but his reading was desultory and capricious. He took little exercise merely for the sake of exercise but he was ready at any time to unbend his mind in conversation, and for the sake of this, his room (the ground-floor room on the right hand of the staircase facing the great gate) was a constant rendezvous of conversation loving friends, I will not call them lounggers, for they did not call to kill time, but to enjoy it. What evenings have I spent in those rooms! What little suppers, or *sizings*, as they were called, have I enjoyed; when Æschylus, and Plato, and Thucydides were pushed aside, with a pile of lexicons, &c., to discuss the pamphlets of the day. Ever and anon a pamphlet issued from the pen of Burke. There was no need of having the book before us. Coleridge had read it in the morning; and in the evening he would repeat whole pages verbatim. Frend's trial was then in progress. Pamphlets swarmed from the press. Coleridge had read them all; and in the evening, with our negus, we had then *viva voce* gloriously. O Colerige! it was indeed an inauspicious hour when we quitted the friendly cloisters of Jesus. The epithet 'friendly' implied what you were thinking of, when you thought of college. To you, Coleridge, your contemporaries were indeed friendly, and I believe, that in your literary life you have passed over your college life so briefly, because you wished to banish from your view the 'visions of long-departed joys.' To enter into a description of your college days would have called up too sadly to your memory 'the hopes which once shone bright,' and would have made your heart sink.

Coleridge was a sincere believer and the ever ready and powerful defender of christianity.

"Mr. C. now changed the subject, and spoke of Holcroft; who he said was a man of but small powers, with superficial, rather than solid talents, and possessing principles of the most horrible description; a man who at the very moment he denied the existence of a Deity, in his heart believed and trembled. He said that Holcroft, and other atheists, reasoned with so much fierceness and vehemence against a God, that it plainly showed they were inwardly conscious there *was* a God to reason against; for, a nonentity would never excite passion."

The letters and conversations of Coleridge, contained in this work have a deep and permanent interest. One of the great characteristics of his mind consisted in possessing, in an eminent degree, the power of clearly perceiving and developing in a luminous manner the great principles of intellectual and moral philosophy and religion. It is now universally admitted that he ranks among the first of poets, but we believe that his fame as a philosopher and theologian rests on a still more permanent basis, and that his position will become fixed among the great creative minds that have exercised a powerful influence in advancing man towards ideal perfection.

Foreign Items.

France.—The Duke de Guise, son of the Duke d'Aumale, died on the 10th inst., after an illness of three days. The Duke was born on the 11th September last.

The government having given permission for Prince Jerome Bonaparte, with his family, to reside in France, he has arrived in Paris, after an exile of 32 years.

Spain.—A telegraphic message has reached Paris to the effect that a complete reconciliation has taken place between the Queen and the King of Spain. The King goes to live in the palace with the Queen.

Switzerland.—The accounts from Switzerland are daily contradictory. On one day it is said that actual war is about to break out, whilst the next the indications are more pacific. According to the calculations of the Radicals, the Sonderbund has only 31,823 men and 119 guns to oppose 96,993 men and 278 guns.

Italy.—The Austrians gave up Ferrara on the 3d inst., to the Pontifical troops. His Holiness tried, without effect, mild and conciliating remonstrances, to induce the Austrian cabinet to withdraw the troops. He then, it it said, informed Count Lutzow, that if human means failed to enable him to preserve the trust which has been confided to him, he would have resource to divine means. He would first address himself to the whole Christian world, and if after that Austria should persist in keeping her troops in the city of Ferrara, he would be compelled to resort to excommunication. Before this threat Austria recoiled.

The wife of the celebrated Vidocq has committed suicide in Paris.

The Archibishop of Paris has just been named by the Pope Count of the Holy Roman Empire.

M. de Humboldt has recovered from his late illness, and would spend the ensuing winter in Paris.

A serious fire had occurred at Rouen, France.

Rome continues prefectly quiet.

The last accounts from Italy announce the abdication of the Duke of Lucca in favor of the Grand Duke of Tuscany.

A gang of forgers of Russia bank notes have been apprehended in London.

The Bavarian Government is taking measures to contract a loan of 49,687,000 florins for railroads.

Parliament has been further prorogued till the 11th November.

A M. Ledet, a Frenchman, ascended in a balloon on the 12th ult., in St. Petersburgh, and has not since been heard of. The balloon has been found on the Lake Ladoga.

It is rumored that Lieut. Munro's sentence will be farther commuted to six months, and that he will again have a commission in the army. He was convicted of killing Col. Fawcet in a duel.

By a French steamer arrived from St. Thomas, accounts are received of the capture of four slave vessels.

The trial of the Poles and other persons implicated in last year's conspiracy, has been resumed. Two have suffered death, twenty have been condemned to hard labor in the fortresses, while forty have been pardoned and set at liberty. Amongst the latter is the youthful Count Ney.

Another atrocious murder has been committed in France. The Count de Gomez, on perceiving a little boy on one of his trees, breaking off the dead branches, deliberately shot the child dead, as if he were shooting at a head of game.—Proceedings have been directed against the Count.

Private letters state that distress was making further progress among the trades of Paris. After nearly two years of uninterrupted drain of the savings banks, averaging at least £10,000 per week, the withdrawals from the Paris savings banks exceeded the lodgments on Monday last by nearly 150,000f.—£6000.

The Emperor of Russia has issued a decree ordering all the Jews in the empire either to become members of one of the guilds of commerce, or burgesses of towns, or to become cultivators of the soil. Those who refuse to comply with this order are to be subjected to all the measures of oppression which the Governor may think proper to adopt.

The rich and valuable Library of the Royal Society of Icelandic Literature, in Copenhagen, was destroped by fire on the morning of the 26th September. The loss is distressing, as the library contained more than 2000 unpublished manuscripts, and a numerous collection of single copies of ancient Icelandic literature.

A violent snow storm commenced at St. Petersburgh on the 2d, and continued with little interruption till the 5th. The mass of snow which fell was immense.

A deputation of the Society of Friends is now in Dublin, negotiating for the purchase of waste land to the amount of £40,000, on the coast of Donegal, for the purpose of promoting an extensive lobster fishery.

Mr. Charles Humble, a sharebroker at Sunderland, has committed forgeries to the extent of ten thousand pounds, and is supposed to have decamped to Monte Video.

The *Belfast Vindicator* announces the death of Henry Scullam, of Antrim county, Ireland, who lived to the mature age of 112 years, and a few days previous to his death, was capable of shearing his ridge with any laborer in the country.—His eldest child is now 94 years of age, and his youngest 17.

The distresses of Ireland have returned with greater severity than ever, and the prospects for the coming winter are gloomy, dark, and terrifying. Starvation, fever, murders, robberies and revolutions, are looked for as matters of course. They are the fruits of a high tarif and a church established by law. A magistrate of Tipperary had been murdered in broad day by one of his evicted tenants. In a Dublin paper no less than five proclamations were advertised for the arrest of murderers.

ANOTHER PRASLIN AFFAIR.—An extraordinary sensation has been created at Darmstadt, by the mysterious death of the Countess de Goerlitz, who was found sitting in her room dead, dreadfully burnt, supposed to have been murdered by her husband.

Since the act was passed in England which allows letters of any weight to go by post, a leg of mutton and a basket of grapes have gone through one of the offices.

SUBSTITUTE FOR POTATOES.—A large importation of West India yams has lately taken place in consequence of the anticipated scarcity of potatoes, which has given a stimulus to the cultivation of this tropical substitute for that root. Some tons have been sold for the purpose of cattle feeding and a quantity has also been sent gratuitously to Ireland, to test their applicability to the feeding of pigs.

WONDERFUL TELEGRAPH IMPROVEMENT.—The London Magazine of Science for last month says that a machine has been invented which will communicate intelligence simultaneously to some forty or fifty British cities—among them Liverpool, Glasgow, Manchester, Bristol, Leeds, Sheffield, Nottingham, Hull, York. It can transmit at once to all these places from one thousand to two thousand letters per minute.

Steam in the Desert.

BY EBENEZER ELLIOTT.

"God made all nations of one blood,"
And bade the nation-wedding flood
Bear good for good to man:
Lo, interchange is happiness!—
The mindless are the riverless!
The shipless have no pen!

What deed sublime by them is wrought!
What type have they of speech or thought?
What soul-ennobled page?
No record tells their tale of pain!
Th' unwritten History of Cain
Is theirs from age to age!

Steam!—if the nations grow not old
That see broad ocean's "back of gold,"
Or hear him in the wind—
Why dost not thou thy banner shake
O'er sealess, streamless lands, and make
One nation of mankind.

If rivers are but seeking rest,
E'en when they climb from ocean's breast
To plant on earth the rose—
If good for good is doubly blest—
O, bid the severed east and west
In action find repose!

Yes, let the wilderness rejoice,
The voiceless campaign hear the voice
Of millions long estranged:
That waste, and want, and war may cease
And all men know that Love and Peace
Are—good for good exchanged.

Editorial Department.

J. CLEMENT, EDITOR.

A Ride down the St. Joseph River.

PART SECOND.

The second morning, at eight o'clock, we passed Elkhart, Ia., a place of some consideration, and hurried on to Mishawaka, eighteen miles below. On the way we saw hundreds of wild ducks in the river, and it was with apparent regret that they were disturbed in their morning recreations. They left the water with the most extreme reluctance, and usually dropped into it again after a short flight down the stream. Some, evidently tamer than others, if overtaken where the channel was wide, would swim to the shore and half conceal themselves beneath the overhanging willows, till the boat had passed—a very tempting mark for the fowler—who happened to be absent. But the *most* tempting mark was a small flock of wild geese which rose out of a little nook a few rods in front of us and steering their course up the stream, passed almost directly over our head.—One could not help thinking of "villainous gunpowder," nor fail of being friendly, for the moment at least, to a "war of extirmination." How aggravating it was to be unequipped on such an occasion, and to hear meanwhile the gentleman "before the mast" tell how plentiful wild turkeys were on the uplands, "and we far away on the"—St. Joseph. Having never seen one of these latter birds on the wing, they would have very much obliged us by showing themselves while we were "out," just to gratify the curiosity of a poor editor in "pursuit of knowledge under difficulties." But did'nt we think more than once, and dont we still think, how that one *tasted* at Jackson, Mich., the Sabbath before? Ah, Judge T., it's a pity and we are sorry for it, but, according to the laws of mental philosophy, you will be cooped up with wild turkies henceforth in all our associations of your name with the glorious past. Who cares if we did'nt see a live turkey, when dead ones, well cooked, are so much better! Pshaw! they must be black ugly things with their feathers on, and not worth seeing—as the fox would say which hated sour grapes. Grapes! —don't we feel thankful at this moment to friend B. of Schoolcraft for those luscious clusters of Catawbas? Its just like Big Prairie Ronde to produce such rich fruit, and we could'nt expect any thing better of B. than to be burdened with them. But leaving wild turkeys and grapes, we return to our mutton.

The village of Mishawaka contains 1200 inhabitants. Possessing good hydraulic privileges, it will be likely to become a large village. As yet there is but one flouring mill erected. The place is principally noted for its two blasting furnaces and its forge. Ore is abundant in the vicinity and is there being rapidly manufacture into bar iron. The engine of the Michigan was made there.

Six miles below Mishawaka is the village of South Bend (Ia.), the seat of justice of St. Joseph Co. Its population is 16,00. It has a pleasant and business-like appearance. At this point the river bends towards the north.

A few miles below South Bend we overtook a keel boat, heavily laden, and nicely at rest on a sand bar in the middle of the river. Her commander asking for assistance in his dilemma, the little Michigan politely turned about and drew the keel boat up the stream till she was once more handsomely afloat. This however she did not do without some difficulty nor without a second trial, the line fastened to the two boats giving way on the first trial. During the second "pull," which was somewhat prolonged, and which was accompanied with a good deal of prying and pushing on the part of the hands on board the obstinate keel boat, one of said hands, evidently a green one, not understanding natural philosophy, began to push the wrong way, and hearing others laughing at him and being told his mistake, turned round somewhat abashed, and in his hurry and flurry made a bad poise of the pole which he held in his hand, lost his balance and turning a beautiful half-somerset went, down to examine the silica on which the boat reated.—After making brief observation, he made his appearance again (*looking* "none the wiser") amidst a perfect hurrican of applause.

Twenty-five miles by land from the mouth of the St. Joseph, we came to Niles, where we left the steamer. This is the largest and most thriving village on the river. It is delightfully situated on high and healthy lands and the country on every side is under excellent improvement. One could hardly desire a lovelier country seat than may be had there. Niles is so central a point for trade, that it will be likely to increase in size constantly for years. Its business already requires six ware houses, each of them, according to a late report, on the commercial advantage of the place, "capable of storing 20,000 bushels of wheat and 2000 barrels of flour and other manufactured articles. People from northern Indiana go there to trade, the distance of sixty miles. The Central Railroad will be extended to that place by another fall, when its business will very much increase.

Niles was laid out in 1829, but did not grow much till '35 or '36, when, like a thousand other places, it took a mushroom start, and for a short time had a rapid yet sickly growth. Some of its enterprising merchants suffered a terrible shock in the galvanic report that followed the electrical charge of speculation in those "times that tried men's"—pockets. Most of them, however, survived and are up again. The place now numbers at least 1600 inhabitants; and has twenty-three trading shops, of which sixteen are large variety stores. The amount of goods sold annually is

$200,000 worth. In addition to four primary schools now in operation, a classical institution is under immediate contemplation. The churches already erected are two Baptist (a Calvanist and a Freewill) two Presbyterian, one Episcopal and one Methodist: one or two more, if we mistake not, are soon to be commenced.

The valley of the St. Joseph was once the favorite abode of the Indians, and many of their relics are almost daily found in the neighborhood of Niles. At a future period we may refer to this subject again. The French once inhabited the country, and some of their relics are still visible. Among them are several apple trees three-fourths of a mile south of the village of Niles, one of which we measured two feet above the ground and found it to be eight feet and three inches in circumference. It is probably "the oldest inhabitant." It is but a few rods from an old fortification, the accounts of which are so conflicting that we will not venture at present to touch upon its history.—Thus endeth our ride down the St. Joseph.

MODERN PAINTERS, by a Graduate of Oxford.—New-York: Wiley and Putnam. 1847.

We have not looked into a book for a long time which strikes us more favorably than this. Its freshness, its originality, the depth of its thoughts, and its close investigation into the principles of art, win the admiration of the reader, together with his high esteem for the "Graduate of Oxford" whose elegance of taste and profundity of artistical knowledge, are here most happily, yet modestly displayed. None but a thorough student could have produced such a work. No artist can do without it, and all amateurs will be anxious to peruse and re-peruse it.—For sale by Messrs. Peck.

THE LIFE OF HENRY THE FOURTH, KING OF FRANCE AND NAVARRE. By G. P. R. JAMES. New-York: Harper and Brothers. 1847.

Part *three* of this pleasing historical work has been received by Hawks. One more part completes it. The editor of the Literary World thus speaks of Mr. James in connection with this life: "To write the life of Henry the Fourth, he doubtless possessed many essential qualities. Among them may be mentioned his familiarity with the events of that reign—his long study of the scenes and habits that characterized it, his graphic ability, and the spirit with which he narrates both warfare and intrigue. All these merits appear in the volume before us, but there is a lack of transparent method, a somewhat confused arrangement, perhaps impossible to avoid entirely, and yet highly desirable."

THE ELECTION IN MICHIGAN has resulted, as usual, in the success of the Democratic ticket. Gen. E. RAMSON, of Kalamazoo, is chosen Governor, by about eight thousand majority.

COLERIDGE.—The article on Mr, Cottle's Reminiscences of Coleridge and Southey, a work for sale by Hawks and Peck, will be read with interest. It was prepared by a gentleman of excellent literary taste, who has lately opened a Law office in this city, and whose pen will, from time to time, be devoted to the interest of these columns. He *appreciates* the genius of Coleridge—more than every man of literary pretensions can do.

En passant, does the reader recollect the following epitaph for Coleridge, written by himself?

"Stop, christian passer-by: stop, child of God,
And read, with gentle breast. Beneath this sod
A poet lies, or that which once seemed he—
O, lift a thought in prayer for S. T. C.
That he who many a year with toil of breath
Found death in life, may here find life in death;
Mercy for praise—to be forgiven for fame
He asked, and hoped through Christ. Do thou the same."

CAMPAIGN SKETCHES OF THE WAR WITH MEXICO. By Captain W. S. HENRY, U. S. Army. Complete in two parts; with engravings. New-York; Harper and Brothers. 1847.

These sketches are written in a plain unvarnished style, and judging by part one, they contain merely a brief recital of the causes of this war, and a simple narrative of its bloody campaigns. Indeed, the author "issues them as a *diary* of events now blended with the history of his country." They are no doubt authentic; and take the volumes all in all, with their interesting anecdotes, which give zest to the narrative, they form a very readable work. The engravings and the charts of battle grounds add to its value. For sale by Hawks.

NEW JERSEY ELECTION.—The Democrats have elected their candidate for Governor, though the Legislature is strong Whig.

HON. ALEXANDER H. EVERETT, our Minister to China, is dead. We shall have more to say of him at another time.

☞ AURORA AND BUFFALO PLANK ROAD.—It will be seen by the advertisement that the books for taking stock in this road will be opened on Friday next. We have heretofore alluded to it, and have sometimes felt astonished that whilst in other parts of this State and in Canada, longer roads have been built and found to be profitable, where the traffic is less than now travels over this road—bad as it is—the chief road leading to Buffalo should remain in such a condition. It is probably owing to the fact that the land through which it passes has until so recently been held by the Indians. The road never was in a worse condition than at the present time and all those who have any interest in the business of the city would be greatly benefited by the Plank Road—apart from the direct profit on the stock subscribed.

PROGRESS OF CIVILIZATION.—A first-class omnibus, a tip-top, out-and-out Broadway affair, has been introduced at Matamoros. The Mexicans look at it with amazement, and wonder what will come next.

From the Buffalo Commercial Advertiser.

Examination of Prisoners—The Duke of Praslin.

We refer to this well known trial—not for the purpose of dilating upon the greatness of the crime, or of insinuating that the deeds of one criminal condemn the national character of any country—but because the method of subjecting a prisoner to the most severe examination for the purpose of eliciting evidence of his guilt is seldom brought to our notice in so striking a manner.—This is a relic of the civil law and prevails in France, as also, we believe, in most other countries on the European Continent. It is completely opposed to the ideal principles which we are taught by our laws to admire and revere. By our laws the prisoner, confined and trembling, is regarded as an object for mercy and forbearance. He is warned not to commit himself by any unguarded expression. The Judge by whom he is tried not unfrequently urges him to plead "not guilty"—that he may have the benefit of a trial. Sometimes the prisoner, sincerely penitent for his offence, has formed a secret resolution of amendment. He is desirous of telling the truth and deems the avowal of his guilt to be the first and only proper step in the course of change and virtue upon which he has already entered. But the Judge warns him not to commit himself, and the high moral tone and character by which that office should always be distinguished is perverted to recommend the commission of a falsehood.

It is true that the prisoner should be an object of compassion and mercy. The old sentiment that he "who pities, next embraces vice," is no less false in fact, than opposed in feeling to humanity and to the principles which though it may sometimes appear irreverent to mention on ordinary occasions, should pervade every act and every law of each Christian country. But it is the object of law to preserve the welfare of society, and hence to detect and punish crime. Our duty to our fellow men should not be forgotten, guilty though they may be; but there is also a duty to society to be observed—mercy to those who are innocent and who have suffered, or may hereafter suffer if we do not detect and punish crime.

At that period of history when the infamous practice of torturing prisoners for the purpose of procuring confessions of guilt was first abolished, the practice of cautioning a prisoner against self-accusation had a reasonable though only temporary justification. But if to discover truth is the object of judicial proceedings, that exigency no longer exists.

In selecting this trial for the purpose of illustrating our remarks, we have given an instance which in some respects is calculated to prejudice our arguments. The fact that at the time when complicated and leading questions were put to the prisoner, he was laboring under the effects of fatal poison adds much to the compassion with which, criminal as he was, it is natural to regard a fellow man under circumstances so wretched.

The "*Patrie*" states that when the countenance of the Duke was, from the effects of the poison, cadaverous and yellow, the—

Disorder in the organization augmented visibly when the Procureur du Roi told the Duke what overwhelming charges there were against him. 'Confess that you are guilty,' said the Procureur du Roi; 'confess that you have assassinated your wife.' The Duke looked at the magistrate, and concealed his face with his hands. 'Do not assome the attitude of a *forcat*, of the assassin by profession. For yourself, if not for society, you are bound to speak the truth; the honor of your family makes this a duty.' The Duke cast his eyes on the magistrate, and appeared as if he was going to confess his crime: but suddenly he turned round and said, 'Decidedly I cannot say that I have assassinated her, I did not do it.' The Procureur-General persisted, but the Duke would not reply a single word.

In consequence, it is said, of an over-dose, the poison did not produce immediately mortal consequences. He was attended by the best physicians, but after a few days the fatal symptoms returned—

And he was in such a state that he could with great difficulty utter a few words in reply to the Chancellor. 'Did you murder your wife?' said the Chancellor. 'In order to reply, I need time and strength, and both are wanting.' But there is not much time or much strength required,' replied the Chancellor; 'it is yes or no.' 'I have no strength to reply.' The two interrogatories which took place in the prison of the Luxembourg may be summed up in these few words. He made no avowal, he replied nothing decidedly; it was only in the afternoon of the 23d that the symptoms of poison again appeared with fresh intensity. The same night the evil gained ground: dreadful sufferings tortured the prisoner, convulsions came on, and the next day it was evident that his death was approaching. The Grand Referendary went to him, it is said, and called on him to declare at what moment he took the poison, and who prepared it for him.

He was required to make a declaration of the facts relative to the murder of the Duchess, for the insertion of which we cannot afford sufficient space. In the course of it he was frequently interrupted by the closest cross examinations. The manner in which such things are conducted is sufficiently indicated by this examination before the Chancellor of France, the President of the Court of Peers, in the presence of the members of the commission.

You are aware of the frightful crime that is imputed to you. You know all the circumstances which have come under our own eyes, and which do not allow of a shadow of doubt. I recommend you to shorten the fatigue which seems to oppress you by making a confession, for it is impossible for you to deny; you cannot dare to deny?—The question is very definite, but I have not sufficient strength to answer. It would require long explanation.—You say it would require long explanation; but, on the contrary, a 'yes' or a 'no' is sufficient.—It requires great strength of mind to reply that 'yes' or 'no. It requires immense strength, which I do not possess.—There is no necessity for entering into long explanations to reply to the question which I have just put to you?—I repeat that it requires great strength of mind, which I do not possess.—At what hour did you part with your children on the evening the crime was committed?—It might be half

past ten or a quarter to eleven.—What did you do when you left them?—I went down to my chamber, and went to bed immediately.—Did you sleep?—Yes (sighing).—To what hour?—I don't recollect.—Was your resolution formed when you went to bed?—No; but I don't know if it can be called a resolution.—What was your first thought upon waking?—I think I was awoke by cries in the house. I immediately hastened to the chamber of Madame de Praslin? (The accused here added, sighing, I beg of you to spare my life, and to stop this interrogation.) When you entered the chamber of Madame de Praslin, you could not be ignorant that all the entrances about you were closed, and that you alone could enter?—I was ignorant of that.—You have frequently, in the course of this morning, gone into the chamber of Madame de Praslin. Was she in bed the first time you intered?—No; she was unfortunately stretched upon the floor.—Was she not stretched upon the spot where you had struck her for the last time?—Why do you put such a question to me?—Because you have not answered me all. Whence came these scratches which I see upon your hands?—They happened yesterday evening when about to leave Praslin, when making up some parcels with Madame de Praslin.—And that bite upon your thumb, how did that happen?—It is not a bite.—The doctors who have visited you declare that it is?—Spare me, I am exceedingly weak.—You must have experienced a most distressing moment, when you saw, on entering your chamber, that you were covered with the blood which you had just shed, and which you were obliged to wash off?—Those marks of blood have been altogether misinterpreted. I did not wish to appear before my children with the blood of their mother upon me.—You are very wretched to have committed this crime? (The accused makes no answer, but appears absorbed.) Have you not received bad advice, which impelled you to this crime?—I have received no advice. People don't give advice on such a subject.—Are you not devoured with remorse, and would it not be a sort of solace to you to have told the truth?—Strength completely fails me to-day.—You are constantly talking of your weakness. I have just now asked you to answer me simply 'yes' or 'no'.—If anybody would feel my pulse, he might judge of my weakness.—Yet you have had just now sufficient strength to answer a great many questions in detail. You have not wanted strength for that?—[The accused makes no reply.] Your silence answers for you that you are guilty?—You have come here with a conviction that I am guilty, and I cannot change it.—You can change it if you give us any reason to believe the contrary; if you will give any explanation of appearances that are inexplicable upon any other supposition than that of your guilt.—I do not believe I can change that conviction of your mind.—Why do you believe that you cannot change that conviction?—[The accused, after a short silence, said that he had not strength to continue.] When you committed this frightful crime did you think of your children?—As to the crime, I have not committed it; as to my children they are the subject of my constant thoughts. Do you venture to affirm that you have not committed this crime? The accused, putting his head between his hands, remained silent for some moments and then said—I cannot answer such a question.

As a specimen of a French report, made by the Chancellor before the Peers, who sat judicially for that purpose, the following will be of interest to members of the legal profession; and the great beauty of its style and thoughts, in addition to the nature of the subject, render it no less interesting to those who view it altogether apart from its peculiarities as a legal document:

"The Duchess de Praslin was murdered by her husband, to whom she had given ten children, of whom nine are still living—to whom she had brought, with all the gifts of nature, those of the most cultivated mind, elevated soul, and affectionate heart. Her illustrious origin was equal to that of her husband. I do not speak of the magnificent fortune which she had added to his, and of which she was worthy in every way, by the use which she knew how to make of it when she had the means, and by the acts of charity inspired by the principles of the holy religion with which she was penetrated. This angel of goodness has fallen. Words would be wanting if I were to attempt to describe to the court the feelings inspired by the discoveries which I made during the afflicting researches which it had ordered me to make. It appeared to me, and my colleagues shared my opinion, that the best mode of conveying to you the ideas which I have been able only very feebly to express in this short statement, would be to place under your eyes at least a portion of the letters written by Madame de Praslin to the very person who was so unworthy to receive them, and some of the reflections and meditations, the expression of which is contained in a small number of writings, the precious remains of the emanations of one of the purest minds ever created by God for the honor of all times and all ages! If this collection is to remain as an eternal monument to the perversity of one of the greatest criminals that ever lived, there will arise from it, at the same time, the consolatory reflection that by the side of the most furious passions of the most perverse men, Providence has frequently placed, in all ranks and all classes, the most angelic virtues, wishing thus to grant to humanity a sort of right sometimes to turn away the eye from the perversities which afflict it, and perhaps also to solicit for them a little mercy. Who, in fact, can doubt, after having read the letters and writings of the Duchess de Praslin, that her soul is at this very time entirely engaged in appeasing, if it be possible, the anger of Heaven against the man who was her assessin, but who had also been the father of her children?" The Chancellor proceeded to show that the murderer's suicide was in no respect connived at, and entered into elaborate explanations on this part of the subject.

It is a singular circumstance in relation to this sad tragedy that the marriage was what is called a "love match," and that it was opposed by the family of the Duchess. The Duke was interred in the cemetery of Mont-Parnasse, and, with a singular and touching propriety, the place where his remains rest is marked by a plain tablet of marble, on which no word is inscribed, but the emblem of the cross is sculptured.

Dwellers on the Sea.—The Sailor's Magazine estimates the number of men "whose home is on the deep," at between two and three millions. In the vessels of the United States there are supposed to be about 275,000 sailors. In consequence of the peculiar exposure to which this class of men are subjected, it is found that the length of a generation is but about fifteen years, and that some six thousand, on the average, every year perish by shipwreck.

"Is not one man as good as another?" asked a Chartist of a Repealer. "Sure he is," replied Mr. O'Brien, "and a great deal better."

Arrival of the Caledonia.

NEW YORK, Nov. 5—5 P. M.

LIVERPOOL Oct. 19th, M.—Best western canal flour 25 to 27s. Richmond and Alexandria 25 to 29s. Philadelphia and Baltimore 25 to 29s. New Orleans and Ohio 22 a 24s. United States and Canada 20a21s.

Wheat, U. S. white and mixed per 80 pounds 7 to 8s, red 7s 6d. Oats per 45 pounds 2s 3d to 2s 8s. Oat meal per 240 lbs. 23 to 24s. Indian corn per 480 lbs 30a32s. Indian meal per bbl 14 to 15s. Barley per 60 lbs 3 to 5s.

The corn market is of course sensibly influenced by the unparalleled stringency of the money market. All shows a general decline, particularly in quotations for inferior parcels.

Indian Corn has depreciated from 2 to 3d per quarter, and Meal has also receded in value and is in very limited demand.

The above quotations represent the maximum price, but occasional forced sales have been made at considerable under those figures.

In London, yesterday, there was an extensive supply of foreign wheat, but trade was dull and American receded from 2 to 3s per quarter—without progress being made in the sales.

7 o'clock P. M.

The cotton market is much depressed, New Orleans ordinary to middling 4½a5½ pence. Mobile ordinary to middling 4½a5⅛, fair to good fair 5⅛a6d. Georgia, ordinary to middling 4½a5½d.

In the manufacturing districts business wears the gloomiest possible aspect. Every week adding to the number of mills working short time or closing constantly.

Provision market, Beef prime mess per tierce 86s to 92s 6d. Ordinary 75 to 83s. Mess per bbl 46 to 52s 6d, ordinary 40 to 45s. Prime 32 to 36s. Pork, prime mess, new, per. bbl 60 to 67s, old 40 to 50s. Mess 65 to 70s. Prime 45 50s. Bacon, long middles free from bone in salt, per cwt 42 to 56s. Tongues, ox, in pickle per dozen 12 to 18s. Pig's per cwt 20 to 30s. Hams, smoked ordinary, in canvass, duty paid, per cwt 20 to 30s, in casks salted 25 to 40s.

Cheese, fine, duty paid, per cwt 52 to 58, middling 42 to 49s, ordinary 20 to 40s.

Lard, fine leaf in kegs per cwt 58 to 60s, do. in bbls 55 to 58s, ordinary to middling 50 to 53s, inferior and grease 29 to 33s.

Rice, Carolina, dressed first quality from 18 to 21s 2d.

The disastrous monetary pressure recorded in our last advices, has during the last fortnight continued to rage with unabated severity; involving several additional failures, and diffusing a deep impenetrable gloom throughout the whole commercial community of Great Britain. To such a point of intensity has the inaccessibility of money now arrived that there is scarcely one house which can be looked upon without suspicion, no matter how exalted its position, while a feeling of unmitigated anxiety is every where perceptible.—Among the more recent failures we have to announce that of E. T. Thomas, Son and Lefure, an old Brazil house.

G. De Jersey & Co., of Manchester, Barclay Brothers, of London, whose liabilities are put down at £450,000.

Little & Co., also of London, J. Z. W. Morley, of Manchester, L. Phillips, Louis & Co. London, Molatta & Son of Liverpool, Southam of Ashton-under-lyne, E. G. J. Andrews of Manchester, White & Co. of Waterford, &c

We may avoid farther examination by stating that altogether 55 houses have broken down or suspended payment since the departure of the last steamer.

Yesterday it was announced that the Royal Bank of Liverpool had been compelled to suspend payment, which proved too correct. At present it is impossible to give any thing in a reliable statement of the position of the establishment; it is understood to possess assets sufficient to meet all of its liabilities.

In the present universal confusion and alarm, it can well be conceived how deeply manufacturing operations have been affected, and business appears to be quite at a stand still, without the slightest prospect of a reaction. Although good orders are stated to be held by many firms, yet in the present prostration of monetary affairs, they abstain from executing them, indeed, the pressure for money has been so great that sales have been forced for cash at prices considerable below (lowest) ordinary quotations.

The money market continues most stringent, but the London papers of last night indulge hopes of a partial restoration of ease—owing to the circumstances of a heavy payment on the Consol settlement—the 10,000,000 loan and the advances from the Bank having been completed last week.

The public securities are very unsteady again. The stock exchange opened with some degree of firmness yesterday, but suddenly declined in the absence of any particular ascertained circumstance. Consols commenced at 81¼a81 to 81⅛, but fell to 80⅞.

Parliament has been prorogued until the 17th of Nov., when it will be farther adjourned until January for the despatch of business.

The Mayor of Liverpool attended by one of the representatives and five of the leading merchants of the place proceeded to London last evening, for the purpose of presenting to the Government the deplorable condition of mercantile affairs.

In Italy Ferrara is about to be completely evacuated by the Austrian troops and the Pope will be preserved undisturbed in his career of civil administration reform.

The civil war in Switzerland is still impending and serious disturbances have taken place in the two Sicilies.

In Spain, Espartara has been suddenly displaced from the head of the new ministry. Narvaez installed in his place.

French influence again has been unsuccessful in that country.

The prospects for Ireland during the approaching winter are gloomy enough, famine in an aggravated form has already appeared, and also the Queen's letter commanding general collections to be made in the church establishment.

2 P. M.

P. S.—The markets up to this moment have been losing ground. Flour cannot be quoted beyond 26s per bbl., and Indian Corn shows no tendency to rise above 30s.

The stoppage of the Liverpool Banking Co., is just announced, but the liabilities are not heavy.

A WILD MAN.—FIRST STEP TOWARDS CIVILIZATION.—Considerable interest has been created by the arrival in this city of a wild man who had been discovered in the woods at Cape Breton, in a state of nudity. For the short time this strange individual has been in the Poor's Asylum he has received numerous visits, and, although in a condition of complete barbarism, begins to afford encouragement that attempts to civilize him may not be altogether hopeless. He is both deaf and dumb, and his appearance is extremely haggard. He remains generally, whether awake or asleep, in a sitting position. His skin is considerably shrivelled, from constant exposure to the weather, and his whole deportment resembles more of an inferior animal than a human being. When food

is offered he seizes, and pressing it into his mouth with both hands, devours it ravenously. He is remarkably fond of salt, which he eats in large quantities The first steps towards civilization have been partially successful; he having learned the use of a spoon.—*Halifax (Nova Scotia) Herald.*

NEW YORK, Nov. 5—7 P. M.

The steamer Alabama arrived at New Orleans from Vera Cruz with dates to the 20th, and City of Mexico to the 7th ult.

The decree appointing Pena as President revoked. Santa Anna again President.

At Queretaro Paredes was trying to establish a Monarchy.

Feelings of the people were generally opposed to any compromise.

Congress assembled at Queretaro the 5th. No quorum.

Valencia was at his country seat doing nothing.

Gen. Bravo was at the capital on parole.

Other leading Generals gone to Cuernavaca, 17 leagues south of Mexico.

Lane reached Huamatla half way between Peorte and Puebla on the 11th.

He met Santa Anna, who evacuated immediately, leaving two pieces of artillery, two prisoners, Cols. Vega and Iturbide.

Rogers took possession after Lane's departure and followed up in the rear, losing seven men, principally American stragglers.

Rogers sallied out of Puebla at the head of a considerable force, awaiting the approach of Lane whose flank and rear were constantly harrassed by Mexicans.

Texas rangers returned safe.

The yellow fever is still raging at Vera Cruz and Matamoros. Capt. Churchill and Lieut. Jenkins died of it.

It was reported at Matamoros that the army mail was captured, also that a Mexican force assembled at Mier.

☞ To prevent flies from injuring picture frames, boil three or four onions in a pint of water, then with a gilding-brush do over your glasses and frames, and the flies will not light on the articles so [illegible] This may be used without apprehension, as it will not do the least injury to the frames.

BUFFALO MUSICAL INSTITUTE FOR YOUNG LADIES.

At the residence of Prof. W. R. Coppock—Composer and Teacher of the Piano Forte, Organ, Singing and Composition.

An institute devoted exclusively to Musical Education is not yet common in this country; but in Europe the test of experience fully shows its great advantages over the too general superficial manner in which this important part of polite education is acquired. The advantages this institution offers to those desirous of completing their studies as Organists—or practical players of the Piano Forte, together with a thorough system of imparting the same to others is fully established by the many precedents of the past 15 years. The pupils are constantly guarded in their practice, against all bad habits, and from the various stages of progress they may be in, are continually stimulated to effort and industry, by association with each other. The family too, are all players, and the theory is amusingly discussed, impressing its rules in a more pleasing manner, and more lasting upon the understanding, than by the mere dry study of an elaborate book. Music is composed and arranged from time to time, showing the various styles and harmonies analytically, and adapted for performance on several Pianos at the same time. This teaches a thorough knowledge of counting, and dividing passages into their given time. Vocal music is particularly attended to, and when the pupil has a moderate share of talent, we hesitate not to say, a correct and pleasing singer can be made. The Piano Fortes used are all new, and of the finest quality, and every inducement will be given to render the true spirit with us profitable. The building is commodious, and has a fine garden attached, with Green houses, Bathing rooms, &c., and is pleasantly situatuated in Seventh street, between Niagara Street, and the Falls rail road, and about midway to Prospect hill

Terms made known uppon application at the Institute, or by mail, post paid, directed Prof. Coppock, Buffalo.

Prof. Coppock, keeps constantly a choice selection of Piano Fortes for sale.

Buffalo, August 3, 1847.

CHEAP CASH BOOK STORE.

The subscriber, dealer in Books and Stationery, at 188 Main Street, 4 doors above Seneca, keeps constantly on hand, an extensive stock, embracing the most valuable selections from Ancient and Modern Literature—and a general variety of Theological, Classical, Gift and School Books, &c., &c. The Amateurs of Knowledge and all interested in the purchase of Books or Stationery are respectfully solicited to call. Print and Cap Paper at wholesale.

WESTERN
LITERARY MESSENGER.

VOLUME IX. BUFFALO, SATURDAY, NOVEMBER 20, 1847. NUMBER XVI.

For the Western Literary Messenger

"The Autumn Wind."

WRITTEN ON READING MRS. NORTON'S POEM.

How could the heart, whose untold wrongs had power
To call strange whisperings from the calmer mind,
List the wild autumn wind in musing hour,
And sadly feel its "grieving voice" "*unkind?*"

Oh there is sympathy in the low moan,
Passing ere droops the summer's beauteous pride.
Or seems it like the soul's rich undertone
Heard where life's ruder breathings all have died.

There is a time for spring's awakening mirth—
There is an hour of reckless passions' play—
Deep, solemn winds sweep o'er the fading earth,
And chastened hearts bow to a holier sway.

What though a "dreary sound" the forests fill
And withered leaves bestrew our lonely path?
What though dark memories rise and coldly thrill
With pain which scorns the tempest's howling wrath?

What though pale seamen sleep on many a strand,
And the tossed waves no human skill can bind?—
'Midst wreck, and fear, and pain, moves the strong Hand,
Whose sternly wounding stroke may still be kind.

MAYVILLE, Nov. 4, 1847. THE RECLUSE.

The Brothers.

TRANSLATED FROM THE GERMAN OF TIECK.

In the vicinity of Bagdad lived Omar and Mahmoud, sons of a poor family. When the father died, they inherited but a slender patrimony, and each determined to try, how high he might advance his fortune. Omar travelled to find a place where he might settle advantageously. Mahmoud established himself near Bagdad, where he commenced a little traffic, which in a short time considerably increased his patrimony. He lived quite retired and very frugally, and carefully added every sequin to his capital, therewith to commence some new enterprise. In this manner he obtained the favor of several wealthier merchants, who sometimes relinquished to him a part of their freight, and, in company with him, attempted various speculations. By continued good fortune Mahmoud grew bolder, he staked larger sums, and each time they obtained him richer gains. As he became better known, his business increased; he had large sums outstanding with many people, as he likewise had in his hands the possession of many others, and fortune seemed to smile upon him continually. Omar on the contrary had been unfortunate, none of his enterprizes had succeeded; he returned now very poor, almost without clothing, to Bagdad, heard of his brother, and went to him to beseech his assistance. Mahmoud was delighted again to behold his brother, but lamented his poverty. Since he was very weak and good natured, he immediately gave him a sum of money to commence business, and likewise fitted him up a shop. Omar began to deal in silks and garments for ladies, and fate seemed favorable to him in Bagdad; his brother had given him the sum of money, and therefore it was not necessary to trouble himself about the reimbursement. He was in all enterprizes bolder than his brother, and even more fortunate; he soon became acquainted with many merchants, who until then had transacted their business with Mahmoud, and succeeded in making them his friends; hence his brother lost many lucrative bargains which now fell to him. Mahmoud had just married a wife, for whom he needed many luxuries to which he had before been a stranger; he was obliged to borrow money of his acquaintances to pay his debts. Other *sums* which he had expected, he could not collect; his credit sank, and he was near despair, when he received intelligence that one of his ships had been lost with her whole cargo; a creditor now presented himself clamorously urging the payment of his debt. Mahmoud saw that on this payment hung his whole remaining fortune, and determined in this utmost necessity to have recourse to his brother. He hastened to him, and found him very peevish, because he had just suffered a slight loss. Brother, began Mahmoud, I come in extreme embarrassement with a request to you.

Omar. "What has befallen *you?*"

Mahmoud. "My ship is lost, all my creditors are pressing upon me and will hear of no delay; my whole fortune hangs on this day, loan me for a short time 10,000 sequins."

Omar. "So for the 500 sequins which you gave me, you demand now 10,000? I will give you back the 500 sequins. Do you expect no letter from Persia?

Mahmoud. "I expect nothing more."

Omar. "Certainly, Brother, you ought to have been somewhat more prudent; you should not [illegible]arried, as I have never yet done; but you [illegible]om your childhood rather thoughtless. [illegible] a lesson to you."

Mahmoud. "You had a right to refuse me the desired assistance, but not therewith to make such bitter reproaches."

Mahmoud left his ungrateful brother, with a heart bitterly stirred. So it is true, cried he, that the soul of man is only avarice. Self only is his earliest and latest thought—for gold he will barter truth and love—fling off his better nature for the worthless metal, which, with disgraceful fetters, binds us to this sordid earth! Selfishness is the rock on which every friendship strikes—men are a reprobate race! I have known no friends, no brother, I have associated only with merchants. Fool, that I spoke to them of love and friendship! only a piece of gold should man offer to them!

He took a circuitous route home, to allow his trouble to abate. He wept, when he saw the noisy bustle of the market, how every one, like the ant, was toiling to carry the grain to his own heap, how no one cared for his neighbor, or only when it consorted with his own interest, all hurrying on together, feelingless. He went home comfortless. Here his sorrow was increased.—He found the 500 sequins, which, with the kindliest feelings, he had formerly given his brother; they were a prey to the stormy creditors. All which he possessed was publicly sold; one of his vessels lay in the harbor, but the cargo only served

to discharge all his debts. Poor as a beggar he left the city without passing the house of his hard-hearted brother.

His wife, who accompanied him in his misery, consoled him and endeavored to dispel his grief; he succeeded but in part, for the memory of his misfortune was yet too fresh in the heart of Mahmoud; he still saw ever before him the towers of the city in which his brother dwelt, who had remained cold and immoveable to his distress.

Omar asked no one after his brother, for he durst not pity him, and flattered himself that perhaps all might go well. Nevertheless, his credit suffered through his brother; men grew distrustful towards him, and merchants would not trust him with money so readily as before. Besides, Omar was very avaricious, and proud of his acquired affluence, so that he made many enemies, who rejoiced when he lost. It appeared as if fate wished to punish his ingratitude to his brother, for one loss succeeded another. Omar, who was impatient to retrieve his losses, hazarded larger sums and lost these also. He delayed paying the money which he was owing, distrust was universal, all his creditors demanded payment at the same time. Omar knew no one to whom he could apply for assistance; he saw no resource, but to leave the city, secretly, by night, and try if fortune would be more favorable to him in another country. The small sum which he could take with him was soon exhausted. His trouble augmented, as his money diminished; he saw before him the most frightful poverty—and yet no way of escape.

Amid complaints and melancholy reflections he had wandered to the boundaries of Persia.—He had now spent all his money, but three small pieces, which would barely suffice to pay for a supper at a caravansery; he felt hungry, and as the sun was beginning to sink, he hastened to find some habitation, where he might this night, perhaps for the last time, find a shelter.

"How unfortunate am I?" said he to himself; "how destiny pursues me, and decrees my wretchedness; what a fearful prospect opens before me! I shall be compelled to live on the charity of compassionate souls; must endure it, if [illegible] contemptuously refuse me, must not murmur [illegible] the spendthrift, gaily passing by, deigns me no glance, and flings away a hundred gold pieces for a miserable game, O Poverty! how canst thou humble man! how unequally, how unjustly does fortune mete out her gifts! She lavishes all her riches on the vicious, and leaves the virtuous to die with hunger.

The rocks, which Omar had climbed, made him weary, and on a turf-covered mound by the way-side, he sat down to rest. A poor beggar dragged himself along on crutches, and murmured an unintelligible petition; he was tattered and meagre, his burning eyes stood deep in his head, and his pallid face smote the heart, and wrung from it compassion. The attention of Omar was against his will, directed to this miserable object, who, murmuring, outstretched to him his shrivelled hand. He asked the name of the beggar, and perceived now that this unfortunate was deaf and dumb also.

"O, how unspeakable happy am I," cried he, "and yet I complain! Why can I not work; why not by the labor of my hands supply my wants? How gladly would this wretch exchange with me and think himself happy! I am ungrateful to Heaven."

Moved by a sudden feeling of compassion, he drew the last piece of silver from his pocket, and gave it to the beggar, who with silent thanks pursued his way.

Omar felt strangely sanguine and happy; the Deity had, as it were, shown him a picture to teach him how wretched man could be. He now felt strong to struggle against poverty, and by his exertions to rise above it. He laid plans for a subsistence, and now only longed for an opportunity to show his industry. He had, after his generous compassion to the beggar, after the liberality with which he had given away the last remnant of his fortune, a feeling, such as he had never known before.

A steep rock stood beside him, and Omar ascended it with a light heart, to survey the surrounding, which shone in the light of the setting sun. He saw at his feet the fair earth lie, with its green plains and majestic mountains, with its dark forests and red-shining streams, and bending over all, the golden evening sky; and he felt as if he were a prince, who ruled this fair domain, and whom mountains, streams and woods obeyed. He sat on the pinnacle of the rock, lost in the contemplation of the scene. He resolved here to await the rising of the moon, and then pursue his journey.

The crimson light of evening faded; twilight from the clouds sank down; the dusky night soon followed. The stars gleamed in the dark blue heavens, and the earth slept, hushed in a solemn stillness. Omar with steadfast eyes gazed far into the night, till his sight grew giddy, in the endless number of the stars; then he prayed to the great God, and felt a holy awe steal through his soul.

Then, as it were, a beam of light in the far horizen rose, blue shining mounted upwards, and like a glowing flame approached the height of heaven. The pallid stars drew back, and, like the light of morning, through the whole heaven it shone, and rained down in tender twilight-blushing beams. Omar was astonished at this singular apparition, and rejoiced in the fair and wondrous light; the hills and forests gleamed around, the distant clouds floated in purple light, and like a golden tent its lustre bent over Omar.

"All hail, thou noble, generous one, called a sweet voice from above, thou hast compassion on the wretched; and, well pleased, the Lord looks down on thee."

Like the tones of the breathing flute whispered the winds of night to Omar, his heart heaved, oppressed with gladness, his eye was intoxicated with light, his ear with heavenly harmony. And from the splendor stepped forth a form of light, and stood before the enraptured one: it was Asrael, the glorious angel of God. "Ascend with me on this rosy beam to the dwelling of the blessed, murmured the sweet voice, since by thy magnanimity, thou hast merited to behold Paradise with its blessedness."

"Lord," spoke Omar, trembling, "how shall a mortal follow thee." Mine earthly body is not yet taken from me.' "Give me thine hand," said the form of light. Omar reached out his hand with trembling joy, and through the clouds and between the stars, they wandered on the crimson beam, the sweet tones went behind them, the rosy morning lay down in their path, and the breathing of flowers made sweet the air.

Suddenly it was night. Omar shrieked aloud, and lay in thick darkness at the foot of the steep rock, with a shattered arm. The moon, even then dark-red, rose up behind a hill, and shed o'er the rocky valley a dim uncertain light,

"Oh, thrice unhappy!" cried he, when his recollection returned to him. 'Was I not wretched enough, that Heaven, in a flattering dream, should fling me from the summit of the rock, and break my limb, that I may become a prey to hunger? Does it thus reward the compassion which I had

for the poor? Who was ever so unfortunate as I?"

He sighed deeply, his arm pained him as if a glowing fire burned in the bones and every breath was agony. He considered his fate silently, and now first thought of his brother.

"O! where art thou, thou generous heart?" cried he; "perhaps the sword of the death angle has already pierced thee; misery has consumed thee in crushing poverty, and thou, at the hour of death hast fled thy miserable brother. Ah! I have deserved this, I suffer now the penalty of my ingratitude, of my hard-heartedness; Heaven is just. And yet I could stand up so proudly, and call God to witness of my virtue! O Heaven! forgive the sinner who submits without a murmur to thy chastisement."

Omar lost himself in troubled thought; he remembered with what brotherly love Mahmoud had received him, when he first became poor, he reproached himself that he had neglected to relieve his brother, and thus return thanks unto him; he longed for death to put an end to his misery. The moon shone clearly, and a small caravan of camels passed slowly through the valley. The love of life awakened anew in the breast of Omar; with a weak voice, he called for aid to the passers by. They placed him carefully on a camel, and bound up his wounds at the nearest city which the caravan reached at the dawn of day. The merchant himself took care of the unfortunate, and Omar recognized in him his brother. His shame was without bounds, so was the compassion of Mahmoud. One brother asked for pardon, and the other had already forgiven him. Tears flowed from the eyes of both, and the most perfect reconciliations was formed between them.

Mahmoud, after his impoverishment, had wandered to Ispahan, and there become acquainted with a rich old merchant whose affection he soon gained, and who intrusted him with his property. Fortune was favorable to the exile, and in a short time he recovered his lost wealth; his aged benefactor died, and left him his heir.

When Omar recovered, he remained with his brother at Ispahan, where he enriched himself in traffic. Omar married, and never forgot how much gratitude he owed his brother, Both lived from this time in the greatest harmony, and were to the whole city a pattern of brotherly love.—*Boston Traveller.*

SINGULAR TRIAL AND MORE SINGULAR VERDICT.—Mr. James Searing, of Hempstead, L. I., died in August, 1846, leaving property valued at $12,000. His two brothers took possession of his estate, as his heirs, assigning as a reason, that Mr. Searing had never been married to the woman who lived with him as his wife, and who was pregnant at the time of his death. The action was brought by Mrs. Searing to eject them from the premises. No marriage ceremony was proved but Mrs. Searing's mother testified that she once heard Mr. S. say to her daughter: "*Mary, I will take you to my home, and what is mine is yours, and if you'll agree to that, we're as married as any two can be or ever was.*" She told him that "she'd agree to it," and expressed the opinion that such a form of marriage was as proper as any other. She lived with him until his death, and it was proved that Mr. S. had introduced her and spoken of her as his wife. Evidence was brought forward by the defence to prove that she was a woman of bad character previous to her acquaintance with Mr. Searing, but notwithstanding the fact, the jury brought in a verdict in favor of the plaintif, *thereby declaring the marriage to be valid*, and giving the lady quiet possession of the estate.—*Hampden Post.*

For the Western Literary Messenger.

Dignity and Responsibility of the Teacher's Calling.

BY L. PACKARD.

Extract from an address read before the Teachers' Institute of Erie County, Oct. 1st, 1847.

Our vocation, fellow Teachers, is no sinecure, as all who have shared in its exhausting labors can well attest; and though a degree of insignificance may heretofore have attached to the Common School Teacher, there is no more honorable or responsible position in society; and the neglect which has heretofore been, in a degree, inseparable from our business, as its importance is more clearly seen, and more fully acknowledged by the public, is giving way to that respectful attention, which, as public servants and benefactors, we have a right to expect and demand. Perhaps there is no one of the other professions, though all may be useful, and inthe present condition of society necessary, which is of paramount importance to ours. It is for the gospel minister, in the discharge of his holy duties, to hold out to the world the inducements to piety and virtue, with which the sacred page is everywhere eloquent; and to present, with holy zeal and in the fear of God, its sanctions and rewards. But it is ours to render his labors the less arduous, by stamping upon the young heart, while its leaves are most susceptible of the impression, the ennobling precepts of the Christian religion. It is for the enlightened legislator, in the exercise of his high prerogative, to frame wise and impartial laws for the government of the bad, the guidance of the good, and the protection of all. But it is ours to secure respect for those laws, and to guard them against violation, by implanting in the hearts of the young an abiding love of justice, and a sacred regard for the rights of others, ere passion has grown strong, or interest urges on to crime. It is for the physician, in the discharge of his truly philanthropic mission, to administer the healing draught, to alleviate physical suffering, and restore the shattered health. But it is ours, by a knowledge and an application of the *laws* of health, to diminish the liability to disease, and to secure to the young, of whom we have the charge, and for whose *physical* condition we are in a measure responsible, a healthful development and vigorous manifestation of the bodily powers, It is for the lawyer to explain and apply the laws; but especially, and at all hazards to defend the interests of his client. Ours is the farnobler work of preventing the growth of those evils which it is his interest to foster, by teaching the young that we should live, not for ourselves, but for those around us; that principles of the strictest integrity should govern all; that an honest and scrupulous discharge of all the various duties of life, is the only condition of permanent happiness; thus destroying the causes of contention which imbitter life, and laying, broad and deep in society, the foundations of future peace and harmony. It is for the

agriculturist, whose diploma dates from Eden, and bears the seal and signature of God, to cultivate the soil for the food necessary to the maintenance of animal life. But it is ours to break up the subtile soil of *mind*—to plant there seeds, that are to spring up and yield fruits for the garner of another world. How high then, in point of importance, as of honor and responsibility, does ours rank among the great vocations of life!

Ours is the guardianship of life in its budding spring; and ours the charge of expanding its tender buds into flowers of fair development; of watching the mind's unfolding with anxious and ceaseless care; of engrafting upon its growing stalk, the scions of virtue and knowledge, that its ultimate fruits may be joy and peace. This is emphatically an age of mental progression. Mind is eminently and unprecedently active. In every department of nature this restless inquisitor is instituting continual researches, and bringing to light new truths and principles, and applying them to the great practical purposes of life. If the present age has any prominent distinctive feature, peculiarly its own, it is this enlightened curiosity to pry into and search out, the hidden and unknown. And who can foreknow the manifold blessings to which this spirit of inquiry, aided as it is, by the powerful auxiliaries of science and art, may ultimately lead? Who can estimate the multiplied means of happiness and prosperity, which it may develop and mature? Who, even in the ardor and extravagance of enthusiastic prediction, can foretell, in their amplitude, all its glorious results? Already has it penetrated into the heart of the globe, and discovered the constituent elements of which its mass is composed, and the definite proportions of each. It has torn away the vail that shrouded the material heavens, and revealed to the wondering ken of man, glittering worlds, which had long wheeled in unseen glory round their central suns. It has covered our inland seas, our mighty rivers, and the great thoroughfare of nations with noble steamers, carrying within their mammoth bosoms the commerce of the world, and urged onward in their paths of foam, against the adverse power of wind and tide, by the resistless impulse of the invisible agent within. It has sent the "Iron Steed" panting and careering on his track, shaking the firm ground beneath the swift clatter of his well-shod hoofs, and startling the stillness of the forest solitudes by his shrill and lonely neighings. It has made the subtile lightning subservient to the will and the interests of man; constituting it the messenger of thought—the news-herald of the world; bringing into the closest proximity places before separated by a long and weary distance; thus multiplying the elements of individual happiness and public prosperity, and binding the globe together with an intermittent chain of electric fire. Earth, air, and ocean have been laid under contribution, and been compelled to surrender at discretion their sublimest mysteries. Such are some of the achievements of modern mind:—achievements which will secure to their authors an enviable and a merited remembrance; achievements which, in their wonderful reality, have far surpassed the wildest fantasies of enthusiasts in science, and would once have been considered as possible only to superhuman power. The ability of the mind thus to range through the great laboratory of nature and science, and to search out and apply truths and principles so long buried in the gloom of the past, clearly proves its capacity for, and its susceptibility of, endless progress in knowledge, and stamps upon it the seal of its immortality.

But if the mind exhibits such transcendent energies through the medium of material and decaying organs, what must be the measure of its power, when these clay walls, which circumscribe its vision, and clog the spirituality of its manifestations, shall have moldered and fallen, and it shall finally rejoice in the full liberty, and wear the bright garniture of Heaven! when the great panorama of the universe shall open to its unvailed view, all its mysteries solved, all its laws comprehended, all its grandeur revealed! when, with its capacities for rational enjoyment infinitely enlarged, it shall range from orb to orb, from glory to glory of that bright sphere, receiving new delight, drinking in new beauties, and acquiring new energy from every successive object! Truly is the mind a fearful thing. It is ours, fellow Teachers, to deal with an agent of such limitless energies. Let us aim so to develop, direct, and control its powers, as to make the instruction we communicate here, preparatory to a higher and better course hereafter.

There is no position in life more sublime than the position of him who labors for the good of others; who, divesting himself of personal considerations, ever seeks his own in the happiness of those around him. Such is the position of the teacher from principle, who voluntarily assumes the burdens and the wasting cares of the profession; who, sacrificing his ease and interests to the public good, expends the energies of too short a life, in guiding the young to future usefulness and honorable distinction; in fitting them for an intelligent exercise of their rights, and a scrupulous discharge of their duties. We give its character to the nation. It is for us to preserve the pure principles of republican equality which lie at the foundation of our government, by infusing into the minds of the rising generation the progressive spirit of our institutions, and imbuing them with that virtue and intelligence which are their strongest supports. It is for us, in a great measure, to say whether the fair fabric of our freedom, upreared by the fathers of the Revolution, is still to stand, towering in its lone splendor, or whether, sapped by ignorance and concomitant vice, it is to fall, burying in its ruins those whom it was designed to protect;—whether our political sky is still to glow with its fair sisterhood

of republican stars, or whether it is to be overcast ultimately by the consolidated gloom-cloud of monarchy. Let us settle these questions in view of our strict amenability to the millions that are to follow us; striving to bequeath to them, as we have received, the noble heritage of liberty. In this view of the subject, what teacher can fail to see the responsibility of his position, and the vastness of his influence, in its prospective bearing on society? And what teacher, in view of this responsibility and influence, will not aim, by a more thorough preparation, and a higher integrity in the discharge of his duties, to impart greater strength and efficiency to our system of public instruction? Our burden is the world; but who, who of us is Atlas? Let us not trust in ourselves; for human strength, unstaid by the divine arm, is impotent for the accomplishment of so great a work as ours.

EDUCATION.—"Education," says a truthful writer in Frazer's Magazine, "does not commence with the alphabet. It begins with a mother's look—with a father's nod of approbation, or sign of reproof—with a sister's gentle pressure of the hands—or a brother's noble act of forbearance—with handfuls of flowers in green daisy meadows—with bird's nests admired, but not touched—with creeping ants and almost imperceptible emmets—with humming bees and glass bee-hives—with thoughts directed in sweet and kindly tones and words, to nature, to beauty, to acts of benevolence, to deeds of virtue, and to the source of all good, to God himself."

On seeing an Infant Sleeping on its Mother's Bosom.

BY MRS. AMELIA B. WELBY.

It lay upon its mother's breast, a thing
Bright as a dew-drop when it first descends,
Or as the plumage of an angel's wing
Where every tint of rainbow-beauty blends.
It had soft violet eyes, that, 'neath each lid
Half closed upon them, like bright waters shone,
Where its small dimpled hands were slily hid
In the warm bosom that it nestled on.

There was a beam in that young mother's eye,
Lit by the feelings that she could not speak,
As from her lips a plaintive lullaby
Stirred the bright tresses on her infant's cheek,
While now and then with melting heart she prest
Soft kisses o'er its red and swelling lips—
Lips, sweet as rose-buds in fresh beauty dress'd
Ere the young murmuring bee their honey sips.

It was a fragrant eve; the sky was full
Of burning stars, that tremulously clear
Shone on those lovely ones, while the low lull
Of falling waters fell upon the ear;
And the new moon, like a pure shell of pearl
Encircled by the blue waves of the deep,
Lay mid the fleecy clouds that love to curl
Around the stars when they their vigils keep.

My heart grew softer as I gazed upon
That youthful mother, as she soothed to rest
With a low song her loved and cherished one—
The bud of promise on her gentle breast;
For 'tis a sight that angel ones above
May stoop to gaze on from their bower of bliss,
When Innocence upon the breast of Love
Is cradled, in a sinful world like this.

Metternich—Young Napoleon.

We take the following sketch from "Perley's Peregrinations," published in the *Boston Atlas:*

Prince Metternich is the most powerful individual in Europe who does not wear a crown.—His house is near the Palace—a slight iron foot-bridge connecting his study window with one of its terraces, so that he has his imperial puppet directly under his thumb. I was fortunate enough to see him yesterday afternoon, as he was leaving the council room. About five feet in height, slightly formed, meagre, and walks with a feeble step; his head is large, the eyes grey, the mouth small and compressed, while the broad forehead is strongly marked with wrinkles of cunning or furrows of thought—perhaps both. A winning smile played upon his cheek as he acknowledged my lifted hat by a polite bow, and I could hardly realize that so plainly-dressed, gentlemanly a man could be the ruler of fifty millions of people—the antagonist of European freedom—the outwitter of Napoleon—the murderer of his son.

As a diplomatist, he is unrivalled: possessing in a high degree the power of concealing his feelings under an icy cold mask, while he carries out his political tactics, which consist, to use his own words, "in the art of telling lies with a good grace!" To aid him in his mind depressing task he has organized a secret police which is unrivalled, successfully repressing every expression of thought, by forcing on all the deadening conviction that the eyes and ears of spies are every where. Those who have good opportunity for knowing, assert that there is not a private circle in Vienna destitute of paid informers, whose denunciations are sufficient to banish or imprison any one, native or foreigner.

From the palace of the executioner, we went to the tomb of his victim, in the vault of the Capuchin Convent. A pale, penance-macerated looking young monk, with a flowing beard and brown cowl, lit a candle, and preceded me down a flight of stone steps, leading to the last resting place of the Imperial House of Hapsburg. Here are upwards of seventy coffins on the pavement, of silver, bronze or copper, some covered with bas-reliefs, others entirely plain; but only one interested me—that which contains the remains of Napoleon's son.

Not many years ago (it was the 20th of March, 1811,) a death like silence reigned over Paris, though it was mid-day. Carriages were stopped, the artizan's hammer, thousands of Frenchmen held their breath, and counted the cannon notes that were pealing from the battery before the Invalides; it had been announced that twenty-one guns would be fired on the birth of a Princess, while an Imperial hundred guns salute would welcome a male heir. "Eighteen, nineteen, twenty,"—hearts beat quick—"twenty-one"—a second of mighty doubt—and then another report was heard; but the remainder were drowned by a unanimous shout of joy. Napoleon had an heir. He was repaid for the sacrifice he had made, in casting aside his loved Josephine for his adored France. The vast French Empire rejoiced, and even in our then infant republic, Jas. Monroe wrote a letter to the Emperor, signed by President Madison, offering "congratulations on the fortunate birth of a Prince, bearing, from the dignity of his extraction, the title of KING OF ROME."

The life of this unfortunate young man is too long to give here—a catalogue of oppression and attempts to subdue an eagle mind; but POISON at last carried off to a quiet grave a noble form, that military hardships could not break down, or Fanny Elssler corrupt. The "King of Rome" rests in a copper coffin, on whose sides eight lion's

heads hold large bronze rings, while smaller lion's heads ornament the ends. In each corner of the top is a small bas-relief representation of an overturned helmet on a lance and sword, surrounded by a wreath of laurel.

San Antonio in Texas.—Traveling up the Mississippi in company with a young friend, who has been, and intends to be, a resident of San Antonio, Texas, I had to become quite inquisitive.

"How do the men dress? the Mexican language chiefly spoken, hey? Well, do they vote at elections?"

"Entirely Catholics!"

"Are there any Methodist Churches in that region?"

"Oh, they are all Catholics," replied he. "They call us Jews, for they never had any idea of any other religion than their own; and as they never saw our marriages celebrated, suppose we live in concubinage, or have been married according to the Jewish rites. A Methodist preacher came there once since I have been there. He preached in the Plaza, (which is a large public square,) on a Sunday afternoon, and all the Mexicans had come out to enjoy the holiday. They stood around listening and wondering; after the hymn and prayer had been given out, we sang, and the sermon commenced. I noticed they all gathered together, whispering and wondering, and they appeared, too, a little alarmed. And that was it. As Gen. Taylor had just removed his position from Corpus Christi, this speech seemed to be a sort of political jubilatory harangue, and to show that they were good citizens, well and heartily disposed towards the Government, as soon as the sermon was concluded they all threw up their hats and began shouting 'Viva Texas! Viva Mexicano!' with all their might."

"Well," said I, laughing, "what effect did that have on the preacher?"

"Oh, by zounds! he was more frightened than they, for he immediately left his stand, and I have never seen him since."

"I suppose he dreaded a Bartholomew Massacre *of one?*" said I.

"Precisely," said he. "However, I am sorry for the mishap, for I should have liked to have heard a sermon in English now and then. And now we are on the subject, I may say that the Methodist ministry deserve the greatest credit for the zeal they manifest in the Western wilds."

"Certainly," said I in reply. "They are most indefatigable, and I experience no greater pleasure than in listening to sermons which are such pleasing remembrances of happier days gone by, at home."—*Spirit of the Times.*

Black Mail.—The whole colored population of Washington city, was brought up a few days ago to the Mayor's officrs to pay a corporation tax of two dollars each; have their names registered; and besides that give a bond, with five freeholders as sureties, for their good behavior, in a penalty of one thousand dollars. It is said that more than five thousand colored people must either pay up and give security or leave the Federal city. The reason of this law is, that the States of Maryland and Virginia have adopted a course of policy in regard to their colored people, which drives some portion of the worst of them into the district and city. The respectful and useful portion of the free blacks there, so far from objecting to the law, were influential in procuring its passage. They were in part, perhaps, actuated by some jealousy of the competition of the free blacks from other States.—*Norfolk Her.*

Condition of England.—The actual condition of England is thus stated in the London *Times*, of the 20th ult., without any disguise or circumlocution, or indisposition to look the facts in the face:

"Sorry are we to say it, but the truth must be spoken,—*the country is poor.* To say that it wants money or credit will not convey a very overwhelming idea of the helplessness to some of our readers. So we will repeat that England is actually poor in the grossest and most tangible sense. The country has till just now been miserably destitute of food. That deficiency is hardly supplied, and in supplying it so far we have both to part with our gold, and put ourselves in debt to the world. This is being poor in a very plain sense. Again, we are unusually short in the materials of manufacture, and consequently in those manufactured commodities wherewith we have hitherto purchased what we wanted from our neighbors. Now, there is no theorizing, no currency-spinning, in these simple facts, they are perfectly intelligible in the case of one person, and are equally so in the case of the nation.—There are people, indeed, who appear to imagine that while poverty in the case of an individual is a very solid affair, national poverty is a sentimental abstraction which an argument or a word can demolish. There is, however, no difference between them, except that the aggregate poverty is the worst and most incurable of the two.

The defects of the death have been seriously aggravated by the humanity of the nation. Besides the natural rise in the prices of food, a fact alone sufficient to run us into debt, we felt it our duty to feed for many months several millions in Ireland. This cost us £10,000,000, of which £8,000,000 were to be borrowed. Here is the case of a man, who being poor already, and stinted in his household, is further impoverished by his poor relations. It is the act of one who divides his last loaf with the beggar.

The conclusion drawn by the *Times* from this state of things in reference to applications by particular classes or interests from governmental relief, that such relief, if bestowed, cannot possibly be an addition to the capital of the country. It can only be a re-arrangement,—a violent disturbance of the natural order, for the sake of a few favored persons or classes.

The weaker, says the *Times*, must be left to that fate from which it is, unfortunately, impossible to save them without throwing their burthen on some other, perhaps equally unable to bear it. The aid given to one class starves another.

A Perfect Politician.—He was a perfect politician, and used (lapwing-like) to flutter most on that place which was farthest from his eggs: exact at the concealing of his intentions, with that simulation, which some make to lie in the marches of things lawful and unlawful. He had perfect command of his passion; with the Caspian Sea never ebbing nor flowing: and would not alter his composed pace for all the whipping which satirical wits bestowed upon him.—*Fuller's Worthies.*

Education.—The splendid mansion and grounds of J. W. Gill, Esq. have been purchased by Bishop Whelan, in behalf of the Roman Catholics, for about $10,000. This will be converted into a seminary of the first class. We perceive also that the Protestants are making an effort to procure grounds and establish a school on an extensive scale.—*Wheeling Times.*

THE REPUBLIC OF LIBERIA now takes its place among the independent nations of the earth. The constitution has been received at Washington, as adopted by its Convention and fills over seven columns of a printed sheet. It opens with a rapid historical sketch of the establishment and the prosperity of the colony, which concludes with the following appeal:

Therefore, in the name of humanity, and virtue and religion—in the name of the Great God, our common Creator, and our common judge, we appeal to the nations of Christendom, and earnestly and respectfully ask of them that they will regard us with the sympathy and friendly consideration to which the peculiarities of our condition entitle us, and to extend to us that comity which marks the friendly intercourse of civilized and independent communities.

Next follows the *declarations of rights*—many of them being copied from the State constitutions of the United States. The spirit of the whole may be inferred from an extract:

All power is inherent in the people: all free governments are instituted by their authority, and for their benefit, and they have a right to alter and reform the same when their safety and happiness require it.

All men have a natural and inalienable right to worship God according to the dictates of their own consciences, without obstruction or molestation from others; all persons demeaning themselves peaceably, and not obstructing others in their religious worship, are entitled to the protection of law in the free exercise of their own religion, and no sect of Christians shall have exclusive privileges or preference over any other sect, but shall be alike tolerated; and no religious test whatever shall be required as a qualification for civil office, or the exercise of any civil right.

The powers of this government shall be divided into three distinct departments, the legislative, executive, and judicial; and no person belonging to one of these departments shall exercise any of the powers belonging to either of the others. This section is not to be construed to include justices of the peace.

The liberty of the press is essential to the security of freedom in a State; it ought not, therefore, to be restrained in this republic. The printing press shall be free to every person who undertakes to examine the proceedings of the legislature or any branch of government; and no law shall ever be made to restrain the rights thereof. The free communication of thoughts and opinions is one of the invaluable rights of man; and every citizen may freely speak, write, and print on any subject, being responsible for the abuse of that liberty.

The Legislative and Executive branches of the Government are made conformable to our own; except that the President and Vice President are to be elected every two years. The constitution concludes thus:

Done in Convention at Monrovia, in the county of Monsterrado, by the unanimous consent of the people of the Commonwealth of Liberia, this 26th day of July, in the year of our Lord 1847, and of the republic the first. In witness whereof we have hereto set our names.

SHOCKING RAILROAD ACCIDENT AT ROME.—We are indebted to Mr. Grove of the Democrat for the particulars of a shocking accident, that occurred on the Syracuse and Utica Railroad near Rome, Friday morning. A freight train, loaded with iron, was approaching that village, when the shaft of the forward car broke and the engine was suddenly stopped, which caused a violent concussion between it and the rear cars.—Several persons on the train were caught between the cars and jammed in the most horrid manner. Three men and a boy, employed on the track, are badly injured, having had several limbs broken. One is so badly bruised in the back that little hopes are entertained of his recovery. We have not been able to learn the names of any of the injured persons.

Since writing the above, we learn that one of the persons injured was John Spring, a German, whose family resides in this city. All the sufferers were doing well at 4 P. M. yesterday. —*Oneida Her.*

"WHAT'S TO BE DONE FOR IRELAND?"—The press is discussing in several cities the propriety of similar contributions to those made last year, and speculating more freely as to the political results which will attend upon the famine which seems again to be approaching. The only permanent remedy which appears to be practicable is such a change as will be equivalent to a literal revolution—or turning over—of the system of Irish landlordism. It is in reality the relic of the system of confiscation which has been pursued towards Ireland. But no single political or social change can alone elevate a nation. Such a work requires ages for its accomplishment. The European correspondent of the *Courier & Enquirer* says:

If the Government *can't* do what these gentry want—give relief out of an exhausted and deficient treasury—give it, out of the taxes of an impoverished, and in many cases a starving population—then these gentry *must* get it from the measures which Parliament can give—and would have given, but for their insane and feudal opposition. The land must be sold—the Proprietary must be multiplied and solvent—the wastes must be made productive—to the landlord, the people, the Government. An heiress was married the other day—the daughter of the celebrated "Dick Martin, of Galway"—with an estate of twenty-five miles in length, two-thirds of which is desert. And the chairman of the Monaminey Electoral Division of Mallow, County Cork, says: "The non-resident proprietors possess the most valuable interest in nearly nine-tenths of the soil of our district. Their estates are capable of great improvement; and for the most part, indeed, four-fifths of them are wilderness, waste and unproductive; but which, if drained, reclaimed, and improved, would give ample employment and subsistence to the whole surplus population, and change the district from a region of distress and calamity, into one of comparative wealth and prosperity." Instead, then, of a lordly, pauperized, feudal, bankrupt Proprietary, the whole aspect of landlordism must be changed; the first step to an industrious, peaceful, and comfortable population.

A TREACHEROUS CLERK.—A queer developement took place the other day among certain dealers in tropical and other fruits who have their local habitation in a busy part of this Commercial Emporium. A young gentleman in the confidential employment of a pretty large establishment, was discovered to be in the habit of furnishing—for a consideration, of course—a rival house in the same business with copies of his employer's private papers, by which their whole affairs, orders, profits, schemes and everything, were laid open to the shrewd eyes of their not too scrupulous competitors. The operation had been kept up for a long time, till on one occasion a paper was not laid away with the usual care; one of the young men in the counting room found it, and with it found out the whole secret. Thinking it rather too bad to keep silent about, he went to the injured house and informed them of it; they at once discharged their faithless clerk; the employers of the informer took their revenge by turning him out also, but as we understand, he had the prudence to keep in his possession the paper which proved the fact of this new trick in trade. And not only was he discharged, but on the same day a police officer arrested him on a criminal charge brought by his late employers, the result of which has not yet been ascertained. The whole matter has caused a great deal of talk in the circles where it is known.—*N. Y. Paper.*

FRUITS.—Compare the quantity and quality of the vegetables now offered in our markets, with those exhibited thirty years ago, and the improvement is astonishing. From the growth of the cucumber to the production of the most delicious of our fruits, the influence of science is felt, and the encouragement for further effort, and the certainty of an ample reward, is every where visible.

NIAGARA BLOCK.

Above we present our readers with a beautiful and accurate view of the new buildings recently erected on Main-Street, and which have been named by the proprietors, "Niagara Block."—The buildings constitute Nos. 155, 157, 159, and 161 Main-Street, and are erected on a part of the Lecoutenlx property, near the corner of Main-Street and Exchange. The whole buildings were designed and executed under the superintendence of Mr. H. G. Harrison, Architect, an artist of much skill and taste, and are occupied as follows:

A. Reynolds, No. 155, as a General Wholesale and Retail Dealer in Paints, Oils, Glass, Drugs and Medicines, Manufacturers, Articles, Groceries, &c.

Eugene Mulligan, No. 157, Wholesale and Retail Dealer in Crockery, Glass, and Earthen Ware, &c.

Wells & Co., (late Livingston and Wells,) No. 159, as a General Express Office. In the same building are also the offices of Livingston & Fargo's Western Express, and C. Snead's Canada Express. The basement is occupied by Messrs. C H. Blosier & Co., General Dealers in Oysters and other shell-fish, Foreign Fruits, Preserves, &c.

The interior arrangement of the Express Office is conceded to be one of the most convenient and elegant in the United States.

The second story of the building forming the centre of the block is fitted up for offices, and the third story is finished in beautiful style for a Concert Hall. The room is 40 feet wide by 80 deep, and 20 feet high, and forms the most complete room for public purposes ever erected in this city. Over the Concert Hall is another large and commodious Hall of the same dimensions, to be finished for the use of several of the Odd Fellows Lodges.

No 161 is occupied on the first story as a Counting Room for the Commercial Advertiser, in connection with a Book-store kept by Messrs. W. B. & C. E. Peck. The second story, front part, by Jones, merchant tailor: the back part is occupied as a paper ware-room for the printing establishment. The third story is the Book Bindery and Blank Book Manufactory, carried on by Mr. G. H. Read. The fourth story is occupied as a Stereotype Foundry with all the modern facilities for stereotyping Books, Pamphlets, Jobs, &c.—This is a new business recently introduced here, and will form an important adjunct in promoting the publishing of Books at this point.

The rear building is 25 feet wide and 40 deep, four stories high, devoted entirely to the various departments of Book, Job and Newspaper work.

The first story is occupied exclusively as a Press-room.—In this room are one of *Hoe's Napier Presses*, of the largest size, combining all the latest improvements; capable of throwing off at the rate of 2,000 sheets per hour; and also one of ADAMS'S IMPROVED POWER PRESSES, so celebrated for the execution of fine Book work.—These are driven by an Engine of three horse power from the establishment of WM. KIDD, of Rochester, which is pronounced by competent judges to be one of the most perfect machines ever set up in this city. Its compactness, finish and ease of work does infinite credit to Mr. PERRY the foreman of Mr. K's establisment, under whose superintendance it was built. In the same room are also various hand-Presses, which, together, form facilities for throwing off at the rate of 25 to 30,000 impressions per day. The steam engine is supplied with water from a cement cistern built inside the building, capable of holding 75 to 80 hogsheads.

The second story is occupied for the JOB DEPARTMENT; nearly all the modern improvements, including the patent card-cutter, paper-press and cutter, the celebrated RUGGLES' JOB ENGINE, driven by steam, and other Presses, are here to be found. Fonts of all the most fashionable and useful job types, and everything necessary for the prompt and elegant execution of Commercial printing, for steamboats, railroads, &c., and for perfecting the various kinds of fine job work are here brought into requisition.

The third story is occupied for the composition room of the BOOK AND PAMPHLET DEPARTMENT, where a number of hands are constantly employed on the numerous works issued from the Press of Messrs. JEWETT, THOMAS & Co. And here it may be well enough in order to show, that in publishing, the city of Buffalo has made some progress, to state, that within the past year, Messrs. J. T. & Co. have printed editions of "ALLEN'S Herd Book," a beautiful work of about 300 pp. 8vo.; "Cousin George's Sketches of Niagara Falls," a neat octodecimo of 150 pp.; "ALLEN'S American Agriculture," 425 pp. 12mo.; "Angel Voices," a beautiful 18mo. of 150 pp., together with three editions of the "Book of Common Prayer," 420 pp. 12mo., and a host of smaller works. Probably no establishment west of Albany has as extensive facilities for the speedy execution of large orders as this.

The fourth story is occupied as the composing room for the COMMERCIAL ADVERTISER. This room is beautifully adapted for its purpose, having in addition to ten large windows, two large sky-lights directly over the imposing stones—a desideratum which practical printers can rightly estimate. A sliding closet traverses from the fourth down to the first story or press room, for the purpose of carrying forms from the several stories to and fro—and, by the aid of speaking pipes and other appliances, communication can be had between the occupants of the several stories without the trouble of going out of their respective rooms.

The whole number of hands employed in the various departments connected with this establishment, averages between thirty and forty; and the weekly consumption of paper of all sorts, is between fifty and sixty reams.

There are now publishing at this establishment the following Newspapers and Periodicals:

Daily Commercial Advertiser,
Tri-Weekly Commercial Advertiser,
Patriot and Journal—Weekly,
Western Literary Messenger—Weekly,
Buffalo Medical Journal and Monthly Review—Monthly,

In conclusion, we take the liberty of saying that we shall be pleased to receive the orders of those having occasion for any description of book or job printing, promising prompt execution and satisfactory terms. Particular attention is given to work required by those engaged in the commerce of the lakes and canals. Having superior facilities for procuring the best of stock of all kinds from first hands, we are confident our articles in this line cannot be excelled.

CURIOUS MARRIAGE CONTRACT.—The Scientific American states that the Royal Library of Paris have a written contract, drawn up in 1297, between two persons of noble birth in Armagnac. The document bound the husband and wife to faithful wedlock for *seven years*. It stipulated that the parties should have the right to renew the tie at the end of that time if they mutually agreed; but if not, the children were to be equally divided, and if the number should chance to be unequal, they were to draw lots for the odd one.

Gentle Words.

A young rose in summer time
Is beautiful to me,
And glorious are the many stars
That glimmer on the sea;
But gentle words and loving hearts,
And hands to clasp my own,
Are better than the finest flowers,
Or stars that ever shone.

The sun may warm the grass to life,
The dew the dripping flower,
And eyes grow bright, and watch the light
Of Autumn's opening hour.
But words that breathe of tenderness
And smiles we know are true,
Are warmer than the summer time,
And lighter than the dew.

It is not much the world can give,
With all its subtle art,
And gold and gems are not the things
To satisfy the heart;
But, oh, if those who cluster round
The altar and the hearth,
Have gentle words and loving smiles,
How beautiful is earth!

RUMORS OF INDIAN DISTURBANCES.—Within a short time we have seen many rumors and speculations in the papers of probable outbreaks on the part of some of the Indian tribes along our extensive western frontier, and gloomy anticipations of bloodshed and murder, coupled, of course with charges of inefficiency on the part of the authorities of the Government, by papers hostile to the administration. We have taken some pains to enquire into the subject, and it gives us pleasure to state that there is no reasonable ground whatever for the representations that have been made.

Reports have recently been received from commanding military officers, and most of the Indian agents and sub-agents, on the frontier, from which it would appear that there has probably never been a time when the tribes with which we have treaty-stipulations and intercourse were more peaceable or friendly-disposed, both towards each other and our own citizens. But one case is known of an attack by any one of the tribes within reach of the agents provided for by law, upon our citizens; and this was one committed by some Pawnees living on the Platte river, in the for north-west, upon a party of emigrants to Oregon last spring. Some mischief was done, but no lives reported to have been lost. The attack upon our trains have been by the wild and wandering tribes of the far west prairies; and probably some from Mexico, instigated by renegade Mexcans, for the purpose of plunder, who can be reached only with difficulty, and by a mounted military force.

There have been some intestine difficulties among some of the tribes high up on the Missouri river, caused by the restless and daring disposition of the Sioux, who are among the most mischievous of the Indian tribes. Proper measures have been taken for their punishment, and to prevent, as far as posible, a repetition of such occurrences in future. This, however, is, and has been from the commencement of the government, very difficult, if not impossible. Wild and untutored Indians will, occasionally, reckless of all consequences, seek to indulge their natural love of war and plunder, but which, however, no efforts have been or will be spared on the part of those charged with the management of our indi an relations, to prevent or repress.—*Washington Union.*

NIAGARA SUSPENSION BRIDGE.—The contract to build this magnificent bridge was taken yesterday by Mr. Ellet, of Philadelphia, at $180,000. It is to be about 750 feet in length, and to sustain a weight over and above its own of 450 tons. A train of cars 100 feet in length with their usual load will weigh about 140 tons—so that the bridge will sustain over 300 tons more than a loaded train. The work is to be completed by the 4th of July, 1849. Plans were submitted by Mr. Ellet, of Philadelphia, Mr. Roebling, of Pittsburgh, Mr. Thomas, of Toronto, C. W., Mr. Keefer, of Thorold, C. W., and a Scotch gentleman, whose name we did not learn. There is now no doubt of the speedy completion of the Canadian Railroad, and the Rochester and Niagara Falls Road. The latter, we understand, is to be put under contract today.—*Rochester Amer.*

THE SALT-WATER WORM.—We have seen in the Quartermaster's Department, a specimen of the voracity of the salt-water worm. It is a piece of wood eaten so as to resemble a honeycomb, or rather it looked like a piece of a hornet's nest. It was sent to Washington from the Brazos; and so piercing is the hard mouth of this little insect, and so active when it penetrates the fibre, that the wood was reduced to its present appearance in the course of thirty days. It was not the part of a vessel, but a piece of the ways laid to bring articles to the shore. It is scarcely possible for a vessel to lie in those waters, if it be unsheathed with copper, without serious damage.—One or two steamboats which were without copper bottoms, have sunk in those waters,—and all others have been sheathed. The insect is said to be at first laid upon the timber, in the form of a nit; and when it is hatched, it pierces the wood, making a very small hole; but as the worm increases in size, in passing through it, it eats a larger aperture into it. When it has gone through a piece of timber, instead of penetrating the opposite surface, it turns round and eats its way back.—*Union.*

The Spirit of Poetry.

BY MARY HOWITT.

Men build to thee no shrine,
Yet every holy place is filled with thee;
Dim groves and mountain-tops alike are thine,
Spirit of Poetry!
Island and ocean-peak;
Seas where the keel of ships shall never go;
Cots, palaces, and graves; whate'er can speak
Of human love or wo;
All are the shrines where thou
Broodest with power, not visible, yet strong;
Like odor, from the rose, we know not how
Borne to the sense along.
Oh! spirit which art pure,
Mighty and holy, and of God art sprung;
Which teachest to aspire and to endure,
As ne'er taught human tongue;
What art thou? A glad spirit,
Sent down, like Hope, when Eden was no more,
From the high heavenly place thou didst inherit,
An Eden to restore;
Sent down to teach, as never
Taught worldly wisdom; to make known the right;
And the strong armor of sublime endeavor
To gird on for the fight.
I see whom thou hast called;
The mighty men, the chosen of the earth,
Strong minds invincible and disenthralled,
Made freemen at their birth.
I see, on spirit-wings,
How thou hast set them high, each like a star,
More royal than the loftiest names of kings.
Mightier than conquerors are.
Though weak
And poor my spirit, thou dost condescend
Thy beauty to unveil, and with me speak
As gentle friend with friend.
With thee I walk the ways
Of daily life, and, human tears and sighs
Interpreting, so learn to love my race,
And with them sympathise.
Hence is it that all tears
Which human sorrow sheds are dear to me;
That the soul struggling with its mortal fears
Moveth me mightily.
Hence is it that the hearts
Of little children and unpractised youth
So gladden me with their unworldly arts,
Their kindness and their truth.
Hence is it that the eye
And sunken cheek of poverty so move—
Seen only by a glimpse in passing by—
My soul to human love.
Spirit, I will not say
Thou dost not visit me; nor yet repine,
Less mighty though I be, less great than they
Whom thou hast made divine.

Editorial Department.

J. CLEMENT, EDITOR.

THE HOUR FOR CLOSING STORES.—The merchants' clerks of this city have lately made an attempt to secure the suspension of business at seven o'clock at night during the winter season; and our heart is with them in this movement. We are happy to say that several of the merchants have pledged themselves to comply with this request. Why any refuse to do it seems strange. Winter is the season for public lectures, and when in fact most of the opportunities for mental improvement are presented to the laboring clases, and it seems wrong to debar clerks from these privileges. There is no justice in requiring them to labor two or three hours a day more than mechanics. Their bodily health would seem to demand releasement by seven; and why may not the cry of the soul be heard, and this request be granted?

We suspend any farther remarks of our own on this subject, and cheerfully give place to the following extract from a poem lately dropped in our pigeon-hole, called

LAMENT OF A MELANCHOLY CLERK.

For us na momentary gleams,
O' comfort o'er the hearthstane streams,
Nae social joys like golden dreams,
Bring heartfelt pleasure:
E'en Sunday our auld bossie deems,
Maist too much leisure.

Tho' still confined, he needs maun watch us,
An' gif at mischief he sud catch us,
Some midnight Churlie soon wud snatch us,
An' tak us aff,
An' then for Auburn they'd dispatch us,
Fu' quick enough.

Heigh-ho! tis hard to be confined,
Yet, harder to be forced to mind,
Some *crabbit species* o' mankind,
That think they're born
To rule o'er all they chance to find,
Puir an' forlorn.

The Lord be thankit I'm not vicious,
Else I wi' fate might be malicious,
Nae proud, nor any wise ambitious,
Else I might hope,
Same day wi' Fortune sae capricious,
Wi' zeal to cope.

Nor will I be sae "desperate"
As "join myself against my fate,"
The fick'le dame *may* come, tho' late,
In gaudy colors,
An' me amang the highest rate
Wi' bags o' dollars.

TO CORRESPONDENTS.—The remainder of the Address to Teachers, will be used in subsequent numbers of the Messenger, appearing under the several heads of the subjects discussed. We commend the extract published this week to the consideration of all who are interested in the subject of education.

"THE PRESENT AGE," contains one or two fair verses, but as a whole is unworthy of publication.

MADISON UNIVERSITY.—The subject of the removal of this noted institution from Hamilton to some place on the great central railroad, has been agitated of late, and the thing seems likely to be accomplished. In order to secure its removal it is necessary that $100,000 be raised as an endowment, and subscriptions to this end have already been started for its establishment in Rochester, in Syracuse, and also, we believe, in Utica.—The strife, however, appears to be between the first two places. The people in and near Rochester have entered on the work with the greatest zeal, and have already obtained pledges to nearly half the desired amount; and it is most likely that, if removed at all, it will be established in that city. The press in Buffalo has spoken at large on the importance of its removal, and there is but one opinion here in regard to the place of its future location. After speaking of the fact that the University, "in addition to being a public institution of general literary and scientific learning, is more immediately under the patronage of the Baptist denomination, by whom it was established and has been sustained," and also of the earnest of this denomination "for its removal to some more favorable location," the Courier of this city adds:—

"For several reasons we prefer that it shall be removed to Rochester. The principal of these are that there is no institution of the kind in Western New-York. It is farther from other Colleges, and will there occupy a vacant field—one in which it is highly desirable that such an institution should be located. It is upon the great thoroughfares of the State, and thus the University would be brought out into the world. The citizens of Rochester are enlightened and liberal in other educational views, and the institu would there find spirits congenial to its high ends and purposes, and energy and enterprise to sustain it and enlarge and extend its usefulness. It is in the midst of one of the most substantial agricultural regions of the country, which would furnish to it a large number of students. The principal reason, however, for preferring Rochester to Utica or Syracuse, is the first. There is a population of some 600,000 in Western New-York, and no institution of learning of the character of the Madison University. The only one claiming the name is Geneva College. It is true we have a Medical University in this city—an institution which promises to be one of the first in the country. But this does not interfere with the Madison University, as it is separate and distinct in its functions—occupying another field of science.

CAMPAIGN SKETCHES OF THE WAR WITH MEXICO. By Capt. W. S. Henry, U. S. Army. With engravings. New-York: Harper and Brothers. 1847. Part 2.

This work is completed, and the second part is for sale by Hawks, and booksellers generally. It is a work that will be read by "the million."

ALAMANCE; or, *The Great and Final Experiment.* New-York: Harper and Brothers.

This is a pamphlet of 150 pages, forms No. 104 of the Library of Select Novels. For sale by Hawks.

THE AMERICAN REVIEW.—Through the energetic exertions of the agent for this periodical, Mr. Cutting, we understand its subscription list in this city has lately been much enlarged. This is as it should be: the Review is deserving of the most liberal support. Of the number for this month we have not yet found time to read but two articles (aside from the poetry), viz., "Howett's 'Homes and Haunts of the British Poets,'" and "Some New Poets." The reviewer of Howett's work finds but little to commend, and gives the "Humanitarian Quaker book wright," a severe flogging for his rusticity, vanity, self-conceit and other short comings. What Mr. Colton means by classing Mr. Hosmer among "Some New Poets," we do not understand. In publishing the Months, Mr. H. does not make his *debut* as an author. Yonnondio, acknowledged by the ablest critics to be the best Indian poem yet written, was published three years ago: and such writers as Greeley, Lewis Gaylard Clark, Judge Conrad and Griswold, discovered "long, long ago," that he was a poet.—We shall give this issue a thorough perusal and shall be likely to find something appropriate with which to enrich our columns. We ought to mention that it is embellished with a likeness of Pope Pius IX, engraved by Doney.

WILSON COLLEGIATE INSTITUTE.—The Catalogue of this institution for the current year exhibits the following summary of students:

Number of Males,	146
Number of Females,	101
Total number of Students,	247

The Institute, though young, is, we are happy to learn in a very flourishing condition; and being favorably located and having an excellent board of teachers, it will be likely to be not only a permanent but remain a popular, institution. Prof. WILCOX, the Principal, has probably no superior as an instructor in Niagara County. Let the friends of education in that section give the Wilson Collegiate Institute a liberal support.

THE DEMOCRATIC REVIEW is improving. The only fault that can be found with it is that it is slightly sectarian and not, in this respect, strictly orthodox. It will injure itself by meddling with theological questions. The November number presents the following attractive table of contents: "Occupation of Mexico;" "Lay of a Solitary One;" "Our New Houses;" 'Obituary of Hon. A. H. Everett;" "Condition of China," by the deceased Minister to the same; "Work On," by J. S. Rice; "Death of Ringgold;" "Progress of Civil Liberty;" "John Keats;" "The Two Beggars;" "Cooper's Last Novel;" "National Prosperity;" "Sketch of Nathaniel Greene;" Reviews, Gossips, etc.

THE ELECTION IN MASSACHUSETTS has resulted in the re-election of Gov. Briggs, though by a diminished majority.

PICTORIAL HISTORY OF ENGLAND.—Number thirty-two of this serial work can be had at Hawks' Literary Depot. It treats mainly of Civil and Military Transactions in the Seventeenth Century, and is richly embellished.

RECORDER'S FINE BLACK INK.—This is the name of the sable fluid in which our "grey goose quil" has been baptised for a few weeks past, and we pronounce it the best we have ever used. Unlike a politician's life, it grows brighter with age. It is manufactured by J. JOHNSON, of Erie, Pa., and is for sale, we believe, by DERBY & HEWSON, of this city.

CHEAP POSTAGE—IMPORTANT INFORMATION.—The Washington correspondent of the Philadelphia *Ledger* gives some interesting information relative to the mission of Major Mobbie, just returned from Europe, and to working of the cheap postage system in the UnitedStates. The deficit in revenue under the new law from $800,000 the first year, is reduced to $40,000, and the Postmaster General, JOHNSON, is so gratified with the result that he will probably propose in his report the introduction of a *uniform system of cheap postage*, similar to the penny postage in England. This, says the *Ledger*, is gratifying intelligence, not only to the friends of that measure, who so earnestly advocated it in the face of strenuous opposition, but to the whole country, and fully justifies the predictions of the result made by the friends of the law.—*Com.*

☞ BACHELORS.—Down with them, they have no friends. Such seems to be the spirit of a bill actually introduced into our Legislature for the purpose of taxing bachelors seven dollars a year—the proceeds to be employed in the support of orphans. Its definition of an old bachelor is

"§ 3. Every unmarried white male, unconvicted of crime, of good health and fair physical proportions, and who is between the ages of 28 and 56 years, shall be deemed an old bachelor."

A widower, if childless we suppose, will pay the same sum if he does not marry again within two years after the death of his latest wife—whether she is his first or his twentieth.

THANKSGIVING IN YANKEE LAND.—The editor of the Northampton *Courier* thus soliloquises upon the approaching Thanksgiving in Massachusetts:

Thanksgiving is signalized in all its past history for its indiscriminate warfare upon the beasts of the field and the fowls of the air. The slaughter on the hen roost, and in the poultry yard, and pig pen, is tremendous. Already our ears ache with the feeble wailings of the 'stuck pig,' and the inarticulate cackle of the hen with her head wrung off. Many a young porker will 'sigh, yet feel no pain,' as he looks for the last time upon his favorite swill trough, when some inglorious hog killer draws him forth from his sequestered bed of straw, to terminate his life of vicissitude and gnawing hunger with a bare 'bodkin.'

TO BE HUNG FOR STEALING A SLAVE.—At the recent sitting of the Court of General Sessions for Darlington District, S.C., the honorable Judge WARDLOW presiding, James Carlisle was brought to the bar charged with selling a negro slave, the property of Mr. P. W. PLEDGER, of Marlboro District, to which charge he pleaded guilty, and was sentenced to be hung on Friday, the 25th day of February next.

Extensive Conflagration.

From the Rochester Advertiser Extra.

About 2 o'clock Sunday morning, a fire broke out in the large building occupied by James W. Kerr as a carriage manufactory, in the rear of his extensive sales-room on State street. The building was of wood, and very old and dry, and was soon completely enveloped in flames. How the fire originated is not known.

Before sufficient water could be procured to stay the progress of the fiery element, the flames communicated to the finishing shop and sales-room, a large three story brick building, fronting on State street, and in a short space of time, the inner portion was soon destroyed. A large number of carriages, wagons, sleighs, &c., were in the building, only a portion of which were saved.—The loss of Mr. Kerr is pretty heavy.

The fire then communicated to the rear part of the extensive Livery Stable of D. T. Walbridge, a three story brick building, and there being a quantity of hay and other combustible material in it, the flames made rapid progress. About 20 horses were in the barn, but we are glad to learn that all of them, together with the carriages and wagons, were removed in time. Mr. W. had but just moved in, and had gone to considerable expense in fitting up, and had not as yet secured an insurance.

The building next south of the carriage factory, a three story brick, which was nearly new, was partially destroyed. The lower part was occupied by Edwin Brown, City Sexton, as a chair and coffin factory, and by E. S. Watson as a window shade factory. The stock and furniture of both were removed without much injury.

The second and third stories of this building were occupied by Mr. D. T. Walbridge, as a dwelling. A part of his furniture was removed, the flames and smoke preventing the getting out of all. Furniture more or less damaged. This building and the one adjoining, on the north, together with the rear one, in which the fire originated, were owned by John Cleveland, of New York.

A two story wooden building adjoining the livery stable, on the north, was completely demolished by the falling of the wall of the brick building.

In the rear of Brown's chair factory was a wooden building occupied by him as a work shop, which was entirely destroyed. Another building on Pindle Alley, a small brick, was partly destroyed. The fire from the large building was so hot, that the inmates of the small brick one were obliged to make their escape through a back window in the upper story.

The wooden building occupied by John Gardiner, the tobacconist, on the north, as a dwelling, narrowly escaped destruction. Damage principally by removal of furniture.

As yet it is impossible to get at the loss with accuracy. John Cleveland's will not be far from $10,000; insurance not known. The livery stable building, and the two story wood dwelling on the north, were owned by Mr. Jacob Schermerhorn. Loss about $4,000; insurance $2,800. Mr. Kerr's loss is perhaps $5,000; insurance $2,000. Mr. Walbridge had no insurance on furniture or stock; his loss will probably be several hundred dollars.

When the wall of the livery stable fell, several firemen very narrowly escaped being buried in the ruins. They had just left the wooden building as the mass of brick crushed it. As it was, two of them, Stephen Hanford and —— Brown were somewhat injured. One was struck in the face with a brick, cutting him badly, and the other had his wrist and arm severely bruised.

The building in which the fire originated is associated and identified with the earliest history of our city. It was one of the oldest buildings, having been erected between thirty and forty years since, by the First Presbyterian Society of Rochester, and occupied by them for a number of years as a church. It afterwards passed into the hands of the First Baptist Society, who worshipped in it until some ten years since.

Later from Mexico.

We have farther particulars received by the steamer New Orleans at New Orleans, that the Pennsylvania volunteers were garrisoned at Perote.

The North American published at the Capital says, that prominent members of the Mexican Congress now sitting will obstinately maintain the present obstinate position of the country.

The publishers of the Republican were summoned to appear before Governor Quitman, to prove an alleged outrage by the Americans in the Capital.

Joseph D. Bacon, died on the 12th.

It was rumored at the Capital that a severe fight had taken place at Ventara.

The supreme Government ordered Parades to remain at Teloloapan.

Cols. Williams and Roberts of the Pennsylvania Regiments died at the Capital on the 2d of Oct. of typhus fever.

Gen. Quitman had returned to join General Taylor.

Bustamente was expected to be appointed Commander-in-Chief.

Maj. Gaines, Capt. Cassius M. Clay, Capt. Heady, Maj. Borland, Capt. Donly, Midshipman Rodgers and Mr. Kendall, are coming home again. Mr. Bankhead, the British Minister, arrived at Vera Cruz on the 30th ult., and was received with military honors. Mr. Marshall is ill at Vera Cruz.

Gen. Lane entered Puebla on the 13th ult., with 3,000 men and 6 pieces of artillery—so says a dispatch of Santa Anna. The latter could effect nothing against him on the Pinal.

The principal part of the force recently under Santa Anna is understood to have marched for Puebla. Being entirely unprovided for, they subsist by rapine, and plunder.

Lieut. E. B. Daniels of the 2d Artillery, has died of his wounds.

It is said, that Capt. Walker of the rifles, killed in the affair at Huamantla, received a lance wound entirely through the body, and also lost a leg by a cannon shot. His personal antagonist in the charge, and who lanced him, was a celebrated guerilla chief: it is said that he had sworn vengeance against Capt. W. But, he too, fell in the conflict, and by Walker's hands, receiving two balls from his revolver.

Capt. Layall and eighteen men of his company of mounted Georgians, and from six to ten of the rifles, are also known to have been killed in the charge of Capt. Walker. A man named Raborg, of Baltimore, interpreter to Capt. W. lost a leg from a discharge of artillery. Col. Wynkoop writes that the Mexicans were slaughtered after this like sheep.

Torres, the Editor of the *Monitor Republicano*, was cowhided for aspersing the character of a lady.

A duel was fought near Vera Cruz, outside the Gate of Mercy, on the 1st inst., between Capts. Warrington and White, with muskets, at sixty paces. At the first fire Capt. Warrington received a ball through the fleshy part of both legs, below the knee.

The Steamer Ann Chase and two three-masted schooners have gone ashore in the harbor of Vera Cruz. All, it is supposed, will be totally lost.

A duel was fought about the 24th ult. between Capt. Porter, of the rifles, and Capt. Archer, of the Voltigeurs. At the second fire Capt. Archer was shot in the abdomen—a severe but not a dangerous wound.

Gen. Mora y Villamil has been appointed Mexican Secretary of War.

Lieut. Shackleford, of the 2d artillery, has died of his wounds.

As far back as the 14th ult., Gens. Pillow and Shields were able to be about.

The political intelligence by this arrival is vague and unsatisfactory, though as yet we have not had time to read a tithe of our letters or papers.

The steam frigate Mississippi arrived at Vera Cruz on the 22nd ult.

Assistant Surgeon Tredwell died at Vera Cruz on the 24th ult. of vomito.

A Court Martial was in session at Vera Cruz on the 28th for the trial of Capt. John H. King, Military Store-keeper.

The steamer A. R. Hetzel, Capt. Baker, arrived at Vera Cruz from Mobile on the 30th.—He had to throw overboard all his horses, having encountered awful weather.

The steamer Florida was in the same gale and had to throw overboard all her mules.

Lieut. Steen, of the South Carolina regiment, and Capt. Huddleson of the 14th infantry, are dead; the former of his wounds, the latter of a bowel complaint.

A new paper has been established in the Capital entitled *La Razon*. It is published entirely in Spanish, is a democratic paper and advocates the re-establishment of the Constitution of '24.

The newspaper El Mexicano, of the 14th ult., says it has received letters from Queretaro, in which it is stated that Gen. Almonte has been received there with marked courtesy by the persons who "appeared to be most in power," and it was feared that they were concocting a pronunciamento against the lawful Government.

The North American, a new paper established in the Capital, and published in both Spanish and English, says, on the 15th ult.: "It appears that a large number of deputies of the Congress, forming a junta, have got up a protest against Pena y Pena holding the Presidential power."

Dr. Wm. Roberts, of the medical staff, and attached to the 5th Infantry as Surgeon, died on the 12th ult. of a wound received at the King's Mills.

Capt. Pierson of the New York regiment of volunteers died on the 10th ult. of wounds received in storming Chapultepec.

Senor Rosa, the Mexican Secretary of State, has, under the instructions of Pena y Pena, addressed Santa Anna a note from Toluca, ordering him to give up the command of the army to Gen. Rincon, until his conduct in the late battles shall have been investigated by a military council or court martial.

The officers of the Mexican army who had gone to Queretaro and Toluca, were hooted, it is said, by the population, both men and women, and scarcely dared to appear in the streets for fear of being shot.

The guerrillas are on the road between Queretaro and the Capital, and are plundering every traveler they meet.

A letter dated the 12th ult. received at the Capital from Queretaro, says Pena y Pena had just arrived, in company with a few deputies, making the total number in the Capital about fifty. It was thought, says the Star, endeavors would be made at once to organize a Government, which would settle the question of peace or war. If a quorum of Congress could be assembled, the first question which would be bro't up would be the Presidency. Almonte was spoken of as the candidate of the Puros and some of the Moderados, and Olaguibel Governor of the State of Mexico, as the candidate of the opposing parties. Nearly all the officers of the dispersed army were at Queretaro, and it is said found it hard to obtain subsistence.

The military force at Queretaro consisted of about 1,000 cavalry and infantry, with six pieces of artillery from Guadalajara, under the command of Heredia.

The Star is assured by a Mexican that the Cathedral of Guadalajara had been attacked by the party opposing the Church. The Star thinks there is something important and "deep-rooted" in this.

The Star of the 16th says the assassination of American soldiers by the Mexicans had again commenced. Sergeant Sutliffe of the rifles was killed the night before.—A private of one of the infantry regiments was also killed the same night, and it was reported that two others were killed.

Earthquakes, says the North American of the 29th ult., are at the present time of very frequent occurrence in this beautiful country. A few days ago the village of Ocotla was totally destroyed. The Canton de la Barea has also suffered a severe shake, throwing down houses and the tower of the principal Church. We have had four of these unpleasant visiters in this city since our occupation of it.

The Mexican Eagle is the title of a new Mexican journal just commenced at the Capital. The editor does not believe in opposing an amicable adjustment of the differences, and says that Providence has decreed the destiny of the nation. The following is the substance of a motto at the head of the Eagle:—"An honorable peace ennobles nations, and the magnanimity of the North will not let them offer us terms other than honorable."

From the Vera Cruz Genius we gather the following items:

Through the instrumentality of a kind friend we are enabled to lay before our readers the following particulars, gleaned from the American Star, published in the city of Mexico.

Capt. Philip Kearney, of the 1st dragoons, is about returning to the United States. In the upon the Garita, he lost an arm.

The house of Gonzales, a Mexican officer, was entered by order of Capt. McKinstry, of the Q. M. Department, and in it was found a quantity of clothes, ammunition, pistols, swords, drums, &c., belonging to the United States, which were taken away.

From the Durango Journal of the 14th ult., is derived the information that the American frigate Portsmouth arrived at Mazatlan on the 22d ult., from Monterey, in California. The American squadron, consisting of the Congress, Dale, Cyane, and a transport, left Monterey on the 1st September, for Mazatlan and San Blas, and for these of Guaymas and Acapulco.

Operations Below.—There seems to be but little doubt that a force of Americans have entered and taken possession of Orizaba, and it is also probable that the force did not exceed 400 men. Orizaba contains a population of something near 16,000 inhabitants, yet they had the good sense to surrender their city, notwithstanding that the force was so meagre that demanded it. Accompanying this expedition we are told were many American merchants, whose goods for a long

time had been lying on their hands in Vera Cruz, for lack of a market, and who readily availed themselves of the opportunity to take them into the interior for trade with the natives. This, of course, is a benefit to our government and the Mexicans too, for while the first receives a moderate revenue from importation, and that revenue from the country with which we are at war, the people who pay the duty, do so at a rate of 75 per cent. below what they paid during the administration of their own customs.

Arrival of the Steamer New York.

The French steamer *New York* arrived at Newport Friday, out of coal, from Havre, whence she sailed on the 24th ult. She brings two days later intelligence from France, and the Continent. The firms of Verien & Geills at Courtray, have suspended for two millions of francs.

France was tranquil at Paris. French threes opened at 75,60 and closed at 75,50.

A change of Ministry was expected at Vienna, the Augsburg Gazette states that the Pope, in addressing himself direct to the Emperor of Austria, has rather retarded than advanced the negotiation respecting the occupation of Ferrara, that no hope is entertained of an arrangement without the mediation of some third power.

The Pope has just published a decree consisting of 7 chapters and 56 articles, by which he constitutes a Council of State. He declares such a Council to have been in former times the glory of the States of the Holy See.

He declares his conviction that when the pontifical Govearnment is enriched by such an institution, and has the aid of those honored with the suffrages of the provinces, the public administration will be more vigorously executed and give to the government the practical character which his Holiness desires it should have.

He farther trusts to the moderation of the people to appreciate this political benefit, and asks that they will express their gratitude by the preservation of order.

M. Dragonatti had been exiled from Rome, and the "*Pallade*" had been suppressed. These two events were by some connected with Cardinal Ferretti's absence from the city.

Four suspension bridges were about to be erected in Rome by a French company, and other works of public utility were likely to be carried forward by foreign capitalists. Hitherto the law, or at least unbroken custom, did not admit of such privileges being granted to foreigners.

The Duke de Broschi is nominally at the head of the French company referred to, but it is supposed only for the sake of not too abruptly doing away with a long established custom.

In Tuscany the punishment of death has been abolished, by proclamation of the Grand Duke. The excited populace thereupon broke open the prison where the guillotine was kept, and having carried that instrument to the public square, set fire to it, while the bells of the town rang a merry peal.

The Grand Duke and Duchess made their entry into Lucca on the 14th, signalizing the event by munificent charities.

The Courier d'Alsace of the 19th, contains a report founded on a letter from Colmar de Locle, a town of the canton of Neufchatel, that fighting had commenced on the banks of the Lake, but no details; and it is impossible to judge of the degree of credit to which the news is entitled.

Some sensation had been created at Madrid, by the intelligence that 400 armed men entered the government of Leo De Ugal, under the conduct of French guides at Moreny. A band of 130 insurgents, after a contest, was dispersed by the Queen's troops on the 9th.

The government had seized the National newspapers at Paris, on what ground is not apparent.

The stock of the Bank of France has risen—its intention to take five million of the new government loans having been interpreted favorably and an augmentation of its Capital is agitated.

Mile de Luzy is likely to be set at liberty.—There is nothing in her correspondence with the Duke de Praslin which tends to criminate her.

In Spain the reconciliation of the young Queen with her husband would seem to be complete, and the Narvarez ministry firmly in favor, that is, for a Spanish Cabinet.

Some sensation has been excited by reports of new troubles in Catalonia.

Switzerland.—The Swiss Diet met at Berne on the 18th of Oct., to discuss the means of carrying into execution the vote of the Diet on the 20th of July. The deputy for Zurich opened the debate by proposing means of pacification; a proclamation addressed to the people of the seven cantons, the sending of two federal commissioners into each of the seven cantons, and that the committee should as soon as possible make propositions to this effect.

The member from Lucerne offered a resolution that these propositions which had been read should be printed, for the use of the members.—This was agreed to.

On a proposition of the deputies from the town of Bale, a joint committee of the majority and minority was appointed, who are to draft a letter of instrustions for the representatives, and a proclamation for the seven cantons. A conciliatory spirit was shown by all parties.

Another account of the 20th, says that supplies of cannon, muskets and powder, from the French government are smuggling into the Jesuit cantones.

The rumor of hostilities having already commenced on the banks of lake Neufchatel was current, but not believed.

The beautiful little steamboat so well known to American travelers has now become a ship of war.

Sweden.—Apprehensions of the cholera were entertained and it was said, on the authority of a letter from Stockholm that two schooners and four barques, with medical men on board, had been sent out to superintend the quarantine on the frontier on accout of its appearance.

Russia.—Negotiations for a concordat between Russia and the Holy See had been broken off. The Pope demanded that converts from the Greek to the Russian-Greek Chuoch should be allowed to return to their former religious worship.

This was refused, on the ground that their conversion was voluntary. To which it was replied that if voluntary, there was nothing to apprehend on the part of Russia from the concession; if otherwise, no concordat could be entered into without this concession.

Southern Telegraph.—We understand that the posts for the southern line of telegrph are up all (or nearly all) the way to New Orleans, and that the wiring is in pregress from New Orleans and from Charleston, S. C. It is expected that the line will be in operation to the latter point, if not farther south, by the 1st of December: and it is hoped that New Orleans will be able to communicate with Quebec some time in January next. Some delay has occurred from the sickness of those engaged in building the line, and the same causes may somewhat, though not seriously, retard its completion.—*Union.*

Legislative.

THURSDAY, Nov. 11.

SENATE.—Bill to amend the charter of the city of Buffalo ordered to a third reading.

Resolutions to adjourn laid over to the 23d inst.

Bill passed to abolish the office of County Superintendent of Common Schools. To establish Teachers' Institutes. To aid Clinton Prison. Relating to fees of County Clerks.

HOUSE.—Bill to reduce fare on Railroads from Albany to Buffalo—reported against.

Petition for bridging over Genesee Valley Canal in Rochester.

Bill reported authorising Buffalo Orphan Asylum to sell lands.

Bill reported to Charter Buffalo City Hospital. Appropriation of $5,000 struck out.

Bill relative to publication of Session Laws passed to a third reading. It gives publishers this year $100—next year the publication in newspapers to be stopped, and a volume of Session Laws to be placed in each School District Library.

Bill to release prior lien on Berkshire Railroad, and to relay track with heavy rail. Passed.

A few more election returns have been received from Louisiana, but nothing definite. As far as heard from 10 Whigs and 14 Democrats have been chosen to the Legislature. Nothing has been heard from the 3d and 4th Congressional Districts.

SINGULAR CEREMONY.—*Stockholm, Sept.* 27. The day before yesterday the obsequies of the late Count Rosenblad, lord of the kingdom, and formerly Minister of Justice, took place. The funeral procession was composed of eight hundred persons, among them the King, the Prince Royal and others of the nobility who went to the Church where they were present at the funeral services. After the officiating priest had thrown three shovels full of earth on the coffin, Count Beskow, Grand Marshal of the Count, mounted on a staging and announced in a loud voice, that since the deceased had left no direct or collateral descendant for his successor, and consequently his family and name were extinct, he would proceed to the breaking his armorial bearings. Immediately a small table of marble was placed before the Grand Marshal, on which was placed an escutcheon in crystal, on which was painted the arms of the Rosenblad family. A herald brought and handed a hammer to the Grand Marshal, and M. de Beskow struck a blow with it on the escutcheon, which was immediately broken and fell in pieces to the earth. This act finished the ceremony, and the numerous assembly retired.

MARRIED.

On the 6th inst. by Selah Barnard, Esq. Mr. DEXTER COBB, of Tonawanda, and Miss CELIA DEMING, of Utica.

By the same, Mr. CHARLES S. CASTLE and Miss LYDIA DOWNS, both of Oneida co.

By the same, Mr. SAMUEL VINE, of Buffalo, and Miss MARY JANE WEBSTER, of Alden.

In Rochester, on the 10th instant, by Rev. S. B. Shaw, Mr. DANIEL BALDWIN, of this city, and Miss ANN M. PALMER, of the former place.

DIED.

This morning, 13th inst., EMILY JANE, eldest daughter of John and Jane Sage, aged 5 years and 9 months.

On the 15th inst., HARRISON TEFT, son of Charles and Olive Teft, aged one year and eight months.

This morning, 16th instant, ELIZABETH, daughter of William and Jane Kennedy, aged 5 years.

REEVES AND CARNER,

DRAPERS AND TAILORS, Nos. 274 and 276 Main street, (Kremlin block, up stairs,) Buffalo.

GEORGE H. READ,

BLANK BOOK MANUFACTORY AND BOOK BINDERY, Commercial Advertiser Buildings, 161 Main Street, Buffalo. Over the office of the Daily Commercial Advertiser.

Blank Books of all descriptions ruled and bound to any pattern.

Periodicals, Music Books, Newspapers, Magazines, Old Books, etc., carefully arranged and bound in every variety of style, and at moderate prices. Ladies Albums, Port Folios, etc., made to order. n2

NEW PUBLISHING HOUSE AND WHOLESALE BOOKSTORE.

The subscribers beg to inform Booksellers, Buyers and dealers in Books, and all interested in education and literary advancement, that they have recently opened an extensive Book and Stationery Establishment. Their assortment of Books in the various departments of literature is complete and well selected; comprising a full assortment of School and Classical Books in general use, Law, Medical and Theological Books, in great variety. Their facilities as Publishers enable them to offer Books on as favorable terms as most of the Eastern Houses. Orders from the country solicited and promptly answered.

Citizens and the public generally are invited to call and examine Books and Prices, where will be found the one progressive principle "Small Profits on numerous Transactions."

DERBY & HEWSON,
a7 No. 191 Main Street, Buffalo.

BUFFALO MUSICAL INSTITUTE FOR YOUNG LADIES.

At the residence of Prof. W. R. Coppock—Composer and Teacher of the Piano Forte, Organ, Singing and Composition.

An institute devoted exclusively to Musical Education is not yet common in this country; but in Europe the test of experience fully shows its great advantages over the too general superficial manner in which this important part of polite education is acquired. The advantages this institution offers to those desirous of completing their studies as Organists or practical players of the Piano Forte, together with a thorough system of imparting the same to others is fully established by the many precedents of the past 10 years. The pupils are constantly guarded in their practice, against all bad habits, and from the various stages of progress they may be in, are continually stimulated to effort and industry, by association with each other. The family too, are all players, and the theory is amusingly discussed, impressing its rules in a more pleasing manner, and more lasting upon the understanding, than by the mere dry study of an elaborate book. Music is composed and arranged from time to time, showing the various styles and harmonies analytically, and adapted for performance on several Pianos at the same time. This teaches a thorough knowledge of counting, and dividing passages into their given time. Vocal music is particularly attended to, and when the pupil has a moderate share of talent, we hesitate not to say, a correct and pleasing singer can be made. The Piano Fortes used are all new, and of the finest quality, and every endeavor will be given to render the true spirit with us profitable. The building is commodious, and has a fine garden attached, with Green houses, Bathing rooms, &c., and is pleasantly situatuated in Seventh street, between Niagara Street, and the Falls rail road, and about midway to Prospect Hill.

Terms made known upon application at the Institute, or by mail, post paid, directed Prof. Coppock, Buffalo.

Prof. Coppock, keeps constantly a choice selection of Piano Fortes for sale.

Buffalo, August 3, 1847.

CHEAP CASH BOOK STORE.

The subscriber, dealer in Books and Stationery, at 188 Main Street, 4 doors above Seneca, keeps constantly on hand, an extensive stock, embracing the most valuable selections from Ancient and Modern Literature—and a general variety of Theological, Classical, Gift and School Books, &c., &c. The Amateurs of Knowledge and all interested in the purchase of Books or Stationery are respectfully solicited to call. Print and Cap Paper at wholesale.

Buffalo, April 20, 1847. F. W. BREED.

JEWETT, THOMAS & CO.

PUBLISHERS,

COMMERCIAL ADVERTISER BUILDINGS

MAIN STREET, BUFFALO.

Steam Press of Jewett, Thomas & Co.

WESTERN LITERARY MESSENGER.

VOLUME IX. BUFFALO, SATURDAY, NOVEMBER 27, 1847. NUMBER XVII.

For the Western Literary Messenger

The Messenger Dove.

FROM THE FRENCH OF BERANGER.

The wine sparkled bright, and the maid I adored
Sang the Gods who of old had in Hellas their seat:
And we told how old Greece in our France was restored,
When all sudden descended a dove at our feet.
My Nœris a billet descried 'neath his wing;
To some hearth-stone beloved were its tidings address;
Drink, faithful bird, from the cup which I bring,
And slumber in peace on my Nœris's breast.

Too long was his flight, and exhausted he lies;
Haste quickly his freedom and strength let him prove;
Say, if on some message of commerce he flies?
Or waft to young beauty the warm vow of love?
Perchance to the nest which allures his fond wing
He bears the last prayer of some exile unblest:
Drink, faithful bird, from the cup which I bring,
And slumber in peace on my Nœris's breast.

From some words of the billet full well do I deem
That 'tis destined for Greeks who sojourn 'neath our sky;
A letter from Athens! and glory its theme!
Quick, read it: 'tis ours by our blood's sacred tie.
Athens is free! how the tidings shall ring!
How her laurels again in fresh beauty be drest:
Drink, faithful bird, from the cup which I bring,
And slumber in peace on my Nœris's breast.

Athens is free! fill the goblet again!
New heroes, the God-like, appear in her clime:
All trembling with age, did old Europe in vain
Disinherit those sons of her glorious prime.
Greece triumphs; all bright from the dust see her spring;
In the shade of past glories no more shall she rest:
Drink, faithful bird, from the cup which I bring,
And slumber in peace on my Nœris's breast.

Athens is free! Muse of Pindar, again
Take the sceptre and harp which of old were thy right:
Athens has burst the barbarian's chain:
Athens is free in our sovereign's despite.
By the nations, that drink from her wisdom's pure spring,
Be the glory of Athens in Paris confest:
Drink, faithful bird, from the cup which I bring,
And slumber in peace on my Nœris's breast.

Bright wanderer from Hellas's beautiful shore,
Here rest thee awhile, and then fly to thy love;
And soon wafted back to thine Athens once more,
Let her tyrants and vultures be braved by the Dove.
To the tottering throne of each bigoted king,
Bear the shouts of a people whom freedom hath blest:
Drink, faithful bird, from the cup which I bring,
And slumber in peace on my Nœris's breast.

HAMILTON, N. Y. A. C. KENDRICK.

WAR.—It would have proved a striking part of a vision presented to Adam, the day after the death of Abel, to have brought before his eyes half a million of men crowded together in the space of a square mile. When the first father had exhausted his wonder on the multitude of his offspring, he would then naturally inquire of his angelic instructor, for what purposes so vast a multitude had assembled? what is the common end? alas! to murder each other—all Cains and yet no Abels!

Alexander H. Everett.

The last steamer from Europe brought intelligence of the death of the Hon, Alexander H. Everett, American Minister to China. The event took place at Canton, on the 29th of June last. Funeral honors accordant with the official position of the deceased, were paid to his memory by the foreign residents. The English burial service was read by the resident clergyman of the established church, and the cannon of a French vessel of war boomed over the waters, as his body was conveyed to the island cemetry; the flags of all the ships in the harbor were displayed at half-mast, a long procession of boats with muffled oars moved slowly towards the shore, and volleys of musketry were discharged above the grave. As the representative of a distant nation, the memory of the departed received these appropriate honors. It was fit they should be paid; and the unanimity and respect manifested by the foreign authorities and residents of Canton, on the occasion, is worthy of grateful recognition. There is, however, another and not less deserved tribute due to the character and abilities of Mr. Everett, and one that should be the more readily accorded from the very fact that in this country we are so apt to estimate our prominent citizens merely by their official career or external success. The claims of Mr. Everett to the affectionate remembrance of his friends are of a more intrinsic kind, and we cannot but record, however imperfectly, our humble testimony to his liberal sympathy, intelligent companionship, and uniform kindness.

A brief sketch of his life, however, is essential to a just appreciation of his character. Alexander Hamilton Everett was born in Boston, on the 10th of March, 1790. He graduated at Harvard, with the highest honors, in 1806. The year following he taught at Exeter Academy, and then became a student of law in the office of J. Q. Adams. It was at this time that, as a member of the Anthology Club, his first literary efforts appeared. In 1809 he accompanied Mr. Adams in his mission to Russia, and passed two years—chiefly devoted to the modern languages and politics, at St. Petersburg. On his return to the U. States, he was appointed Secretary of Legation to the Netherlands, and in 1818 succeeded Mr. Eustis as Charge d'affairs at that post; and in 1825 he was appointed Minister to Spain. In 1829, on his return from this mission, he became editor of the N. A Review. From 1830 to 1835 he was Senator or Representative in the legislature of Massachusetts; in 1831 a delegate from that State in the Convention at Baltimore, which nominated Mr. Clay for the presidency; in 1833 a leading member of the Tariff Convention in the city of New-York, and prepared the memorial which it addressed to Congress in reply to one written by Mr. Gallatin for the Free Trade Convention. For several years past he acted with the Democratic party. In the winter of 1836 he visited Cuba as confidential agent of the Government and was afterwards elected President of Jefferson College in Louisiana, an office which ill-health soon obliged him to relinquish. He was appointed Minister Plenipotentiary to China, and sailed in a national ship on the fourth of July,

1845. On his arrival at Rio Janeiro, he was so ill, that despairing of recovery, he returned to the United States, but in the course of the ensuing year his health was so far restored, as to enable him to resume the voyage—alas, only to breathe his last just as he had established himself at Canton.

The diplomatic services and political course of Mr. Everett, we think, were the result more of necessity than inclination. By nature he was eminently fitted to seek his enjoyment in literature and society. Indeed, his taste for general knowledge and speculative philosophy rendered professional life ungenial, and he undoubtedly prized his foreign missions chiefly on account of the opportunities they afforded him for literary culture. This is evident from the assidnity with which he pursued a course of reading on Chinese history and civilization during the interval between his first and second voyage. But a more striking and pleasing indication of his love of literature for its own sake, or rather for the good of which it is the agent is manifested by the cordial support he rendered all who struggled worthily for its honors, and the evident satisfaction it afforded him to impart the result of his own studies and thoughts to others. He extended the hand of encouragement to the young and difficult aspirant for mental triumphs; he gracefully unfolded his stores of wisdom to intellectual women, and spared no pains to aid the researches and promote the views of his countrymen who toiled in the fields of scholarship and poetry. While minister in Spain he invited Mr. Irving to Madrid, and obtained for him access to the public archives, whence he derived materials for his Life of Columbus and other works. He also essentially aided Prescott and Longfellow in the same way. It was, indeed, a habit with him to take a ready and effective interest in all those devoted to literature and art, or intent upon self cultivation, especially if they labored under discouragements. His eloquent defence of Greenough's Statue of Washington against the indiscriminate abuse it at first suffered, and his sketches of the life of Harro Harring, undertaken in order to call attention to his claims, are among recent instancee of the kind But many of the most valuable are enshrined in the grateful recollection of individuals, whose intellectual bias his personal intercourse confirmed or whose noble but insolated pursuits he sustained by his pen and his counsels. Mr. Everett has been a prolific, although desultory writer. His first work, entitled "Europe, or a General Survey of the Political Situation of the Principal Powers, with Conjectures on their Future Prospects," was published at London and Boston, in 1821. It was translated into German, French, and Spanish, and the German Version was edited by Professor Jacobi, of the University of Halle. His interest was excited by the theories of Malthus, and he has written extensively and ably on the subject of Population. He also put forth a volume on America, upon the same plan as that on Europe. But perhaps the most satisfactory reflection of Mr. Everett's personal tastes and intellectual power, is to be found in his miscellaneous writings. These have the advantage of having been written at periods when business and political anxieties were laid aside. The subjects of them were voluntarily chosen. They embody the fruits of his reading and observation; and suggest the natural play of his sympathies. Many of them are marked by great soundness of thought and others have a genial tone and speculative interest. Several of his public addresses are equally felicitous. We recall especially, one on German literature, giving a very lucid exposition of its rise and characteristics, and another on the Age, in which some beautiful allusions to Burke and Byron occur. Most of Mr. Everett's Essays appeared in the North American, Quarterly and Democratic Review. They exhibit remarkable versatility and extensive information. His papers on French literature—especially on the Female writers, are very agreeable. He excelled in giving a complete and harmonious impression of an historical epoch or a personal biography. Some of his translations are very effective. Two volumes of these miscellanies have appeared within two or three years past; and there are abundant materials for several more. If many of the articles thus collected had been first published in the Edinburgh or Foreign Quarterly—they would have doubtless been gathered into volumes long since, and become as popular reading as the miscellanies of English Reviewers, which are so eagerly sought. Perhaps now that death has removed their author from the influence of political prejudices, and that familiar and native contact which seems to dampen the zeal of American appreciation, a more general attention will be given to the literary remains of Alexander H. Everett. For ourselves, it is with melancholy pleasure that we revert to the urbane and intelligent spirit of his intercourse. Ambition had not sealed up his acquirements and thoughts for the exclusive furtherance of personal aggrandizement. His was emphatically a liberal mind—expansive and rich through varied studies and travel, and attractive from its self-possessed, yet courteous expression. Though "by strangers mourned," his services have endeared him to his country, and by numerous friends his memory will be cherished with lasting and affectionate respect.—*Literary World.*

From Blackwood's Magazine.

Capricious Visitations of Fortune.

In a very amusing collection of French anecdotes, there is a good story told of a capricious visitation of Fortune, which came—where Fortune does not often play her more amiable tricks—to a miserable poet, releasing him at once from poverty and his jaded music. We regret to be obliged to tell the story from memory. We ought to have preserved the book, if only out of gratitude—for it was the most pleasant travelling companion, the best fellowship for a diligence or steamboat, we remember to have encountered. But the market-price of the small paper-bound volume (such was the shape in which it came to us) was so little—it being one of those editions which the journalists on the continent often print to distribute gratis to the subscribers to their journal—that no pains were taken to preserve it.—Very absurd! We print books so cheap, that the book loses half its value: it is bought and not read; or read once, thrown aside, or destroyed.

Poor Dubois was one of that unhappy class, which we are given to understand is dying out of Europe, (we hope for the sake of suffering humanity that this is true;) of that class which we in England used to call Grub-street poets. He *flourished* at the time of the empire, and had been flourishing during the whole of the eventful period that preceded the elevation of Napoleon. Poor Dubois had alternately applauded and satirized all parties, and written songs for all sentiments; but had extracted very little either of praise or pocket-money from any of the reigning powers, whether republican or imperial. He was quite in despair. Still young in years, but with worn-out rhymes, he was lamenting one day to his sister his melancholy and hopeless fate. This damsel was in the service of Pauline, the sister of Napoleon. "Write me a sonnet,"

said she, "about Pauline, and about beauty, and let me try what I can do." A beautiful sonnet, and a sonnet about beauty, are two very different things. Dubois made nothing of his task, but did it out of hand: his sister took the sonnet with her.

It was not long before she had an opportunity in her capacity of *femme de cabinet*, of speaking to Pauline about her brother the poet. She produced her sonnet about beauty. Pauline did not exactly read it; no one but the writer, and a few afflicted friends, and those heroic souls who do things to say they have done them, ever do read sonnets; but she glanced her eyes down the rhymes, and saw her own name in harmonious epithets. Therefore she asked what she could do for the poet—what it was he wanted? Alas! everything! was the prompt and candid reply—some little post, some modest appointment.

Now it happened that Fouche at that time was doing his best to conciliate the fair Pauline, who, with or without reason, had shown a little humor against the minister of police. He had frequently entreated her to make use of his power in favor of any of her friends. "Well," said the good-natured Pauline, "this Fouche is always plaguing me to ask for something; give me my desk."

A lady's pen upon the smoothe vellum—you know how fleetly it runs and what pretty exaggeration of phrase must necessarily flow from it. The style, the very elegance of the note, demands it. Dubois was in an instant, and most charmingly converted into a man of neglected genius and unmerited distress. What was the happy turn of expression is lost to us forever; but as Fouche read the note, he understood that there was a man of talent to be assisted, and, what was still more to the purpose, an opportunity of showing his gallantry to Pauline.

The next day the minister rode forth in state accompanied by four mounted *gens-d'armes*.—Following the address which had been given him, he found himself in one of the least inviting parts of Paris, far better known to his own myrmidons of police than to himself. But, arrived before the enormous pile of building, which was said to enclose our poet amidst its swarm of tenants, he made vain inquiries for Monsieur Dubois. At last an old crone came to his assistance: she remembered him; she had washed for him, and had never been paid. If you do not wish to be forgotten by all the world, take care there is some one living to whom you are in debt.

Meanwhile Dubois, from his aerial habitation, had heard his own name pronounced, and looking out at window caught sight of the *gens-d'armes*. For which of his satires or libels he was to undergo the honor of prosecution, he could not divine; but that his poetical effusions were at last to bring him into hapless notoriety, was the only conclusion he could arrive at. That he was still perfectly safe, inasmuch as write what he would nobody read, was the last idea likely to suggest itself to the poet. He would have rushed down stairs, but steps were heard ascending. So much furniture as a cupboard may stand for, the bare walls of his solitary room did not display. There was nothing for it but to leap into what he called his bed, and hide beneath his blankets, always presuming they were long enough to cover both extremities at once. The minister undeterred by the difficulties of the ascent, and animated by his gallantry towards Pauline, continued to mount, and at length entered the poet's retreat. Great are the eccentricities of genius, and lamentable the resources of pride and poverty, thought Fouche, as he gently drew the blankets down, and discovered the dismayed Dubois. Some conciliatory words soon relieved him of his terror. The awful visit of the minister of police had terminated—could it be credited!—in an invitation to breakfast with him next morning.

Judge if he failed in his appointment; judge if he was not surprised beyond all measure of astonishment, when the minister politely asked him whether he would accept so trifling a post as that of commissaire-general of police of the Isle of Elba, we know not how many hundreds of francs per annum, with half a year's salary in advance, and all travelling expenses paid. The little condition was added that he must quit Paris directly, for the post had been too long vacant, and there were reasons which demanded his immediate presence at Elba. How he contrived to accept with any gravity, without a broad grin upon his face, can never be known. He would certainly have bounded to the ceiling; but by good fortune, or happy instinct, he had convulsively clasped his hair with both hands, and so anchored himself to the ground.

Off he started the very next day, happier than Sancho Panza, to the government of his island; for his post virtually constituted him the governor of Elba. Nor was the stream of his good fortune half exhausted. For immediately on his arrival he was appealed to for a decision, between two rich and rival capitalists, both desirous of undertaking to work certain mines lately discovered in the island. One offered him a large share in the future profits; the other a large sum of ready money. Our governor decided for the ready money.

When a gallant man renders a service, he does not run and proclaim it immediately. Fouche allowed a few days to transpire before he waited on Pauline. He then alluded to the appointment he had made; he hoped she was content with the manner in which he had provided for her client, Dubois.

"Dubois! Dubois!" said the lady, "I know of no Dubois."

The whole affair had entirely escaped her memory. Fouche assisted in recalling it.

"Oh, true!" she said, "the brother of my chambermaid; well, did you give him any little employment? What did you make of him?"

Fouche saw his error, bit his lips, and let the subject pass.

That very evening a messenger was despatched to recall Dubois—and home he came; but "with money in both pockets"—a little capital of solid francs. Poet as he was, the man had sense; he did not spend, but invested it, and the revenue enabled him to assume the life and bearing of a gentleman. We leave him prospering, and to prosper.

It is said that Fouche did all he could to keep this story secret. But Pauline discovered the truth, and was malicious enough to disclose it to Napoleon, who more than once jested his minister on his governor of Elba.

Dogmatism.—Maintain a constant watch at all times against a dogmatic spirit: fix not your assent to any proposition in a firm and unalterable manner, till you have some firm and unalterable ground for it, and till you have arrived at some clear and sure evidence—till you have turned the proposition on all sides, and searched the matter through and through, so that you cannot be mistaken. And even where you think you have full grounds for assurance, be not too early or too frequent in expressing this assurance in too peremptory and positive a manner, remembering that human nature is always liable to mistake in this corrupt and feeble state.—*Watts.*

Solution of a Great Geographical Problem.

The Montreal *Herald* of Saturday last contains an article that will be read with the liveliest interst, by the friends of Geographical Discoveries in this country and Europe, on account of its setting at rest the great geographical question of the existence of a Northwestern passage from the Atlantic to the Pacific ocean. For the first time sine the discovery of America, its northern shores have been surveyed, and the precise limits of this continent fully and finally estab ished. This work has been performed under the auspices and instructions of the Hudson's Bay Company. The *Herald* in giving the evidence of this, prefaces it with an interesting sketch of the long agitated question, now happily solved, and a short abstract of the several steps in the exploration of the coast, as follows:

The cause which, at first, led to the attempts to discover a northwestern passage from the Atlantic to the Pacific, was the hope that, through it, would be found a short and convenient route from Europe to India—the jealousy of the Spaniards and Portuguese, having blocked up, as it were, from the English and Dutch, their great rivals in commerce, the routes by the Cape of Good Hope and the Southern Pacific. The discoveries, however, of Frobisher and Davis in the reign of Queen Elizabeth, and of their successors, while they failed in ascertaining the existence of the wished-for passage, abundantly satisfied the world, that, even it ultimately discovered, it would be found, from its vicinity to the north pole, and its being continually encumbered with ice—utterly useless for the purpeses of navigation. The settlement of the great geographical question continued, notwithstanding, to interest the world of science, and its determination has, within late years, called forth the utmost efforts of the British Government. In 1818, an expedition was sent out to Baffin's Bay, under the command of Capt. Ross, which resulted in his disbelief of the existence of any passage. His second in command, Lieutenant Parry, had, however, come to a different conclusion: and on returning with a new expedition, succeeded in penetrating into the Polar sea, through Lancaster sound. He there found a chain of large islands lying parallel to the American coast; and among them continued his navigation, until stopped by the accumulation of ice in the straits and channels through which he had to pass. This circumstance induced him to make his next attempt by Sir Thomas Rae's Welcome, a channel running from Hudson's Bay. He here also found a narrow strait communicating with the Polar Sea, but so encumbered with ice as to preclude the hope of its ever affording an open passage. He renewed his efforts, but without success, by Lancaster Sound. The obstacles which he had formerly been unable to overcome, still continued, and prevented him from making any material addition to his former discoveries. While these, so far successful, voyages were in progress, Capt. Franklin was sent out at the head of two successive expeditions by land, and, by actual survey, ascertained three-fourths of the Northern boundary coast of America; his operations terminating at a point beyond the 149th degree of West longitude. On the other hand, an expedition under Capt. Beechy, sent to meet Capt. Franklin on his second toilsome journey, passed the Icy Cape of Cook, and penetrated nearly as far as the 156th degree of West longitude, leaving nearly seven degrees, or 160 miles, between the farthest point thus reached from the West, and the utmost limit reached by Capt. Franklin, from the East. In the summer of 1837, Messers. Simpson and Dease, officers of the Hudson's Bay Company, surveyed the coasts between the points reached by Captains Franklin and Beechy, and, in the following summer, 1838 and 1839, having reached the Polar Sea, from the interior, by the Copper Mine River, continued their survey of the coast up to the 86th degree of west longitude, a point previously visited by Capt. Back. From thence they were forced, by the advanced season, to return to their winter quarters on the Great Bear Lake. The only portion of coast then remaining unsurveyed, was that between Simpson and Dease's extreme East point, and Parry's Straits of the Fury and Hecla; and, but for Mr. Simpson's disastrous death in 1840; he would have been entrusted with the command of the expedition, the successful result of which, is stated in Mr. Rae's letter.

The results of all these explorations and surveys, would appear to prove that—with the exception of Captain Ross's peninsula of Boothia Felix, with stretches as far North as seventy-four degrees of latitude—the Northern coast of America extends, from the Atlantic to the Pacific, in a line not varying much from the parallel of the seventieth degree of latitude; and that, the existence of a naval passage, in the line of Captain Parry's first voyage, is all but demonstrated.

We need scarcely add, that whatever benefits may accrue to science and navigation from these important discoveries, will be, in a great measure, due to the enlightened liberality of the Hudson's Bay Company,—at whose expense these latter expeditions have been carried on,—and to the intrepidity, perseverance and self-devotion of their officers.

Following this is a letter from Sir George Simpson, Governor of the Hudson's Bay Company, dated Red River Settlement, June 15,1846, and addressed to John Rae, Esq., informing him that the grand object of the expedition placed under his direction, is to complete the Geography of the Northern Shore of America, by surveying the only section of the same that has not yet been traced, namely, the deep bay, as it is supposed to be, stretching from the western extremity of the Straits of the Fury and Hecla, to the eastern limit of the discoveries of Messrs. Dease & Simpson.

The rest of the letter is devoted to instructions as to the manner of proceeding, objects to which attention should be turned, police regulations of the expedition &c. The following extract will show the purposes designed to be subserved beside the solution of the geographical problem sought:

You will do your utmost, consistently with the success of your main oject, to attend to botany and geology, to zoology in all its departments, to the temperature both of the air and of the water, to the condition of the atmosphere and the state of the ice, to winds and currents, to the soundings as well with respect to the bottom as with respect to depth, to the magnetic dip and the variation of the compass, to the aurora borealis and the refraction of light. You will also, to the best of your opportunities, observe the ethnographical peculiarities of the Esquimaux of the country; and in the event of your wintering within the

arctic circle, you will be careful to notice any characteristic features or influences of the long night of the high latitudes in question

The following is the brief report made by Mr. Rae on his return after successfully accomplishing the objects of the expedition. The publication of his full report with his journal embracing the daily observations he was directed to make, will be awaited with much interest:

York Factory, }
Hudson's Bay, Sept 10, 1847. }

Sir George Simpson:—

Sir,—I have now the honor to acquaint you that the expedition which left Churchill under my command, on the 5th July, 1846, for the purpose of completing the survey of the northern shores of America, reached this place in safety, on the 6th instant.

Having already written you by way of Red River, and enclosed an outline of my discoveries, I shall merely mention here that, I reached Repulse Bay on the 25th July, last year, and immediately had a boat taken across land, and through Lakes, to the sea, west of Melville Peninsula. The ice here was too closely packed for us to make any progress, so that I determined on returning to Repulse Bay, and making preparations for wintering. A stone house was built, measuring 20 feet by 14, and covered with oil cloths as a roof: there being no wood, some moss and a sort of heather we collected for fuel; and 162 deer were shot before November was ended, when all these animals had passed southwards.—Our house was frequently cold enough, the thermometer being sometimes 10 deg. or 20 deg. below zero.

On the 5th of April I started with a party, and traced the coast up to Lord Mayor's Bay of Sir John Ross, thus proving that veteran discoverer to be correct in his statements. Boothia Felix is part of the American Continent. This journey occupied us until the 5th May, and we had traveled about 560 geographical miles. I again set out with four chosen men, on the 13th of the month, (May) and, after undergoing much fatigue and suffering, and some privations, we traced the west shore of Melville Peninsula to within 6 or 8 miles of the Fury and Hecla Strait. We arrived at winter quarters on the 5th June, all in good health and spirits, but much reduced in flesh. From this time until the 11th August, when the ice broke up, we were all busily occupied in procuring the means of existence, and in making preparations for our homeward voyage. We took leave of our dreary home, and of our Esquimaux acquaintances, on the 12th August.—Our progress southward was much impeded by contrary winds, so that we did not enter Churchill River until the 31st. We had still 8 bags of Pemican, and 4 cwt. of flour on hand. Being detained here two days, we did not arrive at York Factory until late in the evening of the 6th Sept., where my sudden appearance somewhat surprised my friends, who had not expected to see me so soon.

As I intend going to England by the ship, I shall do myself the honor of addressing you more fully from London.

With the utmost respect,
I remain, Sir,
Your most obedient servant,
(Signed, JOHN RAE.

Russia and Austria.—The Emperors of these two countries have forbidden all persons to erect Magnetic Telegraphs, unless by their special permission.—*N. Y. Tribune.*

The Western States.

We seldom see any thing in the North American Review more lively in description or more truthful and encouraging in sentiment, than the following from a review of Burnett's Notes on the Northwest:

Upon the surface of the earth there is no land which ought to be more interesting to us than the vast and wealthy realm which lies upon the Mississippi and its tributaries. The dead or dying hero is no more worthy of our regard than the new born infant. Beyond the Alleghanies is to be tried the great question of our age and race—that of self government as we call it, or more properly, the question whether we can and will submit ourselves to the government of God.—There is a Pagan Democracy, which looks to real self-control, or, in other words, no control at all, which demands its own rights, and aims at nothing higher than happiness; but there is also a Christian Democracy, which bows to the Controller of all, looks to the right of others and its own duties, and aims at justice, truth, and God's kingdom among men. Upon those Western prairies, among those Western "knobs," along those winding rivers, and by the side of the countless little water courses and "dry runs" of that vast valley are the rival spirits of Heathen and Christian Democracy to contend for supremacy; already the battle is begun.

And what a battle-field! From the Alleghanies to the Rocky Mountains, from the frozen lakes of the North to the tepid waters of the Gulf of Mexico! Every soil, every climate, every variety of surface. Of all the great products of the world, coffee is the only one which does not, or may not, grow there. Take the people of Britain, Ireland, France, Holland, Germany, Italy and Spain, and place the whole in the valley beyond the Appalachians, and it would continue to ask for "more." Ohio alone, without sinking a pit below the level of her valleys, could supply coal equal to the amount dug from the mines of England and Wales for twenty-five hundred years: and Ohio is but a pigmy, in the way of bitumen, compared with Western Pennsylvania and Virginia. Iron abounds from Tennessee to Lake Erie, and forms the very mountains of Missouri and Arkansas. Salt wells up from secret storehouses in every Northwestern State. Lead enough to shoot the human race extinct with is raised from the great metalic dikes of Illinois and Wisconsin. Copper and silver beacon all trusting capitalists to the shores of Lake Superior. And mark the water-courses, the chain of lakes, the immense plains graded for railroads by Nature's own hand, the reservoirs of water waiting for canals to use them.—Already the farmer far in the interior woods of Ohio or Indiana may ship his produce at his own door to reach Boston, New York, Philadelphia, Baltimore, or New Orleans, and every mile of its transit shall be by canal, steamboat, errail-car.

What a land is this for Democracy to try her hand in! How different from the hard, rough Attica, where the olive tree, the peasant's cow and pig combined in one, clung to the fissured rock century after century, yielding its butter and lard: where the humming swarms of Hymettus were instead of the sugar cane, and pastures and fields, and ease and plenty were not tempting men to sloth and neglect. Is not the very wealth of the West to be its ruin? Can virtue and self-control exist without hard labor and struggles?—And can labor be the characteristic of a land so reeking with abundance?

Let us enter that land, and choose its most typical State, Kentucky; let us look at its towns, its people, its inner history, and see what light we can gather to aid us in a Yankee guess at the time to come. We leave the Ohio valley: we ascend the hills, if those deserve the name which are only "elevations of depression," the ridges left where the water has gullied the plain;—how rounded, how feminine the landscape! Over the gentle undulations, symmetrical as the bust of Venus, the ripening wheat, the rising corn fields, spread to the shadow of the emerald maple boughs or the feathery beeches. The blue sky softens in the distance into a hazy, sleepy white; the tulip tree, left alone in the pasture, lifts its branchless trunk seventy or eighty feet heavenward, and the broad, glossy leaves twinkle and wink in the sunbeams; the cattle lie dozing, only their molar teeth wakeful; the pigs are deep in the mire by the brook-side; a gaunt horse, dragging after him at the plough-tail an unwilling negro, walks between the corn-rows, trampling, not eradicating, the weeds; through the open door of the farm-house, as you pass, you may see the mistress *lazing* in her easy chair: when you reach the town before us, you may find her helpmate talking politics at the tavern door.

And now we come upon the town, the county seat. How old it looks! Nature so young and vigorous, and this poor place so decrepit and halt! The stone house at the corner has not a whole window in it, and the chimneys look more ancient than the Pyramids; the hewn log dwelling to the left totters and reels as if the steaming bar room next door kept it perpetually half drunk; the hotel itself, red, and brick, and brazen, is the symbol of impudence and brutality,—of that Heathen Democracy whose life-blood is whiskey, and whose breath is oaths.

Let us join the group round the old gentleman, who, with his chair in the street, his feet on the window-sill, his left hand in his ruffled shirt-bosom, and his cud in his cheek, is laying down the law, pointed off with spurts of tobacco juice. These men, common as they look, are not common men; lazy as they appear, leaning against the shoulder polished door posts, they are full of energy and ability. Such men as these won the battle of Buena Vista, and will rule the world if they choose to. Here is one, hard featured and stern, with full veins and a complexion like half tanned ox hide, who would, like Harry Daniel of Mount Sterling,* murder the brother of his wife and see her go crazy, and yet walk his way with an easy conscience, or at any rate the pretence of one. Next to him sits a man who could wage war with the human race for a lifetime and enjoy it; a man of the Middle Ages, with all the vices of feudalism and all those of our money seeking age combined. He has made his fortune by hunting up invalid titles, purchasing and prosecuting the legal claim, and turning the innocent holder to the dogs. And yet at home no one is kinder, more thoughtful, almost self-sacrificing. Send him to Mexico and humanity is capable of no crime from which he would turn, or at which he would shudder. Take him to Boston and his manner will be as pleasing as his conversation will be original. Search his pockets and you will find a plan for defrauding a neighbor of his farm, a most affectionate letter to an absent daughter, a bowie knife, and Paradise Lost.

Beyond him notice that face. How clear the eye, how confident the mouth, how strong and firm the chin! If he speaks you will hear a voice like the Eolian harp, pouring forth words of such sweetness that the bees might cling upon his lips. If he moves it is the Indian's motion, quiet and strong as sunlight. In his mind the Higher Democracy is forming itself a home: and amid the low contests of politics, he will be, unconsciously, acting as the messenger of the great Friend of man. Another comes by with a quick, springy step, as if with ankle joints of India rubber: he stops, joins in the discussion: words pour from his tongue more rapidly than the ear can drink them: he looks round, his eye all seriousness, and his mouth all smiles; men catch his idea, though they cannot his syllables, and their nods show that he has hit some nail on the head. That man, slight as a girl, might be safely trusted to lead any corps in any battle: and yet in his life he never struck a blow. Go for ten miles round, inquire in any household, and you will hear of him as the kind adviser, the steadfast friend, the unostentatious helper; many a son has he saved from the gambling table, the race course, or the deadly duel, begun with rifles and finished with knives; and he, too, is a child of the soil.

Now consider, that, while the murderer and the victim of assassination become known to you through the press, the virtues of the patriotic politician or the village philanthropist make no noise in the world. Believe us, also, that, while the towns and taverns of these Western States, reeking with tobacco and whiskey, are symbols of the evil Democracy of our land, and the bullies and cut-throats, the knaves and robbers, are its true children; and though you might, on first looking at such a society as you may see in almost any Western town, think anarchy was close at hand, yet are the villages ever improving, the taverns themselves growing more decent, and anarchy is going farther and farther away. Remember that this Kentucky was settled by men perfectly their own masters; no government, no religion, no police, no restraining power of any kind, save the voice of God in their own breasts. Remember that among them were the most reckless, unprincipled, and bloodthirsty of human beings. Remember that for twenty years this population, thus gathered in anarchy, was demoralized by a border warfare, full of atrocities on both sides. Call to mind, that, without attachment to the Union, the people of Kentucky were courted by Spain, France and England, and were more than once nigh severing themselves from the Atlantic States, And when you have recalled these things, observe how out of anarchy† has come a regular and untroubled governmen ; out of indifference or antagonism to the Union, a true dvotion to it; and ont of a population scarce cognizant of law, a society which, even in its excesses and violation of statute, aims, however blindly, to obey the law of justice and public good. To understand the West, you must remember that it is socially a youth, in a state of transition, to be compared rather with England under the Plantagenets than with England now. You find, consequently, strange mixtures of statute law and lynch law, of heathen brutality and the most Christian excellence, of disregard for human life and self-forgetting philanthropy. But amid all the confusion, you may find evidence, we believe, that the Higher Democracy, the rule of God, is advancing.

* Henry, commonly called Harry Daniel, of Mount Sterling, Montgomery country, Kentucky, shot his brother-in-law in open court, March 5th, 1845. Both were, in wealth and standing, among the first men of the neighborhood. Daniel was acquitted, and is now again a leader in his district.

† This is not too strong a term: in 1776, George Rogers Clark called the people together to take measures to procure a recognition of their existence by Virginia, or to set up for themselves; there was then absolutely no government. [See Butler, Marshall, Morehead, or Clark's own Journal, in Dillon's *Indiana*, i, 125, &c.]

TAKING THE VEIL.—Early on Sunday morning last, the chapel of the Sacred Heart, at Baltimore, within the walls of the institution, was crowded to overflow, principally by females, all anxious to witness the ceremonies of taking the veil. At about nine, Miss Mary Josephine Smith, of that city, with Miss Annie Lawrence, of Frederick, the two candidates entered the church, accompanied by Miss Margaret Ellen Holbrook, in the capacity of bridesmaid. They were all dressed in pure white, with jewels, and a veil falling over the head and shoulders, similarly to the usual array of a bride for the altar.—Indeed, seldom were viewed more youthful and happy countenances under the bridal veil than those about to enter the cloister. They took seats among the audience, and, at about 10 o'clock, high mass was sung, and the sacrament of the communion was administered to the noviciates.

Rev. Mr. Donelan delivered the sermon, taking for his text the 28th, 29th and 30th verses of the 11th chapter of Matthew:—"Come unto me all ye that labor and are heavy laden," &c.

* * * * *

After sermon, the curtains hanging on the right of the altar were drawn aside, and the private sanctuary of the institution was visible in its whole extent through the gratings of the cloister. In a few minutes a procession of nuns, some with black, and others with white veils, each bearing a lighted taper were observed approaching along the balcony outside of the interior of chapel, headed by the Abbess. They approached the door leading to the altar, which was thrown open, when the two noviciates arose, and entering the altar, accompanied by the bridesmaid, were received by Archbishop Eccleston and led by him to the door, where the nuns were in waiting to receive them. They there kneeled down, and were received and raised by the lady Abbess, when the door closed. They then approached the grating on the interior side and kneeled, when the Archbishop questioned them as to their names, and whether they had presented themselves after due consideration, and of their own free will and accord as candidates for holy orders. They replied, in clear and distinct voices, that they had duly considered the step they were about to take, and had approached the altar of their own free will and accord, with a firm intention to live up to the vows and duties of their holy calling.

They then retired into an ante-chamber, and in a few minutes returned, arrayed in the garments of the sisterhood, apparently shorn of their hair and all outward ornaments, with their heads bound in the bands of the order, but with no veils on. Each of them bore in her hands a lighted taper on a staff, and approaching the grating, again kneeled. The Archbishop, accompanied by the Rev. Messrs. Donelan and Carberry, again approached, and after going through the service ordained for the occasion, christened Miss Smith as Sister Alberti, and Miss Lawrence as Sister Rose of Lima, by which names they will hereafter be known among the sisterhood. They were then invested in the mantle of the order, and a white veil thrown over each of their heads After kneeling at the interior altar on either side of the Lady Abbess, they passed around and saluted each of the numerous sisters arranged along each side of the interior chapel, all closely veiled, and each carrying a lighted taper in her hand. The two noviciates then approached the railing, and by a nod of the head bid a general adieu to the hosts of friends who had assembled to witness the ceremony, when they all retired to the interior of the convent, with the same solemn tread and manner with which they had previously entered.—*Baltimore Sun.*

☞ As it is confidently stated that Father MATTHEW intends to visit this country next spring, the following account of him when at home may be read with some interest. It is taken from "Travels in Ireland by an American Lady":

His house is quite plain; the hall-door is fastened open from six in the morning, till the same time in the evening, saying to the citizen and stranger, "ye are welcome." The carpet of the hall is loose straw, and a woman sits at the entrance to receive and point the visitor to the room on the right, where the "rich and poor meet together," to take the pledge, or spend a leisure half hour, to watch the movements, and listen to the salutary cautions and words of kindness from the lips of this devoted man. My letter of introduction had been given him some months before in a crowd, when he had only opportunity to say, "I will see you in Cork."

"Why did you not come to me when you first came to the country; you knew I would have taken care of you?" was the greeting he gave, when I entered.

The room is entirely devoid of ornaments, except the papers pasted upon the wall, as cautions to the intemperate. Benches are arranged about the room for those in waiting, on one of which, in an obscure corner, I took my seat, and saw the lame and deformed, the clean and the filthy, the well-clad and the tattered, kneel and take the pledge, and enter their names in a book, which the clerk who registers them said counted five millions and four thousand. To the meanest beggar he speaks as kindly as to the titled gentleman, and to the suffering I often saw him slip a little change, bidding them depart, and not disgrace him by breaking the pledge.

He invited me to dinner at five o'clock, and his dining-room wore the same unassuming appearance, as does everything about him—no carpet, no sofa, and not an appendage but what was absolutely necessary. His table is arranged in the most finished order, and the cooking, which is done by a man, is of the best kind. He seldom dines alone.

SPIRIT OF PUBLIC IMPROVEMENT.—On the occasion of lighting St. Louis with gas, that improvement was made a text by the papers of that city to lecture their readers on the subject of their want of public spirit in reference to works tending to benefit their city. St. Louis appears to have prospered from the natural advantages of her position, unassisted by the combined efforts and enterprise of her citizens. The following remarks by the *Republican* of that city have a local reference, but they indicate also the general course to be pursued in every city aspiring to greatness:

While, all around us, other cities, towns and districts, are marching forward, and availing themselves of the improvements of the age—securing to themselves the mastery and control of the trade and commerce of the surrounding country—opening up new avenues to enterprise and individual and collective wealth—we are standing still—not moving even in the rear of the great moral, political and social advancement of the age. We have neither turnpikes, railroads or telegraphs, and if we had not the Mississippi river, we should have nothing. That we have the wealth, none can deny—that we want the spirit of the age, and that this is in a great measure engendered by the stinted and narrow policy of our State, few will question, who look soberly and candidly at the subject. But as a city and a community, we should rise above the narrow policy which has, for years past, controlled the State Legislature, and seek to infuse a different and more liberal spirit. Let us push into the interior, in every direction, works of internal improvement, thus drawing to ourselves additional wealth and benefits, and thereupon the cloud will be dispersed from other sections. Those who are now blind will begin to see, that their policy is adverse to their own welfare—a more liberal spirit will be engendered, and the whose country benefitted.

NAVIGATION CLOSING.—The packet boat companies have withdrawn their night lines on the whole length of the canal.—*Utica Gazette.*

For the Western Literary Messenger.

To Nelly Grey.

BY THEODORE C. WHEELER.

The merry little warbler to which the following song was reciprocated, is a small grey bird that built a snug little cottage in the green branches of a gooseberry bush near the door of my humble dwelling, and became, shortly after depositing within her nest five exquisitely spotted snow drops, the gay, and perfectly happy mother of five children. This bird is almost the only one that comes familiarly to our door steps in this country in search of crumbs. Not knowing the correct name of the bird, I have taken the liberty to term it Nelly Grey. We have Robin Redbreasts, and Jenny Wrens, and may have Nelly Greys.

O more than I can tell,
Do I love thee Little Nell!
In search of seed or crumb,
Morn and evening thou dost come,
With timid wing and fleet,
Even to my very feet;
Lifting up thy bright black eye,
With a glance half bold, half shy,
Ever ready, Nelly Grey,
With thy prize do dart away.
With a look grotesquely bold,
How fiercely thou dost scold,
When thy frown thou aimest at
Thine enemy the cat!
In the "merry month of May,"
Thou art gayest of the gay;
But most in sunny June,
I do love to hear thy tune.
From every tuft of grass,
I start thee as I pass.
Every bough of maple tree
Is vocal with thy glee!
And I trace thy tuneful speech
To the branches of the beech,
That leans above the brook,
In an old romantic nook,
Half sunshine and half shade,
By sylvan fairies made!
The birds are poets, Nell,
Of forest, field, and dell.
Then listen, warbler gay,
To a brother minstrel's lay.
Thou happy sinless thing,
All day upon the wing,
In search of dainty food,
To sustain thy helpless brood,
If I were to injure thee,
A curse would wither me.
Dear Nell, what bliss is thine—
Emotions how divine!
Five little helpless things
Repose beneath thy wings.
O joy all joy above,
To watch o'er those we love,
And danger from them keep,
When their eye-lids close in sleep!
Thou,dost lull them into rest,
With the heavings of thy breast.
No peril do they fear,
When thy well known voice they hear,
Warbled from the green old thorn,
Where thou sittest all the morn.
The song that to them floats,
Hath meaning in its notes;
And unto them doth say,
As plain as language may—
"Be hushed—my pretty dears,
Dismiss your silly fears—
For she who loves you most,
Is ever at her post.
And O, her heart will break,
If evil overtake
The little happy nest,
Where her helpless darlings rest!"

Cobourg, Canada West.

Rural Department.

HORTICULTURE.—We cannot but consider the attention recently awakened to this branch of the fine arts, as marking an era in the civilization of our city. We have been behind half the Union in this respect until now; and there seemed but little hope that, in the rage for business, and the wild race for gay and expensive pleasure, a taste so natural, simple and true, should have its gentle claim acknowledged. The results of the recent proceedings of the Horticultural Society, show that there are at least a few cultivated people among us, to whom Nature's lead seems worth following. Under such auspices, we may expect soon to see an elegant emulation in floriculture, taking the place of less refined and refining pursuits. Especially is it pleasant to observe that the gentlemen to whose taste and enterprise we owe the new movement, have invited ladies to share with them the pleasant duty of awarding certain of the premiums. This is drawing the right sort of influence about the undertaking. The title of "Japonica-dom," will be peculiarly appropriate when every lady raises her own Japonicas, and when the emulation is, who shall produce the most exquisite varieties.—*Mrs. Kirkland.*

FOOD FOR MILCH COWS.—At a large milk establishment near Newcastle, England, the cows are fed in the following manner. "Ninety-one pounds of clover hay, (cut or chopped,) one hundred and sixty-eight pounds of brewer's grains, twelve pounds of ground flaxseed, two pounds of salt, are mixed together, and equally divided, as the daily food for twelve cows. The hay, after having been cut, is put into the mash tub, and scaled with boiling water. The other articles are then mixed with it. It is stated that a good cow, thus fed, will yield an average of fourteen quarts of milk per day, eight months in succession.—The owner of the establishment, Mr. Arundale, stated that he had a calf for two years and a half, that was giving an average of eight quarts per day. A great point observed is, that the cows never fall off in condition.

TO KEEP APPLES FOR WINTER.—Put them in casks or bins, in layers well covered with *dry* sand; each layer being covered. This preserves them from the air, from moisture, and from frost; it prevents their perishing by their own perspiration their moisture being absorbed by the sand; at the same time it preserves the flavor of the apples, and prevents their wilting.

A MATTER OF INTEREST TO FARMERS.—A case was recently decided in Vermont, which goes to establish this position: The purchaser of a farm has a claim on the manure made on the farm, and remaining in or about the barn at the time of the sale. The case decided was that of a purchaser of a farm in Vermont against a tenant, who piled up the manure made during the winter, in the barn, and moved it before his tenancy expired.—The county court gave judgment for the defendant; but the higher court reversed the judgment on the ground that manure made from the produce of a farm was appurtenant to the freehold, and must pass with it; and that the fact the manure was piled in the barn with the intention of removing it, would not effect the plaintiff's right to the manure, unless the defendant's intention was manifested by some act calculated to put the plaintiff on inquiry.

For the Western Literary Messenger.

Importance of the Development of Man's Three-fold Nature.

The education of the young has been, and is now, too exclusively intellectual. Mind has been treated as if its manifestations were entirely independent of the conditions of this brittle clay in which it tabernacles; as if indeed it were the all of man. The great laws of physical being have been unknown or disregarded. The *body*, on whose condition the *mind* is, in a great measure, dependent for its own, has been left to neglect and premature decay:—the *casket* has been destroyed in an exclusive endeavor to polish the *gem* it enclosed. The development of the tender bud has thus been urged beyond the measure of physical endurance, and early death, the legitimate result, has crowned the parents' hopes.—This, and this alone, is the mysterious fatality, which, in the opinions of the superstitious, cuts down the gifted child. The affections, the holiest part of our nature—the moral sentiments, upon whose proper development and activity depends the true dignity of human character, have been left to dwindle and die, in the fatal and paramount importance which has been given to intellect.—And the result has been what all should have foreseen:—a fearful prevalence of moral disease—many Napoleons, but few Howards! many Byrons, but few Cowpers:—monsters of mind, who, like ill-omened stars, have shot athwart the sky, dispensing *light*, and *misery:* to each of whom the self-drawn portrait of the bard may well apply:—

> "A wandering mass of shapeless flame,
> A pathless comet and a curse,
> The menace of the universe,
> Still rolling on with innate force.
> Without a sphere, without a course,
> A bright deformity on high,
> The monster of the upper sky!"

Such has been the effects of this system of partial training:—mighty but unbalanced intellect, whose light has too often been obscured by vice and crime. Such have been many of the world's great; great, not in the elements of good, but of mischief to their race; not in the benefits they have conferred, but in the miseries they have inflicted. It is for the teachers, to discard this partial system, which has produced so many moral and physical dwarfs, and by the application of one more general, to bring out and perfect the whole man—to unfold simultaneously, and in equal degree, his three-fold nature—to lop off its present redundancies, to supply its deficiencies, and to build up a model of faultless proportions, which shall be the standard stature of the race.

His is the great business of moulding the manners of the young. And the first great requisite in this, as in all else that pertains to his vocation, is, that he know and practice himself what he volunteers to impart to others; for without a practical indorsement of our precepts, they will avail but little more than those of the fabulous crab, who rebuked her offspring for its backward movements. Let us heed the moral. There is no more successful method of teaching the young than by example. I allude not now to the conventional rules of modern society, many of which have little claim to the deference or respect of its members; originating in weakness or design, and adopted by those, who, to use a homely phrase, are far more nice than wise. Modern politeness has indeed but little adaptation to our nature. It consists in an iceberg formalism, which checks the hearts best impulses, and chills the blood of youth in its warm and sympathetic flow; in stereotyped phrase, the cold coinage of the brain, mortised and framed together with all the speciousness of art; in automaton movements; bows, that test the elasticity of whale, and the strength of starch; in smiles, whose lunar light plays around the lips alone. Such is not the model which teachers themselves should copy, or after which they should mould the manners of their pupils. It is but a system of popular hypocrisy, sanctioned, it is true, by the obsequiousness of public sentiment, but not, on that account, the more authoritative, or the less objectionable. There is a nobler model; set up, not by modern folly, not by our own erring wisdom, but based upon that God-originated rule: "Whatsoever ye would that others should do unto you, do ye even so unto them."—A rule which should be applied not the *business* merely, but to *all the intercourse* of life. Let us demonstrate its practicability by making it the great standard not only of honesty, but of etiquette. Let us aim to inscribe it on the hearts of the young intrusted to our care. Let us teach them that genuine politeness has its seat in the *heart*, and manifests itself, not in studied forms of action or of speech, not in cold and unmeaning courtesies, but in the display of habitual kindness toward all; and that he only is master of true etiquette, who has a word of assurance for those that fear, and of comfort for those that mourn; a hand to relieve the poor; and a heart, which, in its warm out-goings, takes in the universality of his race. L. P.

Female Society.—Without female society, it has been justly said, that the beginning of man's lives would be helpless, the middle without pleasure, and the end without comfort. The celebrated D'Alembert makes a reflection that does honor to the female sex and to his own feeling:—

"We are, in a peculiar manner," says he, "in want of the society of a gentle and amiable woman when our passions have subsided, to participate in our cares, calm and alleviate our sufferings, and enable us to support our infirmities.—Happy is the man possessed of such a friend! and more happy still if he preserve her, and escape the misfortune of a survival."—*My Daughter's Book.*

Volcanic Eruption in the Alleghanian Chain.—The Mountain (Ga.) Eagle asserts that, from one of the high peaks of Look-out Mountain, on the 19th ultimo, a terrible volcano burst forth with a violent shock.

Condition of Ireland.

Sending the Irish Nation a begging over the globe for meat and drink, is, to our minds, the most cruel and ineffective way of relieving their wants. The source of their evils lies lower than the potato rot, and to pass round the hat over half of the Western Continent for the relief of a British province, which is suffering from political mismanagement, is to tamper and quack with a disease that cries out to be cured. Our duty, it seems to us, is to help make the soil of Ireland support the children of Ireland. Let the Irish have a chance at their own fruit-bearing earth. Let us give them something beside the dangerous right to appeal to charity—a right full of peril to the pride, the self-reliance, and the industry of any people, but specially dangerous to a people to whom long familiar want and wrong have made mendicancy easy. Let us give the Irish the privilege of maintaining themselves by their own labor, striving to secure to them access to the waste and uncultivated lands of their beautiful Island.

The following extract is from the Dublin *Nation*, one of the ablest and most influential papers published in Ireland:

We spit upon the English Charity.—Cordially, eagerly, thankfully, we agree with the *English Times* in this one respect—there ought to be no alms for Ireland. It is an impudent proposal, and ought to be rejected with scorn and contumely. We are sick of this eternal begging. If but one voice in Ireland should be raised against it, that voice shall be ours. Tomorrow, over broad England, Scotland, and Wales, the people who devour our substance from year to year, are to offer up their canting thanksgivings for our "abundant harvest," and to fling us certain crumbs and crusts of it for charity. Now, if any church-going Englishman will hearken to us; if we may be supposed, in any degree, to speak for our countrymen, we put up our petition thus: Keep your alms, ye canting robbers—button your pockets upon the Irish plunder that is in them—and let the begging box pass on. Neither as loans nor as alms will we take that which is our own.—We spit upon the benevolence that robs us of a pound and flings back a penny in charity. Contribute now if you will—these will be your thanks.

Educate for Happiness.—It is a curious phenomenon in human affairs, that some of those matters in which education is most potent, should have been almost the least thought of as branches of it. What you teach a boy of Latin and Greek may be good; but these things are with him but a little time of each day in his after life. What you teach him of direct moral precepts may be very good seed; it may grow up, especially if it have sufficient moisture from experience: but then again, a man is, happily, not doing obvious right or wrong all day long. What you teach him of any bread-getting art, may be of some use to him as to the quantity and quality of bread he will get; but he is not always with his art. With himself he is always. How important, then, it is, whether you have given him a happy or a morbid turn of mind; whether the current of his life is a clear wholesome stream, or bitter as Marah. The education to happiness is a possible thing—not to a happiness supposed to rest upon enjoyments of any kind, but to one built upon content and resignation. This is the best part of philosophy. This enters into the wisdom spoken of in the Scriptures. Now it can be taught. The converse is taught every day and all day long. —*Friends in Council.*

American Tract Society.—This noble institution is in the full tide of prosperity, so far as its efforts and energies are concerned. At a meeting of its Society's Committee on Friday, two Colporteurs were commissioned for New York city, one for the Ferries and Steamboats, and one for Virginia; two for Alabama; one for the German population of New Orleans; two for Texas, and two for Tennessee. They are members of six different Christian denominations. It appeared, at the meeting, that the Society is greatly in need of funds to carry forward its noble work and steadily increasing enterprises. Between 200 and 300 Colporteurs now depend upon it for their support; and the gratuitous publications issued to poor families amount to about $2,000 a month. The Colporteurs on board the Ferry Boats and Steamers is a new experiment, and is designed to meet, and so far as possible, counteract the pestilential publications which are constantly thrust into the face of the travelling public. It is to be hoped that the wants of this noble philanthropic institution will not be disregarded, but out of the abundance of the prevailing prosperity it may receive its merited share of aid.—*Cor. Jour. Com.*

Our Bessie.

[The death of a child is a trite subject; but the following lines will not fail to commend themselves to the hearts of all bereaved ones, as both beautiful and true. They are from the pen of W. H. Burleigh—a true poet.]

Our Bessie was as sweet a girl
As ever happy mother kissed,
And when our Father called her home,
How sadly was she missed.
For, grave or gay, or well or ill,
She had her thousand winning ways,
And mingled youthful innocence
With all her tasks and plays.

How softly beamed her happy smile,
Which played around the sweetest mouth
That ever fashioned infant words;
The sunshine of the south,
Mellowed and soft, was in her eye,
And brightened through her golden hair;
And all that lived and loved, I ween,
Did her affection share.

With reverent voice she breathed her prayer,
With gentlest tones she sung her hymn;
And when she talked of heaven, our eyes
With tears of joy were dim.
Yet in our selfish grief we wept,
When last her lips upon us smiled;
O! could we, when our Father called,
Detain the happy child?

Our home is poor, and cold our clime,
And misery mingles with our mirth;
'Twas meet our Bessie should depart
From such a weary earth.
O! she is safe—no cloud can dim
The brightness of her ransomed soul;
Nor trials vex nor tempter lure
Her spirit from its goal.

We wrapt her in her snow-white shroud,
And crossed, with sadly tender care,
Her little hands upon her breast,
And smoothed her sunny hair.
We kissed her cheek, and kissed her brow,
And if aright we read the smile
That lingered on the dear one's lips,
It told of heaven the while!

Editorial Department.

J. CLEMENT, EDITOR.

YOUNG AMERICAN'S MAGAZINE.—The fifth number (for November) of this two-monthly magazine, is the best issued. The first article, "The Romance of Rascality," is a discriminating dissection of the criminal-calender literature of the day, and is worth half the price of the number.—Scarcely less valuable is the article on "Head-Work and Hand-Work," which we commend to the consideration of the reader. Indeed, there is not an article in the number which is not worthy of a re-perusal. J. R. Lowell and D. H. Howard contribute each a poem, and here is one by the editor, Mr. Light:

GO AHEAD.

When your plans of life are clear.
Go ahead,
But no faster than your brains:
Haste is always in the rear;
If dame Prudence has the rein
Go ahead.

Do not ask too broad a test:
Go ahead;
Lagging never clears the sight;
When you do your duty best,
You will best know what is right.
Go ahead.

Never doubt a righteous cause:
Go ahead;
Throw yourself completely in:
Conscience shaping all your laws,
Manfully, through thick and thin,
Go ahead.

Do not ask who'll go with you;
Go ahead:
Numbers! spurn the coward's plea!
If there be but one or two,
Single handed though it be,
Go ahead!

Though before you mountains rise,
Go ahead:
Scale them? certainly you can:
Let them proudly don the skies:
What are mountains to a Man!
Go ahead.

Though fierce waters round you dash,
Go ahead;
Let no hardships baffle you:
Though the heavens roar and flash,
Still, undaunted, firm and true,
Go ahead.

Heed not Mammon's golden bell:
Go ahead;
Make no compromise with sin:
Tell the serpent he looks well,
But you cannot let him in,
Go ahead.

Better days are drawing nigh;
Go ahead:
Making duty all your pride,
You must prosper, live or die,
For all heaven's on your side,
Go ahead.

"THAT OLD ARM CHAIR.—Being at Chicago a few weeks since, at the time when the mechanics of that noble young city were holding their first annual Fair, we availed ourself of the opportunity, to examine some of their workmanship. The number of articles exhibited was not large, but they showed that the West was not destitute of skilful artizans; and the Fair, being the first of the kind in that part of the country, was very commendable. Among the articles, we noticed, as an oddity, a chair, neatly covered by Miss—somebody, and having attached to it a label signifying that it was more than two hundred years old. It looked like an ancient settler, or rather an aged stranger in a new country and a great way from home. It is in a robust condition, "well to do," not needing—*arms*. It must be "*that* old arm chair."

THE EDUCATOR is the name of a well-looking monthly periodical, published at Chicago, Ill., by J. L. ENOS, and devoted mainly to education. Such a work ought to be circulated extensively in the West.

THE NOM DE PLUME is all the rage since "Fanny Forester's" wonderful and partially puff-begotten popularity. Almost all our exchanges contain original poetry by some sweet Laura Linton, Mary Myrtle, Cara Clayton, Belle Beaufort, Grace Gooseberrybush, and so on to the end of the nomeclature of poetical names. It was flat enough in Miss Clarke to butterfly herself in "Grace Greenwood"; and when a legion of rhyming larva undertake to fly off to literary glory in this way, it is—why, it is sickening; and that is all we have to say about it.

DR. GRISWOLD'S WRITINGS.—Says the Literary World: We understand that Bartlett and Welford, of this city, have received an order from the Emperor of Russia for ten copies of Dr. Griswold's two octavos upon the Prose and Poetry of America, to be placed in the public libraries of St. Petersburg and Moscow.

A BEAUTIFUL THOUGHT.—We clip the following scrap from the last number of the Lockport Democrat, It is found in a basket full of "Odds and Ends" by our Royalton correspondent, "J. H. B."

"Chilling is the impression of the first Autumn snow storm on the sensitive heart, which sympathizes with the flowers, into whose bosoms the snowy flakes fall so *light—yet so cold*. Yet, again and again are they warmed into dew drops of refreshing fragrance, and thus ever seems the mission of the flower, a ministry of love. It teaches the trusting heart that thus the trials of life become blessings, purifying and ennobling it;—and when chilled into seeming death, there is the promise of the resurrection morning folded in each sleeping bud, and a prophecy of spring-time hidden in the root, which clings to life, and waits the genial season.

Miss Pardoe in her *Louis the Fourteenth and the Court of France in the Seventeenth Century*, a work which we have frequently noticed, speaks of a peculiarity in the picture-galleries of that country, which is that of introducing sable faces into the most elaborate portraits, and accounts for it in this way. The African king of Arda sent as a royal present to Louis, a tiger, a panther, and two lions; and to the queen, a golden pheasant, which possessed the wonderful faculty of laughing like a human being, and a Moorish dwarf above ten years of age, whose height was not over twenty-seven inches. Of this dwarf Miss Pardoe observes:

"The queen, delighted at the new plaything with which the African envoys had provided her, caused the dwarf to be richly habited in the costume of his country, and covered him with jewels; after which she employed him to bear her train as she passed from one apartment to another, and derived great amusement from the liveliness of her pigmy attendant, who frequently diverted himself by suddenly stopping, and thus impeding her own progress, in burying his head and face in the folds of the train to excite the mirth of the courtiers. All these antics, which differed so widely from the habitual monotony and ceremonial of her existence, were a source of continual delight to Maria Theresa, who retained the Moor constantly about her; and he was perpetually to be seen in her apartment, either gambolling upon the rich carpet, or perched upon the bureau, or seated on the sofa, or even upon the very lap of his royal mistress.

"Instantly it became the fashion among the great ladies of the court to have Moorish dwarfs to carry their trains: and from this caprice short as was its vogue, arises the fact that Mignard, Le Bourdon, and other high-cast painters of the time, have introduced negro boys into their pictures."

☞ The Mt. Savage Iron Works embracing the land and machinery of the company, together with all the personal property, and the railroad, were sold by the sheriff, a few days ago, under executions issued upon judgments, against the company.

These Works constituted one of the most extensive establishments of the kind in the United States. The original proprietors were, we believe, Englishmen, who owning a large tract of land in Cumberland county, Maryland, abounding in Coal and Iron, thought to turn their property to the best account by entering largely into the iron business. All their appointments were on a grand scale, their salaries were of the most liberal character, and for a while every thing went on swimmingly. But expenses soon began to eat up profits, the Company got into difficulties and the sale by the sheriff is the result. The Cumberland *Civilian* says:

The purchasers of the property are gentlemen of capital and wealth, and practically acquainted with, and some of them heretofore, and at present, largely engaged in, the manufacture of iron in its various branches.

The whole amount of the purchase exceeds $200,000. The purchasers were Messrs. Corning & Winslow of Albany, New York, and Mr. J. M. Forbes, of Boston, Mass. We feel authorised to congratulate the entire community upon the fortunate change thus made in the prospects of the works.

We understand that with the change of proprietorship of the Mount Savage Iron Works, there will also be a change of name. The company will hereafter be called the "Lulworth Iron Company," under an act of incorporation passed by the last legislature.

Rev. Mr. McCarty, one of the chaplains of our army, delivered a thanksgiving sermon in the Capital of Mexico on the 30th of October, in response to the general order of the Commander-in-Chief. He reminded his hearers that the responsibility of the war rested not with the country but with the constituted authorities of the country, and spoke of the uniform success which has attended our arms as a ground of especial thanksgiving.

He instances also as peculiar grounds of gratitude, the character of their commander, who has felt and avowed his responsibility to God,—the preservation of the army from sickness, the results of the battles, &c. &c., and concludes thus:

"Then let us conclude by praying God that as soon as we shall have finished our tour of duty in this land, and a just, and, as we may hope, a lasting peace shall have been made between our United States and those of Mexico, we may leave it and its influences so unfavorable to our piety and virtue; but leave it in good will towards its people, wishing them toleration, a purer form of religion, better and more stable Government."

Slavery in California.—The *Californian* of the 26th June, contains a strong article against the introduction of slavery into that territory. The editor says that the population are one hundred to one against it, and that the warmest advocates, after a residence of one year, become the strongest opponents to slave labor. He counsels the emigrants against bringing their slaves, and states that several who have done so have been glad to get clear of them on any terms. The strongest reason he urges against the introduction of blacks is the following:

In California we have an immense population of Indians, who were born on the soil, and have neither the disposition or the means of living anywhere else, and they are willing and capable of being good servants and laborers—they can work much *cheaper* than an American colored man, and can live at *one-fourth* of the expanse.

The editor is equally as strong an opponent of the free blacks, and he urges the necessity of laws preventing their emigration to the country. After stating a number of reasons against their settling in the territory, he says:

We have ten other good reasons, which we shall give hereafter, but we shall certainly use all the influence we may have to procure the passage of such laws as will effectually prevent them from settling among us, whenever there is a law-making power in California.

New Paving.—A new mode of paving has been substituted for the old mode. The stones are now placed two or thee inches asunder, and the intervals are choked with small gravel, thro' which asphalte is poured so as to render the whole impermeable to wet from above, and afrd a firm footing for horses.

Arrival of the Arcadia.

LIVERPOOL, Nov. 4.

Best western canal flour 29a29s 6d; Richmond and Alexandria 28a29s; Philadelphia and Baltimore 28a29s; N. O. and Ohio 26a27; U. S. and Canadian, sour, 21a23s.

U. S. wheat—white and mixed 7s 6da8s per 70 lbs; red 6s 6da7s 6d. Indian corn 30a35s per qr. Indian meal 14a15s 6d per bbl. Oats 2s 4da2s 10d per 45 lbs. Barley per 60 lbs, 3sa4s.

The arrivals of the English were in London last week; were a fair average scale, but the show of samples was small yesterday. Selected qualities of both red and white were in good request, but in all other kinds business trifling.

Before the day of departure of last Steamer, and for two days subsequently, Liverpool market was unusually dull and declining, owing to the pressure of heavy home arrivals with a limited demand, but a slight improvement in the money market on the 26th, imparted a better feeling, which was greatly stimulated by the advices received per Hibernia. Since then, prices steadily advanced to our present quotations, at which they continue firm. The demand for Indian Corn and Meal, for Ireland, have been remarkably brisk.

Cotton market had still a downward tendency, and was dull, consequence favorable advice of crop and reduced consumption caused by additional shutting up mills, and short working fair upland 5 1-8; Orleans 5 1-2.—*Courier.*

The dismal state of trade and money in this country, described in our advices per Caledonia, continued to exist, with unmitigated severity up to the 26th ult. When the Government yielded at last to the popular cry for succor, authorized the Bank of England, to depart from the Bank act of 1844—and to make advances on good security on sums of not less than £2000—at interest after the rate per cent.

A striking reaction at once took place in the funds Public confidence appeared to have acquired a fresh impulse.

Produce became in better demand, and the entire fabric of trade indicated returning strength and vigor. The accommodation, however, was found to be miserably disproportioned to the necessities of the public, and the result has been, within the last few days, that trade has almost wholly relapsed into the same state of torpor and alarm.

FROM THE MANUFACTURING DISTRICTS, particularly, the advices are of a most unsatisfactory nature: Many mills have ceased to work, and numerous others were working on short time—merely open from motives of humanity to the workmen, and to preserve the appearance of occupation.

It is therefore perfectly clear that the present cannot be ameliorated, if the Bank does not extend its accommodations. Meanwhile it is impossible to form any adequate idea of the fearful ruin which must overwhelm every department of trade.

Day after day, instead of dispelling, has but deepened the shadow of approaching calamity, which, though perfectly foreseen, cannot be averted, save by the interposition of the Government and the Bank.

Fresh failures, to an enormous extent, have taken place within the last fortnight, some of them the oldest establishments in the land, and all affecting, in a greater or lesser degree, various houses who have still continued to maintain their credit.

The funds which for some days following, the departure of the Caledonia had fallen to a point of depression beyond the recollection of any living man, have considerably revived, though suffering excessive fluctuations.

Monday is reported as having been a comparatively quiet day; the funds rising considerably. On Tuesday the fluctuations were very rapid: Consols opened at an advance of ¼ per cent,—the quotations for money being 81⅞ to 82⅛, from which point they slowly rose to 82⅜.

Some speculative sales immediately took place, when prices declined considerably. Yesterday the feeling was easier in the money market, and less unsteadiness was preceptible. Consols for money were quoted at 81½ to 89½, and 81⅛ to 82⅝ for account. Bank stock is worth 185½. Foreign stocks are merely nominal. Mexican Bonds have fallen to 15¼ a 16¼.

ENGLAND AND IRELAND.—The English Parliament will assemble on the 18th inst., for the depatch of business. The Pope's rescript has been received, condemning the proposed Roman Catholic Provincial Colleges for Ireland.—A feeling of universal sorrow and disappointment has been caused by it.

The Catholic Bishops of Ireland, have addressed the Lord Lieutenant, on the certain recurrence of the famine in the approaching winter.—He promises that Government will interfere for the preservation of human life.

SWITZERLAND.—The affairs of Switzerland are fast approaching a crisis. The belligerent forces are in view of each other and hostilities appear to be inevitable.

SPAIN.—A reconciliation has taken place between the Queen of Spain and her husband.—The late Minister of Finance, Senor Salamanca, is charged with a fraudulent issue of bonds to the extent of 160,000,000 reals.

ITALY.—The affairs of Italy are not yet satisfactorily adjusted. The emperor of Austria continues obstinate but does not seem disposed to take any aggressive steps.

The Hibernia arrived on the morning of the 28th after a run of 11½ days from Boston.

The Sarah Sands will not sail till January.

Correspondence of the Journal of Commerce.

WASHINGTON, Nov. 18th.

There is some reason to believe, according to what I hear to-day, that a treaty is about to be made, or has been made, with somebody in Mexico, which our commissioner, Mr. Trist, recognizes as a government, or rather, I should say that the administration cherish the belief, that they will receive a treaty of peace with Mexico, before or soon after the commencement of the session.

The treaty now talked of will probably embrace the States of New Leon, Coahuila, and a part of Chihuahua, in our limits, and the pecuniary compensation to Mexico will be increased.

Perhaps the administration, on this occasion, as well as heretofore, reckon without their host. But it is very likely that, Santa Anna having been deposed and denounced, the present provisional government might be induced again to negotiate, and perhaps to enter into a treaty.

Whether it will be in actual or mere paper peace, it remains to be seen.

In a letter written the next day the correspondabove quoted says:

In addition to what I yesterday stated, in regard to the prospects of a peace, I may now add

that, it is deemed probable that the government at Queretaro will send to the United States Commissioners to treat for peace.

The Commissioners will come to this city. with Mr. Trist, who has been recalled; but only remains for the purpose of executing some later orders, in relation to the proposed renewal of negotions.

I do not state the above as ascertained facts, but as the belief of some persons, who are likely to know what is going on.

The administration certainly expects a treaty, and very soon. Perhaps the treaty will be made here and its ratification required here, before it shall be sent to the Mexican Congress for ratification.

We give the above because the writer is a gentleman generally pretty well-informed, and not apt to give currency to rumors resting on mere gossip; but we shall put no faith in the reports of this character, until the fact that a treaty has been actually made is officially announced.

An Interesting Letter.

Notwithstanding, the mass of documents relating to the late battles in Mexico, recently published, we think our readers will be interrested in the perusal of the following graphic account of the battle of El Molino del Rey, one of the most brilliant of the many illustrious achievements of American arms. The letter below, written by Capt. H. W. Merrill of the 2d Dragoons, was addressed to his brother J. D. Merrill Esq., of Batavia, by whom it was furnished to the papers of that place, for publication. Few letters from the army have been written in better style:

TACUBAYA, MEXICO, }
Wednesday, 4 P. M., Sept. 8, 1847. }

MY DEAR BROTHER:—I have just returned from the battle-field, and as usual, am tired, hungry, etc; still, I will find time to drop you a line. The day has been a hard and bloody one, though another most glorious victory has crowned our arms. This morning, a few minutes after midnight, and after having had a short sleep, we were aroused from our slumbers to prepare for the events of the day. At 2 A. M. we were in our saddles and ready for the field. From this till 4 P. M. we were in waiting for the other columns to form, and when so formed all marched under cover of night and the stillness of the waking morn on to the battle field. Not a voice was heard nor a sound fell upon the ear as silently our little column marched on to the attack.—At five minutes to 5, and as the enemy's position was revealed to us by the first dawn of day, a heavy report from one of our batteries on the right told us that the action had commenced.—Casting my eyes in that direction I was struck with the grandeur and sublimity of the scene.—I shall long remember it. The occasion, the stillness, the calmness of the hour, the vivid flash, the thundering roar, the joyful echo, all gave it deep and additional interest. But *silently and slowly we continued our march*, still hearing no voice or sound from the unseen enemy. Soon this silence was broken, his batteries now opening upon our advancing columns His true position at once became known: only 300 yards separated us. To storm and carry his outworks was the first object, and accordingly the "*charge!*" sounded along our ranks. *Amid a thousand cheers which seemed not only to animate every heart with joy but to bespeak the glorious triumph of the day*, on dashed the storming column of 500 men, when, amid a shower of canister and grape and a torrent of musketry, they drove the enemy from their guns, captured all their pieces, and for a short time were masters of this position (the enemy's right.) But soon, from severe loss, they were near being overwhelmed by the successive hordes of the enemy pouring in upon this point, when the timely advance of our supporting columns, flanked by our cavalry and a battery of artillery, again turned the tide in our favor; from this position, also, while the infantry remained not only in possession of all they had acquired, but continued to drive, inch by inch, the enemy from his position among his works, the cavalry, assisted by two pieces of artillery, were actively engaged holding in check the large force of the enemy's cavalry with which our left was now threatened, and which seemed critically exposed to the charging column of at least 3000 lancers.

In this condition of affairs, and amid a deafening roll of musketry the action continued to rage, without cessation, for two hours and thirty-five minutes, when, at thirty minutes past seven, A. M., the enemy being driven from his houses and and from behind his breast-works, and exposed to our fire, commenced a retreat in the greatest confusion, to the neighboring corn-fields, mountains, woods, and to the city. *The battle was won! Three cheers now rent the air again; then three times three!* A portion of our troops gave pursuit, killing and wounding many. Their cavalry, seeing all lost, retired to the base of the mountain; and at 8, A. M., having no enemy to confront, we took possession of the battle-field and remained until 4, P. M., to give time to collect the dead and wounded. During this interval two of our heavy pieces and a few light troops were constantly engaged exchanging shots and ceremonies with the garrison of Chapultepec; the latter occasionally throwing a random shot among our ranks, which passed unheeded as the wind that whistled above our heads.

Thus has terminated the action of to-day—in future to be known as the battle of Molino del Rey. By the report enclosed you will perceive our regiment suffered largely, having lost in killed and wounded about 40 men and over 100 horses; and this from a command of about 270 men. My own horse was shot under me.

The battle has unquestionably been the hardest of the war. Our entire force in the field did not exceed 2500 men, of whom not over 2200 or 2300 were engaged. The enemy's force, with the strong reinforcements he received from the city during the night, amounted to from 12 to 15,000. But, to say the least, an army of 12,000 has been routed and driven from the field and from behind his entrenchments by less than 2500 men. On examining the ground one would almost pronounce it a miracle, and I am at loss to account for the truth except by believing, as I firmly do, that God has been with us from the beginning, and that we have the best troops in the world.

I cannot forbear noticing two touching incidents that fell under my observation:—Among the brave and good who have this day fallen was my friend Burwell, of the 5th Infantry. He fell early in the action from a wound in the leg. On the slight repulse of our troops he was inhumanly murdered by the enemy's lancers. His *faithful dog*, a beautiful pointer, had accompanied him there: he also was wounded During the action he became separated from his master. After it had subsided the noble form of Burwell, manly as in life, was discovered, and beside him and even licking his face and wounds was his poor

dog, who, regardless of his own pain, had sought his generous master in the hour of danger, and there, upon the same field, to die. This affectionate scene touched the hearts of many.

Again, after the fury of the battle was over, I saw a camp woman, of the infantry, who came upon the field to look for her husband. Almost frantic with despair she ran from one to another to enquire after him, but getting no information she immediately went to search for him among the slain. Passing from body to body she at length found him—dead. Kneeling over his corpse she endeavored to raise it, but finding life extinct she gave utterance to shrieks and lamentations truly touching to hear. Her all had fallen. She continued to remain on the field, (under fire of the enemy,) until his lifeless body was carried off, which she followed in the deepest grief.—Such is affectionate woman!

Rendering all thanks to the God of battles for his goodness to us, and praying for the welfare and happiness of relatives and friends at home, I remain, ever, Your affectionate Brother,

H. W. MERRILL.

Destruction of a Bridge on the Central Railroad, by Fire.—The extensive bridge over the Huron river, near the village of Scio, was on Tuesday afternoon, nearly destroyed by fire.—The fire was supposed to have been communicated by the falling coals dropping from some of the locomotives, that passed over it during the afternoon. The trains that left here in the morning, going west, all passed over it but the passengers on the train from the west, coming in, arrived there in time to witness the conflagration, and were detained about eight hours, arriving here yesterday morning, about 3 o'clock. The passengers were obliged to leave the train on the west side of the bridge—the locomotive and train on this side turning round and bringing them into this city.

The bridge was of the substantial lattice work, erected by the State, at an expense of $5000. It was about 300 feet in length, and, we understand, about 200 feet of it is entirely destroyed.—*Detroit Free Press.*

Wabash and Erie Canal.—We are gratified in stating that navigation on the Wabash and Erie Canal has been opened as far south as Lodi—the mouth of Coal creek, on this great State work. The canal boat Planet reached Lodi from Toledo on the 27th ult, and marks another era in the history of the progress of this canal. This lower division of the Canal, from Covington to Coal creek, making fourteen miles, has been finished and brought into use since the Canal passed into the hands and under the charge of the Board of Trustees, and brings Canal navigation to a point only thirty-six miles north of this place, and from that point to Terre-Haute, the *whole line* is under contract and the work in progress. In this connection we may state, that a large number of additional laborers could find work on this line during the ensuing winter, at fair wages and prompt *cash* payment.

Jesse L. Williams, Esq., authorises us to state, for the information of Produce Shippers, that they may safely rely upon having four feet water throughout the Canal from Lodi to the lakes, on the opening of navigation next spring.

We learn from the Perrysville, Eagle, that the arrival of the Planet at Lodi, was made the occasion of general rejoicing along the lower part of the line. Citizens from Perrysville, Eugene, &c., were on board—a handsome dinner was prepared, which was partaken of by ladies and gentlemen, and the day passed away in genera festivity. We hope the same spirit will be kept up as every section of the Canal is brought into use, until one grand army may meet to celebrate the union of the waters of the lake with those of the Ohio.

The winter stocks of merchandise intended for this place, which have been bought in New York, are all arriving by the Canal route, which must considerably increase its tolls, and as every mile is finished, more business will be added to the Canal; and when shipments from this part of the country are made *both* ways, the State will then feel the immense value of this great western work, and producers will realize a profit from their toils, to which they are now strangers.—*Terre-Haute Express.*

New York, Nov. 18—7 P. M.

A letter from Buena Vista of Oct 10th, says that a portion of Capt. Taylor's command had arrived, having in charge seven or eight prisoners, captured at the Hacienda of Yerba Buena, near Laventura, where the Mexican trader was robbed, and his goods found in possession of the two alcades of the place. During the night of the capture of the prisoners, an attempt was made by them to escape, and four were shot down.—Capt. Taylor also seized about 100 heads of cattle, horses and mules. One of their prisoners, a proprietor or lessee of Yerba Buena, is said to have been most active in furthering the plan of the guerillas, giving them assistance and disposing of their plunder, or receiving it from them. The people of Monclova had assumed a very hostile attitude, and the news of the capture of the Mexican capital had rather increased than allayed their hostility. The chief officer of the place refused to surrender on the order of Gen. Wool, the mules and horses taken from Mexican deserters, and said he should only obey the orders of his Government.

In Parras, a band of some 500 strong, are said to be advancing on the latter place, from the direction of Zacatecas, Seven Penons, belonging to Don Manual Abuaro, were recently killed, while they were at work in the corn field.

Accounts from Campeachy to the 21st ult. state that as usual that country is in a state of anarchy, one faction with Barbachano at its head, is in possession of the capital, and another at Campeachy, headed by Mendez.

The Mexican Spy Company that brought the dispatches from Gen. Scott, number 100, and are under command of Col. Bomanguest. They left Puebla on the evening of the 14th ult. and were attacked during that day by Torrijon, with a large force—and shortly after by Col. Vames. Their loss in the two engagements was but 15 men, whilst they killed upwards of 16 of the 150 attacking force.

Gen. Scott is said to have at least 450 of those Mexican Spies under his command.

Paredes says that Santa Anna issued orders for his (Paredes) arrest, imprisonment or expulsion from the country, but that the officer entrusted with the order was too sensible to execute it.

How to Learn the Value of a Dollar.—Reader, says a democratic paper, if you would learn the value of a dollar, go and labor two days in a burning sun as a hod carrier. This is an excellent idea, and if many of our young gentlemen had to earn all their dollars in that way, how much less dissipation and folly and crime would we witness every day. So of our fashionable young ladies; if they, like some of the poor seamstresses of our large cities had to earn their dol-

jars by making shirts at ten cents a-piece, how much less foolish finery would we see about them, and how much more truthful notions would they have of their duties of life, and their obligations to the rest of the world.—*Port Washington Democrat.*

BEAUTIFUL FENCES.—The following is a beautiful mode of making fences, practised in some parts of Scotland. A fertile and well cultivated country abounding in such fences, must present a picturesque appearance:

"It is a natural living fence, and consists simply of growing and planting for the purpose trees or shoots of the same species or of the same genus, and causing them to unite by means of the process of grafting by approach or inarching. A fence formed on this principle possesses many advantages over fence-work ordinarily employed, never requiring to be repaired on account of living wood resisting the action of weather, &c."

THE LABORER IS WORTHY OF HIS HIRE.—Man does not deal with his *brother* as God deals with *him*. HE causes the sun to shine and his showers to descend with equal profusion upon all. But in adjusting the rewards of labor, WE adopt no such equitable rule. We pay largely for the labor of the head; and little for the labor of the hands. We graduate the scale of the prices, not according to the utility or the actual severity of the labor; but the demand and the supply.—Hence, that class of mankind, laborers, being the most numerous class, are the worst paid people in society. We cannot control the laws of nature. Yet, this we may do, pay as liberally as we can afford for labor—common labor—the labor of the poor.—*Anon.*

☞ Gerrit Smith Esq., says the Madison co. Whig, has directed a letter to the Supervisors and Justices of the several towns of that county, requesting them to select seven unmarried, poor landless women, [a part or all of them may be widows,] to each of whom he proposes to give fifty dollars for the purpose of aiding them to purchase a home for themselves.

MARRIED.

In Croton, Tomp. Co., N. Y., Sept. 29th, by Rev. Wm. B. Downer, Doct. HIRAM NOE, of East Lansing, to Miss MARY ANN PECK, of the former place.

At the same place, Oct, 10th, by the same, MYRON GARDNER, of Skaneateles, to CATHARINE A. YOUNG of Moravia.

Also, Oct. 28th, by the same, RICHMOND DAVIS, to MINERVA C. HOWELL, both of Genoa.

On the 20th inst., by J. G. Dickie, Esq., Mr. BENJAMIN HIGGINS, and Miss MARY ANN MACKABOY, both of Troy.

DIED.

This morning, 23d inst., Col. N. VOSBURGH, in the 53th year of his age.

On the 22d inst., Mrs. LYDIA KENNEY, wife of Elijah Kenney, aged 56 years.

REEVES AND CARNER,

DRAPERS AND TAILORS, Nos. 274 and 276 Main street, (Kremlin block, up stairs,) Buffalo.

GEORGE H. READ,

BLANK BOOK MANUFACTORY AND BOOK BINDERY, Commercial Advertiser Buildings, 164 Main Street, Buffalo. Over the office of the Daily Commercial Advertiser.

Blank Books of all descriptions ruled and bound to any pattern.

Periodicals, Music Books, Newspapers, Magazines, Old Books, etc., carefully arranged and bound in every variety of style, and at moderate prices. Ladies Albums, Port Folios, etc., made to order. n2

NEW PUBLISHING HOUSE AND WHOLESALE BOOKSTORE.

The subscribers beg to inform Booksellers, buyers and dealers in Books, and all interested in education and literary advancement, that they have recently opened an extensive Book and Stationery Establishment. Their assortment of Books in the various departments of literature is complete and well selected; comprising a full assortment of School and Classical Books in general use, Law, Medical and Theological Books, in great varieties. Their facilities as Publishers enable them to offer Books on as favorable terms as most of the Eastern Houses. Orders from the country solicited and promptly answered.

Citizens and the public generally are invited to call and examine Books and Prices, where will be found the one progressive principle "Small Profits on numerous Transactions."

DERBY & HEWSON,
n7 No. 164 Main Street, Buffalo.

BUFFALO MUSICAL INSTITUTE FOR YOUNG LADIES.

At the residence of Prof. W. R. Coppock—Composer and Teacher of the Piano Forte, Organ, Singing and Composition.

An institute devoted exclusively to Musical Education is not yet common in this country; but in Europe the test of experience fully shows its great advantages over the too general superficial manner in which this important part of polite education is acquired. The advantages this institution offers to those desirous of completing their studies as Organists or practical players of the Piano Forte, together with a thorough system of imparting the same to others is fully established by the many precedents of the past 15 years. The pupils are constantly guarded in their practice, against all bad habits, and from the various stages of progress they may be in, are continually stimulated to effort and industry, by association with each other. The family too, are all players, and the theory is amusingly discussed, impressing its rules in a more pleasing manner, and more lasting upon the understanding, than by the mere dry study of an ordinary book. Music is composed and arranged from time to time, showing the various styles and harmonies analytically, and adapted for performance on several Pianos at the same time. This teaches a thorough knowledge of counting, and dividing passages into their given time. Vocal music is particularly attended to, and when the pupil has a moderate share of talent, we hesitate not to say, a correct and pleasing singer can be made. The Piano Fortes used are all new, and of the finest quality, and every endeavor will be given to render the true spirit with us profitable. The building is commodious, and has a fine garden attached, with Green houses, Bathing rooms, &c., and is pleasantly situatuated in Seventh street, between Niagara Street, and the Falls rail road, and about midway to Prospect hill.

Terms made known upon application at the Institute, or by mail, post paid, directed Prof. Coppock, Buffalo.

Prof. Coppock, keeps constantly a choice selection of Piano Fortes for sale.

Buffalo, August 3, 1847.

CHEAP CASH BOOK STORE.

The subscriber, dealer in Books and Stationery, at 168 Main Street, 4 doors above Seneca, keeps constantly on hand, an extensive stock, embracing the most valuable selections from Ancient and Modern Literature, and a general variety of Theological, Classical, Gift and School Books, &c., &c. The Amateurs of Knowledge and all interested in the purchase of Books or Stationery are respectfully solicited to call. Print and Cap Paper at wholesale.

Buffalo, April 20, 1847. F. W. BREED.

WESTERN
LITERARY MESSENGER.

VOLUME IX. BUFFALO, SATURDAY, DECEMBER 4, 1847. NUMBER XVIII.

For the Western Literary Messenger.

Translation from Horace.

EPODE 13.

Thick darkling clouds involve the heavens in gloom,
And as the tempest fierce impends
In rain and snow the god descends,
And now the forests quake, and now the billows boom.

Seize we, my friends, while seize we may, the time;—
And while we flourish strong of limb
Repel old age with visage grim,
Nor let his wrinkled brow o'ertake us in our prime.

Take of the vintage of my natal year,
And as the luscious wine we sip,—
Old as Torquatus' consulship,—
Speak not a word of grief, or aught to mar our cheer.

Our ills some god, perchance, will yet repair;—
Now Achaemenian nard require,
And joyful with Cytlenean lyre
Drive from our burdened breasts grief and vexatious care.

His noble charge old Chiron counseled thus:—
"Goddess-born, great Thetis' son!
Thou invulnerable one!
Where cool Scamander flows, land of Assaracus.

That land awaits thee, from whose fatal shore
The azure goddess of the foam
Shall not prevail to bring thee home,—
The out-run web of fate grant thy return no more!

There every evil that that thy life may know,
There every gnawing sorrow's rage
With generous wine and song assuage;
Those consolations sweet in grief and hideous woe."

E. L. BROWN.

SCHOOLCRAFT, Mich. Nov. 10, 1847.

The Old Judge, or Life in a Colony.

BY THE AUTHOR OF "SAM SLICK, THE CLOCKMAKER."

A LONG NIGHT AND A LONG STORY.

On the evening after our arrival, the storm still raged with unabated fury, and the prospect of its continuance for another day quite exhausted the patience of Mister Richardson. He stretched out both his legs and arms, and expanded his jaws to their fullest extent, and proclaimed the day to have been the most tiresome he ever spent in his life.

"I never saw one that was too long to home," he said, "for I can always find enough to do.—Fine days, rainy days, and stormy days, are all alike to me. Out-doors, or in-doors a body need not be idle; but away from home, with your head like horned cattle, fastened in the stanchels, a-chewing of the cud, or sitting before the fire, a-working as hard as you can, turning one thumb over the other, is dull music. It makes a slow day of it, and this has been about the longest I ever passed; though, after all, it ain't to be named with an endless night I once spent. It was longer than you, Broadcloth, who are only five feet nothin', and sometimes beyond me, who am six feet and a considerable piece to spare; and, before we part, I will tell you how and when it was.

In the fall of 1820, I think it was, when I lived to the head of Bear River, I took a notion into my head one day to go out a moose-calling; so I trapped on my powder-horn and shot-bag, and put some balls into my pocket, and took a trifle to eat with me, and set off alone into the woods. Well, first I visited one moose-ground, and then another, and I never see them so scarce in all my life; and, at last, by the end of the third day, I got off ever so far from home away to the southward, and my provisions got out, and I couldn't see bird nor beast, nor any thing to feed on, and I was almost starved, that's fact. Says I to myself, says I, "Shall I go back while I'm able, or shall I hold on and trust luck?" and seein' that I never failed yet, I thought I wouldn't give in, but persevere; so I drew my belt tighter round my stomach, which was pretty empty, I do assure you, and pushed on to a place where I thought I couldn't fail to find a moose; and all I had to feed upon after the second morning was the inside bark and juice and scrapings of wild poplars. In the spring, a body might live on it for a week, I do suppose; but in the fall, it's kind of dry and stringy, and hard fare, you may depend. At last night came, and I began to call the moose again.

"This is the way, stranger," he said, addressing me, "you fold up a piece of birch bark like a short speaking-trumpet, as I fold this paper, and then go like the voice of the cow-moose—this fashion;" and he uttered some extraordinary lowings, which Miss Lucy pronounced very horrid and disagreeable, but which Barclay and others eulogised as capital imitations; "and then," he said, "if there is a herd in the neighborhood, one or more of leaders are sure to answer it, and come to the spot where the sound rises. Well, I had been at this spot so long, and been out of food such a length of time, I was quite weak and hardly able to call; but, howsomever, call I did; and byme-by, I heard a great whapping feller come thrashing and crashing, and rearing and tearing along through the trees, as easy as if he was moving through the tall grass, and I was getting ready to have a shot at him, as soon as he stood still to blow, and snort, and listen again, or as he passed on, when the first thing I knew was he went right slap over me, and trod me under foot, knocking the wind out of me, and nearly breaking every rib in my body.

Thinks I to myself, what under the sun shall I do now? I am e'n most starved to death: every created thing seems to keep out of my way but one, and that one wants to teach me to keep out of his; and if I ain't starved, I ain't quite sure I ain't bruised to death. Just then I heard an owl hoot, and although they ain't very good to eat at no time, they are better than nothin' to a starving man. So I lay down on my back, and began to inveigle him; for I have been so much in the woods, I can imitate every sound that's in 'em—when looking up, what should I see but a pair of bright eyes in the tree above me, and I let slip, and down came a porcupine. What a godsend that was! didn't he get out of his jacket and trousers in double quick time! There never was a gentleman got a good warm fire made up for himself at such short notice, I know; and didn't

raw fat meat taste, for the first time, better than that that's well done! Arter that, I lay down and took a nap, and gin up the moose hunt, and mended next day to start for a cross road that I expected to reach by night, where I knew a settler, one Increase Card, lived, and where I could put up and refresh a bit. Well, when morning came, I sot off, and is always the case in this world, when you don't care a morsel about things, you can have lots of them: and when you do, you can't get them for love or money. So, the next day, I shot partridges for my breakfast, and partridges for my dinner, and other fellers run, as sodger officers do desarters, without looking arhem; and, when I least expected I came all of a sudden on a moose, and shot him just as I reached the road.

About seven o'clock, not very long after sundown, I came to the house of Increase Card, legweary, foot-sore, and near about beat out.

"Crease," said I, "my boy, how are you? I never was so glad to see any body afore in all my life, for I'm all but used up. Have you got a drop of rum in the house?"

"Yes," says he, "I have," and pulling out a large stone bottle from his closet,—

"Here's a little,' said he; "wait till I get you some water."

"I guess I won't spoil two good things," said I, and I poured out half a tumbler of the naked truth, and drank it off like wink. "Now," says , 'one good turn deserves another. Ill take a glass of water, if you choose, for I always like to see the quality go first." Well, we sot by the fire and talked over farming and crops, and politics and old times, and what not, and cooked some moose steaks, and eat and cooked, and cooked and eat, as fast as contract-work, and then went to bed. But afore I left the room, Increase said,

"Steve," sais he, "Miss Card, my wife, and the little ones, are gone to Capersues to see her father, old Captain Salmon. I am going after them afore day to-morrow, to fetch them back in the wagon. Do you just help yourself in the morning to whatever you want, and rake up the fire carefully, and put the housekey under the step of the door."

"Why, Crease," said I, "was your wife a Salmon? I never knowed that afore."

"Yes," sais he, "one of the Salmons, of Tusket, old Captain Noah's daughter."

"You showed your sense," sais I; "they are the best fish going; and I see you know how to manage her, too. You have given her the line, let her run off the whole length of it, and now are a-reeling of her up, and a-going to slip a landing-net under her, bag her, and fetch her home. It's the only way with women and fish. If you snug 'em too short, they spring and flounce like the devil—tangle the line, or break it, and race right off. You warn't born yesterday, I see. How many young salmon-trout have you?"

"Two," says he.

"Ah!" said I, "your name is capital bait to a coasting hook."

"How?" sais he.

"Why, Increase," sais I; "it's a grand name that."

"What a droll fellow you be! said he, laughing; "you ain't a bit altered, for you always was a funny man ever since I knowed you;" and then, taking up a quart-bottle with a candle stuck in it—

"Follow me," he said, "and I'll show you where to sleep."

"Stop," says I, "Crease don't be in such a pucker of a hurry; have out that stone jug again, that's a good fellow, will you? that I may drink Miss Kitty, your wife's health, afore I go."

"Sartainly," said he, "and I axe your pardon for not offerin' it again to you; but, the fact is, I railly forgot; for, to tell you the truth, I never take any myself."

"Neither do I," sais I, "in a general way, when I am to home, for it's a bad habit and a bad example to the boys, unless I am shocking dry, as I am just now, but, somehow or another I consait me wife uses too much salt both in curing her hams and corning her beef; and I often tell her so, though she won't hear to it, for I am always awful dry after dinner. Well, I poured out a rail good nip, and then, holding it up, 'Crease Card,' sais I, "here's Miss Kitty, you wife's health, and the same to you, and wishing you may have a strong hand of cards, all trumps and all boners. Now, make haste, and I'll follow in your trail; for I feel as a bull mouse a'most."

Well, he took me into a room that had a carpenter's work-bench in it, and tools, and shavings, and boards; and what not; and then passed into a place that had been a porch, and then into a nice, snug tidy bedroom; and putting down his ready-made candlestick on a table, he bid me good night, and then went off to his own roost. Well, I takes two chairs, and puts them to the bottom of the stretcher, and haults out the bed two foot or more—for no bedstead in a general way is long enough for me, and it ain't plessant to have your legs a-dangling out of bed—and then I turned in, took a good stretch out, and was asleep in no time. Well, being in no hurry, and not intending to get up early, I took a good long sleep, and when I woke up, I shoved out, first one leg, and then the other, to prove all was right in those distant parts; and then I drew a long breath to try if the ribs were in the right place to home, after the trampling and kicking of that are confounded moose; and then I rubbed my eyes, and found that it was still dark, so I turned round again, and took another famous nap. "Now," says I to myself, "its time to be a-stirring;" and so I sot up in bed, and looked and looked, and all was as dark as ink.

"Steve," says I, you are getting old you may depend. Once on a time you used to do up your sleep into one long parcel, but now you are so tired you don't rest sound, and have to content yourself with a piece at a time;—it ain't day yet, try again." Well, I tossed and turned, and rolled about ever so long, and at last I sneezed away again, and when that was over, I up and out of bed, and felt for the window, and looked out, and it was as dark as Egypt; and then I put a hand to each cheek agin the glass, and nearly flattened my nose agin the pain, and stared and stared, but there warn't a star or the least streak of light to be seen; so back I went to bed agin, but I couldn't sleep—no how I could work it; I had had enough or else too tired; but I don't like to give in till I can't help myself; so I began to count one, two, three, four, up to a hundred, and then back agin, one, two, three, four, and so on—but it was no go. Then I fancied I was driving a flock of sheep over a notch in the fence, one by one; and when two got over the fence at once, I'd drive one of them back, and begin agin; but it didn't confuse me to sleep; and then I tried a rhyme:

"I wish I had a load of poles
To fence my garden round,
The pigs they do break in and root,
And all my sarce confound."

And then I chased a little black boar round and round the garden walks, till I grew dizzy, and slipt off into a good solid nap. Well, when this was over, I looked up, and still all was as dark as ever, and I got more tired of the bed than of the three days' moose-hunt; so, thinks I, I'll get up

and go to the keeping room, and light my pipe, and wait for daybreak;—but this is a most mortal long night, that's certain; or, perhaps, I've got cold, and, can't see out of my eyes. Well, that idea did startle me, you may depend; so I went to the window agin, and looked through as hard as I could, till I strained my peepers out a most, but no daybreak was there. "Perhaps it's a heavy land-fog," says I; so I lifted the sash, and just as I was a popping my head out, I got a crack over the pate that actilly made the fire fly from my eyes. "Hallo!" says I, "what in natur is all this?—let me think about it. Where am I?—Am I in Increase Card's house?—what ails me, that I can't sleep?—or am I buried alive by an earthquake?—or has the sun forgot to get up this morning?—or what in the world is to pay now—I'll try the door. Well, I opened the door, and felt along out to the porch, along the wall to the house door, when the light fell on me all of a sudden so dazzling bright, it nearly blinded me, and made me wink like an owl. It was two o'clock in the day, at the least, and the sun shining away as clear and has hot as iron melted to a white heat. The fact is, Increase had built an addition to his house, and had lathed and plastered outside of the windows, and hadn't yet cut out fresh places in the end of the room for them, and it was agin this new wall that I knocked my head. Well, I didn't know whether to be mad or to laugh; but I didn't see I had any one to be mad with but myself, and as I never laugh except at other folks, I didn't do neither one nor the other, but struck a light, went into the dark room, dressed myself, returned, and made a most royal dinner and breakfast all in one, shouldered a haunch of venison, and started for the settlements. That was a most—a particular long night, and was more than a match after all for this tremendous long day."

Whitefield.

The son of a Gloucester inn-keeper, and sent to Pembroke College, his mind became so burdened with the great realities, that he had little heart for study. God and eternity, holiness and sin, were thoughts which haunted every moment, and compelled him to live for the salvation of his soul; but, except his tutor Wesley and a few gownsmen, he met with none who shared his earnestness. And though earnest, they were all in error. Among the influential minds of the University there was no one to lead them into the knowledge of the gospel, and they had no religious guides except the genius of the place and books of their own choosing. The genius of the place was an ascetic quietism. Its libraries full of clasped schoolmen and tall fathers, its cloisters so solemn that a hearty laugh or hurried step seemed sinful, and its halls lit with medieval sunshine, perpetually invited their inmates to meditation and silent recollection; whilst the early tinkle of the chapel bell and the frosty routine of winter matins, the rubric and the founder's rules, proclaimed the religious benefits of bodily exercise. The Romish postern had not then been re-opened; but with no devotional models save the marble Bernards and de Wykhams, and no spiritual illumination except what came in by the north windows of the past, it is not surprising that ardent and reverential spirits should in such a place have unwittingly groped into a Romish pietism. With an awakened conscience and a resolute will, young Whitefield went through the sanatory specifics of A Kempis, Castanza, and William Law, and in his anxiety to exceed all that is required by the rubric, he would fast during Lent on black bread and sugarless tea, and stand in the cold till his nose was red and his fingers blue, whilst, in the hope of temptation and wild beasts, he would wander through Christ Church meadows after dark. It was whilst pursuing this course of self-righteous fanaticism that he was seized with alarming illness. It sent him to his Bible, and whilst praying and yearning over his Greek Testament, the "open secret" flashed upon his view. The discovery of a completed and gratuitous salvation filled with ecstasy a spirit prepared to appreciate it, and, from their great deep breaking, his affections thenceforward flowed, impetuous and uninterrupted, in the one channel of love to the Saviour. The Bishop of Gloucester ordained him, and on the day of his ordination he wrote to a friend, "Whether I myself shall ever have the honor of styling myself a 'prisoner of the Lord' I know not; but indeed, my dear friend, I can call heaven and earth to witness that when the bishop laid his hand upon me, I gave myself up to be a martyr for Him who hung upon the cross for me. Known unto Him are all future events and contingencies. I have thrown myself blindfold, and, I trust, without reserve, into his Almighty hands; only I would have you observe, that till you hear of my dying for or in my work, you will not be apprized of all the perferment that is expected by George Whitefield." In this rapture of self-devotion he traversed England, Scotland, and Ireland, for four-and-thirty years, and crossed the Atlantic thirteen times, proclaiming the love of God and His great gift to man. A bright and exulting view of the atonement's sufficiency was his theology; delight in God and rejoicing in Christ Jesus were his piety; and a compassionate solicitude for the souls of men, often rising to a fearful agony, was his ruling passion; and strong in the oneness of his aim and the intensity of his feelings, he soon burst the regular bounds, and began to preach on commons and village greens, and even to the rabble at London fairs. He was the prince of English preachers. Many have surpassed him as sermon-makers, but none have approached him as a pulpit orator. Many have outshone him in the clearnes of their logic, the grandeur of their conceptions, and the sparkling beauty of single sentences; but in the power of darting the gospel direct into the conscience he eclipsed them all. With a full and beaming countenance, and the frank and easy port which the English people love—for it is the symbol of honest purpose and friendly assurance—he combined a voice of rich compass, which could equally thrill over Moorfields in musical thunder, or whisper its terrible secret in every private ear; and to this gainly aspect and tuneful voice he added a most expressive and eloquent action. Improved by conscientious practice, and instinct with his earnest nature, this elocution was the acted sermon, and by its pantomimic portrait enabled the eye to anticipate each rapid utterance, and helped the memory to treasure up the palpable ideas. None ever used so boldly, nor with more success, the highest styles of impersonation. His "Hark! hark!" could conjure up Gethsemane with its faltering moon, and awake again the cry of horror-stricken Innocence; and an apostrophe to Peter on the holy mount, would light on another Tabor, and drown it in glory from the opening heaven. His thoughts were possessions, and his feelings were transformations; and if he spake because he felt, his hearers understood because they saw. They were not only enthusiastic amateurs, like Garrick, who ran to weep and tremble at his bursts of passion, but even the colder critics of the Walpole school were surprised into momentary sympathy and reluctant wonder. Lord Chesterfield was listening in La

dy Huntingdon's pew when Whitefield was comparing the benighted sinner to a blind beggar on a dangerous road. His little dog gets away from him when skirting the edge of a precipice, and he is left to explore the path with his iron-shod staff. On the very verge of the cliff this blind guide slips through his fingers, and skims away down the abyss. All unconscious, its owner stoops down to regain it, and stumbling forward —"Good God! he is gone!" shouted Chesterfield, who had been watching with breathless alarm the blind man's movements, and who jumped from his seat to save the catastrophe But the glory of Whitefield's preaching was its heart-kindled and heart-melting gospel. But for this all his bold strokes and brilliant surprises might have been no better than the rhetorical triumphs of Kirwan and other pulpit dramatists. He was an orator, but he only sought to be an evangelist. Like a volcano where gold and gems may be darted forth as well as common things, but where gold and molten granite flow all alike in fiery fusion, bright thoughts and splendid images might be projected from his flaming pulpit, but all were merged in the stream which bore along the gospel and himself in blended fervor. Indeed, so simple was his nature, that glory to God and good will to man having filled it, there was room for little more. Having no church to found, no family to enrich, and no memory to immortalize, he was the mere embassador of God; and inspired with its genial piteous spirit—so full of heaven reconciled and humanity restored—he soon himself became a living gospel. Radiant with its benignity, and trembling with its tenderness, by a sort of spiritual induction a vast audience would speedily be brought into a frame of mind—the transfusion of his own; and the white furrows on their sooty faces told that Kingswood colliers were weeping, or the quivering of an ostrich plume bespoke its elegant wearer's deep emotion. And coming to his work direct from communion with his Master, and in all the strength of accepted prayer, there was an elevation in his mien which often paralyzed hostility, and a self-possession which only made him, amid uproar and fury, the more sublime With an electric bolt he would bring the jester in his fool's cap from his perch on the tree, or galvanize the brick-bat from the skulking miscreant's grasp, or sweep down in crouching submission and shamefaced silence the whole of Bartholomew Fair, whilst a revealing flash of sententious doctrine or vivified Scripture, would disclose to awe-struck hundreds the forgotten verities of another world or the unsuspected arcana of their inner man. "I came to break your head, but, through you, God has broken my heart," was a sort of confession with which he was familiar; and to see the deaf old gentlewoman, who used to mutter imprecations at him as he passed along the street, clambering up the pulpit-stairs to catch his angelic words, was a sort of spectacle which the triumphant gospel often witnessed in his day. And when it is known that his voice could be heard by 20,000, and that ranging all the empire, as well as America, he would often preach thrice on a working-day, and that he has received in one week as many as a thousand letters, from persons awakened by his sermons; if no estimate can be formed of the results of his ministry: some idea may be suggested of its vast extent and singular effectiveness.—*North British Review.*

THREE WISHES.—Three joyous fellows were sitting at the table at the inn of the Lamb, at Kehl, eating and drinking: and, while draining a last bottle, they began indulging in wishes. It was determined that each should express a wish. He who should give utterance to the best would be held free of his share of the expense. The first, opening the debate, "I desire, then," said he, "that all the ditches of the fortifications of Strasbourg and Kehl be filled with fine needles, and that each of these needles be placed in the hands of a tailor; and that each of these tailors be occupied from morning till night during a whole year in making great bags, each of a size to contain a hectolitre, and if at the end of that time all these bags were filled with doubloons belonging to me, I should consider myself satisfied." The second said in his turn: "I, for my part, would desire that the cathedral of Strasbourg be wholly filled up to the topmost part of the steeple, without the slightest spare space, with bank notes payable to me, written on the finest paper, and that each of these bank notes be equal in amount to the contents of all the bags, and that the whole be mine." "And I," said the third, "I wish that you may obtain the accomplishment of your wishes; that the very next night the executioner may seek you out to hang you, and that I may be your legatee." The third was the man who left the inn without paying.

Barrow-Beggars.

Many of our readers may not be aware that, some forty years ago, it was common, and still may be in some districts of Scotland, for mendicant cripples to be carried about the country in a hand-barrow. It was incumbent on the individuals at whose door the cripple was set down, to bestow the customary alms of a handful of oatmeal, or whatever largesse their bounty might prompt, and forward him or her, as the case might be, on to the next farmhouse—sometimes a few yards' distance, sometimes a mile—or, if not so forwarded, the beggar behoved to be lodged and fed by the person at whose door he was placed. In villages or small towns such conveyance was easily accomplished; but in thinly-populated country districts it was not unfrequently a matter of much trouble and inconvenience, where the great distance between the dwellings rendered it a positive burden.

Occasionally, the house at whose door such lamiter was laid was tenanted only by females, sometimes by a solitary aged woman, or by an aged and decrepit woman and her equally aged and decrepit husband. In such cases the only alternative was to hire assistance, if it could be found; or if the party was too poor to pay, the individuals who brought them, would resume their burden, and tramp on to the next dwelling; and as these *barrow-beggars* were generally peremptory and irascible in their manners, to get rid of them was usually accounted a boon. Thus these lordy sorners performed a sort of almsgatering ovation through the length and breadth of the land. When I was a boy of ten years of age or thereabout, one of these pests was set down at the farmhouse where I was the herd. She—for it was one of the tender sex—was a large, sallow, broad shouldered Amazon, with a world of well-filled *meal-pokes* hanging round her burly person, over which depended a piece of greasy blanket, by way of mantle, and which was secured at the throat by a large brass bodle-pin.—She was dignified too, and evinced the bearing of a Somiramis—surly, imperious, and commanding as any beggar on horseback could be; and as the master and all the men and womenfolk were half a mile off, busy on the hairst rig, the goodwife—who, with myself and a half-witted son of the farmer, a lad of sixteen years of age, where the only inmates of the *town*—was sadly perplexed as to the disposal of the vagrant.

She had received a liberal *aumus* of two *goupens* of meal, bread and cheese, and a drink of milk, for which she evinced not a particle of gratitude, but sat on her well-stuffed cushion (I remember wondering if it could be meal) in sulky and offended dignity, till she should be conveyed to the next farm-steading, nearly a mile distant. After waiting nearly an hour, during which period this locomotive volcano manifested various symptoms of an eruption, by breaking out at frequent intervals in wrathful mutterings, at length a welcome relief appeared in the person of Randy Rob, a weaver lad from a neighboring village, who at this juncture came up the croft whistling 'Maggie Lauder.' Rob had been fishing in the Earn, which ran immediately in front of the house; and to him the goodwife applied, with the promise of a liberal hire, to carry the lame woman to Caulside, the next farm town. Rob readily undertook the job, provided Tam (the daft son) would carry one end of the barrow. Tam was delighted at the proposition; and after the two had whispered together for a moment, they were to be seen, with their portly burden, moving solemnly down the path that led by the side of the river, Rob in front, Tam behind. At first their pace was grave, then lively, then brisk, then zig-zag; anon, as if a new fancy inspired them, they danced and sung as they went, making the mendicant perform the most wonderful feats with her body and arms to preserve her equilibrium. At last, as if impelled by a new whim, they took to running; and as their path was close on the margin of the stream, and the jolting immense, the beggar woman was sadly put to her trumps to keep herself steady. The race was a short one; for as soon as Rob perceived that the footpath led them close to the river, where it was free of brushwood, he shouted, 'Noo, Tam!' and in an instant the beggar, bags, barrow, and all, were soused in the Earn.

In another instant she stood up to her middle in the stream, from which she was not long in extricating herself. To disencumber herself from the saturated meal-pokes, and rush after her now affrighted tormentors, was but the work of a moment; and the speed with which she gained on them was astonishing. The goodwife and myself had at the outset mounted the loupin'-on-stane to see the fun; and the worthy woman, with uplifted hands, uttered an ejaculatory 'Losh guide us!' as she beheld the beggar woman—she that had been born a cripple—overtake Randy Rob, and lend him a 'lunt i' the lug,' as she phrased it, 'that laid him on the craft as dead's a herring.' With Tam she was less successful, for Tam was lathy and light of foot, and mortal terror had lent wings to his heels. But the lame woman, after swearing like a trooper, and threatening 'to gi'e the hale toun a het waukening for't some misty morning,' took herself off, and was never again seen in that part of the country.

As for Randy Rob, he always maintained that 'be kent she could gang, but never jalonsed the jaud was sae souple o' fit, or he wad ha' ta'en sooner to his heels.' As it was, he said 'hig lugs rang wi' that uncanny thud for sax weeks after.'
—*Chamber's Edinburg Journalh*,

A secret is like silence; you cannot talk about it and keep it. It is like money; when once you know there is any concealed, it is half discovered. "My dear Murphy," said an Irishman to his friend, "why did you betray the secret I told you?" "Is it betraying you call it? Sure, if I found I wasn't able to keep it myself, didn't I do well to tell it to somebody that could?"

From the National Era.

The Drovers.

BY J. G. WHITTIER.

A freer, manlier life than ours,
No son of toil is living—
Through heat and cold, and sun and showers
Still onward cheerly driving.
But, see, the day is closing cool,
The woods are dim before us,
The white fog of the wayside pool
Is creeping slowly o'er us.

The night is falling, comrades mine,
Our foot-sore beasts are weary,
And through yon elms the tavern sign
Invites us all to tarry.
The landlord beckons from his door,
His beechen fire is glowing;
These ample barns with feed in store
Are filled to overflowing.

From many a valley frowned across
By brows of rugged mountains;
From hill-sides where through spongy moss
Gush out the river fountains:
From quiet farm-fields, green and low,
And bright with blooming clover;
From vales of corn the wandering crow
No richer hovers over!

Day after day our way has been
O'er many a hill and hollow;
By lake and stream, by wood and glen,
Our stately drove we follow.
Through dust-clouds rising thick and dun,
As smoke of battle o'er us,
Their white horns glisten in the sun,
Like plumes and crests before us.

We see them slowly climb the hill,
As slow behind it sinking;
Or, thronging close, from roadside rill
Or sunny lakelet drinking.
Now, crowding in the narrow road,
In thick and struggling masses,
They glare upon the teamster's load
Or rattling coach which passes.

Anon, with tore of horn and tail,
And paw of hoof and bellow,
They leap some farmer's broken pale,
O'er meadow-close or fallow.
Forth comes the startled good man; forth
Wife, children, house-dog, sally,
Till once more on their dusty path
The baffled truants rally.

We drive no starvlings, scraggy grown,
Loose-legged, and ribb'd and bony,
Like those who grind their noses down
On pastures bare and stony—
Lean oxen, rough as Indian dogs,
And cows with dust-dry udders,
Disputing feebly with the frogs
The crop of saw-grass meadows!

In our good drove, so sleek and fair,
No bones of leanness rattle:
No tottering, hide-bound ghosts are there,
Of Pharaoh's evil cattle.
Each stately beeve bespeaks the hand
That fed him unrepining;
The fatness of a goodly land
In each dun hide is shining.

We've sought them where in warmest nooks
The sweetest feed is growing,
And priced them by the clearest brooks
Through honeysuckle flowing;

Wherever hillsides, sloping south,
Are bright with early grasses,
Or, tracking green the lowland's drouth,
The mountain streamlet passes.

But, now the day is closing cool,
The woods are dim before us,
The whitefog of the wayside pool
Is creeping slowly o'er us,
The cricket to the frog's bassoon
His shrillest time is keeping,
The sickle of yon setting moon
The meadow mist is reaping.

The night is falling, comrades mine,
Our foot-sore beasts are weary,
And through yon elms the tavern sign
Invites us all to tarry.
To-morrow, eastward, with our charge
We'll go to meet the dawning,
Ere yet the pines of Kearsarge
Have seen the sun of morning.

When snow-flakes o'er the frozen earth
Instead of birds are flitting;
When children throng the glowing hearth,
And quiet wives are knitting,
While in the fire-light strong and clear
oung eyes of pleasure glisten,
To tales of all we see and hear
The ears of home shall listen.

From many a Northern lake and hill,
To Ocean's far-off water,
Shall Fancy play the Drover still,
And make the long night shorter.
Then let us still through sun and showers
And heat and cold be driving;
A freer, manlier life than ours,
No son of toil is living!

Gold in Russia.

The following article in relation to the gold mines of Russia we extract from one of our exchange papers. It contains matter of general interest. The increasing demands of Commerce require a larger specie currency than we at present command, and all information promising a greater supply must be therefore peculiarly interesting.

We have been informed by a competent geologist that the formation of the hills of Lake Superior are of the same character with the Ural mountains in Russia. It may be that more diligent and earnest search in the little-known regions bordering upon our Great Lake will develope wealth as yet unsuspected:

The sum of thirty millions of rubles, (twenty-four millions of dollars) in precious metals, which the Emperor of Russia has this year placed at the disposition of Western Europe, has caused not a little surprise. The finances of the empire were not supposed to be in a condition to make such an advance convenient. Russia was reputed the poorest of the five Great Powers, and yet it is she who comes to the assistance of the commerce of the richest States. This unexpected incident may be attributed to several causes, but more than all to the development which has been recently given to the efforts for procuring gold in the Eastern provinces of the empire.

The working of the gold mines in Russia, hough it dates back only a few years, has acquired great importance. It has become an event which may have great influence, and which has already changed the relations of the two precious metals in the world to a degree as to cause a perturbation in their comparative value to be anticipated. We borrow, on this subject, some facts from a recent work of Michael Chevalier, on the gold and silver mines of the two hemispheres.—The gold mines are situated in the chain of the Ural mountains, and more to the East, in the heart of Siberia. These are immense alluvions stretched out at the foot of the Ural mountains, or in the valley of the more elevated chain of the Altai mountains. Gold is there in its native state, disseminated as usual in very small quantities in the midst of sand and gravel. The zone in which the auriferous deposits are distributed has a mean width of about nine hundred kilometres, (rather more than half a mile) and a length of several thousand kilometres. The presence of gold on so great an extent of soil is one of the most general of the mineralogical phenomena which can be pointed out on the face of the globe. It may be compared to the permanency of silver in the metalic veins, which in America cross the chain of the Andes, the length of which is 14,000 kilometres. Those mines which were worked by the ancients, and whence antiquity, according to the Father of History, drew the greater part of the gold in use, had been entirely lost sight of; and the recital Herodotus passed for a fable, when, toward the close of the last century, and the beginning of the present, chance discovered in the Ural chain that certain portions of the bed of sand and gravel, the soil of which is uniform in these vast regions, contained a little gold-dust. The working was not regularly carried on until 1823. Till then all the gold furnished by boreal Russia was reduced to six hundred and fifty kilograms weight. which was separated as an accessory production, from the silver, of which the country has some mines. Six hundred and fifty kilograms represent, according to the tarif of French money, which gives gold fifteen times and a half the value of silver, a sum of about 450,000 dollars. The working of the gold mines, carried on at the same time by the Crown, and by individuals, has been constantly increasing, but private industry produces much more than the workshops of the Crown. In 1845 the production, as officially stated, was 18,803 kilograms of fine gold. Allowing for what passes off clandestinely, in order to avoid the impost, the production may be placed at 22,564 kilograms, which represent 15,540,000 dollars. In 1840, the amount obtained was not two-fifths of this sum, but during these last years the increase has been very great. In 1846 there were obtained, in the whole nearly 30,000 kilograms of fine gold, worth nearly three millions of dollars.

To form an idea of the importance of this revenue, it must be compared with the quantity of gold thrown by other countries into the general market. It results from the most careful researches, that this product is only equal to about 30,000 kilograms. Thus Russia brings double the quantity of gold annually yielded to the commerce of the world. It surpasses America in the ratio of two to one, for America yields only 14,934 kilograms of fine gold.

A more exact idea of the importance of this product may be formed by comparing it with silver. Since the discovery of America the production of silver has greatly increased. At the beginning of the century, the New World yielded 796,000 kilograms of fine silver, valued at over thirty-five millions of dollars. The Spanish republics, almost all of them made desolate by anarchy, have seen this product fall to 614,641 kilograms of fine silver, worth somewhat more than 27,000,000 dollars. The general production of silver was,

at the beginning of the century, about 900,000 kilograms—about 40,000,000 dollars. America then furnished nine-tenths of this metal. There was then produced in the world 36 kilograms of silver to one kilogram of gold, or 2 francs 33 centimes in silver against one franc in gold. At present the total product of silver may be estimated at 875,000 kilograms worth nearly 39,000,000 of dollars, against more than 60,000 kilograms of gold worth more than 41,000,000 of dollars. This is more than 14 kilograms and a half of silver against one kilogram of gold and 49 centimes of silver against one franc of gold. The old proportion is thus overturned, and it must be attributed to Russia.

The rate which was presented at the beginning of the century was nearly the mean rate of the product of the two metals since the discovery of America. Till more recent times America had had almost the exclusive privilege of supplying the world with gold and silver. What that country had produced from its discovery to the first of January, 1846, may be computed to amount to 7 milliards 120,000,000 dollars of which 5 milliards were in silver, and 1 milliard 980,000,000 of gold. Or in weight, to 120,168,000 kilograms of fine silver, and 2,877,600 kilograms of gold, or again in volume, 11,477 cubic metres of silver, and 149 cubic metres of gold. It was in weight 42 kilograms of silver against 1 kilogram of gold, in value about 2 francs 33 centimes in silver for one franc in gold. It is in consequence of this great extraction of silver that the gold had acquired so much value in relation to that metal, and that 1 kilogram of gold, which in commerce was formerly exchanged for 10 kilograms of silver, had reached the value of 15½ to 15¾. In process of time, if, as there is reason to believe, the produce of gold continues to be in Russia what it is now, the comparative value of the two metals will not be slow in approaching more or less what it was three centuries ago. It is true that the explanation given by M. Michel Chevalier gives reason to think that the improvement in the art of mining in America, which will probably be the inevitable and speedy consequence of the dominion of the United States over the new continent, will tend to cause for silver the same changes which Russian industry has brought about in gold; the expenses of production will diminish still more than can be hoped in regard to gold; the quantity produced will increase; the value of the two metals compared with each other may remain the same or a little modified; but their value, in relation to commodities, will fall in a greater or less proportion. This will be a revolution.

We see by the preceding remarks how the Russian Government, to whom its subjects sell all they obtain of gold and silver, has found itself possessor of a great quantity of gold, and has been able to bring forth to the eyes of astonished Western Europe, more than thirty millions of rubles. The Imperial administration, like all Oriental Governments, when they can, follows the system of metallic reserves, which, under the inspiration of a more enlightened public economy, the Governments of Europe have with reason renounced, for reserves produce nothing. This treasure has now become considerable. The Emperor of Russia draws from it the amount of thirty millions of rubles, which he places in a very advantageous manner, since he buys French or English stocks at seven or eight per cent below the rate at which they will probably be in a year. It is not for Europe to blame him for having accumulated a metallic reserve when she is now profitting by it. We may remark, however, that by a singular contradiction, the Russian Government kept several millions in ingots in the cellars of one of the fortresses of St. Petersburg, while the representative sign of value in the empire was paper money, depreciated to such a point that the paper ruble circulated for a quarter only of its nominal value.

This operation, ordered by the Emperor, is nevertheless interesting, though the effect of it has been exaggerated. It is useful to Europe as well as to the Imperial treasury. Some persons remark that it is curious that the great production of gold should be in the hands of the Autocrat of the Russias, while that of silver is concentrated in that of the American Democracy. If we attributed to the precious metals the importance formerly given to them by public opinion, at that time less enlightened, this relation, which is only a game of chance, from which no political effect may be expected, would be interpreted as an extraordinary prognostic.

Unanimity of Juries.—The uncertainty of the law is proverbial with the public, and a frequent toast at the festivities of lawyers; but the uncertainty of juries is said by the profession to constitute no small part of the doubtfulness attending legal proceedings. The chief recommendation of juries is that they are less liable to corruption than individuals. It is on this account mainly that their institution has a beneficial tendency in civil cases. In criminal cases there is also some advantage in the fact that a prisoner, being for the most part tried by his equals, so far as justice will admit, receives more compassionate consideration than an officer of justice, rendered familiar with such cases, by his daily business, would be likely to experience. Hence we would by no means advocate the substitution of any other mode of trial, unless by consent of the litigating parties. But the question of unanimity is well discussed in the following words:

"Look round upon society, and you see it made up of jarring opinions and infinite varieties of sentiment. You can hardly find two men agreeing exactly on any subject. Nothing but identity of interest can produce identity of judgment. And yet, in a proceeding on which the proper administration of justice entirely depends, it is required that twelve men shall always agree. That they do not agree in a large majority of cases is a fact which no one pretends to dispute. One of two things generally happens—either the minority yield and give up their own convictions, and tell a falsehood on their oaths, or the majority succumbs to the superior obstinacy or the healthier organization of one man, who conquers his companions by a resolute resistance. In this manner justice is outraged, juries are demoralized, and the law is made to produce at once an inconvenience and an absurdity."

It may be said that if the opinion of the majority or of two-thirds of the jury were substituted for the opinion of the whole, as necessary to the rendition of a verdict, there would be more canvassing of juries. It appears to us that this danger would be rather diminished than increased by giving a decision to a two-thirds majority, instead of allowing one individual of interested motives or unusual obstinacy and power of endurance, to do much towards bending the others to his will. The question now sometimes is, not which opinion may be the best, but which is likely to be most obstinately maintained.

Last View of a Battle.

Let us visit the field where so lately the sound
Of War's booming guns shook the motionless ground,
And awakened old echo again:
Let us visit the field where the cannon bestowed
On the struggling combatants its death-dealing load,
And the ranks of the foe like the green grass were mowed,
And battallions were routed and slain.

But wait till the storm of the battle has passed,
Till the ear-piercing fife and the shrill trumpet blast
Cease to startle the still depths of air;
Till the slaughter is done and the stirring alarms
The waving of plumes and the clashing of arms,
And the pageant that gives unto glory its charms
Shall have passed and the picture laid bare.

The blue-curling smoke in the distance grows dim,
And Death on his Pale Horse looks blackened and grim;
The conflict and carnage are o'er:
And these piles of the dying and dead but proclaim
That the glory of Mars is humanity's shame,
And those red reeking fields but the tablets of fame
Whose records are written in gore.

See here where the sharp-speaking rifle has told,
And see where the charge like an avalanche rolled,
Leaving death and destruction behind!
So are hundreds whose bosoms were swelling with pride
That low now are lying by each others' side,
And their life blood is gushing from wounds deep and wide,
Like the torrent whose course is assigned.

And behold there the noble, the gifted and brave,
O'er whose heads the broad banners delighted to wave,
Now stiffened, in death lying low;
And around them are heaps that in numbers untold
Are blackning in sunlight and turning to mould,
And the hearths that they lighted are gloomy and cold,
As the heath o'er which winter winds blow.

They have passed like the meteor that flames in the sky;
Ere their brightness had ceased they were fated to die,
And their graves among strangers be made.
Far away from the land where their forefathers sleep,
From the homes where affection her vigils may keep,
Where no sigh shall be breathed save by wild winds that sweep
O'er the tomb where their bones have been laid.

BUFFALO, Nov. 16, 1847. D. W.

For the Western Literary Messenger

Influence of Teachers in the Formation of Character.

Influence is the great motive power of the world. It moves, directs, and controls all. However strongly our characters may be marked in childhood, by the presence of peculiar and striking qualities, subsequent influences are omnipotent to modify and destroy. At that period the opposite scales of virtue and vice hang in trembling equipoise, and a breath may determine which shall preponderate for life. As plants, which have sprung from a common stock, may, from the influences of climate and position, measurably lose their former characteristics, and acquire new properties aed appearances; so the properties of the mind may be materially changed, and its inherent impulses counteracted and destroyed, by the moral influences which are brought to bear upon it in the more susceptible stages of its growth. There is in the human mind a wonderful power of assimilation. We all unconsciously catch the moral and mental lineaments of those with whom we associate, be those lineaments beautiful or deformed; and it is possible that minds, between which there existed at first but few points of resemblance, by long and close intimacy, ere they have acquired the stern inflexibility of age, may become as copies of the same original.

Nothing is alone. There is a responsive and sympathetic spirit in all nature. Mind responds to mind and heart to heart. Every individual, however limited his capacity, however narrow the sphere of his action, is a responsible point in the universe, from which go out influences that roll endlessly on, and ripple the surface of eternity. A bell is struck; its tones tremble along the air, are borne onward by its communicating power, and mingle with the undying melodies of the universe. Thus is struck the magic chain of influence, and its strong vibrations run on and on for ever. Who of us has ever felt the force of the astounding truth, that the influences which we are daily and hourly breathing around us, are *endless* in their duration and effects? Who of us has ever reflected that his or her example may have stamped endless moral progress or retrogression on the tables of many a heart? Naught but the revelations of the future can determine the power we exert, in giving form and character to the crude mass of surrounding mind. Let us not make this power an engine of evil. Let us comport ourselves with that scrupulous circumspection, which so peculiarly becomes our position as teachers; never descending to present expediency, but ever consulting the right; acting as becomes living, responsible models of character for the young.

L. P.

MARY HOWITT.—Who has done more for the good of mankind than this Quaker lady? Once we thought that her writings would soon become dull and monotonous, and yet she writes more and more, and everything she writes is instructive and beautiful, making us think her pure mind is as fertile in producing noble thoughts as Nature is in bringing forth the leaves, flowers, and innumerable forms of loveliness. This story is given in the September number of Howitt's Journal. We find it in the Louisville *Examiner*. It is about "A poet and his little daughter."

There they are, of a June morning, where roses, and yellow jasmine covered the old wall, and the blackbird, aloft in the broad-leaved sycamore, was singing as if he was out of his senses for joy—and Nature and art conspired to make all glad. It was the poet's own garden.

Was he happy? Did content smile upon and bless him? Was his spirit in harmony with the place? It was clouded with sad and bitter thoughts; his heart was oppressed; he had been disappointed; where he had hoped for good, he found evil. And as his little daughter ran up to him to tell about the little charity children, full of sympathy herself, and sure of finding it in him, she heard him say to a neighbor:

"No, I have no hope of human nature now: it is a poor, miserable thing, that is not worth

working for. My best endeavors have been spent in its service; my youth and my manhood's strength—my very life—and this is my reward! I will no longer strive to do good. I will work for money's sake as others do—and not for the good of mankind!"

The poet's words were bitter, and tears came in the eyes of his best friend. Never had the child heard such words from her father before; he had been to her hitherto as a great and good angel.

"I will work," said he, "for money's sake, as others do, and not for the good of mankind!"

"My father, if you do," said the child, in a voice of mournful indignation, "I will trample all your writings under my feet!" Large tears rolled down her cheeks, and her eyes were fixed upon her father's face.

The poet took the child in his arms and kissed her: an angel had touched his heart, and he could forgive his bitter enemies.

"I will tell you something, my child," said he, in his usual mild voice. The child leaned her head against his breast, and listened. "Once upon a time a man lived in a great wide wilderness; he was a poor man, and worked very hard for his bread; he lived in a cave of a rock, and because the sun shone burning hot into the cave he twined roses, and jasmins, and honeysuckles all around it: and in front of it, and in the ledges of the rock, he planted flowers and sweet shrubs, and made it very pleasant. Water ran gurgling from a fissure in the rock into a little basin, whence it poured in gentle streams thro' his garden, in which grew all kinds of fruits. Birds sung in the tall trees which Nature herself had planted, and little squirrels, and lovely green lizards, with bright, intelligent eyes, lived in the branches and among the flowers. All would have gone well with the man, had not evil spirits taken possession of his cave; they troubled him night and day; they dropped canker blight upon his roses, nipped off his jasmine and honeysuckle flowers, and in the form of a caterpiller and blight, ate his beautiful fruits. It made the man angry and bitter: the flowers were no longer beautiful to him, and when he looked at them he thought only of the canker and the caterpiller, 'I can no longer take pleasure in them,' said he, 'I will leave the cave and go elsewhere.' He did so; and he traveled on and on; but it was a vast wilderness in which he was, and so it was many and many a day before he came to a place of rest, nor did he know that all this time the evil spirits who had plagued him so in his own cave, were still going with him; but they were; and they made every place where he came to seem worse than the last: their very breath cast a blight upon everything. He was foot-sore and weary, and very miserable. A feeling like despair was in his heart, and he said he might as well die as live; he lay down in the wilderness, and scarcely had he done that, when he heard behind him the pleasantest sound in the world; a little child singing like a bird because her heart was innocent and full of joy; the next moment she was at his side. The evil spirits that were about him, when they saw her coming, drew back a little, for she brought with her a beautiful company of angels and bright spirits, little cherubs, with round, rosy cheeks, golden hair and laughing eyes, stuck between two dove's wings as white as snow. The child had not the least idea that these beautiful spirits always were about her; all she knew was, that she was full of joy, and that she loved above all things to do good. When she saw the poor man lying there, she went up to him, and talked so pityingly and yet so cheerfully to him, that he felt as if her words would cure him. She told him that she lived just by, and that he should go with her and rest, and get well in her cave. He went with her, and it was just such a cave as his own, only much smaller. Roses and honeysuckles and jasmines grew all around it; and birds were singing, and gold and silver fish were sporting about in the water; and there were such beds of strawberries all red and luscious that filled the air with odour. It was a beautiful place: there seemed to be no canker or blight on anything; and yet the man saw how spiders had woven webs like the most beautiful lace from one one vine branch to another; and butterflies that had once been devouring caterpillers were flitting about: and just as in his own garden, fat yellow frogs were squatted under the cool strawberry leaves; but the child loved the frogs as well as the green lizards, and said that they did her no harm, and that there were plenty of strawberries both for them and for her.

"The evil spirits that had troubled the man, and followed him, could not get into the child's garden: it was impossible, because all these rosy-cheeked cherubs and white angels lived there; and that which is good, be it ever so small, is a great deal stronger than that which is evil, be it ever so large. So they sat outside and bit their nails for vexation: and as the man stayed a long time with the child they got so tired of waiting, that some of them flew away forever. At length the man kissed the child, and went back to his own place. When he got there he found that owing to the evil spirits having been so long away, the flowers and the fruits had in a great measure recovered themselves; there was hardly any canker or blight left, and as the child came now very often to see him, and brought with her all her bright company, the place was freed, at least while she stayed, from the evil ones.—That is a true story. There are many men, who, like him, live in a willderness, and it is happy for them when they have a child for their neighbor."

The poet was silent, the child kissed him, and then, without saying a word about the little charity children, ran off to sit down beside them, and perhaps to tell them the story which her father had just told her.

And, children, do you see *how* you may teach Fathers and Mothers, and your elders, when wrong, how to do right? A word kindly spoken, when they are angry—a sweet smile when they are unhappy, the right thing done in the right way, will chage away the evil spirits and make them good again.

From the Buffalo Commercial Advertiser.

THE PRESENT MOVEMENT IN ITALY.—The changes introduced by Pope Pius the ninth have excited much of the attention of the press. Popular feeling, ever desirous to enlist itself on the side of human advancement and liberty, except in those cases where public judgment may be temporarily obscured by the crafty plans of designing statesmen, has in this country hailed with gladness the promised regeneration of Italy.—To some conscientious and prudent persons it appears that no good thing can proceed from Rome, and that whenever this Church may render its aid in behalf of a good cause, it is unreasonable to believe in its sincerity—that such aid, like the Greek horse that carried destruction into the Trojan city, is a gift whose object is in reality treacherous conquest. Such opinions are danger-

ous in themselves, for what is so apt to make men unworthy of any confidence, as to prove that their meritorious acts shall be deemed to proceed from vicious motives.

The friends and enemies of the Romish Church have alike adopted extreme views. According to bigots on one side, she has been a glorious and divine institution, protecting mankind from tyranny, iniquity, and all wrong in this world—and ensuring them the reward of virtue throughout eternity. On the other hand she has sometimes been regarded as the chief—almost the only—obstacle to the prevalence of intelligence, virtue, and happiness. Both these extremes are alike erroneous. She is worthy neither of unqualified blame, nor indiscriminate praise. She is neither infallible, nor incapable of advocating right opinions from worthy motives. Her members, like other men, are liable to be acted upon by the tendency of the age in which they live; and that tendency being towards liberty and popular advancement, it cannot escape the observation of wise statesmen or crafty diplomatists in this Church, that she can only prosper by conforming in a certain degree to the spirit of the times, and by aspiring to lead in the events of the day rather than by opposing that which she cannot prevent.

Possibly investigation may prove that few men or associations of men are quite so black as they are sometimes painted, amid the strife of opposing principles and parties.

The Marquis Massimo D'Azeglio, one of the most distinguished leaders in the present movement for reform in Italy, has lately issued a pamphlet stating plainly what are the questions at issue in this contest. He endeavors to show that the changes proposed are right and practicable, and that it is sought to advance them only by honest means—however much they may be opposed by the bayonets of Austria, or the craft of Louis Philippe. The name of the Marquis D'Azeglio adds weight to his statements. It is connected with the best literature of his country, in which he has sought to incorporate the spirit of Italian nationality and independence. A few months before the death of Pope Gregory he warned him that through the policy then prevailing the papal throne was tottering beneath his feet. He now assumes that no monarch is more secure than the present Pope.

He and his party advocate the substitution, in these contests, of appeals to reason for appeals to force. He traces the agencies of the French revolution, and, as its influences have diminished since the days of Napoleon, he states that the popular belief in the superior efficacy of moral agency has been strengthened. The belief of his party is that the first step to be taken is to guarantee the independence of the different Italian States. The "only wise and really important policy" on the part of the rulers is asserted to be that they should adopt such a course as will render the Italian part of Italy more happy and prosperous than the Austrian part. He wisely recommends the people to co-operate heartily in any such efforts on the part of their princes, and to seek by open and moderate means the necessary changes, without giving way to impatience if they should not immediately be obtained. He repeats that the only means available for the great ends desired are open and honest exertions—part of which are to be unceasing efforts to strengthen the moral sense of the people. He ably justifies by statements and reasoning, the policy of Pius the ninth, and speaks of the effect upon the population, as that of a "religious regeneration."

He says it is not just that other Governments should employ the wealth and power of their people to restore to Italy the independence of which she has suffered herself to be deprived. Of Austria he says, "that the interests of the Austrian and Italian Governments are diametrically opposed. The object of the former has ever been the extension of her dominion in Italy: and she is studiously seeking a fit moment to accomplish her purpose. The latter ought to hold opposite views, and make opposite efforts."

There is a manly eloquence in the concluding words of the pamphlet; and few who read a history of the struggle can suppress a hope that it may end successfully:

It is the object of our untiring endeavors to prepare for the recovery of our absolute and complete independence, whenever it is God's pleasure to grant an opportunity.

We do not on this account seek to excite national hatred against Austria. We wish to draw a distinction between the people and their Government, which are often unjustly confounded. The Austrians, as a people, have neither interest nor desire to injure us, and we hold in high esteem the noble rectitude and solid virtues of the German people.

Our actions are influenced by the highest of human affections—the love of our country; and we think that alone suffices to nerve us for every struggle, without any admixture of hatred or revenge against nations for the trespasses of their Governments, which they often detest and cannot prevent.

We have declared the path we shall pursue, the means we intend to adopt, and the object we seek to attain.

We ask not from Europe one drop of her blood, one atom of her treasure; but the support of her voice, and her sympathy in our cause, if she deems it just.

We know that when a nation is worthy of Independence, she will obtain it by her own exertions, and not by extraneous assistance.

We wait the event tranquilly, not idly. We occupy ourselves, not in disturbing the repose of others, but in ameliorating our condition in that part of Italy which they have left to us; in reforming ourselves so as to render ourselves worthy of Divine aid, and competent to profit by any occasion vouchsafed to us.

If it does not please God to grant this blessing before our generation shall have passed away, we resign ourselves to His will. We shall equally with patience and perseverance seek the regeneration of Italy; and we shall descend into the tomb blessing God, if we have in any degree contributed to the attainment of this object, and thus been able to leave the land where our ancestors repose, in a less deplorable condition than we received it at their hands.

CURRENTS IN THE ATLANTIC.—At a recent meeting of geologists and naturalists in Boston, U. S. Professor Rogers read a report from Lieut. Muray, on the currents of the North Atlantic, which may be of great importance to navigation. Between New York and Havre and New York and Liverpool there is only a difference of one day's sailing in *distance*, while in *time* there is an average difference of nearly a week. This may be obviated by a knowledge of the currents. In going from Havannah to New Orleans vessels stem a current of three miles an hour against them, when they might have a current in their favor of two miles an hour.

J. CLEMENT, EDITOR.

Reading.

Many young men have more time to devote to mental improvement in the winter than at any other season. The long evenings afford them a good opportunity for reading; and to such as consecrate the precious hours of relaxation from manual labor to this pleasant exercise, we wish to offer a friendly hint.

In order to render reading profitable, care must be taken in selecting books, and a proper method observed in perusing them.

A large share of the volumes in circulation, are not worthy of the least notice. It is worse than idleness to spend one's time on them, for not only *that* is lost, but we suffer actual and serious injury. Either our taste is corrupted or our moral principles weakened, or both.

Many books, *apparently* harmless in their tendency, prove deleterious from an awkward delineation of human passions, or from an infelicitous portrayal of real characters. It requires talent to paint vice in its hideous colors and make it truly hateful. This some modern writers of fiction do not possess. Others, possessing the talent, lack the disposition. Bulwer's villains are permitted to shake hands with virtue, and have the impudence to ask her sympathies.

The *constant* reading of works of the imagination—however elevated their tone—will, in the end, enervate the powers of reason and debilitate the entire mental constitution. In order to preserve a well balanced mind, our reading, as a general thing, should call into exercise the reasoning faculties. "Many books," says the author of Lacon, "require no thought from those who read them, and for a very simple reason;—they made no such demand upon those who wrote them. Those works, therefore, are the most valuable that set our thinking faculties in the fullest operation. For as the solar light calls forth all the latent powers and dormant principles of vegetation contained in the kernel, but which, without such a stimulus, would neither have struck root downwards, nor borne fruit upwards, so it is with the light that is intellectual; it calls forth and awakens into energy these latent principles of thought in the minds of others, which, without this stimulus, reflection would not have matured, nor examination improved, nor action embodied."

While some books are to be merely "tasted," others, Bacon happily observes, are to be "chewed and digested"; and the fault is with many of us, that we too seldom choose the latter class. Reading, as is too often the case, for mere amusement, we are apt to shun such books as require the constant exercise of thought. This is wrong, for such a practice unfits us for the manlier labors of the mind.

Let us see to it, then, that we read such books as *require* reflection, and that the habit itself is not abused by neglect. It is better to read little and think much, than to read much and not think at all.

Rev. Asa T. Hopkins, D. D., pastor of the First Presbyterian Church of this city, died on Saturday the 27th ult. He preached the Sabbath before, and was seized with a paralytic fit on Monday, which terminated in his sudden and afflictive death. He was a close student, a ripe scholar, an eloquent speaker and a profound theologian; and in his demise the church of which he was the pastor has lost a faithful guardian, and divine truth a powerful champion. His age was forty-two.

Revival at Evans.—The Baptist Church at Evans in this county, is enjoying a revival of Religion. Eight or ten individuals, mostly young persons, have obtained a hope and others are anxiously seeking the same.

To Correspondents.—Through the carelessness of somebody, the poem "*To an Absent Wife*," did not fall into our hands till a day or two since. It is among the accepted.

Two communications have been received from West Bloomfield and are filed for insertion.

"*The Last Leaf*," is worthy of a place in our columns, which it will have in a few weeks.

An Exploring Visit to each of the Consular Cities of China and to the Islands of Hong Kong and Chusan. By the Rev. George Smith, late Missionary to China. New-York: Harper and Brothers. 1847.

This is a valuable and an interesting work, adapted to please all classes of readers. Though a narrative of Missionary proceedings, yet from its exploratory character, it embodies, aside from an account of the moral condition of China, much information in regard to the social and political state of that peculiar nation, and touches a variety of other topics, "which" as the author says, "might appear less appropriate in a book professedly devoted to a strict narrative of missionary work." The map and the numerous engravings contained in this work, materially enhance its value; and the paper, type, etc., it is enough to say, are Harper's best. It is published in two parts, at fifty cents each, may be found at Hawks.

An Introduction to the Author's "Course of Reading," etc. By H. Mandeville, D. D. New-York: D. Appleton & Co. 1848.

Dr. Mandeville's "Course of Reading" and his "Elements of Reading and Oratory" are popular text books; and this Introduction will be found a useful accompaniment. For sale at Pecks'.

The Convict, or, The Hypocrite Unmasked; a Tale. By G. P. R. James. New-York: Harper and Brothers. 1847.

This is number 107 of the "Library of Select Novels." Price twenty-five cents. For sale by Hawks.

Loss of the Propeller Phœnix.

The *Phœnix* was bound up, and on Sunday morning last, about 4 o'clock, when witin 17 miles of Sheboygan, she was discovered to be on fire. After finding it impossible to extinguish the fire, and that all who remained on board would perish in the flames, many jumped overboard and endeavored to save themselves as best they could.

About thirty got into the small boats and were picked up by the Delaware, which hove in sight after the Phœnix was in flames, but not in time to render assistance to those who remained on board, or who were unable to get into small boats.

Since the above was in type we have been favored by Capt. TUTTLE of the *Delaware* with the following memorandum, embracing some particulars not before given, and correcting others:

The *Phœnix* was first discovered on fire from the deck of the propeller *Delaware* at a quarter to 4 o'clock on the morning of the 21st, off about 18 miles, bearing about North by East.

The *Delaware* was at once got under weigh and headed for the burning propeller, and drove with all possible speed for two hours, when, arriving within fifty rods of the wreck, they heard a voice calling loudly for assistance.

One boat was immediately lowered down and sent in pursuit of the suffering man. It succeeded in picking him up directly and bringing him safe to the *Delaware*, when he was at once divested of his clothing and dry garments given him instead. After rubbing him severely he became quite comfortable. He proved to be the first engineer. While this man was being picked up the propeller proceeded to the wreck, where the other boat was lowered down, and the clerk was found, together with one passenger, clinging to the rudder. This boat picked them up and brought them on board, where, after the same means were used as before, they were both revived and made comfortable.

Both boats were then sent in pursuit of more bodies, while the *Delaware* was made fast to the wreck and succeeded in towing her to Sheboygan where she sunk in 8 feet water. Soon after the arrival of the wreck at Sheboygan, the boats came up, one with 5 dead bodies and the other with Baggage and Furniture.

At this time one of the *Phoenix's* boats came up from the shore where the two boats had gone from the burning vessel, taking with them 42 of the crew and passengers. The boat that now came up contained the Captain very ill, and the first mate, together with some of the crew—the passengers being left on the beach about 12 miles below. From the Clerk, Mr. Donohue, we learned that there were on board 175 Hollanders large and small, and about 100 other passengers and 25 of the crew, making in all 300 persons—45 in all saved, 255 lost.

The *Delaware* soon left on her downward passage, and in passing in the track where the burning vessel was found, fell in with many floating bodies, to the number of about 100. Some of them were standing upright in the water, some of the women were lying on their sides, some—the children generally—on their faces. Some of the passengers were in full dress, some in undress, and others entirely naked—all with their heads to the northward.

They were within four rmiles of the land, and the wind was fast drifting them ashore, so it was not deemed advisable to pick them up, as plenty of boats had been sent from Sheboygan for that purpose, and all not picked up by the boats would drift ashore by the following morning.

THE IRISH AND FAMINE.—The London Spectator, one of the ablest, and impartial papers in Europe, says that the Lord Lieutenant of Ireland tells the Irish, in unmistakeable language, that they cannot avoid poverty except by order and industry; and from such a quarter they cannot avoid hearing those salutary truths.

Anticipating a scarcity of provisions, the Treasury have re-appointed 22 of the 120 naval and military officers who served under the relief commission in Ireland last year in superintending the distribution of provisions.

The government will have food depots in every quarter of the country, and as there is now a positive enactment against permitting people to die of hunger, we shall be spared the repetition of the revolting scenes of last winter.

STEAMBOAT DISASTERS—40 LIVES LOST.—The steamer *Caroline*, from Pittsburgh for Pearl River, burst her boiler on Friday morning last week, near Shawneetownr Mr. PEACOCK, passenger from Pittsburgh, was killed, and four deck hands badly scalded—one since dead. The boiler was defective.

The steamer *Tempest* bound down, and the *Talisman* from Clinton for St. Louis, came in collision on Thursday morning, 10 miles below Cape Girardeau, Upper Mississippi. The T. sunk immediately in deep water. The total loss is estimated at forty lives—some think more.—The ladies and passengers lost everything, escaping only in their night clothes, and in that condition were taken to Girardeau by the steamer *Tempest*.

A HAUNTED HOUSE.—The quiet of a highly respectable family of females in New Bedford was lately invaded by mysterious noises apparently produced without any natural agency. It appears that a certain malicious trial having resulted in the acquittal of a member of the family, the accusing party resolved to proceed with the manly operation of frightening the family in the house—consisting of women and children. He used to enter by the street door, cellar door, chamber window opening on the stoop, and the scuttle on the roof. Having been instructed by his employer he threw detonating chemical preparations at night into various parts of the house. The preparation used left no mark. A stranger was one evening entering stealthily, when he was met the lady of the house, and after saying that he mistook the house for a Hotel, he ran away. Since that time the ghost has ceased his visits.

More Utility in Monuments—than was Dreamt of in some Philosophy.—A few weeks ago we mentioned that Mehemet Ali had taken a whim in his head that would do credit to the wisest and most philanthropic of ancient or modern potentates, and that when his people talked of erecting a monument to perpetuate his memory, he expressed a hope that instead of erecting something that would look like a huge round chimney of a factory, or of a steamboat, the monument should consist of a building for a Library, Newsroom, and other most useful purposes. Whether Pope Pius has taken a hint from the suggestion of his heathen cotemporary it is impossible to say, but it appears that he has requested that the sums subscribed for the erection of monuments to him throughout his states, shall be applied to the more useful purpose of erecting an asylum for aged persons at Rome, each province having certain rights of presentation.

This was mentioned among other items of foreign news yesterday, but is worthy of separate notice.

Important Invention.—It is stated in one of our foreign papers that M. Coquelin, of Boulogne-Sur-Mer, has discovered the means of neutralizing the shock caused by the collision of trains on railways; he has also added to his invention a means of simultaneously preventing carriages from going off the rails. The Chamber of Commerce of Boulogne has, in consequence, made a report to the French Ministry in order to obtain from the Government an ordinance making it compulsory on all railway companies to employ this means of safety.

Earthquakes in Mexico.

The Telegraphic report yesterday contained an announcement of the occurrence of a severe and destructive earthquake, which laid in ruins the town of Atlisco and many of the surrounding villages and monasteries. Nearly the whole territory of Mexico is volcanic, and every where presents evidences of great convulsions of nature. Many of the volcanoes are apparently extinct, but some yet continue in a state of activity, and by what we know of such phenomena we are warned that the terrible forces slumbering in the deep bosom of the earth may burst forth when least expected with redoubled fury, as if their awful energies had accumulated during a lapse of ages. The high central table land of Mexico has beyond all question been upheaved by the agency of volcanic action, and the valley in which rests the city of Mexico shows unmistakeable signs of having been formed by the breaking down of a mountain, partially filling up with the fragments of its worn sides some vast crater. Fire yet smoulders beneath, and its occasional heaving shows the dread might of the power there imprisoned. Within the last year or two there have been repeated symptoms of renewed and increased activity on the part of these subterraneau forces. The earth has shown a distemperature analogous to the commotions which afflict the dwellers upon its surface. Indeed it would be a curious subject of investigation if we had time to trace out the analogy, and possible connection, between seasons of war and great civil commotions and the times of great marked natural convulsions.

The relations between mind and matter are known to be intimate, and telluric phenomena have long been observed to exert a direct and powerful influence not only upon the bodily health, but the temper, spirits and intellect of men; and hence the frequent coincidence of the occurrence of great natural convulsions and wars and revoutions, when men run riot in unbridled passions, have led many writers to indulge in speculations that these things were more than mere coincidences, that they were, in fact, cause and effect. In the Levant, for instance, it has long been noted that more murders and violent crimes were committed, more desperate resolves entered into, during the blowing of a particular wind, that gave an intolerable acrimony to the temper and fluids of the body, than at any other season.

But speculations of this character, in the lack of accurate observations with a view of educing the elements of general laws, must necessarily be fanciful, though the coincidence between the war raging in Mexico and the occurrence of earthquakes is calculated to excite such a train of thought, and, considering the fact that the volcanic forces of Mexico seem to be freshly aroused, it would not be at all wonderful if we should soon be called upon to chronicle some of Nature's doings as remarkable as the late feats of arms in that country. The partial destruction of the Valley of Mexico, some thousands of years ago, may yet be consummated in our time, and the ruin there be as complete as that which, three centuries since, overwhelmed the proud and stately city of old Guatemala. In connection with this subject the following extract from a letter of Mr. Kendall to the *Picayune* will be read with interest:

City of Mexico, Oct. 3, 1847.

An earthquake! we have had an earthquake! Between the hours of seven and eight yesterday morning, and when all nature was hushed in a stillness most profound, suddenly the earth began to rock with a strange and most fearful motion. I am living at the house of Pena y Pena, the headquarters of Gen. Worth, immediately in front of the beautiful alameda, and the first intimation we had of the dread convulsion was the violent slamming of the doors, accompanied by a furious jingling of the glass pendants attached to a chandelier hanging and swinging from the ceiling of the room. Soon our beds commenced rocking, something after the manner of a ship becalmed at the close of a storm, and then came the shrieks of innumerable women and children, driven, half dressed, affrighted into the streets. The dreaded *tremblor*, as the Mexicans call it, was upon us. Most strange and impressive was the scene disclosed from the front windows, as reeling and staggering we approached and opened them. To walk steady was impossible, so vio-

lent were the upheavings and oscillations of the mighty earth. The tops of the large trees in the alameda, were swaying, the water in the reservoirs was billowing to and fro, the walls around us were cracking and gaping asunder, the wide street in front was crowded with women and children as well as men, screaming and praying and crossing themselves in the extremity of their fright, while our own soldiers were reeling unsteadily in their midst, astonished and awe-stricken at the strange commotion. The sentinels halted upon their rounds, uncertain and not knowing what to do; the *callejons*, or narrow lanes, continued to pour forth their hundreds of affrighted inhabitants, all seeking the refuge of the wider streets and open squares, lest their own houses might totter and tumble upon their heads, while on bended knees they confessed their sins aloud, and earnestly petitioned forgiveness ere it was yet too late. A wounded officer in our house, bed-ridden, and apparently unable to move since the hard-fought battle of El Molino, came hobbling hurriedly from his room, driven thence by the cracking of the walls and the strange tumult from without. The stillness of the morning, so profound had been the repose of Nature, but added to the general feeling of wonder and of awe —of consternation, perhaps I should term it; a fear caught from the actions and countenances of those "native here and to the manor born," those cradled and rocked amid commotions of a kindred nature.

The domes and the steeples of the innumerable churches and convents reeled like drunken men; the lakes hard by rolled their sluggish waters as though moved by an elemental strife from above instead of the earth in which they are nestled in her sore travail. An officer in the street, about to mount his horse at the commencement of the commotion, suddenly found the animal receding from him. Astonished, he enquired of a soldier close by the cause; but the man was as ignorant as himself. The puddles in the streets —for there had been a severe shower the night before—spread themselves and disappeared upon the pavement, so great was the motion, while the trees in the alameda continued to lash their huge tops as if swayed by unseen yet all-powerful hands. The shock lasted over two minutes—perhaps I should say succession of shocks, for the oscillatory motion of the earth at short intervals became calm—while the whole scene impressed every one anew with the might, the majesty and the manifold power of the Most High.

But, if the streets and open ways presented a spectacle most impressive, doubly awful was the effect produced among the wounded men in the different hospitals, Unconscious of the cause of the strange commotion, filled with apprehensions which ever attack with ten-fold force the disabled and the infirm, and dreading results from a phenomenon they must have deemed akin to the supernatural, the poor fellows rose and hobbled from their cots—trembling and stricken by deep awe, yet not knowing whither to fly. The armless hurried hither and thither, the legless hobbled about in all directions, while the bed-ridden, the prostrate, and the utterly helpless, panic stricken and desponding, earnestly prayed and petitioned not to be left unprotected—not to be deserted in an extremity which their ignorance made painfully terrifying. But by and by the earth became relieved of her mighty throes, the staggering steeples resumed their quiet, the affrighted inhabitants rose thankful from their knees, the sentinels recommenced their rounds—the fury of the dreaded *temblor* was spent:

For one, I have always desired to see, or rather to *feel*, the effects of an earthquake. A single convulsion has sufficed to cure all curiosity—I never wish to be present at a repetition.

Geological Survey of Iowa, Wisconsin and Minesota.

We copied from a Western paper, a few days ago, a brief notice of this survey, by a party of geologists in the service of the United States. The St. Louis *Republican* of the 15th contains a more minute and detailed report, which, believing it will prove interesting to our readers, we have copied below. The survey is not yet completed, but the results already ascertained are highly important:

A *reconnoissance* has been made of the country on both sides of the Mississippi River, north of the Wisconsin and Turkey Rivers, and south of the St. Croix and St. Peter's Rivers, embracing the whole of the Chippewa land district situated in Iowa and Wisconsin. The Wisconsin, Prairie la Cross and Black Rivers—all the branches of the Chippewa, St. Croix, Bois Rule, and Montreal, or Mauvais Rivers, and the west fork of Bad River—have been explored from their mouths to their respective sources. The St. Peter's River was ascended a little beyond the Bois Franc; and all the streams south of the St. Peter's, and north of the United States' geological survey, made by Dr. Owen, in 1839, have been ascended as far as they were navigable in birch bark canoes.

The corps, during the first season, have crossed the country from the Mississippi to Lake Superior six times; and in the execution of their explorations, the corps conjointly have traveled over an extent of several thousand miles.

A detailed survey has been made in connection with the linear survey of the southern portion of the Chippewa land district, as well as the region on both sides of Lake St. Croix, and between that lake and the Mississippi. The whole extent of the country of which a *reconnoissance* has been made during the present season, is estimated to be equal, in area, to the State of New York.

The labors of the corps have not been restricted, exclusively, to the investigation of the geological and mineral character of this north-western section of country. Its agricultural resources have been particularly examined—statistics of its lumber trade collected—important additions made to its physical geography, hitherto but little known—and particular attention directed to the acquirement of every kind of knowledge calculated to afford valuable information in regard to the real value of the country, whether applicable to the requisitions of the miner, the manufacturer, the farmer, the trader, or the man of science. During the present winter, chemical analyses will be made of the ores and ore-bearing rocks, and the different soils which have been collected; upon the completion of which the first annual report will be drawn up, containing detailed estimates, accompanied by a geological chart, embracing the general results of the observations of all the members of the corps during the present year.

As respects the geology of the section of country surveyed, its rocks belong, in a great measure, to the primary and silurian, or protozoic formation. The lower magnesian limestone, the *lead-bearing rock of Southern Missouri*, is found on the west side of the Mississippi River, from Turkey River, which enters the Mississippi near Prairie du Chien, to the St. Peter's River, displaying, in various localities, indications of considerable lead ledes.

On the eastern side of the Mississippi river, primitive rocks are met with in places from forty

to sixty miles from the river. These granitic formations are important for architectural purposes, as they afford a great variety of the most durable, as well as ornamental building stones, which, at no very distant period, will be valuable as articles of commerce, as the great Valley of the Mississippi, to the south, is formed of secondary rocks, which are far inferior for the permanent construction of edifices.

Throughout this primitive region, the granitic rocks make their appearance in a succession of rounded knobs, elevated from ten to fifty feet above the waters of the surrounding country. Their general range is S. W. and N. E. These rocks present considerable variation in character and composition. Sometimes they are hornblendic, approaching to perfect syenite: at other times, feldsparthic. Some portions are massively stratified, the masses being nearly vertical. On the western limits of these primitive rocks, there are several large deposits of iron ore. The trap ranges, with the exception of those crossing the St. Croix River, are found on the water courses which empty into Lake Superior, and is the rock in which the Lake Superior copper is found, and no doubt valuable mines of this mineral will be, hereafter, discovered in these ranges, equal to any heretofore found farther east on Lake Superior, as they constitute a portion of the same ranges. In the vicinity of these trap ranges, the land is tilable, the soil good, and generally covered with a rich growth of the sugar maple.

At the Falls of St. Croix, fifty to sixty miles from the Mississippi, there is a grand outburst of of green stone, epidote and porphyritic trap, forming a series of dykes, 170 feet and more in elevation, above the streams, and traversed by veins of native copper, carbonate, and probably grey sulphuret.

At the Falls of St. Croix, immediately in juxtaposition with the trap, in some places entangled in the disrupted portion of these rocks, are beds highly charged with lingulas and orbiculars, some, if not all of them, probably, of undescribed species. These beds differ in lithological character, from any thing observed elsewhere, in the protozoic strata of the west and perhaps in any portion of the United States. These lingular and orbicular beds, though often crowded with remains of these genera of molusca, are found to be subordinate to a quartzose sandstone, also containing lingulas and orbiculars, probably of the same species as in equivalent beds of Potsdam sandstone of New York, making them of great geological interest, as they are undoubtedly the lowest fossiliferous beds ever noticed in the west, and as rich in remains of these forms of molusca as any of the most fossiliferous beds of the Ohio valley. Some distance above these lingular and orbicular beds, but yet considerably below the lower magnesian limestone of Wisconsin, we have a stratum of the lithological character of the hydraulic limestone. These strata are of great geological interest as they make us acquainted with some of the earliest forms of organic existence yet brought to light in this country, and furnish a new clue to the identification of strata. In the rents of the trap are found portions of the adjacent fossiliferous strata indurated, altered, and even cemented to portions of trappean rocks with their fossils unobliterated and even well formed.

The magnetic variations in these grani and traperian ranges, is often great, at times so much so, as to reverse completely the direction of the poles. A variation fluctuating from five to twenty degrees on either side of the true meridian, was not uncommon.

There are about thirty different species of animals in this region, many of them valuable for their furs.

The rivers and lakes contain a large variety of fish, in the greatest abundance, and of superior esculent qualities.

The attention of the corps has been particularly directed to botanical discoveries. There are found in this district, so far as ascertained, forty-five distinct species of forest trees, constituting twenty-five genera, and embracing twelve of the natural orders. Of these, the most valuable are the white and yellow pine, (pinus strobus and pinus resinosa) the hemlock, (abies canadensis, Lin) and the sugar maple, (acer saccharinum Lin.)

Of the resinous trees there are some eleven or twelve species, of which the most important are the white and yellow pine, on account of the immense amount of lumber which they furnish; and the hemlock, for the great quantity of tanner's bark it will afford. Some idea may be formed of the immense loss which the United States government sustains in the destruction of timber in the extensive pineries of this region, when we reflect that independently of the large quantity which is rafted off in logs, square timber, shingles and laths, there are in operation on the waters of the Wisconsin, forty-five saws; on the Black river, sixteen saws; on the Chippewa, seven saws; on the St. Croix, twelve saws—making in the whole, eighty saws. As each saw is capable of turning out generally half a million feet of sawed lumber, there are annually sawed forty millions of feet of lumber, worth in St. Louis nearly half a million of dollars.

On the head waters of the streams on the east side of the Mississippi, there are extensive forests of hemlock, capable of affording an ample supply of bark for all the tanneries which may hereafter be established in the West—a want of which material has been an impediment to the prosecution of the tanning business in the valley of the upper Mississippi, and which has forced us to export our raw hides to the East, and import their leather in return.

The sugar-maple tree grows so abundantly and yields so luxuriantly in the Minesota territory, that at some future period it will be second only to Louisiana in the production of sugar. An Indian squaw, performing all the labor herself, can obtain, during the sap season, 300 pounds of sugar with her imperfect Indian utensils.

The wild rice, (zizania aquatica,) infinitely superior in taste and far more nutritious than the rice of the Southern States, grows abundantly as an indigenous vegetable, and can be cultivated to almost any extent in the lakes which abound in this territory, and will, in all probability, at no very distant period, compete with the Southern production. After the tops of the rice plants have been tied up in small sheaves as it stands growing in the water, an Indian squaw with her canoe will gather from five to ten bushels of rice per day.

The cranberry (oxycoccos macrocarpa,) is an indigenous vegetable of this region, and grows very abundantly in its wild state, and will, in all probability, be extensively cultivated in the wet and swamp lands of this section, and which are almost useless for other agricultural purposes.—We look forward with great interest to the officiat report, which, we hope and expect, will contain a full and minute statement of all the discoveries and researches that have been made in relation to the animal, vegetable and mineral resources of this important section of the Great West.

Despise not the poor and needy.

DUELLING.—It is commonly remarked that a quarrel never comes to a duel if the seconds are men of sense, who know what they are about.—And this fact is really the strongest condemnation of duelling, the duel when it occurs being the result of misconduct on the part of the managers of the dispute. It may be safely asserted that if there were no blunderers and bunglers in the place of seconds, there would be no duels; so that the duel is not referable to the point of honor, but to some error or stupidity in the management of the affair.

If good sense in the seconds prevents recourse to the pistol, do not let us be told that honor can in any case require it; for it cannot be a requirement of honor, but of a misunderstanding and mismanagement of the requirements of honor!

And if, as generally admitted, the duels that take place are the consequence of mismanagement on the part of the friends, how indefensible is so serious an issue, proceeding from no real necessity, but altogether from error, in the managing parties!

What a scandal to an age of civilization, that A and B should shoot each other because C and D did not know what they were about, and had not the sense necessary to the adjustment of an affair of honor. As the good sense and tact for the right management of such matters cannot be secured, and the penalty in default is pistolling, the disuse of the custom is what reason and humanity require.—*London Examiner.*

The Mexican officers in their frequent intercourse with the American troops, must be greatly surprised, if not shocked, at what they see. An officer of the Pennsylvania regiment writing home, tells the following:

"We brought a coffin with us to put Walker's remains in, but found it too small. I went to work and made one myself, and you should have seen Col. La Vega and Major Iturbide look at me when they saw me shoving "John"—(the jack plane.)

THE CHOLERA.—The Liverpool Mail, received by the last steamer, announces the death of a soldier in the garrison at Dublin, from Asiatic cholera. If it has really got a foothold in Ireland, whose people, wasted as they are already by famine and fever, present so ready a prey to this terrible disease, its ravages must be most awful. And if it is certain that it has reached so western a point of Europe in its devastating march, there can be no doubt that it will soon cross the ocean.

MARRIED.

On the 17th inst., by J. G. Dickie, Esq., Mr. CHARLES CARRICH, and Miss JULIA CARLY, both of Black Rock.

On the 23d inst., by P. A. Child, Esq., Mr. PETER N. CLAPSADDLE, of Frankfort, Herkimer Co., and Miss ABIGAIL WHITE, of Buffalo.

On the 24th inst., by the Rev. Dr. Tucker, WILLIAM HODGE, Jr., of Black Rock, and ARRIETTA ADELIA HODGE, of this city.

On the 24th inst., by P. A. Child, Esq., Mr. ANDREW BEZZO, of Port Dover, and Miss NANCY TYGE, of this city.

At Monterey, Mexico, on the 3d ult., JOHN H. CHESTER, Printer, belonging to Company H., 1st Virginia regiment of volunteers, formerly of Philadelphia county, Pa., and MAGDALENA, only daughter of Don Miguel Rodriguez, of Villa Real, Mexico.

REEVES AND CARNER,

DRAPERS AND TAILORS, Nos. 274 and 276 Main street, (Kremlin block, up stairs,) Buffalo.

GEORGE H. READ,

BLANK BOOK MANUFACTORY AND BOOK BINDERY, Commercial Advertiser Buildings, 161 Main Street, Buffalo. Over the office of the Daily Commercial Advertiser.

Blank Books of all descriptions ruled and bound to any pattern.

Periodicals, Music Books, Newspapers, Magazines, Old Books, etc., carefully arranged and bound in every variety of style, and at moderate prices. Ladies Albums, Port Folios, etc., made to order. n2

NEW PUBLISHING HOUSE AND WHOLESALE BOOKSTORE.

The subscribers beg to inform Booksellers, buyers and dealers in Books, and all interested in education and literary advancement, that they have recently opened an extensive Book and Stationery Establishment. Their assortment of Books in the various departments of literature is complete and well selected: comprising a full assortment of School and Classical Books in general use, Law, Medical and Theological Books, in great varieties. Their facilities as Publishers enable them to offer Books on as favorable terms as most of the Eastern Houses. Orders from the country solicited and promptly answered.

Citizens and the public generally are invited to call and examine Books and Prices, where will be found the one progressive principle "Small Profits on numerous Transactions."

DERBY & HEWSON,
n7 No. 164 Main Street, Buffalo.

BUFFALO MUSICAL INSTITUTE FOR YOUNG LADIES.

At the residence of Prof. W. R. Coppock—Composer and Teacher of the Piano Forte, Organ, Singing and Composition.

An institute devoted exclusively to Musical Education is not yet common in this country; but in Europe the test of experience fully shows its great advantages over the too general superficial manner in which this important part of polite education is acquired. The advantages this institution offers to those desirous of completing their studies as Organists—or practical players of the Piano Forte, together with a thorough system of imparting the same to others is fully established by the many precedents of the past 15 years. The pupils are constantly guarded in their practice, against all bad habits, and from the various stages of progress they may be in, are continually stimulated to effort and industry, by association with each other. The family too, are all players, and the theory is amusingly discussed, impressing its rules in a more pleasing manner, and more lasting upon the understanding, than by the mere dry study of an elaborate book. Music is composed and arranged from time to time, showing the various styles and harmonies analytically, and adapted for performance on several Pianos at the same time. This teaches a thorough knowledge of counting, and dividing passages into their given times. Vocal music is particularly attended to, and when the pupil has a moderate share of talent, we hesitate not to say, a correct and pleasing singer can be made. The Piano Fortes used are all new, and of the finest quality, and every endeavor will be given to render the true spirit with us profitable. The building is commodious, and has a fine garden attached, with Green houses, Bathing rooms, &c., and is pleasantly situatuated in Seventh street, between Niagara Street, and the Falls rail road, and about mid way to Prospect hill.

Terms made known upon application at the Institute, or by mail, post paid, directed Prof. Coppock, Buffalo.

Prof. Coppock, keeps constantly a choice selection of Piano Fortes for sale.

Buffalo, August 3, 1847.

CHEAP CASH BOOK STORE.

The subscriber, dealer in Books and Stationery, at 160 Main Street, 4 doors above Seneca, keeps constantly on hand, an extensive stock, embracing the most valuable selections from Ancient and Modern Literature—and a general variety of Theological, Classical, Gift and School Books, &c., &c. The Amateurs of Knowledge and all interested in the purchase of Books or Stationery are respectfully solicited to call. Print and Cap Paper at wholesale.

"Given by his Mother at Parting."

BY MARIANNA HENDEE.

Thy *Mother's Gift!* The gift of her
Who pleadeth with her God for thee!—
Shepherd of Israel! may thy care
In danger's hour the answer be!

Her *Parting Gift!* Would thou could'st know
The truthfulness of that deep love
Which girds thee *thus* to meet each foe
That may thy Christian courage prove!

The *Gift of Life!* Here thou may'st glean
Fresh manna, daily, for thy food!
And bow to drink that living stream
Which floweth from the Word of God!

Oh! pale are India's flashing gems
Beside the "pearl of countless price"!
And vain were bartered diadems
To gain the gold of Paradise!

Then guard within thy faithful heart
This shield'ng talisman of love!
So shalt thou foil the tempter's dart,
And sing the triumph-song above!

WEST BLOOMFIELD, N. Y.

The Miller's Maid.—A Story of Female Heroism.

"Near the hamlet of Udorf, on the banks of the Rhine, not far from Boon, there yet stands the mill which was the scene of the following adventure:—

"One Sunday morning, the miller and his family set out as usual to attend divine service, at the nearest church in the village of Heasel, leaving the mill, to which the dwelling house was attached, in charge of his servant maid, Hanchen, a bold-hearted girl, who had been some time in his service. The youngest child, who was still too little to go to church, remained also under her care.

"As Hanchen was busily engaged in preparing dinner for the family, she was interrupted by a visit from her admirer, Henrich Botteler; he was an idle, graceless fellow, and her master, who knew his character well, had forbidden him the house; but Hanchen could not believe all the stories she heard against her lover, and was sincerely attached to him. On this occasion she greeted him kindly, and not only got him something to eat at once, but found time in the midst of her business to sit down and have a gossip with him, while he did justice to the fare set before him. As he was eating, he let fall his knife, which he asked her to pick up for him; she playfully remonstrated, telling him she feared, from all she heard, he did little enough work, and ought at least to wait on himself; in the end however, she stooped down to pick up the knife, when the treacherous villain drew a dagger from under his coat, and caught her by the nape of the neck, griping her throat firmly with his fingers to prevent her screaming; then, with an oath, he desired her to tell him where her master kept his money, threatening to kill her if she did not comply with his demand. The surprised and terrified girl in vain attempted to parley with him; he still held her tightly in his choking grasp, leaving her no other choice but to die or betray her master. She saw there was no hope of softening him or changing his purpose, and with the full conviction of his treachery, all her native courage awoke in her bosom. Affecting, however, to yield to what was inevitable, she answered him in a resigned tone, and what must be, must; only, if he carried off her master's gold, he must take her with him, too; for she could never stay to hear their suspicions and reproaches, entreating him, at the same time, to relax his grasp of her throat, for she could hardly speak, much less do what he bid her, while he held her so tight. At length he was induced to quit his hold, on her reminding him that he must lose no time, or the family would be returning from church. She then led the way to her master's bed-room, and showed him the coffer where he kept his money. 'Here,' she said, reaching to him an axe which lay in a corner of the room, 'you can open it with this, while I run up stairs to put all my things together, besides the money I have saved since I have been here.'

"Completely deceived by her apparent readiness to enter into his plans, he allowed her to leave the room, only exhorting her to be as quick as possible, and was immediately absorbed in his own operations; first opening the box, and then disposing of the money about his person. In the meanwhile, Hanchen, instead of going up stairs to her own room, crept softly along several passages till she again reached her master's chamber. It was the work of a moment to shut and bolt the door upon him; and this done, she rushed out to the outer door of the mill to give the alarm. The only being in sight was her master's little boy, a child of five years old; to him she called with all her might, 'run, run to meet your father as he comes from church; tell him we shall all be murdered if he does not come back.' The frightened child did as she bid him, and set off running on the road she pointed out.

"Somewhat relieved by seeing that the child understood her, and would make her case known she sank down for a moment on the stone seat before the door, and full of conflicting emotions of grief and thankfulness for her escape, she burst into tears. But at this moment a shrill whistle aroused her attention; it was from her prisoner, Heinrich, who opening the grated window above her head, shouted out to some accomplice without to catch the child that was running away so fast, and to kill the girl. Hanchen looked around in great alarm, but saw no one. The child still continued to run with all his might, and she hoped that it was but a false alarm to excite her fear and overcome her resolution; when just as the child reached a hollow in the next field, (the channel of a natural drain,) she saw a ruffian start up from the bed of the drain, and snatching up the child in his arms, hastened with him towards the mill, in accordance with the directions of his accomplice. In a moment she perceived the full extent of her danger, and formed a plan for escaping it.

"Retreating into the mill, she double-locked and bolted the door, the only apparent entrance

into the building, every other means of obvious access being prevented by strong iron gratings fixed up against all the windows, and then took her post at the upper casement, determined to await patiently her master's return, and her consequent delivery from that dangerous position, or her own death, if indeed inevitable: for she was fully resolved to enter into no terms, and that nothing should induce her to give up her master's property into the robber's hands. She had hardly had time to secure herself in her retreat, when the ruffian, holding the screaming child in his arms, and brandishing a knife in one hand, came up, and bid her open the door, or he would break it down, adding many awful oaths and threats; to which her only answer was, that she put her trust in God. Heinrich, who from his window was witness of this colloquy, now called out to cut the child's throat before her eyes if she still persisted in her refusal. Poor Hanchen's heart quailed at this horrible threat; for a moment her resolution failed, but only for a moment. The death of the child could be no gain to them, while her own death was certain if she admitted the assailant, and her master, too, would be robbed. She had no reason either to suppose that her compliance would save the life of the child. It was to risk all against nothing, and she resolved to hold out to the last, though the villain from without renewed his threats, saying that if she would not open the door to him he would kill the child, and then set fire to the mill over her head. 'I put my trust in God,' was still the poor girl's answer.

"In the meahwhile, the ruffian sat down the child for a moment to look about for some combustibles to carry out his threat. In this search, he discovered a mode of entering the mill unthought of by Hanchen. It was a large aperture in the wall, communicating with the great wheel and other machinery of the mill, and it was a point entirely unprotected, for it had never been contemplated that any one would seek to enter by so dangerous an inlet. Triumphant at this discovery, he returned to tie the hands and feet of the poor child, to prevent its escape, and then stole back to the aperture by which he intended to effect an entrance. The situation of the building prevented Hanchen seeing anything of this, but a thought had meanwhile struck her. It was sunday, when the mill was never at work; if therefore, the sails were set in motion, the whole neighborhood would know that something was the matter, and her master especially would hasten home, to know the meaning of any thing so strange.

"Being all her life accustomed to the machinery of the mill, it was the work of a moment, to set it all in motion—a brisk breeze, which sprang up at once, set the sails flying. The arms of the huge engine whirled round with fearful rapidity; the great wheel slowly revolved on its axle; the smaller gear turned, and creaked, and groaned, according as the machinery came into action; the mill was in full operation. It was at this moment that the ruffian intruder had succeeded in squeezing himself through the aperture in the wall, and getting himself safely lodged in the great drum wheel. His dismay, however, was indescribable, when he began to be whirled about with its rotation, and found that all his efforts to put a stop to the powerful machinery which set it in motion, or to extricate himself from his perilous situation, were fruitless. In his terror, he uttered shrieks and horrible imprecations. Astonished at the noise, Hanchen ran to the spot, and saw him caught like a rat, in his own trap, from which it was no part of her plan to liberate him. She knew that he would be more frightened than hurt, if he kept within his rotary prison, without any rash attempt to escape, and that even if he became insensible, he could not fall out.

"In the meantime the wheel went round and round with its steady unceasing motion; and round and round he went with it, while sense remained besieging Hanchen, with entreaties, promises, and wild impotent threats, which were all equally disregarded, till by degrees feeling and perception failed him, and he saw and heard no one. He fell senseless at the bottom of the engine, but even then his inanimate body continued to be whirled round as before; for Hanchen did not dare to trust to appearances in such a villain, and would not venture to suspend the working of the mill or stop the mill gear and tackle from running at their fullest speed.

"At length she heard a loud knocking at the door, and flew to open it. It was her master and his family, accompanied by several of his neighbors, all in the utmost excitement and wonder, at seeing the mill sails in full swing on Sunday, and still more so, when they found the poor child lying bound upon the grass, who, however, was too terrified to give them any account of what had happened. Hanchen, in a few words, told all; and then her spirit, which had sustained her through such scenes of terror, gave way under the sense of safety and relief, and she fell fainting in their arms, and was with much difficulty recovered. The machinery of the mill was at once stopped, and the inanimate ruffian dragged from his dreadful prison. Heinrich, too, was brought forth from the miller's chamber, and both were in a short time sent bound under a strong escort to Boon, where they soon after met the reward of their crimes."

The story of this extraordinary act of presence of mind concludes by telling us that Hanchen, thus effectually cured of her penchant for her unworthy suitor, became eventually the wife of the miller's eldest son, and thus lived all her life in the scene of her imminent danger and happy deliverance.

Moral Uses of Poetry.

BY REV. S. D. BURCHARD.

That poetry will have an influence, and that it may be made an efficient instrumentality in improving the intellect and the heart, will be evident to any one who will contemplate the elements of its power. It is more effective, more spirit-stirring, than music, statuary or painting. Let us quote two stanzas from Wordsworth, which illustrate the suggestive power of poetry. They are addressed to a butterfly:

"Stay near me; do not take thy flight!
A little longer stay in sight,
Much converse do I find in thee,
Historian of my infancy.
Float near me! Do not yet depart!
Dead times revive in thee:
Thou bring'st, gay creature as thou art,
A solemn image to my heart,
My father's family!

O, pleasant, pleasant were the days,
The time when in our childish plays,
My sister Emeline and I
Together chased the butterfly.
A very hunter, did I rush
Upon the prey. With leaps and springs,
I followed on to brake to bush,
But she, God love her! feared to brush
The dust from off its wings."

Now in these few lines the poet calls up a train of treasured memories, utterly beyond the

reach of every *other* except the poetic art divine. The utmost skill of the painter could never, by a simple butterfly, a boy and his little sister, bring such a rush of old buried feeling over the heart. There is little indeed in the mere apostrophe of the poet to the butterfly. But the moment he calls it the 'historian of his infancy,' up leap the old familiar faces of other days; his father's family, his own boyish sports, his sister Emeline, with a thousand other thoughts associated with the dark and dream-like past. Then with a contrast the poet draws between himself and his sister! The one, in the rough, wild wantonness of boyhood, leaping and springing from brake to bush after the glossy winged wanderer, determined to catch it, though at the loss of one of its wings or feet; but she, with all the fawn-like movements of a gentle girl,

> ——"feared to brush
> The dust from off its wings."

Our moral sensibilities are so arranged and attuned, that true poetry will find its way to the heart, and leave its impress there. Hence its influence, during all time, over the moral feelings and habits of men. Some of the grandest revolutions and changes that have signalized the world's history have been affected through the instrumentality of poetry. It was the lyre of Orpheus that civilized Thrace. It was the sublime ode of Miriam and Moses that developed the patriot spirit of the Jews. It was the songs of the bards, those divinely inspired old men, that preserved the Welch unconquered and unconquerable in their mountain fastnesses. It was the Troubadours and minstrels of the twelfth and thirteenth centuries that laid the foundation of modern literature and civilization. They invested the whole circle of the virtues with an ideal beauty, which found its way to the better feelings of men, in those dark and barbarous ages and called up through the whole length and breadth of Europe the most romantic love of the brave the beautiful and the good.—*Knickerbocker.*

Crisis of the War.

The crisis is reached at last. An event that, to Rome under Cæsar, or to France under Napoleon would have put the top stone to a pyramid of glorious conquest, is ready for record in the history of the decendants of the passengers in the Mayflower. A vast country, teeming with a population impregnated with the spirit of chivalry and with the memories of military glory, has yielded to a comparative handful of a people supposed capable of trade and agriculture and little else; and, after battles of every kind, and at every unfavorable odds, seven thousand men have taken a capital of 150,000 population, and are the masters, now, of Mexico and the "Halls o fthe Montezumas." This is a striking passage of history —whatever may be the right or wrong—and will be named by orators and poets as long as the world lasts, whatever lesson they draw from it, or however it may brighten or blot the names of the men who are responsible for the impulse.

England would, for herself, justify—twenty times over—exactly the conquest we have made of this neighboring nation, on the same ground that the law takes possession of the property of an incompetent, and by assuming guardianship, put it out of his power longer to misuse and waste it. That Mexico will sooner, by Yankee foot-hold in its centre, arrive at desirable civilization and proper self-government, no one doubts. The question is as to our right to put on the strait jacket till a frantic brother country, incapable of self-government, and likely to injure others meanwhile, should come to its senses. But while we see a justification of the war in this light, it imposes, to our view, the obligation to treat the sufferer generously with the first moment of trustworthy recovery. We hope the result of the Mexican war—the management from this point of complete conquest—will justify to all nations soon, and to posterity hearafter, our invasion and temporary acquisition of Mexico. Our country's glory can now require no more. We have shown ourselves masters of the art of war and (as the Mexican account of the battle says) "impossible to defeat without annihilation." Mercy, conciliation, a policy cool but yielding, will now become us, and we think the descent of this war-star from its meridian, may yet be the mingled reliance of hour country as a precedent, and its pride as a memory.

We have enlarged heretofore on one strong feeling we have, with regard to these conquests, —the triumphant warning with which the flag on the "Halls of the Montezumas" flaps in the face of England. Were this haughty tyrant of Europe a half century nearer to the natural termination of bloated national career, we should regret the seed of warlike spirit sown in our country of more healthful constitution and energies. But with England to humble—which we know to be a task before us—we are not sorry to see, breathed and armed, the spirit which otherwise might first learn a lesson of war at some cost, but which now will come, in practice, to the arena, and win its honors gracefully and from the first. The more we admire England for its culture and refinement at home, the more we long to put a stop to its immeasurable haughtiness of dictation and policy of encroachment abroad.

The daily and other papers are so filled with the details of the war, that we think it needless re-production to give them in the Home Journal, and we, therefore, mark only the great events, and with simple mention or copy of the documents most important. We say nothing of the heroes who have accumulated glory for their country, and their children; but our eye is upon their deeds, and we shall pay our tribute hereafter.—*Home Journal.*

MRS. HEMANS AND THE POET SHELLEY.—In many points Mrs. Hemans reminds us of a poet just named, and whom she passionately admired, namely, Shelley. Like him, drooping, fragile, a reed shaken in the wind, a mighty wind, in sooth, too powerful for the tremulous reed on which it discoursed its music; like him, the victim of exquisite nervous organization; like him, verse flowed for and from her, and the sweet sound often overpowered the meaning, kissing it, as it were, to death; like him she was melancholy, but the sadness of both was musical, tearful, active, not stony, silent and motionless, still less misanthropical and disdainful; like him, she was gentle, playful, they could both run about their prison garden, and daily with the dark chains which, they knew, bound them till death. Mrs. Hemans, indeed, was not, like Shelley, a vates; she has never reached his heights, nor sounded his depths, yet they are, to our thought, so strikingly alike, as to seem brother and sister, in one beautiful, but delicate and dying family. Their very appearance must have been similar. How like must the girl, Felicia Dorothea Brown, with the mantling bloom of her cheeks, her hair of a rich golden brown, and the ever varying expression of her brilliant eyes, have been to the noble boy Percy Bysshee Shelley, when he, came first to Oxford, a fair-haired, bright-eyed enthusiast, on whose cheek and brow, and in whose eye was

already beginning to burn a fire, which ultimately enwrapped his whole being in flames!

In Mrs. Hemans's melancholy, one "simple" was wanting, which was largely mixed in Shelley's, that of faithless despondency. Her spirit was cheered by faith—by a soft and noble form—of the softest, noblest faith—a form, reminding us much, from its balance of human, poetical, and celestial elements, of that of Jeremy Taylor—the Shakspeare of divines. Although, as we have said, her poetry is not, of prepense and purpose, the express image of her religious thought, yet it is a rich illustration of the religious tendency of the female mind. Indeed, females may be called the natural guardians of morality and faith. These shall always be safe in the depths of the female intellect, and of the female heart—an intellect, the essence of which is worship—a heart, the element of which is love. Unhired, disinterested, spontaneous is the aid they give to the blessed cause—leaning, indeed, in their lovely weakness on the "worship of sorrow," they at the same time, prop it up through the wide and holy influences which they wield. Their piety, too, is no fierce and foul polemic flame—it is that of the feelings—the quick instinctive sense of duty—the wonder stricken soul and the loving heart—often it is not even a conscious emotion at all—but in Wordsworth's language—they lie in

"Abraham's bosom all the year,
And God is with them, when they know it not."

In Mrs. Hemans's writings you find this pious tendency of her sex unsoiled by an atom of cant or bigotry, or exclusiveness; and shaded only by such pensiveness as attests its divinity and its depth; for as man's misery is said to spring from his greatness, so the gloom which often overhangs the earnest spirit arises from its more immediate proximity to the Infinite and the Eternal. And who would not be ready to sacrifice all the cheap sunshine of earthly success and satisfaction, for even a touch of a shadow so sublime.

The Grave—Where Sleep both Sire and Son:—An o'er true Tale of the Yellow Fever.

How mysterious is that invisible chain, forged by nature, which, in the bonds of the purest and strongest affections, binds parent to child and child to parent. Distance cannot sever it: time cannot destroy its tension: with death only do its links dissolve their connection. Of all the streams through which the social affections flow, parental love is the one which more immediately gushes from the heart's centre: the conduit through which filial affection passes is free from all the impurities of selfishness. These, however, are but truisms, and without further indulgence in them we shall proceed to narrate a recent instance in which the force of parental love and filial affection has been sadly but strikingly illustrated.

When the last call for volunteers was made on Indiana, Edgar Derwin was the first to enrol his name among the active upholders of his country's standard. He was a daring, intrepid, athletic youth, knowing no fear; a patriot by intuition, endowed with all man's most ennobling feelings, though manhood's threshhold he had not yet crossed. His father, fast verging towards life's winter, heard his purpose with silent approval, for, in truth, he felt a secret, satisfactory pride at the patriotism so promptly evinced by his son. Not so his mother. She looked to him as the prop of her declining years, and a presentiment audibly whispered to her that he was about to leave her, never to return. She interposed no obstacle to his resolve, though the tears that coursed down her furrowed cheeks as she embraced and blessed him when leaving, too plainly told how acutely painful to her was the separation.

* * * * * * * *

Young Derwin had got no further than Matamoros with his regiment, when he was seized with a severe fit of sickness. Being unable to proceed he was placed in the hospital. His regiment marched on. The captain of the company to which young Derwin belonged lost no time in informing his father of his son's illness, telling him at the same time he need entertain no apprehensions for his life as his recovery might be pronounced certain. This assurance notwithstanding, that letter, when it reached the quiet western home of the sick young soldier, proved to his fond parents a missive surcharged with sorrow. The first burst of grief over, old Derwin, prompted by the quick instincts of parental affection, concluded that duty to his child, lying on a sick bed in a foreign country—perhaps in a grave made by strange hands, required more of him than unavailing tears. He brushed them away and ere the early rays of the next morning's sun gilded the roof of his humble log cabin, he departed, to seek in Mexico the son he so much loved—to succor him if alive, and if dead, to transport his corpse where it would mingle with its native clay—where he and his stricken wife might in death lay beside it.

He speeded on without impediment till he reached this city, and while here, waiting for a conveyance down to the Brazos, it pleased Providence to afflict him with the yellow fever. From the boarding house where he was staying, he was sent to the Charity Hospital, which he entered on the Wednesday of last week. His "case" was a severe one: it unsettled his reason. All the imaginings of his fevered brain had reference to his son. At one time he witnessed him in battle doing deeds of mighty daring, and he cheered him on. At another time, he saw him a manacled captive, in a prison-dungeon, and he would offer a large sum for his ransom. Again, he would call on the Mexicans not to desecrate his grave.

Skilful medical aid, and the watchful nursing of the Sisters of Charity, carried him through the most violent stage of the disease: if they did not snatch him *from* death's door, they at least prevented him from stepping over it. Thus, he was, his reason restored, himself lingering on the confines of eternity as it were, when, about noon on Monday, an emaciated youth was carried into the same ward and placed in the bed beside him. His glazed eye gazed on the young, emaciated patient with intense anxiety. He tremblingly looked and looked till it might be said that he had well nigh looked his life away. He sprang from his bed; with a convulsive grasp he clutched the small paper label which the porter had just placed at the bed's head of the recently arrived young patient, opening it in his tremulous hand he read—

"Edgar Derwin, Jr., Indiana."

"*My Son!*" he said, and no more did he say, for as he uttered the phrase he fell and expired. Young Derwin, who on account of his sickness had been discharged, was on his return home, when he, too, was taken by the epidemic, and hence the painfully singular coincidence of this meeting between father and son, and its tragic termination. He soon, though not immediately, recognized his father. The scene was too much for his already shattered constitution; before the bell of the cathedral tolled twelve that night he was a corpse. They now, though not at their homestead in Indiana, sleep where the mournful cypress and the death-burthened north wind chant the last requiem o'er the stranger's grave.—*N. O. Delta.*

VALUABLE DISCOVERY.—The last number of *Hewitt's Journal* gives an account of a new fluid discovered by a French Chemist. Its character and uses are certified by many responsible men of science. It has also been tested by order of the English Government and proved to be a genuine discovery. We copy the following particulars from the Journal:

"A fluid which possesses the property of destroying noxious gases has been discovered by a French Chemist, and placed by him, through the instrumentality of an energetic and patriotic Englishman, at the disposal of the English Government. This "disinfecting fluid," as it has been named, inexpensive, simple of application, and without any odor of its own. It destroys the putrid smell of all substances, animal or vegetable, in any stage of decomposition. The "dead-rooms" of hospitals, all dissecting-rooms, the subjects of Coroners' inquests, or of any post-mortem examination, may, by its presence, be rendered perfectly inoffensive. Portions of human remains, portions of animal remains, of fish, of vegetable matter, so putrid as scarcely to retain their form sufficiently to be recognized, have, by it, been restored to their natural odor. Nightsoil, arrived at that most poisonous pitch of stench which it emits when accumulated for years in cess-pools, is, by it, nearly deprived of all smell: that which it retains being so trifling as only to be perceptible by very close observation.

"In sickness, also, the relief afforded will be extraordinary. A sick room may be, in the course of two or three minutes, perfectly purified by the use of a small quantity of this fluid, and all that was disagreeable to the senses before replaced by a sense of singular freshness. The crowded wards of hospitals have been not only purified, but the creation of any offensive smell at all has been prevented by it. In thinking of a number of sufferers whose proximity in their state of sickness and prostration necessarily renders each a cause of offance and additional suffering to all the blessings of this new power to prevent this portion of their calamity is very striking.

"But there is a more important consequence involved. The generator of all the classes of infectious disease, the poison which, arising from the decomposition of animal and vegetable matter, becomes diffused in the atmosphere, and, being inhaled into the lungs, causes that dreadful scourge fever, is neutralized, is actually destroyed by the chemical action of this fluid. The danger to which nurses and medical attendants are perpetually exposed, and which, in the present bad form of fever prevailing to so great an extent, has been particularly fatal, will now be averted. And it appears, from the experience already acquired, that a most beneficial effect is produced on the patients themselves by this purification of the air around them. We should naturally have expected this, and it proved so. A fever patient becomes in himself a source of fever. All the exalations given off from him are dangerous to life; and while he inhales them he is continually taking fresh doses of the poison that has prostrated him. By annihilating the poison, a wonderful assistance is given to the physician in curing him. Hitherto this effect has been produced, as far as possible, by ventilation in all well-regulated sick rooms and hospitals, but the new fluid does it much more completely. Ventilation only dilutes, thus gets rid of the poison. In the most crowded and ill-ventilated wards, filled with cases of dysentery and fever in the dreadful form now prevailing in Ireland, it has been found sufficient to wave in the air, and to hang round the beds, pieces of linen saturated in the fluid, and the state of the atmosphere around has been changed in a few minutes from one so noxious as to be highly dangerous to all those whose duty called them into the dreadful service of breathing it, into one of perfect safety and purity; while the poor suffering patients declared themselves to be 'in Heaven.'"

IMPROVEMENT IN MILL SAWS.—We have received from the inventor, Mr. Moses B. Wright, of Leesville, Ct., a model of a mill saw, so constructed as to plane the boards both sides in its progress of sawing. We are aware that some thing of the kind has been attempted before, but none that could claim equal simplicity. A square hole is cut through the saw plate, near the centre, and a small section of the plate which constitutes the top of the aperture, is bent out in one direction, and that at the bottom, in the other direction; and these two bent edges, being properly tempered for that purpose, each cutter shaves off a small portion of the surface of its respective side surface, at each vibration of the saw. The cutters are about an inch wide—and if kept sufficiently *sharp* (that is the main point) they will answer a valuable purpose.—*Scientific American.*

FEMALE LOQUACITY.—A friar, when preaching in a nunnery, observed to his female auditors, "be not too proud that our blessed Lord paid your sex the distinguished honor of appearing first to a female after the resurrection; *for it was done that the glad tidings might spread the sooner.*"

The Village Churchyard.

I sat in a village churchyard
One day when work was done,
Around me lay the mouldering clay,
Deep hidden from the sun.

This story bore each tombstone,
Revealed by evening's rays—
"His sands have run, his work is done,
He knows not blame or prise."

The breeze moaned through the willow,
Its branches swept the ground;
And every leaf gave sign of grief
With sadly rustling sound.

It seemed a mound beside me,
A stifled voice gave forth—
"Ye dead! how deep and calm your sleep
Beneath the stirless earth."

The conscious breeze passed over,
And hushed its moaning sound;
Like an infant's breath in the lap of death,
It sank in silence drowned.

The *strangers'* nook far yonder
Now caught my wandering eye;—
In their lowly bed the noteless dead,
Without inscription lie.

May I sleep with my kindred,
That where my grave is made,
My name with age on the marble page
May live and never fade.

I thought as I left the churchyard,
'Tis a solemn thing to die;
This goal of earth affords no mirth,
But claims the heartful sigh.

"Oh live! and deeply cherish"
The memory of the past,
For memory's wave rolls o'er the grave,
And dies away at last.

Literary World.

A Touching Story.

BY PROFESSOR WILSON.

The coffin was let down to the bottom of the grave, the planks were removed from the heaped up brink, the first rattling clods had struck their knell, the quick shovelling was over, and the long, broad, skillfully cut pieces of turf were aptly joined together, and trimly laid by the beating spade, so that the newest mound in the churchyard was scarcely distinguished from those that were grown over by the undisturbed grass and daisies of a luxuriant spring. The burial was soon over, and the party with one consenting motion, having uncovered their heads in decent reverence of the place and occasion, were beginning to separate and about to leave the churchyard. Here some acquaintances from distant parts of the parish, who had not had an opportunity of addressing each other in the house that had belonged to the deceased, nor in the course of the hundred yards that the little procession had to move from his bed to his grave, were shaking hands quietly but cheerfully, and enquiring after the welfare of each other's families. There a knot of neighbors were speaking, without exaggeration, of the respectable character which the deceased had borne, and mentioning to one another the little incidents of his life, some of them so remote as to be known only to the grey-headed persons of the group. While a few yards further, removed from the spot, were standing together parties who discussed ordinary concerns, altogether unconnected with the funeral; such as the state of the markets, the promise of the season, or change of tenants; but still with a sobriety of manner and voice that was insensibly produced by the influence of the simple ceremony now closed, by the quiet graves around, and the shadow of the spire and gray walls of the house of God.

Two men yet stood together at the head of the grave with severe and unimpassioned grief.—They were brothers—the only sons of him who had been buried; and there was something in their situation that naturally kept the eyes of many directed upon them for a long time, and more intently than would have been the case had there been nothing more observable than the common symptoms of common sorrow. But these two brothers who were standing at the head of their father's grave, had for some years been totally estranged from each other, and the only words that had passed them during all that time, had been uttered within a few days past, during the necessary preparations for the old man's funeral.

No deep and deadly quarrel was between these brothers, and neither of them could distinctly tell the cause of this unnatural estrangement. Perhaps dim jealousies of their father's favor: selfish thoughts that will sometimes force themselves into poor men's hearts, respecting temporal expectations: unaccommodating manners on both sides; taunting words that mean little when uttered, but which rankle and fester in remembrance; imagined opposition of interests, that, duly considered, would have been one and the same; these and many other causes, slight when single, but strong when rising up together in one baneful band, had gradually and fatally infected their hearts, till at last they who in youth had been seldom separate, and truly attached, now met at market, and miserable to say, at church, with dark and averted faces, like different clansmen during a feud.

Surely if anything could have softened their hearts towards each other, it must have been to stand silently side by side, while the earth, stones, and clods were falling down upon their father's coffin. And doubtless their hearts were so softened. But pride, though it cannot prevent the holy affections of nature from being felt, may prevent them from being shown; and these two brothers stood there together, determined not to let each other know the mutual tenderness that in spite of them was gushing up in their hearts, and teaching them the unconfessed folly and wickedness of their causeless quarrel.

A head stone had been prepared, and a person came forward to plant it—a plain stone, with a sand-glass, scull and cross bones, chiselled, not rudely, and a few words inscribed. The younger brother regarded the operation with a troubled eye, and said, loudly enough to be heard by several of the bystanders—"William, this is not kind in you—you should have told me this. I loved my father as well as you could have loved him.—You were the elder, and it may be, the favorite son: but I had a right in nature to have joined you in ordering this head-stone, had I not?"

During these words the stone was sinking into the earth, and many persons who were on their way from the grave returned. For a while the elder brother said nothing, for he had a conciousness in his heart that he ought to have consulted his father's son in designating this last mark of affection and respect to his memory: so the stone was planted in silence, and now stood erect, decently and simple, among the other ostentatious memorials of the humble dead.

The inscription merely gave the name and age of the deceased, and told that the stone had been erected by his "affectionate sons." The sight of these words seemed to soften the angry man, and he said somewhat more mildly: "Yes, we are his affectionate sons, and since my name is on the stone, I am satisfied, brother. We have not drawn together kindly of late years and perhaps never may, but I acknowledge and respect your worth; and here, before our own friends, and before the friends of our father, with my foot above his head, I express my willingness to be on better and other terms with you, and if we cannot command our hearts, let us at least bar out all unkindness."

The minister, who attended the funeral, and had something entrusted to him to say publicly before he left the church yard, now came forward, and asked the elder brother, why he spake not regarding this matter. He saw that there was something of a cold and sullen pride rising up in his heart, but not easily may any man hope to dismiss from the chamber of his heart even the vilest guest, if once cherished there. With a solemn and almost severe air, he looked upon the relenting man, and then, changing his countenance into serenity, said gently—

> Behold how good a thing it is,
> And how becoming well,
> Together such as brethren are
> In unity to dwell.

The time, the place, and this beautiful expression of a natural sentiment, quite overcame a heart in which many kind, if not warm affections dwelt; and the man thus appealed to, bowed down his head and wept.

"Give me your hand, brother," and it was given, while a murmur of satisfaction arose from all present, and all hearts felt kindlier and more humanely toward each other.

As the brothers stood fervently but composedly, grasping each other's hands in the little hollow that lay between the grave of their mother, long since dead, and of their father, whose shroud was haply not yet still from the fall of dust to dust, the minister stood beside them with a pleasant countenance, and said—"I must fulfil the promise I made to your father on his death bed. I must

read to you a few words which his hand wrote at an hour when his tongue denied its office. I must not say that you did your duty to your old father, for did he not often beseech you, apart from one another, for your own sakes as Christians, for his sake, and for the sake of the mother who bare you, and Stephen, who died that you might be born? When the palsy struck him for the last time, you were both absent—nor was it your fault that you were not beside the old man when he died. As long as sense continued with him here, did he think of you, and you two alone. Tears were in his eyes; I saw them there; and on his cheek, too, when no breath came from his lips. But of this no more. He died with this paper in his hand; and he made me know that I was to read it to you over his grave. I now obey him:

"My sons—if you will let my bones lie quiet in the grave, near the dust of your mother, depart not from my burial, till, in the name of God and Christ, you promise to love one another as you used to do. Dear boys, receive my blessing."

Some turned their heads away to hide the tears that needed not to be hidden—and, when the brothers had released each other from a long and sobbing embrace, many went up to them, and in a single word or two expressed their joy at this perfect reconcilement. The brothers themselves walked away from the church yard, with the minister to the Manse. On the following Sabbath, they were seen sitting, with their families, in the same pew, and it was observed that they read out of the same Bible, when the minister gave out the text; and that they sang together, taking hold of the same psalm book. The same psalm was sung, (given out at their own request) of which one verse had been repeated at their father's grave: a larger sum than usual was on that Sabbath found on the plate, for the poor, for Love and Charity are sisters. And ever after, both during the peace and the troubles of this life, the hearts of the brothers were as one, and in nothing were they divided.

A Few Thoughts from the German of Frederick Jacobs.—We commend the following brief extracts to the attention of the thoughtful—and to those, whether thoughtful or not, who delight in vague terms of condemnation against German literature:

True modesty is beautiful, because it announces the supremacy of the idea of perfection in mind, and at the same time gives truth and sincerity the victory over force and vanity.

Pride, arrogance, and conceit, are so common, because they betray the absence of that idea of perfection, without which there is nothing great or noble.

If ingratitude could extinguish benevolence, the world must daily be destroyed by a deluge, or in flames.

Common minds are hardened by ingratitude; but to superior natures, it is an occasion for new acts of kindness.

Benevolence that can be extinguished by ingratitude, is no true virtue, but, as it were base tinder, upon which vanity has thrown a spark, which is no sooner kindled than extinguished.

True goodness of heart nourishes itself on the good which it does to others. The good loves him to whom he does good, as the bad hates whom he has injured.

How many a man hates his neighbor for no other reason, than because he knows he deserves himself to be hated by him.

Every great and noble feeling which we cherish, every virtuous action which we perform, is a round in the ladder which leads to God. All knowledge of God proceeds from virtue. But virtue is a gift of God. Without God there is neither wisdom nor holiness; and God is the centre of wisdom and holiness.

The saying, "*Do right, and fear no man,*" contains more wisdom than all works which would regulate the intercourse with men can ever teach. "*Do right, and fear no man,*" this is the one safe compass upon the sea of life.

Be kind to the Old.—Oh! be kind to those who are in the autumn of life, for thou knowest not what sufferings they may have endured, how much it may still be their portion to bear. Are they querulous and unreasonable? allow not thine anger to kindle against them—rebuke them not, for doubtless, many and severe, have been the crosses and trials of earlier years, and perchance, their dispositions, while in the "springtime of life," were more gentle and flexible than thine own. Do they require aid of thee? then render it cheerfully, and forget not that the time *may* come, when thou mayest desire the same assistance from others, that now thou renderest unto them. Do all that is needful for the old, and do it with alacrity and think it not hard if *much* is required at thine hand; lest, when age has set its seal upon *thy* brow, and filled thy limbs with trembling, there may be found those who will wait upon *thee* unwillingly, and who will feel relieved when the coffin-lid has covered thy face forever.

The old must soon pass from this to another world; is it a world of bliss? then, though they have much to cheer them through the remnant of their earthly pilgrimage—be kind, very kind to them; for they have many sorrows to endure, before they seek the abodes of happiness; they have yet to pass through "the valley of the shadow of death." Is it a world of wo to which they are hastening? have they no hope of Heaven? then be doubly cautious how thou addest a single drop to a cup already full; for surely they have enough to bear, if their prospects for both time and eternity are shrouded in gloom.—*Chicago Tribune.*

☞ The following paragraph from the *London Times* so admirably sets forth the peculiarly *disinterested* character of England's boasted philanthropy, that we copy it as it stands:

There is nothing in the world more detestable than the cant of philanthropy which justifies and applauds what is in itself indefensible on the presumption—oftentimes a very violent presumption—that the results may be favorable to humanity. And yet, in our international politics, there is nothing more common. Aggression comes in with a smile; violence with a bow of politeness. If we subjugate a new people, we do it for their good. If we appropriate a new empire, it is only a great act of philanthropy. Like the Irishman, who "meets with a friend, and for love knocks him down," we prostrate the independence of our neighbors out of the very fulness of our love and commiseration. We talk about the light of civilization, and let it in upon the benighted through the riddlings of our grape and canister.

We enforce our Christianity at the bayonet's point, and with a flourish of drums and trumpets. We talk about commerce, and open the navigation of great rivers with the prows of our rampant war steamers. We are eloquent on the subject of justice to the oppressed, and send the old rulers of the country to pine in loathsome exiles and imprisonment.

All this, and much more, history tells us we have done out of the plenitude of our disinterested humanity. Starting with the proposition that we are better judges than our neighbors of what is good for them, and better able to manage their own affairs, we assume the character of universal deliverers, and bring all sorts of people in the East and in the West—from the banks of the Indus to the banks of the St. Lawrence—under our protection, as wards in Chancery, congratulating ourselves all the time upon the magnanimity of our achievements.

For the Western Literary Messenger.

A Serenade.

INSCRIBED TO H.

Awake from thy slumber: once more has the Even,
With stars brightly flashing her brow to adorn,
Walked forth in her pride, through the portals of heaven,
To rule like a queen, till the dawning of morn;
And the moon's silver crescent is lowly declining,
Already it kisses the murmuring sea,
Above are the stars in their loveliness shining,
But shining so brightly, 'tis only for thee!

Awake from thy slumber: all nature reposes
As calm as a babe on its mother's warm breast;
And the sigh of the breeze, as it plays over roses,
Is soft as the song that has lulled it to rest;
Wild zephyr with odors his ringlets has laden,
With odors bereft from the blossoming tree,
And now round thy lattice he shed them, dear maiden,
But Oh, they're so fragrant, 'tis only for thee!

Awake from thy slumber: 'tis Even, 'tis Even,
And silence is round us and beauty above,
There's a smile over earth, and a smile over heaven;
'Tis surely the hour for the whispers of love:
Awake, for the beauty of Even is fleeting,
Pale Luna herself has half sunk in the sea;
Awake, for my heart in my bosom is beating,
And beating so wildly, 'tis only for thee.

BUFFALO, Oct. 28th, 1847. D. F. D.

WHAT OUR FINE FRUITS HAVE SPRUNG FROM.—The Peach, originally, was a poisonous almond. Its fleshy parts were then used to poison arrows, and it was for this purpose introduced into Persia; the transplanting and cultivation, however, not only removed its poisonous qualities, but produced the delicious fruit we now enjoy.

The Nectarine and Apricot are natural hybridations between the peach and plum.

The Cherry was originally a berry-like fruit, and cultivation has given each berry a separate stem, and improves its quality; the common mazzard is the original of most of the present kinds of Cherries.

The common Wild Pear is even inferior to the Choke Pear; but still, by cultivation, it has come to rank among our finest fruits. The Cabbage originally came from Germany, and is nothing more than common sea kale. Its cultivation has produced the present Cabbage, and its different acclimatings, the different kinds; while its hybridation with other similar plants has produced the Cauliflower.

The Cooley Rauher, or Cabbage Turnip, is a hybridation between the Cabbage and Turnip, and has lately been introduced into America.—The Brassica Rapa, Brassica Napus, Esculenta, Navet, and other similar vegetables, have been produced by similar means.

Celery, although so tender and fine flavored, is the same plant as the wild celery on the borders of the rivers emptying into the Chesapeake Bay, and is the natural food of canvass back and black ducks.

This shows the benefit of cultivation in the vegetable world, but the change which cultivation has effected in the mind of man is infinitely greater.

ELECTRO-CULTURE.—Much was said a year or two since, and high expectations raised, relative to accelerating the growth of vegetables by electricity. Plats of ground were encircled by wires buried beneath the surface of the soil, and connected with upright pointed conductors, for stimulating the growing plants,—the operator forgetting that the moist soil, being a free conductor of electricity, dissipated in a moment every particle of the fluid that came down the rods, and not reaching the plants; and also forgetting that if the soil were not a conductor, the electricity thus brought down could never reach them;—two conflicting absurdities thus lying at the very threshold. Extraordinary expections were also raised by the occasional observance of the great luxuriance of some plants at the foot of lightning rods—resulting from growing in the deep bed of mellow soil made by digging the hole for the lower end of the rod.

Accurate scientific experiments have been lately made under the supervision of Professor Solly, of the London Horticultural Society, which set the matter finally at rest. A large and powerful cylinder electric machine was used, and the plants, in pots, within doors, were kept heavily charged, four hours each day; for four weeks; and although the experiment was varied in many different ways, not the slightest influence could in any case be perceived, either favorable or detrimental to vegetable growth. The plants operated upon, several pots of each sort being taken, were young French beans; young plants of the common scarlet geranium; plants of the strawberry; seeds of wheat; and seeds of mustard and cress. Experiments were afterwards made in the open air, on a number of different plants, and the machine worked four hours each day for nearly six weeks, but not the slightest difference could be observed between those electrified and those not.—*Albany Cultivator.*

GREEN CORN PUDDING.—The Louisville Journal says, one of the best things ever brought to the table, in the pudding line, is green corn pudding, prepared according to the following recipe:—Let every wife, who would like to surprise her husband by a rare delicacy, try it. Take of green corn twelve ears, and grate it; to this add a quarter of a pound of fresh butter, four eggs well beaten, pepper and salt as much as is sufficient; stir all well together, and bake four hours in a buttered dish. Some add to the other ingredients a quarter of a pound of sugar, and eat the pudding with sauce. It is good, cold or warm, with meat or sauce; but epicures of the most exquisite taste declare for it, we believe, hot, and with the first service.

LOOM FOR CYLINDRICAL CLOTH.—A very curious piece of mechanism in the shape of a loom for weaving cloth in a cylindrical form, and suitable for bagging, has been invented by Mr. Henry Pease, of Clarkson, N. Y. The cloth made by this loom is in the right form for meal bags and without seams. The peculiarity of the loom is such as to admit of two sets of warps so arranged that when the shuttle has passed through between the two halves of the upper warp, it is returned between the two halves of the lower warp and the two warps being kept in contact with each other, the two webs are united at both edges, thus forming a continuous hose. The invention is original, and we think the patent there must prove valuable.—*Scientific American.*

PUMPKIN BUTTER.—To one barrel of sweet cider boiled down about one-third, take two bushels of punkins cut in pieces like apples, they being peeled and cored, and add them to the cider gradually, stirring all the time, until the whole is boiled down to about 12 gallons, and just before taking them off add half pint of ground cinnamon and spice it to taste. This makes an excellent table dish, one fit for either king or countryman, only the latter deserves it most."

The Wife—A Thrilling Sketch.

BY JOHN G. WHITTIER.

She was a beautiful girl when I first saw her. She was standing up at the side of her lover at the marriage altar. She was slightly pale—yet ever and anon, as the ceremony proceeded, a faint tinge of crimson crossed her beautiful cheek, like the reflection of a sunset cloud upon the clear waters of a quiet lake. Her lover, as he clasped her hand within his own, gazed on her a few moments with unmingled admiration, and warm and eloquent blood shadowed at intervals his manly forehead and melted in beauty on his lips.

And they gave themselves to one another in the presence of Heaven, and every heart blessed them as they went their way rejoicing in their love.

Years passed on and I again saw those lovers. They were seated together where the light of sunset stole through half-closed crimson curtains, lending a richer tint to the delicate carpeting and the exquisite embellishment of the rich and gorgeous apartment. Time had slightly changed them in outward appearance. The girlish buoyancy of the one had indeed given place to the grace of perfect womanhood, and her lips were somewhat paler—and a faint line of care was slightly perceptible upon her brow. Her husband's brow, too, was marked somewhat more deeply than his age might warrant; anxiety and ambition, and pride, had grown over it, and left the traces upon it; a silver hue was mingled with the dark in his hair, which had become thin around his temples, almost to baldness. He was reclining on his splendid ottoman, with his face half hidden by his hand, as if he feared that the deep and troubled thoughts which oppressed him were visible on his features.

"Edward, you are ill tonight," said his wife in a low, sweet, half inquiring voice, as she laid her hands upon his.

Indifference from those we love is terrible to the sensitive bosom. It is as if the sun of heaven refused its wonted cheerfulness, and glared upon us with a cold, dim and forbidden glance. It is dreadful to feel that the only being of our love refuses to ask our sympathy—that he broods over the feelings which he scorns or fears to reveal—dreadful to watch the convulsive features and the gloomy brow, the indefinite shadows of hidden emotion, the involuntary sigh of sorrow in which we are forbidden to participate, and whose character we cannot know. The wife essayed once more.

"Edward," she said, slowly, mildly, affectionately, "the time has been when you were willing to confide your secret joys and sorrows to one who had never, I trust, betrayed your confidence! Why, then, my dear Edward, is this cruel reserve? You are troubled, and yet refuse to tell me the cause."

Something of returning tenderness softened for an instant the cold severity of the husband's features, but it passed away, and a bitter smile was his only reply.

Time passed on, and the twain were separated from each other. The husband sat gloomy and alone in the damp cell of a dungeon. He had followed ambition as a god, and had failed in a high career. He had mingled with men whom his heart loathed, he had sought out the fierce and wronged spirits, and had breathed into them the madness of revenge. He had drawn his sword against his country: he had fanned rebellion into a flame, and it had been quenched in human blood. He had fallen, miserably fallen, and was doomed to die the death of a traitor.

The door of the dungeon opened and a light form entered and threw herself into his arms. The softest light of sunset fell upon the pale brow and wasted cheek of his once beautiful wife.

"Edward, my dear Edward," she said, "I have come to save you; I have reached you after a thousand difficulties, and, I thank God, my purpose is nearly executed."

Misfortune had softened the proud heart of manhood, and as the husband pressed his pale wife to his bosom, a tear trembled on his eyelash.

"I have not deserved this kindness," he murmured in the choked tone of agony.

"Edward," said his wife, in an earnest but faint and low voice, which indicated extreme and fearful debility, "we have not a moment to lose. By an exchange of garments you will be able to pass out unnoticed. Haste, or we may be too late. Fear nothing for me. I am a woman, and they will not injure me for my efforts in behalf of a husband dearer than life itself."

"But Margaret," said the husband, "you look sadly ill. You cannot breathe the air of this dreadful cell."

"Oh, speak not to me, my dearest Edward," said the devoted woman, "I can endure anything for your sake. Haste, Edward, and all will be well," and she aided with a trembling hand, to disguise the proud form of her husband in female garb.

"Farewell, my love, my preserver," whispered the husband in the ear of the disguised wife, as the officer sternly reminded the supposed lady, that the time allotted to her visit had expired.

"Farewell! we shall not meet again," responded the wife; and the husband passed out unobserved and escaped the enemies of his life.

They did not meet again, the wife and husband; but only as the dead may meet, in the awful communing of another world. Affection had borne up her exhausted spirit until the great purposes of her exertions were accomplished in the safety of her husband—and when the bell tolled on the morrow, and the prisoner's cell was opened the guards found, wrapped in the habiliments of their destined victim, the pale but beautiful corpse of the Devoted wife.

CHEESE *vs.* CANNON SHOT.—The greatest ammunition that we have heard of lately was used by the celebrated Com. Coe, of the Montevidean navy, who, in an engagement with Admiral Brown of the Buenos Ayrean service, fired every shot from his lockers.

"What shall we do, sir?" asked his first lieutenant. "We've not a single shot aboard—round, grape, canister and double headed, are all gone."

"Powder gone, eh?" asked Coe.

"No, sir; got lots of that yet."

"We had a darn'd hard cheese—a round Dutch one, for desert at dinner today, do you remember it?" said Coe.

"I ought to; I broke the carving knife in trying to cut it, sir."

"Are there any more aboard?"

"About two dozen. We took 'em from a droger."

"Will they go into the 18-pounder?"

"By thunder Commodore, but that's the idea. I'll try 'em," cried the first luff.

And in a few minutes the fire of the old Santa Maria, (Coe's ship) which had ceased entirely, was reopened, and Admiral Brown found more shot flying over his head. Directly one of them struck his mainmast, and as it did so, shattered and flew in every direction.

"What the devil is that which the enemy is firing?" asked Brown, but nobody could tell.

Directly another one came in through a port and killed two men who were standing near him; and then striking the opposite bulwarks, burst into flinders.

"By Jove, this is too much; this is some new fangled paixan or other; I do'nt like 'em at all," cried Brown; and then as four or five more of them came slap through his sails, he gave the order to fill away, and actually backed out of the fight, receiving a parting broadside of Dutch cheeses.

This is an actual fact, our informant was the first lieutenant of Coe's ship.

A Tragedy of Real Life.—Early in the mouth of August last, arrived in this city, from Montgomery, Alabama, a young gentleman, who located himself in comfortable quarters at a boarding house on Sixth street. He was the favored possessor of a pleasing exterior, an agreeable address and an inordinate share of the rare quality of impudence. He gave his name as Franklin Ward, and was frequently heard to remark that his family was among the most distinguished in his native State. He was liberal, almost to prodigality, in his expenditures; and all who had the good fortune to make his acquaintance, esteemed themselves in luck. The lady boarders of the house adored him, and the gentlemen condescendingly patronized his oyster parties and voted him a *trump*.

The landlady was blessed with "one fair daughter and no more," who conceived an ardent attachment for the handsome Frank, and he, sharp fellow, was "not slow" to discover the fact. A declaration ensued, followed quickly by a contract on the part of our gay Lothario to wed the lady, so soon as he should receive the sanction of his friends in Alabama. Weeks glided swiftly by, and Mr. Frank's exchequer began to exhibit unmistakeable symptoms of exhaustion. Months slipped away, and so did our hero's last "shiner."

The landlady, simple soul, grew fidgety,—friends waxed cool, and all things began to assume a gloomy and unpromising aspect. All, save the fair betrothed—the wronged but still ardent and confiding victim (for such, alas! she had become) of the seducer's wiles—suspected that the liberal, gentlemanly, handsome and incomparable Mr. Ward "was not what he seemed." Yesterday morning Mr. Ward did not rise at his accustomed hour. Several of the gentlemen boarders had been robbed during the night. Some mourned their departed watches; others deplored their purses and pocketbooks; and the poor old landlady was inconsolable for the loss of half a dozen silver spoons, which she had, on the evening previous, carefully locked up in the dresser. Altogether, there was considerable commotion in the house: some cursed their unlucky stars; some swore at the city council and the police; others took it coolly; and a few sought consolation in a "nipper" of old rye before breakfast.

Notwithstanding the unusual noise about the premises, Mr. Ward continued to sleep on, undisturbed. Nine o'clock came—so did ten—eleven—twelve: the frequent appeals at Mr. Ward's bedroom door were unanswered. A carpenter was at length called, who, forcing the door, discovered—nobody! The bird had flown! Mr. Ward had taken an unceremonious departure for some more congenial sphere, and with him had gone divers watches, rings and purses, never to return. On learning the heartless desertion of her seducer, the young lady swooned, and awoke a raging maniac. At the last accounts she was in a dangerous situation. We trust that means will be taken to arest the career of the miscreant who has wrought this misery.—*Cincinnati Morning Signal.*

[And suppose he is caught, says the Albany *Argus*. Can he be *punished* for the great wrong of violating the honor, and perhaps causing the death or mental aberration, of his victim? Certainly not! And yet, for the comparatively worthless spoons and rings and for the far lesser *crime*, he can be punished. But for the commission of the lesser, the greater would go "unwhipped of justice." Such is *law!*]

The *Signal* of Thursday last says the young lady alluded to in the above, "positively refused all nourishment, and died of starvation, on Tuesday evening. What should be the punishment of a fiend, who thus invades the peaceful retreat of the domestic circle, bringing blight and infamy and death into its midst?"

Deformity of the Manufacturing Population of England.—Mr. Gaskill, in his work on the situation of this industrious class of the English, says: "Any man who has stood at twelve o'clock at the single narrow door way which serves as the place of exit for the hands employed in the great cotton mills, must acknowledge that an uglier set of men and women, of boys and girls, taking them in the mass, it would be impossible to congregate in a similar compass.—Their complexion is sallow and pallid—with a peculiar flatness of feature, caused by the want of a proper quantity of adipose substance to cushion out the cheeks. Their stature low—the average height of four hundred men, measured at different times and different places, being five feet six inches. Their limbs slender, and playing badly and ungracefully. A very general bowing of the legs. Great numbers of girls and women walking lamely or awkwardly, with raised chests and spinal flexures. Nearly all have flat feet, accompanied with a down-tread differing very widely from the elasticity of action in the foot and ancle attendant upon perfect formation. Hair thin and straight—many of the men having but little beard and that in patches of a few hairs, much resembling its growth among the red men of America. A spiritless and dejected air, a sprawling and wide action of the legs, and an appearance, taken in the whole, giving the world but little "assurance of a man," or if so, "most sadly cheated of his fair proportions." Beauty of face and form are both lost in angularity, while the flesh is soft and flabby to the touch, yielding no "living rebound" beneath the finger. The hurry and anxiety of this juncture bring out very strongly all their manifold imperfections."

Religion.

BY WILLIAM LEGGETT.

Like snow that falls where waters glide,
Earth's pleasures fade away;
They melt in Time's destroying tide,
And cold are while they stay!
But joys that from Religion flow,
Like stars that gild the night,
Amid the darkest gloom of wo,
Smile forth with sweetest light.

Religion's ray no clouds obscure;
But o'er the Christian's soul
It sheds a radiance calm and pure,
Though tempests round him roll;
His heart may break 'neath sorrow's stroke;
But to its latest thrill,
Like diamonds shining when they're broke,
Religion lights it still!

SPANISH PRESCRIPTIONS.—The prescriptions of these well-dressed gentlemen are somewhat more old-fashioned than their coats. Their grand recipe in the first instance is to do nothing beyond taking the fee and leaving nature alone, or, as the set phrase has it, *dejar a la naturaleza*. The young, and those whose constitutions are strong, and whose complaints are weak, do well under the healing influence of their kind nurse, Nature, and recover through her vis medicatrix, which, if not obstructed by art, every where works wonderful cures. The *Sangrado* will say that a Spanish man or women is more marvellous made than a clock, inasmuch as his or her machinery has a power in itself to regulate its own motions, and to repair accidents; and therefore the watchmaker who is called in, need not be in a hurry to take it to pieces when a little oiling and cleaning may set all to rights. The remedies, when the proper time for their application arrives, are simple, and are sought for rather among the vegetables of the earth's surface than from the minerals in its bowels. The external recipes consist chiefly of papers smeared with lard, applied to the abdomen, sinapisms and mustard poultices to the feet, fomentations of marsh mallows or camomile flowers, and the aid of the curate. The internal remedies, the tisanes, the *Leches de Almendras, le Burras*, decoctions of rice, and so forth, succeed each other in such regular order, that the patient scholar has nothing to do but repeat the medical passage in Horace's Satires. In no country, however, can all the sick be always expected to recover even then, since "*Para todo hay remedio, sino para la muerte*"—There is a remedy for everything except death." If by chance the patient dies, the doctor and the disease bear the blame. Perhaps the old Iberian custom was the safest; then the sick were exposed outside their doors, and the advice of casual passengers was asked, whose prescriptions were quite as likely to answer as images, relics, snake soup, or milk of almonds or asses :—

"And, doctor, do you really think
That asses' milk I ought to drink?
It cured yourself, I grant it true,
But then't was mother's milk to you."

Many of the prescriptions of Spain are local, and consist of some particular spring, some herb, some animal, or some particular air, or place, or bath is recommended, which, however, is said to be very dangerous unless some resident local *medico* be first consulted. One example is as good as a thousand: near Cadiz is Chiclana, to which the faculty invariably transport those patients whom they cannot cure, that is, about ninety-five in the hundred; so in chronic complaints, sea-bathing there is prescribed, with a course of asses' milk: and if that fail, then a broth made of a long, harmless snake, which abounds in the aromatic wastes near *Barroso*.—We have forgotten the generic name of this valuable reptile of Esculapius, one of which our naturalists should take alive, and either breed from it in the Regent's Park, or at least investigate his comparatively anatomy with those exquisite vipers which make, as we have shown, such delicious pork at Montanches.—*Ford's Spaniard's and their Country.*

CIRCUMSTANTIAL EVIDENCE.—A good many years ago, two elderly maiden ladies of Medford, who lived by Mystic Pond, as it used to be called, waited formally upon Justice W——, to enter a complaint against one John Tanner and others. Such conduct as Tanner's they thought abominable, and he ought to be taken care of.—It was a shame, so it was, that two respectable females could not look out of their windows of a morning without being shocked at his indecencies. If there was no law for such outrages, they were very sure there ought to be one. Such an example as John Tanner's was enough to corrupt the city of London—they could tolerate it no longer, &c., &c.

With much difficulty and a world of questioning, the magistrate at last got from their virginal lips the specific nature of their grievance. It appeared that John Tanner, *et als*, were in the habit of bathing every morning in the pond on the opposite side to where the maidens dwelt.

"But ladies," said the magistrate, "it seems to me that the pond is at least half a mile wide, and you do not live very close to the edge of it. I do not see how you could identify John Tanner at that distance; or indeed, how you could tell whether it was a man or a beast in the water."

"No more we could," replied one of the spinsters, "we were in doubt more than a week, and at last Sarah happened to think of sending to borrow Capt. Dempsey's spy-glass, and this made all clear.

WHERE'S THE SCHOOLMASTER?—The Alabama Journal says that some of the folks down in Alabama objected to the Telegraphic wires passing through their lands, alleging that they did not understand the "cussed thing," and did not like the idea of having "all the lightning of the country brought on plantations to burn up their crops."

A similar story is told of one of the respectable farmers of Georgia, with whom an Agent of the Telegraph Company staid all night, and to whom he explained, for an hour or more, the whole operation of the mysterious wires. When he had concluded, much to his own satisfaction in *enlightening* his host on the subject, he was met with the query from the farmer—

"How many bales of Cotton will it carry to market?"

"About 40," was the answer of the discomfited Superintendent, as he *sloped* from the premises!—*Muscogo Democrat.*

A RIVAL FOR LOLA MONTES.—The Parisians, perhaps, from jealousy of John Bull's enthusiasm respecting Jenny Lind, have found a rival "nightingale" in the person of Mdle. Alboni, and claim for her even more merit than has been conceded to the fair Swede. If what the Paris papers tell of Mdle. Alboni be true, she is certainly a masculine nightingale, at all events. They say that, like George Sand, *alias* Madame Dudevant, she is in the habit of going about in male attire; that she sometimes amuses herself by calling upon a theatrical manager, in man's costume, and with a cigar in her mouth, announcing herself as the brother of the young vocalist, Alboni, with whom he is in treaty. It is also said, that, when she was in Germany, she used to frequent beer-houses, drinking and smoking with the university students. The famous Lola Montes, who has turned the head of the old king of Bavaria, could scarcely do better.

A GENTLE HINT.—"If I am not home from the party tonight at 10 o'clock," said a husband to his better and bigger half, "don't fear for me." "That I wont (replied the lady, significantly); I wont wait, but I'll come for you."—The gentleman returned at 10 o'clock precisely.—*Toronto Stan.*

There is a tree near Bardstown, Ky., upon which is the resemblance of a human figure in full stature. It is the tree beneath which Judge Gaither was killed last year by his brother-in-law, and the figure is said to bear a close likeness to Judge Gaither. We gather these particulars from the Bardstown Gazette.

Editorial Department.

J. CLEMENT, EDITOR.

Labor.

Strange as it may seem, some people are ashamed of their best friend, labor, and actually despise it. They would not be seen in company with what they cannot live without. Unlike the innocent lamb, which Pope says licks the hand raised to shed its blood, they, in their wicked blindness and stupidity, would smite the hand extended to feed them.

The long-standing remark that *labor ipse voluptas*, would, if mankind *are* in search of happiness seem to be a downright falsehood. The fact is both the assertion and the supposition that we are all pleasure seekers, are correct. The error lies in the road we take to obtain the object of pursuit. "Labor *is* in *itself* a pleasure," but man is too lazy an animal to seek it there. He will loiter whole days in the filthy by-paths of Idleness, in a fruitless search after that which would be found in one short hour in the sweet scented fields of manly toil. The folly of him who would walk ten miles round a gate for the sake of saving a sixpence in toll, is perfect wisdom compared with the actions of him who refuses to cross the bridge of Labor on account of the slight tax on his strength, and so attempts to go round the stream.

That man shall earn his bread by the sweat of his brow, is a dispensation of Divine Providence which it is madness to think of thwarting. "This is a curse," observes a wise writer, "which has proved a blessing in disguise. And those favored few who, by their rank, or their riches, are exempted from all exertion, have no reason to be thankful for the privilege. It was the observation of this necessity, that led the ancients to say, that the gods *sold* us every thing, but *gave* us nothing. Water, however, which is one of the great necessaries of life, may, in general, be gratuitously procured; but it has been well observed that if bread, the other great necessary of human life, could be procured on terms equally cheap and easy, there would be much more reason to fear, that men would become *brutes* for the want of something to do, rather than *philosophers* from the possession of leisure. And the facts seem to bear out the theory. In all countries where nature does the most, man does the least; and where she does but little, there we shall find the acme of human exertion. Thus Spain produces the most farmers, and Scotland the best gardeners; the former are the spoilt children of indulgence, the latter, the hardy offspring of enterprize."

Since labor is the parent of happiness and idleness its assassin, let us, who are workers, bless God for making us so, and see to it that our strength is expended for His glory.

Madison University.

A meeting of the friends of the above Institution was held in the Washington Street Baptist Church, on Tuesday evening the 30th ult., for the purpose of considering the propriety of its removal from its present location to Rochester. The meeting was addressed by Rev. Dr. Church, of Rochester; J. M. Wilder, Esq., of Albany; Dea. O. Sage, of Rochester, with remarks from several others present. The meeting, though not large, was respectable, and all were apparently much interested in the subject. A brief history of the origin and progress of the Institution was presented, with a forcible statement of the reasons which call for its endowment and removal to Western New-York. The principal consideration urging its removal, is the fact that in Western New-York, with its large and wealthy population, there is no institution of its kind that at all meets its wants, while the Central and Eastern portions of the State are abundantly supplied.—Monroe county has already subscribed about $40,000 towards the object and expect to increase it to $50,000. Eastern New-York is expected to raise from $50,000 to $75,000, and an appeal is now made to the citizens of this part of the State to aid in the enterprize. The object is to place the University in a condition and position, that it shall meet the wants and be worthy of Western New-York.

PROGRESS: A SATIRE, BY J. G. SAXE. Second edition. New-York: John Allen. Boston: Jordan and Wiley; 1847.

We are not surprised to see a second edition of this poem. Were it for sale in this city, fifty copies, we presume, would be disposed of in ten days. Almost the entire poem has gone the round of the newspaper press, in "specimen passages" of the beautiful. In this edition, "the author has taken the occasion afforded by this second publication of his poem, to make a few alterations in the original text, as well as to remove several typographical errors which escaped the eye of the proof reader in the first edition."

In our late notice of this poem, we made an extract from that portion which ridicules the "Protean phases" of Fashion. Here are a few more lines on the same subject:

"What impious mockery, when with soulless art,
Fashion, intrusive, seeks to rule the heart;
Directs how grief may tastefully be borne;
Instructs Bereavement just how long to mourn;
Shows Sorrow how by nice degrees to fade,
And marks its measure in a ribbon's shade!
More impious still, when through her wanton laws,
She desecrates Religion's sacred cause;
Shows how 'the narrow road' is easiest trod,
And how genteelest worms may worship God;
How sacred rites may bear a worldly grace,
And self-abasement wear a haughty face;
How sinner's long in Folly's mazes whirled,
With pomp and splendor may 'renounce the world';
How 'with all saints hereafter to appear,'
et quite escape the vulgar portion here!"

THE COLUMBIAN MAGAZINE for this month presents a very attractive table of contents and an unusual array of talent. Among the contributors are H. Hastings Weld, John Inman, J. H. Butler, Mrs. Sigourney, Mrs. Ellet, Mrs. Osgood, Mrs. C. N. Butler and Mrs. M. G. Sleeper. Two beautiful engravings embellish the number. The Columbian is deserving of long life. A new volume commences next month. Ormsby and Hackett, publishers, New-York.

THE YOUNG MEN'S ASSOCIATION.—The weekly course of lectures before this society commenced last Monday, the first being delivered by the Rev. G. W. HOSMER of this city. Next Monday W. H. C. Hosmer, Esq., of Avon will lecture on Scottish Song. Our citizens may expect "a feast of fat things."

TO CORRESPONDENTS.—"*Invocation*," a poem from the Runick, by W. H. C. Hosmer; "*The Minstrel and his Lute*," by Mrs. EAMES, and "*That Steeple*" by a new contributor, are filed for insertion.

A long story received last week, is unread. We presume it will be good.

The elgiac verses from Lockport, must be declined. They are defective.

CONGRESS met on the 6th instant. Hon. R. C. Winthrop, whig, of Boston is chosen Speaker of the House. The Message of the President has not been received at the time of our going to press Thursday morning,

CANADA SUBSCRIBERS, by sending us two dollars, can have the Messenger one year free from American postage.

COLONY OF 20,000 BLACKS IN CANADA.—This colony, settled in the fertile country between Lakes Huron and Erie, appears to be flourishing. They have a manual labor school—the British American Institute—at Dawn Mills, the head of navigation on the Sydenham river, 60 miles from Detroit, with a tract of 300 acres attached, and 7 buildings. Some 80 pupils are engaged for the winter. Among the new secular enterprises in progress is a large steam mill.

FAMINE IN NEW FOUNDLAND.—The people of New Foundland are destitue of food. For three years, the fisheries have yielded little or nothing, and for two years the rot has stripped them of their principal agricultural staple. They are very destitute—80,000 of them; and an appeal is made to the people of Boston by a late Missionary to the Colony. They are legitimate subjects of charity.

☞ The wires for the Telegraph are up and ready for operation between Cleveland and Sandusky City. They are also up between Ypsilanti and Detroit.

Particulars of the Loss of the Phœnix.

From the Chicago Journal.

It appears that the Phœnix lay at Manitouwac on Saturday, waiting for the sea to go down.—She started again at 1 A. M., and after being out an hour or two the firemen discovered the pumps would not work, and so informed the 2d engineer. He paid no attention to it and refused to call the 1st engineer, until the boilers were red hot and the boat was in flames.

The Phœnix carried three boats, one on each side and one hanging at her stern. Capt. Sweet, who was confined with a fractured knee to his berth, at the entreaty of Mr. Blish, consented to go with the first boat, with twenty others, of the passengers and crew. In the second boat there were nineteen persons in all, including the first mate. These, with three persons afterwards taken off the burning wreck, by the propeller Delaware, are all that are known to be saved; FIFTY-THREE out of a total, it is believed, of THREE HUNDRED souls. The boats, as soon as they left the propeller, made precisely for the shore, distant perhaps 4 miles, though invisible of course in the darkness, for it yet lacked an hour of daylight.

The Phœnix had on a full freight, and of her passengers about 50 were Americans, (including the crew,) and 250 emigrants, all Hollanders, and all coming to Milwaukee. Among the latter were many who had considerable sums of money with them, it being supposed that they had in the aggregate some $50,000.

One young girl of 17, now at Sheboygan, is the sole survivor of a party of 25, who had, together $18,000. An old man, the father of nine children, is left to mourn the loss of all those for whose sakes he left his native land and emigrated to America.

The water was so cold, it is stated by the survivors, that few lived over 20 minutes after being driven overboard by the flames. The lake was covered with small boats as soon as the fire was discovered. The Clerk was taken from the mast, which he had tied to the rudder, the heat of the burning boat keeping him alive. Many dead bodies were found, some of which had been frozen to death!

The Milwaukee papers say that hopes are entertained of the safety of Mr. Blish, together with those who may have accompanied him in the third boat.

The Milwaukee Sentinel says: Some painful rumors reach us of inhuman treatment meted out to two or three of the survivors of this appalling disaster. But we cannot, except on the most undoubted authority, lend evidence to tales which would disgrace human nature. We shall rather hope, until well satisfied to the contrary, that *all* the people of Sheboygan (as we know the majority of them did) extended every kindness to those who were thus cast helpless and friendless upon their shores.

We have refrained from making any remarks upon this terrible disaster in the hope that something would be elicited to show that it was one of those dreadful occurrences, that are sometimes called to mourn, against which, so far as appears, no human foresight or care could avail.—But instead of being one of that class of calamities, every successive account deepens into conviction the first impression, that the burning of the *Phœnix* and the consequent destruction of life in a manner so awful that it cannot be thought of without shuddering, are attributable wholly and entirely to the grossest carelessness, if not wanton

recklessness. There can be no excuse whatever, under any circumstances, for a boat taking fire from the boilers, and those who build a boat so that such a thing could take place, or the engineer who allows it, should in the case of a fire and the consequent loss of life, be held responsible for manslaughter. Beyond all the *accidents* we ever heard of we regard this burning of the *Phœnix* as the most unnecessary, wanton, horrible and murderous—one that demands the most vigorous investigation and condign punishment.—*Buffalo Com. Adv.*

Later from Europe.

The packet ship *New York* has arrived at New York, bringing intelligencefrom the continent of Europe two days later than was received by the steamer of the 4th of November. We subjoin some of the most interesting items of news:

The Count de Sartiges who has discharged the duties of a temporary missiou at the Court of Persia, is about to be appointed resident minister near that court at Teheran. The step is regarded as important for Persia.

The French steamer Tonnere has been ordered to transport to Civita Vecchia 15,000 stand of arms from the arsenal at Toulon, to supply the national guard of the Papal State. It is also proposed to furnish the Pope with a number of of cannon. The steam frigate Vauban has been ordered to cruise on the Italian coast. It is said she is to join the fleet there, which will then number *five* steam frigates.

The affairs of Switzerland continue menacing, and it seems probable that hostilities have already commenced. A telegraphic despatch from Paris announces that the federal diet had resolved upon the execution of their decrees and that hostilities had begun. This is not certain, but such an issue seems not remote.

As we are in hourly expectation of the receipt of news by the steamer of the 19th, now fully due, it seems unnecessary to give the Swiss news more in detail.

Letters from Rome of the 23d ult., received at Marseilles, state that the arrest of the Prince de Canno had been taken on on the 22d. The Journals of Rome state that Giovanni Andrea Romeo, one of the Calabrian chiefs, had surrendered himself, been tried and condemned to death, but that his sentence was commuted.

We read in the Presse:

"The following information has reached us relative to the object of Chekib Effendi's mission to Rome. The Sultan has sent him to the Pope to express his desire that the protection of the Christians of the Libanus should take place in a direct manner by the intervention of a representative of the Holy See. The Pope, moved by this overture, has just re-established the office of Patriarch of Jerusalem, and raised to that dignity a simple missionary priest. This nomination causes great surprise in the cabinet of our Minister of Foreign Affairs."

A letter from Turin of the 26th ult., informs us that the Sardinian Government has submitted to the Council of State projects of laws against riotous assemblages of the people, for the establishment of a Supreme Court of Cassation, for a revision and a liberal construction of the Tarif of Custom-duties, and for a postal reform including a delivery of letters on Sundays.

A letter from Ferrara states that the inhabitants had resolved to purchase 4,400 muskets.—A company was formed there to purchase a certain quantity in addition, which would make up a total quantity of 40,000 muskets procured by the town, without the government being obliged to go to any expense. The same letter states that several of the Cardinals, after examining the new Roman Constitution, had added an article declared that the reforms were now finished. Pius IX. effaced this article with the exclamation, "We shall see who will dare to tie up our hands!"

The Prince de Joinville left Genoa on the 23d for Spezzia, after having visited the King of Sardinia at Turin. Lord Minto left Spezzia on the 22d for Rome, where Count Bresson arrived on the 17th.

A letter form Florence of the 19th, published in the *Augsburg Gazette*, states that the Duke of Modena had caused possession to be taken of Fivizzano, and had sent there troops and field pieces.

M. Pacheco, Ambassador of Spain to the Holy See, arrived at Rome on the 20th.

Letters from the celebrated Mr. Gutzlaff Missionary and Consul General of England in the Celestial Empire, have just been received at Munich. They are dated from Hong Kong, and give an account of the labors of that eminent individul, which approaches the marvellous. He had just terminated a voluminous history of the Chinese Empire, and has sent the manuscript of it to M. Cotta, the publisher at Stuttgardt. He has published at Hong Kong, a universal geography in the Chinese language, with sixty large maps. He has begun to compose a complete dictionary of the Chinese language, which will, he says, absorb all his leisure for the next three years. It is only in his leisure hours that he can occupy himself with literary and scientific labors, and the rest of his time being devoted to his missionary labors and his consular duties.

M. Gutzlaff announces that he has addressed some long memoirs on the geography of China, to the Geographicrl Society of London, which it is expected will shortly be published. M. Gutzlaff still maintains the opinion that Christianity and European civilization can only be successfully propagated in China by the Chinese themselves. He has accordingly founded a Chinese Society, which already possesses 600 members, many of whom are mandarins and some native *savans* of the first rank.

The Universal Gazette of Prussia, publishes the following letter of the 17th, from St. Petersburg: "The cholera makes fresh progress on the two directions, which it is following in Russia. It has broken out in the governments of Simbrisk, Kazan, Nijni-Novogorod, Riasan, Poltawa, and Tamboff. Thus far, it does not appear disposed to spread on the side of Podolia, and Gallicia, and it even appears to have very little intensity in that neighborhood. In that direction it has only shown itself on one point, at Ickaterinoslof, where it traversed the Dnieper. Without counting Georgia, Caucasus, and the country of the Cossacks of the Black Sea, it already reigns in sixteen governments. On the 30th ult., it broke out at Moscow."

The cholera is diminishing at Trebizonde.—From ten to fifteen is the average number of its victims per day.

Admiral Napier, it is said in the Spanish *Heraldo*, has embraced the opportunity afforded by his presence and the force under his command,

to exact from the Portuguese Government arrearages due him since the time of Don Pedro. His conduct is denounced as an unjustifiable use of public force for the promotion of his personal interests.

Farther from Mexico by the Steamer Alabama.

NEW YORK, Nov. 30—7 P. M.

Gen. Quitman leaves Mexico under orders form Gen. Scott, that this efficient and most distinguished officer proceed to the United States, and reported personally or by letter to the War Department, that since his promotion no permanent assignment of a division has been awarded to him, and the object of his return is to seek this.

Gen. Shields returns to seek recovery for his wounds.

Col. Harney returns for recruits.

Cols. Burnett, Garland and Morgan, Lieut. Potter, Sweeney and others, are ordered to join Bragg's Battery immediately.

No less than 200 from the army, including 10 sick and disabled or wounded, came passengers on the *Alabama*—3 died on the passage.

Richard McNamus, of the 2d Pa. volunteers was buried at sea.

A Mexican courier was captured with letters at Lesca. Among them were documents from Santa Anna, in which he says, that just as he had matured plans for attacking Perote, he received the order from the Supreme Government to turn over the command of the army.

A letter from an Englishman in Mexico, dated from the capital of Nov. 8th, says, that although much confidence is felt of electing President and Vice President, and Congress, who are favorably disposed to peace, it is much feared that Completo of Godelexara, will be elected President *ad interim* of the Republic, instead of Perrera or Pena.

The health of Herrera is precarious but improving; some says that Glorita will receive the majority of votes for President, while others are divided between Herrera, Almont, Gonzales and Roscia.

Col. Hayes left for Puebla on the 12th, escorting Major Polk and Col. Smythe, bearer of despatches.

The report that Jaraute had sent a commission to General Patterson, is confirmed. It is said that Jaraute has gone towards Queretara.—His force completely broken up. Well's company at Rio Frio, and Gen. Lane at Puebla had been active ferretting out the haunts of the guerillas.

Commodore Perry was to sail the day after the Alabama left for Alvarado, Tabasco, Laguna and Campeachy.

A committee has been appointed by the citizens of New Orleans to receive Gen. Taylor as he ascends the Mississippi

PETERSBURG, Dec. 4, 1847.

New Orleans papers of the 20th are received, containing no later arrival from Mexico.

The result of the election in Texas was still in doubt.

Resolutions have been introduced in the Senate of South Carolina, declaring that, should Congress adopt the Wilmot Proviso, Carolina will consider herself at liberty to form a new, separate and distinct government.

GEORGE H. COLTON, author of Tecumseh and Editor of the American Whig Review, died of typhus fever in the city of New-York, a few days since, at the age of twenty-nine.

☞ An Indian, a few days ago, while concealed under a bridge fired through an opening in the planks, and killed a Mr. COUCH, an overseer on MRS. CARRIEL'S plantation in Louisiana. The inducement to commit the murder, according to the Indian's story, was the promise of a rifle and five dollars, which two young men named Tucker agreed to give. We mention these circumstances as introductory to the following in relation to the affair, copied from the Madison (La.) *Banner*, which strikingly illustrates a remarkable trait in the Indian character:

The Indian was taken in Vicksburg and brought across the river while in a state of intoxication. When he recovered his senses, he proved himself, in one respect, a worthy son of his tribe. Without having been questioned as to his guilt, or having been even charged with it, he asked for his bundle, and taking therefrom his sash, feather, and red shawl, proceeded to deck himself in his finery; and after having with great care adjusted every thing about his person, and placed his feather in his turban, he folded his arms across his chest, and, assuming a proud and dignified attitude, declared his willingness to die. This was before any questions had been asked him as to his connection with this affair. He was then asked to tell, and he proceeded at once to relate all the circumstances attending it, and this relation he has freely made to any one inquiring of him, without a single variation in any of its features in a single instance.—The poor Indian, who could not (according to his story) withstand the tempting proffer of a rifle and five pieces of silver, in a transaction whete he periled his all, even his life, would not stoop to falsehood to screen himself from that punishment which he thought was his inevitable doom. He had killed a white man, and, with the stoical indifference charncteristic of his race, he was ready to meet the penalty of his crime. He could not see and did not desire the lapse of time which must intervene between the transgression and its retribution, and to him, we doubt not, this will be the severest portion of his punishment.

☞ A NEW BRANCH OF MANUFACTURING IN THIS CITY.—T. C. PETERS & BROTHER have begun the manufacture of Linseed Oil, in a cellar in rear of their Wool Depot on Exchange street. They now express the oil from about 50 bushels of seed daily, and intend using 20,000 to 25,000 bushels annually. The oil is extracted in the most approved manner, leaving the cake better than is done in the old mode, and rendering the oil itself remarkably clear and pure—so much so it is said that bleaching is unnecessary.

WHY SOME MEN DO NOT SUCCEED.—There are men enough who, notwithstanding all the noble qualities with which they are endowed, can yet make no right use of them, because they exist only as shining parts destitute of any common bond of connexion. As in an arch that would stand, all parts must be bound together by the keystone, so there must be a middle point in man towards which all tends. Where this is wanting, there is neither in prosperity nor adversity, any sure dependence. All scatters and vanishes like dust away. And thus it not unfrequently happens, that men who, in the ordinary course of things, seem of right to be something with all their shining gifts, on the smallest trial, show that they are nothing; deceive the hope of the world, and to their own astonishment, sink into insignificance.—*German of Fred. Jacobs.*

FRENCH POETICAL IDEA OF A DANDY.—M. Pacelise, in warning his mistress against the fascinations of such an individual, calls him "*un milleſleur* Judas."

A DEA. SUBSCRIBER.

A subscriber for years being sad in arrears,
Still neglecting his bill for to pay,
To the editor said—"Unless I am dead,
I shall pay you on Christmas day."

The time flew by and the debtor was shy,
But the editor thought what he said;
In his paper next week the truth he did speak,
And announced his subscriber as dead!

Up and Down.

BY GOODWYN BARNBY.

Up! is the merry lark floating to sing
Its matins of joy to the sun of Spring;
Down! is the bird of night, winging to peer
For the mice in the barn hole, dun and drear,
Up! is the beamy sun shining to give
Their verdure and hues to all flowers that live;
Down! is the gaping mine, lone, dark and cold,
Where the children of Mammon starve for gold;
Down! is the coward that shrinketh to die;
Up! is the hero that looketh on high.

Up! is the calm of the clear blue sky,
Far o'er the mountain-tops raising the eye;
Down! is the mist of the culturcless clod,
Stooping the gaze to the sepulchre sod;
Up! is the watchman who tells of the night,
When beam the streaks of morn ruddy and bright;
Down! is the sluggard who keepeth his bed,
When morning's dews are all sprinkled and shed;
Down! is the coward who slumbers a slave;
Up! is the hero—the watchful and brave.

Up! is the patriot who raises mankind;
Up! is the poet—the eye of the blind;
Down! is the tyrant who maketh the slave;
Down! is the traitor—the door of the grave;
Up! is the high heaven of prophets of old—
The home of the saints, the meek and the bold;
Down is the hell of the bigot and vile—
